[Statement of Financial Position](#)

Preparation of the Statement of Financial Position

Statement of Cash Flows

Additional Information

APPENDIX 5A: Ratio Analysis—A Reference

Using Ratios to Analyze Performance

Review and Practice

Global Accounting Insights

CHAPTER 6: Accounting and the Time Value of Money

Basic Time Value Concepts

Single-Sum Problems

Annuities (Future Value)

Annuities (Present Value)

Other Time Value of Money Issues

Review and Practice

CHAPTER 7: Cash and Receivables

Cash

Receivables

Valuation of Accounts Receivable

Notes Receivable

Other Issues Related to Receivables

APPENDIX 7A: Cash Controls

Using Bank Accounts

The Imprest Petty Cash System

Physical Protection of Cash Balances

Reconciliation of Bank Balances

Review and Practice

Global Accounting Insights

CHAPTER 8: Valuation of Inventories: A Cost-Basis Approach

Inventory Issues

Goods and Costs Included in Inventory

Which Cost Flow Assumption to Adopt?

Effect of Inventory Errors

APPENDIX 8A: LIFO Cost Flow Assumption

Last-In, First-Out (LIFO)

Inventory Valuation Methods—Summary Analysis

Review and Practice

CHAPTER 9: Inventories: Additional Valuation Issues

Lower-of-Cost-or-Net Realizable Value (LCNRV)

Valuation Bases

The Gross Profit Method of Estimating Inventory

Retail Inventory Method

Presentation and Analysis

Review and Practice

Global Accounting Insights

CHAPTER 10: Acquisition and Disposition of Property, Plant, and Equipment

Property, Plant, and Equipment

Borrowing Costs During Construction

Valuation of Property, Plant, and Equipment

Costs Subsequent to Acquisition

Disposition of Property, Plant, and Equipment

Review and Practice

CHAPTER 11: Depreciation, Impairments, and Depletion

Depreciation—A Method of Cost Allocation

Other Depreciation Issues

Impairments

[Depletion](#)

[Revaluations](#)

[Presentation and Analysis](#)

[APPENDIX 11A: Revaluation of Property, Plant, and Equipment](#)

[Revaluation of Land](#)

[Revaluation of Depreciable Assets](#)

[Review and Practice](#)

[Global Accounting Insights](#)

[CHAPTER 12: Intangible Assets](#)

[Intangible Asset Issues](#)

[Types of Intangible Assets](#)

[Goodwill](#)

[Impairment and Presentation of Intangible Assets](#)

[Research and Development Costs](#)

[Review and Practice](#)

[Global Accounting Insights](#)

[CHAPTER 13: Current Liabilities, Provisions, and Contingencies](#)

[Current Liabilities](#)

[Provisions](#)

[Contingencies](#)

[Presentation and Analysis](#)

[Review and Practice](#)

[CHAPTER 14: Non-Current Liabilities](#)

[Bonds Payable](#)

[Long-Term Notes Payable](#)

[Extinguishment of Non-Current Liabilities](#)

[Presentation and Analysis](#)

Review and Practice

Global Accounting Insights

CHAPTER 15: Equity

Corporate Capital

Reacquisition of Shares

Dividend Policy

Presentation and Analysis of Equity

APPENDIX 15A: Dividend Preferences and Book Value per Share

Dividend Preferences

Book Value per Share

Review and Practice

Global Accounting Insights

CHAPTER 16: Dilutive Securities and Earnings per Share

Dilutive Securities

Share Warrants

Share Compensation Plans

Basic Earnings per Share

Diluted Earnings per Share

APPENDIX 16A: Accounting for Share-Appreciation Rights

SARs—Share-Based Equity Awards

SARs—Share-Based Liability Awards

Share-Appreciation Rights Example

APPENDIX 16B: Comprehensive Earnings per Share Example

Diluted Earnings Per Share

Review and Practice

Global Accounting Insights

CHAPTER 17: Investments

[Debt Investments](#)

[Equity Investments](#)

[Other Reporting Issues](#)

[APPENDIX 17A: Accounting for Derivative Instruments](#)

[Defining Derivatives](#)

[Who Uses Derivatives, and Why?](#)

[Basic Principles in Accounting for Derivatives](#)

[Derivatives Used for Hedging](#)

[Other Reporting Issues](#)

[Comprehensive Hedge Accounting Example](#)

[Controversy and Concluding Remarks](#)

[APPENDIX 17B: Fair Value Disclosures](#)

[Disclosure of Fair Value Information: Financial Instruments](#)

[Disclosure of Fair Values: Impaired Assets or Liabilities](#)

[Conclusion](#)

[Review and Practice](#)

[Global Accounting Insights](#)

[CHAPTER 18: Revenue Recognition](#)

[Fundamentals of Revenue Recognition](#)

[The Five-Step Process Revisited](#)

[Accounting for Revenue Recognition Issues](#)

[Presentation and Disclosure](#)

[APPENDIX 18A: Long-Term Construction Contracts](#)

[Revenue Recognition over Time](#)

[APPENDIX 18B: Revenue Recognition for Franchises](#)

[Franchise Accounting](#)

[Recognition of Franchise Rights Revenue over Time](#)

Review and Practice

CHAPTER 19: Accounting for Income Taxes

Fundamentals of Accounting for Income Taxes

Additional Issues

Accounting for Net Operating Losses

Financial Statement Presentation

APPENDIX 19A: Comprehensive Example of Interperiod
Tax Allocation

First Year—2021

Second Year—2022

APPENDIX 19B: Accounting for Net Operating Loss
Carrybacks

Loss Carryback

Review and Practice

Global Accounting Insights

CHAPTER 20: Accounting for Pensions and Postretirement
Benefits

Fundamentals of Pension Plan Accounting

Using a Pension Worksheet

Past Service Cost

Remeasurements

Reporting Pension Plans in Financial Statements

Review and Practice

Global Accounting Insights

CHAPTER 21: Accounting for Leases

The Leasing Environment

Lessee Accounting

Lessor Accounting

Special Lease Accounting Problems

[Appendix 21A: Sale-Leasebacks](#)

[Accounting Issues in Sale-Leaseback Transactions](#)

[Sale-Leaseback Example](#)

[Appendix 21B: Comprehensive Example](#)

[Lease Terms: Scenario 1](#)

[Lease Terms: Scenario 2](#)

[Review and Practice](#)

From the Authors

Globalization is occurring rapidly. As economic and other interactions increase among countries, capital markets must provide high-quality financial information. A need exists for high-quality financial reporting standards that meet this objective. Fortunately, **International Financial Reporting Standards (IFRS)** has broad international acceptance and is being used in some form by more than 115 countries around the world. One securities regulator noted that IFRS is best positioned to serve as the single set of high-quality accounting standards.

CHANGE IS THE ONLY CONSTANT

Most countries want rapid action related to the acceptance of IFRS. A number of countries have already switched from their own version of accounting standards to IFRS. Students and instructors need educational materials related to IFRS in order to meet this new challenge. Our objective in revising *Intermediate Accounting*, IFRS Edition, was to continue to provide the tools needed to understand what IFRS is and how it is applied in practice. The emphasis on fair value, the proper accounting for financial instruments, and the new developments related to leasing, revenue recognition, and financial statement presentation are examined in light of current practice. In addition, given the rapid changes taking place, we provide and discuss the new Conceptual Framework to understand how these issues will likely be resolved in the future.

“If this text helps you appreciate the challenges, worth, and limitations of financial reporting, if it encourages you to evaluate critically and understand financial accounting concepts and practice, and if it prepares you for advanced study, professional examinations, and the successful and ethical pursuit of your career in accounting or business in a global economy, then we will have attained our objectives.”

A LOOK AT GLOBAL ACCOUNTING

While IFRS has achieved broad acceptance, not all countries have adopted it. For example, U.S. companies still follow U.S. generally accepted accounting principles (U.S. GAAP) in preparing their financial statements. In fact, the differences between IFRS and U.S. GAAP may provide certain companies with a competitive advantage, so understanding these differences may be important in analyzing company performance. In addition, the IASB and the FASB are working together to converge their standards as appropriate. Accordingly, we have included a **Global Accounting Insights** section at the end of selected chapters, to highlight the important differences that remain between IFRS and U.S. GAAP, as well as the ongoing joint convergence efforts to resolve them. As a result, students truly gain a global accounting education by studying this text.

INTERMEDIATE ACCOUNTING WORKS

Intermediate Accounting, Seventeenth Edition (based on U.S. GAAP), is the market-leading text in providing the tools needed to understand what U.S. GAAP is and how it is applied in practice. With this IFRS Fourth Edition, we strive to continue to provide the material needed to understand this subject area using IFRS. The text is comprehensive and up-to-date, and provides the instructor with flexibility in the topics to cover. We also include proven pedagogical tools, designed to help students learn more effectively and to answer the changing needs of this course.

We are excited about *Intermediate Accounting*, IFRS Fourth Edition. We believe it meets an important objective of providing useful information to educators and students interested in learning about IFRS. Suggestions and comments from users of this text will be appreciated. Please feel free to e-mail any one of us at AccountingAuthors@yahoo.com.

About the Authors

Don Kieso

DONALD E. KIESO, PhD, CPA, received his bachelor's degree from Aurora University and his doctorate in accounting from the University of Illinois. He has served as chairman of the Department of Accountancy and is currently the KPMG Emeritus Professor of Accountancy at Northern Illinois University. He has public accounting experience with Price Waterhouse & Co. (San Francisco and Chicago) and Arthur Andersen & Co. (Chicago) and research experience with the Research Division of the American Institute of Certified Public Accountants (New York). He has done post-doctorate work as a Visiting Scholar at the University of California at Berkeley and is a recipient of NIU's Teaching Excellence Award and four Golden Apple Teaching Awards. Professor Kieso is the author of other accounting and business books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Illinois CPA Society. He has served as a member of the Board of Directors of the Illinois CPA

Society, then AACSB's Accounting Accreditation Committees, the State of Illinois Comptroller's Commission, as Secretary-Treasurer of the Federation of Schools of Accountancy, and as Secretary-Treasurer of the American Accounting Association. Professor Kieso is currently serving on the Board of Trustees and Executive Committee of Aurora University, as a member of the Board of Directors of Kishwaukee Community Hospital, and as Treasurer and Director of Valley West Community Hospital. From 1989 to 1993, he served as a charter member of the National Accounting Education Change Commission. He is the recipient of the Outstanding Accounting Educator Award from the Illinois CPA Society, the FSA's Joseph A. Silvos Award of Merit, the NIU Foundation's Humanitarian Award for Service to Higher Education, a Distinguished Service Award from the Illinois CPA Society, and in 2003 an honorary doctorate from Aurora University.

Jerry Weygandt

JERRY J. WEYGANDT, PhD, CPA, is the Arthur Andersen Alumni Emeritus Professor of Accounting at the University of Wisconsin—Madison. He holds a Ph.D. in accounting from the University of Illinois. Articles by Professor Weygandt have appeared

in the *Accounting Review*, *Journal of Accounting Research*, *Accounting Horizons*, *Journal of Accountancy*, and other academic and professional journals. These articles have examined such financial reporting issues as accounting for price-level adjustments, pensions, convertible securities, stock option contracts, and interim reports. Professor Weygandt is the author of other accounting and financial reporting books and is a member of the American Accounting Association, the American Institute of Certified Public Accountants, and the Wisconsin Society of Certified Public Accountants. He has served on numerous committees of the American Accounting Association and as a member of the editorial board of the *Accounting Review*; he also has served as President and Secretary-Treasurer of the American Accounting Association. In addition, he has been actively involved with the American Institute of Certified Public Accountants and has been a member of the Accounting Standards Executive Committee (AcSEC) of that organization. He has served on the FASB task force that examined the reporting issues related to accounting for income taxes and served as a trustee of the Financial Accounting Foundation. Professor Weygandt has received the Chancellor's Award for Excellence in Teaching and the Beta Gamma Sigma Dean's Teaching Award. He is on the board of directors of M & I Bank of Southern Wisconsin. He is the recipient of the Wisconsin Institute of CPA's Outstanding Educator's Award and the Lifetime Achievement Award. In 2001, he received the American Accounting Association's Outstanding Educator Award.

Terry Warfield

TERRY D. WARFIELD, PhD, is the PwC Professor in Accounting at the University of Wisconsin—Madison. He received a B.S. and M.B.A. from Indiana University and a Ph.D. in accounting from the University of Iowa. Professor Warfield's area of expertise is financial reporting, and prior to his academic career, he worked for five years in the banking industry. He served as the Academic Accounting Fellow in the Office of the Chief Accountant at the U.S. Securities and Exchange Commission in Washington, D.C. from 1995–1996. Professor Warfield's primary research interests concern financial accounting standards and disclosure policies. He has published scholarly articles in *The Accounting Review*, *Journal of Accounting and Economics*, *Research in Accounting Regulation*, and *Accounting Horizons*, and he has served on the editorial boards of *The Accounting Review*, *Accounting Horizons*, and *Issues in Accounting Education*. He has served as president of the Financial Accounting and Reporting Section, the Financial Accounting Standards Committee of the American Accounting Association (Chair 1995–1996), and on the AAA-FASB Research Conference Committee. He also served on the Financial Accounting Standards

Advisory Council of the Financial Accounting Standards Board and as a trustee of the Financial Accounting Foundation. Professor Warfield has received teaching awards at both the University of Iowa and the University of Wisconsin, and he was named to the Teaching Academy at the University of Wisconsin in 1995. Professor Warfield has developed and published several case studies based on his research for use in accounting classes. These cases have been selected for the AICPA Professor-Practitioner Case Development Program and have been published in *Issues in Accounting Education*.

New to This Edition

Content Changes by Chapter

Chapter 1: Financial Reporting and Accounting Standards

- New opening story on the current usage of IFRS and its impact on public companies worldwide.
- New What Do the Numbers Mean? (WDNM) box on *IFRS for SMEs*, which is helping IFRS to gain traction with non-public companies.

Chapter 2: Conceptual Framework for Financial Reporting

- Updated throughout to reflect the 2018 *IASB Conceptual Framework for Financial Reporting*.

Chapter 3: The Accounting Information System

- New opening story on blockchain.

Chapter 4: Income Statement and Related Information

- Updated WDNM box on alternative performance measures used by companies.

Chapter 5: Statement of Financial Position and Statement of Cash Flows

- Updated discussions throughout on recent status of IASB project on the presentation in the statement of financial

position as well as that on performance reporting.

- New footnote on recent IFRS on classification of current/non-current assets.

Chapter 6: Accounting and the Time Value of Money

- Reformatted time diagram problems for improved understanding and visualization.

Chapter 7: Cash and Receivables

- New opening story, discussing current effect of TCJA in terms of amounts of company cash parked overseas as well as foreign cash balance disclosures.
- Updated definition and discussion of cash equivalents per recent IFRS.
- Updated discussion of sales returns and allowances per recent IFRS, including use of Return Liability account.
- New Evolving Issue on what companies should include as part of cash and cash equivalents on the statement of financial position, such as cryptocurrencies (now classified as intangible assets or inventory).
- New WDNM box on the pros and cons of securitizations.

Chapter 8: Valuation of Inventories: A Cost-Basis Approach

- New WDNM box on retailers using an omnichannel approach and the impact this has on inventory levels.

Chapter 9: Inventories: Additional Valuation Issues

- New WDNM box on the corporate barter method to handle problem inventory.

Chapter 10: Acquisition and Disposition of Property, Plant, and Equipment

- Updated discussion on borrowing costs during construction per recent IFRS.
- Updated discussion on involuntary conversion per recent IFRS.

Chapter 11: Depreciation, Impairments, and Depletion

- Updated opening story on how technology companies are especially vulnerable to impairment losses.
- Updated definition of depreciation per recent IFRS.
- Updated per recent IFRS requirement that companies review estimates for residual value and service life annually and revise if needed.
- Updated WDNM box on revaluation accounting to highlight how companies use it effectively in the hospitality industry.

Chapter 12: Intangible Assets

- Updated for ASB project on goodwill.

Chapter 13: Current Liabilities, Provisions, and Contingencies

- Updated opening story to include most recent IASB position and considerations regarding liabilities, including contingent liabilities.
- New WDNM box on how **SAP**'s current liabilities account can signal both good and bad news for investors.

Chapter 14: Non-Current Liabilities

- New opening story discussing how total global debt as well as bond issuances continue to increase.
- New WDNM box on negative interest rates—what they are, who issues them, and who invests in them.
- New footnote on recognition that LIBOR is no longer a reliable measure of interest rates between banks and how the Financial Stability Board has been tasked with determining more reliable benchmark rates.

Chapter 15: Equity

- Updated opening story for most recent data indicating continued increase in global investment opportunities.
- New introduction and illustration to emphasize current prevalence in share buybacks.

Chapter 16: Dilutive Securities and Earnings per Share

- Updated opening story to include most recent information about median CEO pay by region to indicate increased usage of share option awards in employee pay packages.
- Updated footnote 1 to provide latest information regarding IASB's development of a standard that will improve the financial reporting requirements for financial instruments with characteristics of debt and equity.

Chapter 17: Investments

- New opening story on whether *IFRS 9* has actually resulted in companies reporting more decision-useful information.
- Updated footnote 1 on definition of financial assets per latest IFRS.
- New WDNM box on whether the single impairment model, based on expected credit losses, will give banks and investors in

banks a better early warning of deteriorating credit quality.

- Updated table showing differences between traditional and derivative financial instruments based on latest IFRS.
- Updated WDNM box on equity method accounting per *IFRS 10*, as well as updated WDNM box on derivatives market per recent data.

Chapter 18: Revenue Recognition

- Updated opening story as companies have begun to implement the most recent revenue recognition standard, including the continuing challenge on the amount of judgment that is still required in determining how to report revenue transactions and how that relates to key audit matters (KAMs).
- Replaced Evolving Issue with discussion on whether the most recent revenue recognition standard represents a convergence with U.S. GAAP or has actually resulted in more differences.
- New WDNM box on how returns can significantly affect reported revenues for e-commerce companies.

Chapter 19: Accounting for Income Taxes

- Loss carryforward and loss carrybacks updated per recent tax law changes; loss carrybacks now discussed in a new [Appendix 19B](#).
- WDNM box on global tax rates completed updated per most recent information as well as the OECD and G20 BEPS (Base Erosion and Profit Sharing) initiative.

Chapter 20: Accounting for Pensions and Postretirement Benefits

- Updated opening story, for most recent information on how the financial crisis of 2008 is still impacting companies' pension

plans.

- Updated discussion of *IAS 19* (see [footnote 11](#) as well as “Recognition of the Net Funded Status of the Pension Plan” section) and how it limits amount of pension asset that is recognized (the asset ceiling).

Chapter 21: Accounting for Leases

- Updated opening story as new lease accounting rules are not expected to be implemented until 2020, a slight delay.
- New illustration showing **Air France**’s incorporation of new lease accounting standard into its financial statements.

Chapter 22: Accounting Changes and Error Analysis

- Updated opening story based on recent *IFRS 9*, *IFRS 15*, and *IFRS 16*.
- Updated WDNM box on accounting change estimates to show the 10 most common changes in accounting estimates as well as the positive/negative impacts of these changes on income.

Chapter 23: Statement of Cash Flows

- Updated chapter to include most recent IFRS on cash equivalents, as well as IFRS on disclosures needed if beginning and ending cash balances on the statement of cash flows do not reconcile.
- New footnote discussing IASB’s Primary Financial Statements project regarding interest and dividends paid or received.

Chapter 24: Presentation & Disclosure in Financial Reporting

- Updated opening story to include new IFRS practice statement related to making materiality judgments.
- New discussion and example of key audit matters (KAMs).
- New discussion and example of alternative performance measures.

Improved Digital Assets

Intermediate Accounting, IFRS Fourth Edition, is completely integrated with Wiley's online courseware, featuring a suite of teaching and learning resources developed under the close review of the authors. Driven by the same basic beliefs as the text, Wiley's online courseware allows students to create a personalized study plan, assess their progress along the way, and access the content and resources needed to master the material. Features of Wiley's online courseware includes the following:

- **NEW Data Analytics:** Data Analytics activities include corresponding data sets and assignments in Wiley's online courseware. These resources further prepare and enhance data analytics skills that students will need in their future accounting careers. *Intermediate Accounting*, IFRS Fourth Edition, also includes a "Data Analytics and Accounting" module within Wiley's online courseware that contains seven interactive lessons with industry-validated content to prepare students for the evolving workforce, video tutorials of real-world data analytics applications, and a case study using Excel that allows students to manipulate and think critically about data.
- **Accessible Lecture PowerPoints:** PowerPoints are a hallmark of many lectures as well as an important study tool for students. In addition to the fully accessible Wiley's online courseware course, we have also improved the lecture PowerPoints to be accessible, including high-quality alt text and screen-reader capabilities.

Proven Pedagogical Framework

This edition continues to provide numerous key learning aids to help you master the text material and prepare you for a successful career in accounting.

CHAPTER 12

Intangible Assets

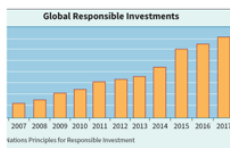

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the characteristics, valuation, and amortization of intangible assets.
2. Describe the accounting for various types of intangible assets.
3. Explain the accounting issues for recording goodwill.
4. Identify impairment procedures and presentation requirements for intangible assets.
5. Describe the accounting and presentation for research and development and similar costs.

PREVIEW OF CHAPTER 12 As the following opening story indicates, sustainability strategies are taking on increased importance for companies like SAP (DEU) and Alcatel Lucent Enterprise (FRA). Reporting challenges for effective sustainability investments are similar to those for intangible assets. In this chapter, we explain the basic conceptual and reporting issues related to intangible assets. The content and organization of the chapter are as follows.

INTANGIBLE ASSETS				
Intangible Asset Issues <ul style="list-style-type: none"> • Characteristics • Valuation • Amortization 	Types of Intangibles <ul style="list-style-type: none"> • Marketing-related • Customer-related • Artistic-related • Contract-related • Technology-related 	Goodwill <ul style="list-style-type: none"> • Recording • Write-off • Bargain purchase 	Impairment and Presentation of Intangibles <ul style="list-style-type: none"> • Limited-life intangibles • Reversal of loss • Indefinite-life intangibles other than goodwill • Goodwill • Presentation 	Research and Development Costs <ul style="list-style-type: none"> • Identifying R&D • Accounting for R&D • Similar costs • Presentation

Global Responsible Investments

Sources: E. Roston, "Non-Financial Data Are Material: The Sustainability Paradox," *www.barrons.com* (April 13, 2012); R. Eccles, "What the World Needs Now: Sustainability Accounting Standards," *Forbes* (May 4, 2013); Fremi-In Global Assessment of Sustainability Reports: Update on the U.S. Global Reporting Initiative (July 2014); and J. Hales, "The Future of Accounting Is Now: Financial Performance Is Linked to Sustainable Growth," *CFA Journal* (July 2013).

For example, as indicated in the adjacent graph, global sustainability investments have increased from below \$10 trillion in 2006 to over \$70 trillion in 2017.

In response, companies are now providing more useful "non-financial" information about the future cash flow consequences of sustainability strategies. Many companies are exploring ways to combine this non-financial information with mandated disclosures in what is called an integrated report. In such a report, a company discloses data on numerous metrics beyond conventional financial statements, whether the data are "integrated" or released in a separate format. Practitioners collectively refer to sustainability reporting as ESG, for the three major categories of data: environmental, social, and company governance.

While a growing number of companies are issuing sustainability reports, there is significant variation in the content and format. Only a handful, like those prepared by **Clorox** (USA), **SAP** (DEU), and **Polymer Group Inc.** (USA), integrate a sustainability report with the financial statements. Standards to ensure useful information on ESG issues are being developed by the **International Integrated Reporting Council** and the **Sustainability Accounting Standards Board**. And with the emergence of sustainability and integrated reporting standards, companies are voluntarily seeking assurance that their sustainability reports are meeting these standards. For example, over half of the world's largest companies recently reporting on sustainability also invested in external assurance for their reports. With standards and assurance, it is hoped that sustainability reports will gain the same credibility as the financial statements.

Review and Practice

Go to the **Review and Practice** section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

LEARNING OBJECTIVE 1

Discuss the characteristics, valuation, and amortization of intangible assets.

Characteristics

Christian Dior's (FRA) most important asset is its brand image, not its store fixtures. **The Coca-Cola Company's** (USA) success comes from its secret formula for making Coca-Cola, not its plant facilities. The world economy is dominated by information and service providers. For these companies, their major assets are often intangible in nature.

Is This Sustainable?

Companies are increasing their focus on sustainability issues. Companies like **Alcatel Lucent Enterprise** (FRA), **China Southern Power Grid Co.** (CHN), and **Clorox** (USA) are implementing strategic initiatives such as fuel-spill control, use of recycled materials, and water conservation in efforts to support long-term objectives related to responsible management of resource use. Why the growing importance of sustainability? One important reason is that market participants are increasingly looking to invest in companies that are pursuing sustainability strategies.

Chapter Opener Vignettes

The Chapter Opener Vignettes provide an engaging introduction as well as place the content of the chapter's topics in context in terms of recent accounting, economic, and political developments.

Chapter Preview

The Chapter Preview summarizes the major issues discussed in the chapter, and provides students with a visual outline of the key topics.

Review and Practice

The Review and Practice section, placed after the text discussion, offers students the opportunity to assess their understanding of the chapter's topics before tackling homework assignments.

NEW MORE Illustration Walk-Throughs

These unique illustrations include mini-cases so that students can immediately understand how to apply the accounting concepts and procedures to specific situations.

ILLUSTRATION 12.11
Evaluation of Goodwill Impairment

Evaluating Goodwill Impairment

Facts: The carrying value of Kohlbuy's Pritt Division is €2,400,000 (including Goodwill of €900,000). The recoverable amount of the Pritt Division is €1,900,000.

Questions: (a) What the impairment loss, if any, should be recorded? (b) What journal entry does Kohlbuy make to record the impairment loss, if any?

Solution: (a) The amount of the impairment loss to be recorded is as follows.

Recoverable amount of Pritt Division	€ 1,900,000	
Net identifiable assets	(2,400,000)	
Loss on impairment	€ 500,000	

(b) Kohlbuy makes the following entry to record the impairment.

Loss on impairment	500,000	
Goodwill		500,000

Following this entry, the carrying value of the goodwill is €400,000.

Underlying Concepts

The controversy surrounding the accounting for R&D expenditures reflects a debate about whether such expenditures meet the definition of an asset. If so, then an "expense all research and some development costs" policy results in overstated expenses and understated assets.

As indicated, all costs incurred in the research phase are expensed as incurred. Once a project moves to the development phase, certain development costs are capitalized. Specifically, development costs are capitalized when certain criteria are met, indicating that an economically viable intangible asset will result from the R&D project. In essence, **economic viability** indicates that the project is far enough along in the process such that the economic benefits of the R&D project will flow to the company. Therefore, development costs incurred from that point forward meet the recognition criteria and should be recorded as an intangible asset (see **Underlying Concepts**).

In summary, **companies expense all research phase costs and some development phase costs. Certain development costs are capitalized once economic viability criteria are met.** IFRS identifies several specific criteria that must be met before development costs are capitalized (which we discuss in more detail later in the chapter).²

Amortization of Intangibles

The allocation of the cost of intangible assets in a systematic way is called **amortization**. Intangibles have either a **limited (finite) useful life** or an **indefinite useful life**. For example, a

Underlying Concepts

The Underlying Concepts highlight and explain major conceptual topics in the chapter.

What Do the Numbers Mean?

The "What Do the Numbers Mean?" boxes further students' understanding of key concepts with practical, real-world examples.

What Do the Numbers Mean? Patents—Strategic Lifeblood

Are patents valuable assets, even though they are intangible? Let's take a look at **BASF** (DEU), a leading international chemical company. Here is the BASF strategy statement regarding innovation:

"Innovations based on effective and efficient research and development are an important growth engine for BASF... This is how we ensure our long-term business success with chemistry-based solutions for almost all sectors of industry."

And BASF acts on this strategy through expenditures on research and development, which many times lead to valuable patents. For example in a recent year, BASF spent €1,426 million on research and development (that's 30 percent of net income), and product innovation alone (from products on the market since 2013) generated €9 billion in sales. In that year alone, BASF filed 900 new patents worldwide.

Because patented technology is so important to BASF's success, it is not surprising that it provides expansive disclosure of patent-related information in its financial statements. Adjacent is an excerpt, from the note disclosure.

This development schedule for know-how intangible assets (sometimes referred to as a "roll-forward") provides reconciliation of the changes in the intangible asset account. This information is important for understanding the magnitude of this important intangible

Assets	2018	2017
Intangible assets (000,000)	€16,554	€17,755
11—INTANGIBLE ASSETS (in part)		
Acquisition costs		Know-how, patents and production technology
Balance as of January 1, 2018	€1,879	
Additions, net	2,761	
Disposals/Transfers	(117)	
Exchange differences, other	52	
Balance as of December 31, 2018	4,575	
Accumulated amortization	(1,046)	
Net carrying value	€3,529	

asset and how it changed during the period. Note that BASF's total intangible assets decreased during the year and that there was a net decrease in its patent balance. This would be something to watch, given the importance of patented innovations in the BASF strategy.

Evolving Issue

The Evolving Issue feature introduces and discusses a current topic in the accounting industry in which the profession may be encountering controversy or nearing resolution. The feature shows how the key standard-setting organizations make decisions to adjust to the changing global business environment.

Evolving Issue Recognition of R&D and Internally Generated Intangibles

The requirement that companies expense immediately all research and most development costs (as well as start-up costs) incurred internally is a practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies' R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the statement of financial position should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of most R&D expenditures removes from the statement of financial position what may be a company's most valuable asset.

Indeed, research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value for R&D-intensive companies. Another study found that there was a significant decline in

earnings usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time.

The current accounting for R&D and other internally generated intangible assets represents one of the many trade-offs made among relevance, faithful representation, and cost-benefit considerations. The FASB and IASB have completed some limited-scope projects on the accounting for intangible assets, and the Boards have contemplated a joint project on the accounting for identifiable intangible assets (i.e., excluding goodwill). Such a project would address concerns that the current accounting requirements lead to inconsistent treatments for some types of intangible assets depending on how they arise. At present, that project is on hold. The IASB has an active project on goodwill and impairment (see www.ifrs.org/projects/work-plan/goodwill-and-impairment).

Sources for research studies: Baruch Lev and Theodore Soughianis, "The Capitalization, Amortization, and Value-Relevance of R&D," *Journal of Accounting and Economics* (February 1996); and Martha L. Loudder and Bruce K. Behn, "Alternative Income Determination Rules and Earnings Usefulness: The Case of R&D Costs," *Contemporary Accounting Research* (Fall 1995). See also the recent critique of the accounting for intangible assets in Baruch Lev and Feng Gu, *The End of Accounting* (Hoboken, NJ: John Wiley & Sons, 2016).

End-of-Chapter Pedagogy

Review and Practice

Key Terms Review

amortization 12-4	goodwill 12-10	patent 12-8

economic viability 12-4	master valuation approach 12-12	
franchise 12-8	organizational costs 12-21	

Learning Objectives Review

1 Discuss the characteristics, valuation, and amortization of intangible assets.

Intangible assets have three main characteristics: (1) they are identifiable, (2) they lack physical existence, and (3) they are not monetary assets. In most cases, intangible assets provide services over a period of years and so are normally classified as non-current assets.

Intangibles are recorded at cost. Cost includes all ac-

financial position as the excess of cost over the fair value of the net assets acquired.

4 Identify impairment procedures and presentation requirements for intangible assets.

An intangible asset is impaired when a company is not able to recover the asset's carrying amount either through using it or by selling it. Limited-life intangibles are reviewed annually to determine if there

Review and Practice

The Review and Practice section includes Key Terms Review, Learning Objectives Review, and a Practice Problem with Solution. In addition, multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms are available online.

Practice Problem

The Practice Problem offers students a comprehensive exercise, incorporating many of the chapter's topics, followed by a detailed, step-by-step solution.

Practice Problem

Sky ASA, organized in 2022, provided you with the following information.

1. Purchased a license for €20,000 on July 1, 2022. The license gives Sky exclusive rights to sell its services in the provincial region and will expire on July 1, 2030.
2. Purchased a patent on January 2, 2023, for €40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2023, were €45,000. The process has an indefinite life.
4. On April 1, 2023, Sky purchased a small circuit board manufacturer for €350,000. Goodwill recorded in the transaction was €90,000.
5. On July 1, 2023, legal fees of €11,400 were incurred for application and filing of a new patent, which will expire at the same time as the patent purchased on January 2, 2023.
6. Research and development costs incurred as of September 1, 2023, were €75,000. None of the related projects involved had achieved economic viability.

Using Your Judgment

The Using Your Judgment section provides students with real-world homework problems including (1) a financial reporting problem, (2) a comparative analysis case, (3) financial statement analysis cases, and (4) an accounting, analysis, and principles problem.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in Appendix A. The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Does M&S report any intangible assets and goodwill in its financial statements and accompanying notes? Briefly explain.
- b. How much selling and administrative expenses does M&S report in 2018 and 2019? Briefly discuss the significance of these expenses to M&S's operating results.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in Appendices B and C, respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. 1. What amounts for intangible assets were reported by adidas and Puma in their respective statements of financial position?
2. What percentage of total assets is each of these reported amounts?
3. What was the change in the amount of intangibles from 2017 to 2018 for adidas and Puma?
- b. 1. On what basis and over what periods of time did adidas and Puma amortize their intangible assets?

Bridge to the Profession

This section includes Authoritative Literature References and a Research Case, all designed to refer students to the relevant literature and standards for key concepts in the text and provide assessment of their understanding.

Global Accounting Insights

Global Accounting Insights offer students a detailed discussion of U.S. accounting standards at the end of each chapter, as well as assessment material (including GAAP Self-Test Questions and GAAP Concepts and Application).

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the accounting for intangible assets under IFRS and U.S. GAAP.

There are some significant differences between IFRS and U.S. GAAP in the accounting for both intangible assets and impairments. U.S. GAAP related to intangible assets is presented in FASB literature addressing goodwill and other intangible assets and business combinations. The accounting for research and development, start-up costs, and advertising costs is prescribed in separate parts of the FASB literature.

CHAPTER 1

Financial Reporting and Accounting Standards

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Describe the global financial markets and their relation to financial reporting.
2. Explain the objective of financial reporting.
3. Identify the major policy-setting bodies and their role in the standard-setting process.
4. Discuss the challenges facing financial reporting.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 1

As the following opening story indicates, countries are moving quickly to adopt International Financial Reporting Standards (IFRS). It is estimated that over 300 of the 500 largest global companies are using IFRS. However, the accounting profession faces many challenges in establishing these standards, such as developing a sound conceptual framework, use of fair value measurements, proper consolidation of financial results, off-balance-sheet financing, and proper accounting for leases and pensions. This chapter discusses the international financial reporting environment and the many factors affecting it, as follows.

Continuing Evolution of International Financial Reporting

The age of international trade and the interdependence of national economies continue to evolve. Many of the largest companies in the world often do more of their business in foreign lands than in their home countries. Companies now access not only their home country capital markets for financing, but others as well. With this globalization, companies are recognizing the need to have one set of financial reporting standards. For globalization of capital markets to be efficient, what is reported for a transaction in Beijing should be reported the same way in Paris, New York, or London.

In the past, many countries used their own sets of accounting standards or followed standards set by larger countries, such as those used in

Europe or in the United States. That protocol has changed through the adoption of a single set of rules, called International Financial Reporting Standards (IFRS). As indicated in the following chart, there is broad acceptance of IFRS around the world.

As indicated, 126 jurisdictions require the use of IFRS by all or most public companies, with most of the remaining jurisdictions permitting their use. Indeed, 27,000 of the 49,000 companies listed on the 88 largest securities exchanges in the world use IFRS. IFRS also has appeal for non-public companies; since its publication, the *IFRS for SMEs* (small and medium-sized entities) is required or permitted in 57 percent, or 85 of 150, profiled jurisdictions, while a further 11 jurisdictions are also considering adopting IFRS.

Changing to IFRS does not come without cost and effort. However, academic research and studies by adopting jurisdictions provide overwhelming evidence that the use of IFRS has brought the following net benefits to capital markets:

- IFRS was successful in creating a common accounting language for capital markets (European Commission, 2015).

- Evidence suggests that IFRS adoption was largely positive for listed companies in Australia (Australian Accounting Standards Board, 2016).
- IFRS adoption helped to reduce investment risk in domestic firms, mitigate the “Korea discount,” and attract foreign capital via overseas shares listing, bond issuance, or mergers and acquisitions (Korean Accounting Standards Board, 2016).

Some companies also report benefits from being able to use IFRS in their internal reporting. This improves their ability to compare operating units in different jurisdictions by reducing the number of different reporting systems. In Japan, where use of IFRS has been voluntary since 2010, business efficiency, enhanced comparability, and better communications with international investors have been identified as the main reasons why many Japanese companies made the choice to adopt IFRS (Japanese Financial Services Agency). Thus, the international financial reporting environment has and is continuing to evolve. With these changes, it is hoped that a more effective system of reporting will develop, which will benefit all.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Global Markets

LEARNING OBJECTIVE 1

Describe the global financial markets and their relation to financial reporting.

World markets are increasingly intertwined. International consumers drive Japanese cars, wear Italian shoes and Scottish woolens, drink

Brazilian coffee and Indian tea, eat Swiss chocolate bars, sit on Danish furniture, watch U.S. movies, and use Arabian oil. The tremendous variety and volume of both exported and imported goods indicates the extensive involvement in international trade—for many companies, the world is their market.

To provide some indication of the extent of globalization of economic activity, [Illustration 1.1](#) provides a listing of the top 20 global companies in terms of sales.

Rank	Company	Country	Revenues (\$ millions)
1	Walmart	U.S.	5,00,343
2	State Grid	China	3,48,903
3	Sinopec Group	China	3,26,953
4	China National Petroleum	China	3,26,008
5	Royal Dutch Shell	Netherlands	3,11,870
6	Toyota Motor	Japan	2,65,172
7	Volkswagen	Germany	2,60,028
8	BP	Britain	2,44,582
9	ExxonMobil	U.S.	2,44,363
10	Berkshire Hathaway	U.S.	2,42,137
11	Apple	U.S.	2,29,234
12	Samsung Electronics	South Korea	2,11,940
13	McKesson	U.S.	2,08,357
14	Glencore	Switzerland	2,05,476
15	UnitedHealth Group	U.S.	2,01,159
16	Daimler	Germany	1,85,235
17	CVS Health	U.S.	1,84,765
18	Amazon.com	U.S.	1,77,866
19	EXOR Group	Italy	1,61,677
20	AT&T	U.S.	1,60,546

www.fortune.com/global500/2018/search/?revenues=desc.

In addition, due to technological advances and less onerous regulatory requirements, investors are able to engage in financial transactions across national borders and to make investment, capital allocation, and

financing decisions involving many foreign companies. Also, many investors, in attempts to diversify their portfolio risk, have invested more heavily in international markets. As a result, an increasing number of investors are holding securities of foreign companies. For example, over a recent seven-year period, estimated investments in foreign equity securities by U.S. investors doubled, from \$3,422 billion to \$7,844 billion (OECD, 2018).

An indication of the significance of these international investment opportunities can be found when examining the number of foreign registrations on various securities exchanges. As shown in [Illustration 1.2](#), a significant number of foreign companies are found on national exchanges.

As indicated, capital markets are increasingly integrated and companies have greater flexibility in deciding where to raise capital. In the absence of market integration, there can be company-specific factors that make it cheaper to raise capital and list/trade securities in one location versus another. With the integration of capital markets, the automatic linkage between the location of the company and the location of the capital market is loosening. As a result, companies have expanded choices of where to raise capital, either equity or debt. The move toward adoption of global accounting standards has and will continue to facilitate this trend.

Exchange	Market Capitalization (\$ millions)	Total Listings	Domestic Listings	Foreign Listings	Foreign %

Financial Statements and Financial Reporting

Accounting is the universal language of business. One noted economist and politician indicated that the single most important innovation shaping capital markets was the development of sound accounting principles. The essential characteristics of accounting are (1) the identification, measurement, and communication of financial information about (2) economic entities to (3) interested parties.

Financial accounting is the process that culminates in the preparation of financial reports on the enterprise for use by both internal and external parties. Users of these financial reports include investors, creditors, managers, unions, and government agencies. In contrast, **managerial accounting** is the process of identifying, measuring, analyzing, and communicating financial information needed by management to plan, control, and evaluate a company's operations.

Financial statements are the principal means through which a company communicates its financial information to those outside the business. These statements provide a company's history quantified in money terms. The **financial statements** most frequently provided are (1) the statement of financial position, (2) the income statement (or statement

of comprehensive income), (3) the statement of cash flows, and (4) the statement of changes in equity. Note disclosures are an integral part of each financial statement.

Some financial information is better provided, or can be provided only, by means of **financial reporting** other than formal financial statements. Examples include the president's letter or supplementary schedules in the company annual report, prospectuses, reports filed with government agencies, news releases, management's forecasts, and social or environmental impact statements. Companies may need to provide such information because of authoritative pronouncements and regulatory rules, or custom. Or, they may supply it because management wishes to disclose it voluntarily.

In this textbook, we focus on the development of two types of financial information: (1) the basic financial statements and (2) related disclosures.

Accounting and Capital Allocation

Resources are limited. As a result, people try to conserve them and ensure that they are used effectively. Efficient use of resources often determines whether a business thrives. This fact places a substantial burden on the accounting profession.

Accountants must measure performance accurately and fairly on a timely basis, so that the right managers and companies are able to attract investment capital. For example, relevant financial information that faithfully represents financial results allows investors and creditors to compare the income and assets employed by such companies as **Nokia** (FIN), **McDonald's** (USA), **Air China Ltd.** (CHN), and **Toyota Motor Company** (JPN). Because these users can assess the relative return and risks associated with investment opportunities, they channel resources more effectively. [Illustration 1.3](#) shows how this process of capital allocation works.

ILLUSTRATION 1.3 Capital Allocation Process

An effective process of capital allocation is critical to a healthy economy. It promotes productivity, encourages innovation, and provides an efficient and liquid market for buying and selling securities and obtaining and granting credit. Unreliable and irrelevant information leads to poor capital allocation, which adversely affects the securities markets.

High-Quality Standards

To facilitate efficient capital allocation, investors need relevant information and a faithful representation of that information to enable them to make comparisons across borders. For example, assume that you were interested in investing in the telecommunications industry. Four of the largest telecommunications companies in the world are **Nippon Telegraph and Telephone** (JPN), **Deutsche Telekom** (DEU), **Telefonica** (ESP and PRT), and **AT&T** (USA). How do you decide in which of these telecommunications companies to invest, if any? How do you compare, for example, a Japanese company like Nippon Telegraph and Telephone with a German company like Deutsche Telekom?

A single, widely accepted set of high-quality accounting standards is a necessity to ensure adequate comparability. Investors are able to make better investment decisions if they receive financial information from Nippon Telegraph and Telephone that is comparable to information from Deutsche Telekom. Globalization demands a single set of high-quality international accounting standards. But how is this to be achieved? Here are some elements:

1. Single set of high-quality accounting standards established by a single standard-setting body.
2. Consistency in application and interpretation.
3. Common disclosures.
4. Common high-quality auditing standards and practices.
5. Common approach to regulatory review and enforcement.
6. Education and training of market participants.
7. Common delivery systems (e.g., eXtensible Business Reporting Language—XBRL).
8. Common approach to company governance and legal frameworks around the world.¹

Fortunately, as indicated in the opening story, significant changes in the financial reporting environment are taking place, which hopefully will lead to a single, widely accepted set of high-quality accounting standards. The major standard-setters of the world, coupled with regulatory authorities, now recognize that capital formation and investor understanding are enhanced if a single set of high-quality accounting standards is developed.

Objective of Financial Reporting

LEARNING OBJECTIVE 2

Explain the objective of financial reporting.

What is the **objective (or purpose) of financial reporting**? The objective of general-purpose financial reporting is to **provide financial information about the reporting entity that is useful to present and potential equity investors, lenders, and other creditors in making decisions about providing resources to the entity**. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit.

[1] (See the [Authoritative Literature References](#) section near the end of

the chapter.) Information that is decision-useful to capital providers (investors) may also be useful to other users of financial reporting who are not investors. Let's examine each of the elements of this objective.

General-Purpose Financial Statements

General-purpose financial statements provide financial reporting information to a wide variety of users. For example, when **Nestlé** (CHE) issues its financial statements, these statements help shareholders, creditors, suppliers, employees, and regulators to better understand its financial position and related performance. Nestlé's users need this type of information to make effective decisions. To be cost-effective in providing this information, general-purpose financial statements are most appropriate. In other words, general-purpose financial statements provide, at the **least cost, the most useful information possible**.

Equity Investors and Creditors

The objective of financial reporting identifies investors and creditors as the primary user group for general-purpose financial statements. Identifying investors and creditors as the primary user group provides an important focus of general-purpose financial reporting. For example, when Nestlé issues its financial statements, its primary focus is on investors and creditors because they have the most critical and immediate need for information in financial reports. Investors and creditors need this financial information to assess Nestlé's ability to generate net cash inflows and to understand management's ability to protect and enhance the assets of the company, which will be used to generate future net cash inflows. As a result, the primary user groups are not management, regulators, or some other non-investor group.

What Do the Numbers Mean?

Don't Forget Management Stewardship

In addition to providing decision-useful information about future cash flows, management also is accountable to investors for the custody and safekeeping of the company's economic resources and for their efficient and profitable use. For example, the management of Nestlé has the responsibility of protecting its economic resources from unfavorable effects of economic factors, such as price changes, and technological and social changes. Because Nestlé's performance in discharging its responsibilities (referred to as its **stewardship** responsibilities) usually affects its ability to generate net cash inflows, financial reporting may also provide decision-useful information to assess management performance in this role. [2]

Entity Perspective

As part of the objective of general-purpose financial reporting, an **entity perspective** is adopted. Companies are viewed as separate and distinct from their owners (present shareholders) using this perspective. The assets of Nestlé are viewed as assets of the company and not of a specific creditor or shareholder. Rather, these investors have claims on Nestlé's assets in the form of liability or equity claims. The entity perspective is consistent with the present business environment, where most companies engaged in financial reporting have substance distinct from their investors (both shareholders and creditors). Thus, the perspective that financial reporting should be focused only on the needs of shareholders—often referred to as the **proprietary perspective**—is not considered appropriate.

Decision-Usefulness

Investors are interested in financial reporting because it provides information that is useful for making decisions (referred to as the **decision-usefulness** approach). As indicated earlier, when making these decisions, investors are interested in assessing (1) the company's

ability to generate net cash inflows and (2) management's ability to protect and enhance the capital providers' investments. Financial reporting should therefore help investors assess the amounts, timing, and uncertainty of prospective cash inflows from dividends or interest, and the proceeds from the sale, redemption, or maturity of securities or loans. In order for investors to make these assessments, the economic resources of an enterprise, the claims to those resources, and the changes in them must be understood. Financial statements and related explanations should be a primary source for determining this information.

The emphasis on "assessing cash flow prospects" does not mean that the cash basis is preferred over the accrual basis of accounting. Information based on accrual accounting generally indicates more accurately a company's present and continuing ability to generate favorable cash flows than does information limited to the financial effects of cash receipts and payments.

Recall from your first accounting course the objective of **accrual-basis accounting**: it ensures that a company records events that change its financial statements in the periods in which the events occur, rather than only in the periods in which it receives or pays cash. Using the accrual basis to determine net income means that a company recognizes revenues when it provides the goods or performs the services (that is, satisfies its performance obligation) rather than when it receives cash. Similarly, it recognizes expenses when it incurs them rather than when it pays them. Under accrual accounting, a company generally recognizes revenues when it makes sales or performs services. The company can then relate the revenues to the economic environment of the period in which they occurred. Over the long run, trends in revenues and expenses are generally more meaningful than trends in cash receipts and disbursements.²

Standard-Setting Organizations

LEARNING OBJECTIVE 3

Identify the major policy-setting bodies and their role in the standard-setting process.

For many years, many nations have relied on their own standard-setting organizations. For example, Canada has the Accounting Standards Board, Japan has the Accounting Standards Board of Japan, Germany has the German Accounting Standards Committee, and the United States has the Financial Accounting Standards Board (FASB). The standards issued by these organizations are sometimes principles-based, rules-based, tax-oriented, or business-based. In other words, they often differ in concept and objective.

The main international standard-setting organization is based in London, England, and is called the **International Accounting Standards Board (IASB)**. The IASB issues **International Financial Reporting Standards (IFRS)**, which are used on most foreign exchanges. As indicated earlier, IFRS is presently used or permitted in over 149 jurisdictions (similar to countries) and is rapidly gaining acceptance in other jurisdictions as well.

IFRS has the best potential to provide a common platform on which companies can report, resulting in financial statements investors can use to compare financial information. As a result, our discussion focuses on IFRS and the organization involved in developing these standards—the International Accounting Standards Board (IASB). The two organizations that have a role in international standard-setting are the **International Organization of Securities Commissions (IOSCO)** and the IASB.

International Organization of Securities Commissions (IOSCO)

The **International Organization of Securities Commissions (IOSCO)** is an association of organizations that regulate the world's securities and futures markets. Members are generally the main financial regulator for a given country. IOSCO does not set accounting standards. Instead, this organization is dedicated to ensuring that the

global markets can operate in an efficient and effective basis. The member agencies (such as from France, Germany, New Zealand, and the United States) have resolved to:

- Cooperate to promote high standards of regulation in order to maintain just, efficient, and sound markets.
- Exchange information on their respective experiences in order to promote the development of domestic markets.
- Unite their efforts to establish standards and an effective surveillance of international securities transactions.
- Provide mutual assistance to promote the integrity of the markets by a rigorous application of the standards and by effective enforcement against offenses.

IOSCO supports the development and use of IFRS as the single set of high-quality international standards in cross-border offerings and listings. It recommends that its members allow multinational issuers to use IFRS in cross-border offerings and listings, as supplemented by reconciliation, disclosure, and interpretation where necessary to address outstanding substantive issues at a national or regional level. (For more information, go to the IOSCO website.)

What Do the Numbers Mean?

What About the Little Guy?

As discussed in the opening story, IFRS has gained acceptance, especially for publicly traded companies that wish to access international capital markets. What about non-public companies? Well, IFRS has a financial reporting answer for these “SMEs” (small and medium-sized entities).

The 250-page *IFRS for SMEs* focuses on the information needs of lenders, creditors, and other users of SME financial statements, who are primarily interested in information about cash flows, liquidity, and solvency. It also takes into account the costs to SMEs and the capabilities of SMEs to prepare financial information. While based on the full-IFRS principles, the *IFRS for SMEs* is considerably less complex. It reflects five types of simplifications from full IFRS:

1. Some full-IFRS topics are omitted because they are not relevant to typical SMEs.
2. Some full-IFRS accounting policy options are not allowed because a more simplified method is available to SMEs.
3. Many of the full-IFRS recognition and measurement principles have been simplified.
4. Substantially fewer disclosures are required.
5. The full-IFRS text has been redrafted in “plain English” for increased understandability and translation.

To date, 85 of the 150 jurisdictions whose profiles are followed by the IASB require or permit the *IFRS for SMEs*. It is also currently under consideration in a further 11 jurisdictions. So IFRS is gaining traction with both public and non-public companies.

International Accounting Standards Board (IASB)

The standard-setting structure internationally is composed of the following four organizations:

1. The **IFRS Foundation** provides oversight to the IASB, IFRS Advisory Council, and IFRS Interpretations Committee. In this role, it appoints members, reviews effectiveness, and helps in the fundraising efforts for these organizations.
2. The **International Accounting Standards Board (IASB)** develops, in the public interest, a single set of high-quality, enforceable, and global international financial reporting standards for general-purpose financial statements.³
3. The **IFRS Advisory Council** (the Advisory Council) provides advice and counsel to the IASB on major policies and technical issues.
4. The **IFRS Interpretations Committee** assists the IASB through the timely identification, discussion, and resolution of financial reporting issues within the framework of IFRS.

In addition, as part of the governance structure, a **Monitoring Board** was created. The purpose of this board is to establish a link between accounting standard-setters and those public authorities (e.g., IOSCO) that generally oversee them. The Monitoring Board also provides political legitimacy to the overall organization. [**Illustration 1.4**](#) shows the organizational structure for the setting of international accounting standards.

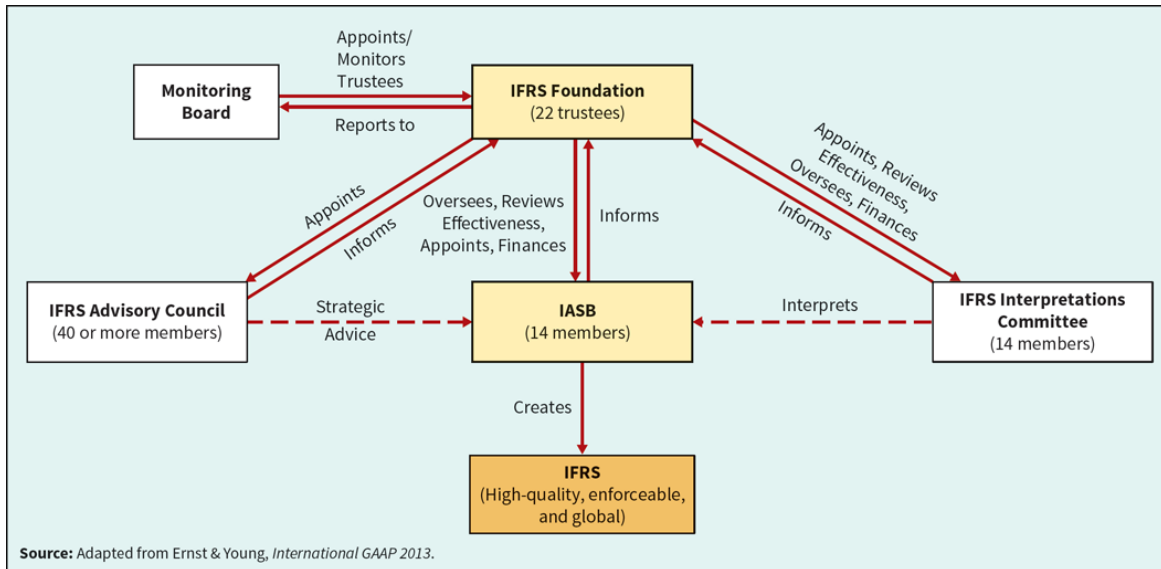

ILLUSTRATION 1.4 International Standard-Setting Structure

Due Process

In establishing financial accounting standards, the IASB has a thorough, open, and transparent **due process**. The IASB due process has the following elements: (1) an independent standard-setting board overseen by a geographically and professionally diverse body of trustees; (2) a thorough and systematic process for developing standards; (3) engagement with investors, regulators, business leaders, and the global accountancy profession at every stage of the process; and (4) collaborative efforts with the worldwide standard-setting community.

To implement its due process, the IASB follows specific steps to develop a typical IFRS, as Illustration 1.5 shows.

ILLUSTRATION 1.5 IASB Due Process

Furthermore, the characteristics of the IASB, as shown below, reinforce the importance of an open, transparent, and independent due process.

- **Membership.** The Board consists of 14 full-time members. Members are well-paid, appointed for five-year renewable terms, and come from different countries.⁴
- **Autonomy.** The IASB is not part of any other professional organization. It is appointed by and answerable only to the IFRS Foundation.
- **Independence.** Full-time IASB members must sever all ties from their past employer. The members are selected for their expertise in standard-setting rather than to represent a given country.
- **Voting.** A majority of votes are needed to issue a new IFRS. In the event of a tie, the chairperson is granted an additional vote.

With these characteristics, the IASB and its members will be insulated as much as possible from the political process, favored industries, and national or cultural bias.

Types of Pronouncements

The IASB issues three major types of pronouncements:

1. International Financial Reporting Standards.
2. Conceptual Framework for Financial Reporting.
3. International Financial Reporting Standards Interpretations.

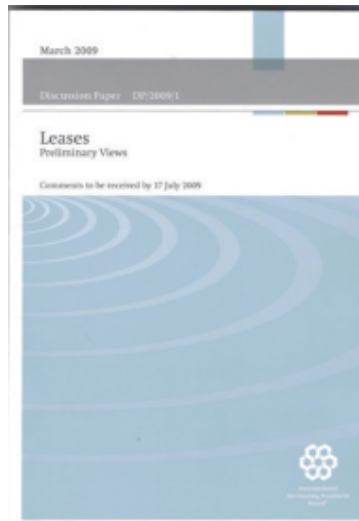

International Financial Reporting Standards

Financial accounting standards issued by the IASB are referred to as International Financial Reporting Standards (IFRS). The IASB has issued 17 of these standards to date, covering such subjects as business combinations, share-based payments, and leases.

Prior to the IASB (formed in 2001), standard-setting on the international level was done by the International Accounting Standards Committee, which issued International Accounting Standards (IAS). The committee issued 41 IASs, many of which have been amended or superseded by the IASB. Those still remaining are considered under the umbrella of IFRS.

Conceptual Framework for Financial Reporting

As part of a long-range effort to move away from the problem-by-problem approach, the IASB uses an IFRS conceptual framework. This **Conceptual Framework for Financial Reporting** sets forth the fundamental objective and concepts that the Board uses in developing future standards of financial reporting. The intent of the document is to form a cohesive set of interrelated concepts—a conceptual framework—that will serve as tools for solving existing and emerging problems in a consistent manner. For example, the objective of general-purpose financial reporting discussed earlier is part of this Conceptual Framework. The Conceptual Framework and any changes to it pass through the same due process (preliminary views, public hearing, exposure draft, etc.) as an IFRS. However, this Conceptual Framework is not an IFRS and hence does not define standards for any particular measurement or disclosure issue. Nothing in this Conceptual Framework overrides any specific international accounting standard. The Conceptual Framework is discussed more fully in [Chapter 2](#).

International Financial Reporting Standards Interpretations

Interpretations issued by the **IFRS Interpretations Committee** are also considered authoritative and must be followed. These interpretations cover (1) newly identified financial reporting issues not specifically dealt with in IFRS and (2) issues where unsatisfactory or conflicting interpretations have developed, or seem likely to develop, in the absence of authoritative guidance. The IFRS Interpretations Committee has issued over 20 of these interpretations to date.

In keeping with the IASB's own approach to setting standards, the IFRS Interpretations Committee applies a principles-based approach in providing interpretative guidance. To this end, the IFRS Interpretations Committee looks first to the Conceptual Framework as the foundation for formulating a consensus. It then looks to the principles articulated in the applicable standard, if any, to develop its interpretative guidance and to determine that the proposed guidance does not conflict with provisions in IFRS.

The IFRS Interpretations Committee helps the IASB in many ways. For example, emerging issues often attract public attention. If not resolved quickly, these issues can lead to financial crises and scandals. They can also undercut public confidence in current reporting practices. The next step, possible governmental intervention, would threaten the continuance of standard-setting in the private sector. The IFRS Interpretations Committee can address controversial accounting problems as they arise. It determines whether it can resolve them or whether to involve the IASB in solving them. In essence, it becomes a "problem filter" for the IASB. Thus, the IASB will hopefully work on

more pervasive long-term problems, while the IFRS Interpretations Committee deals with short-term emerging issues.

Hierarchy of IFRS

Because it is a private organization, the IASB has no regulatory mandate and therefore no enforcement mechanism. As a result, the Board relies on other regulators to enforce the use of its standards. For example, the European Union requires publicly traded member country companies to use IFRS.

Any company indicating that it is preparing its financial statements in conformity with IFRS must use all of the standards and interpretations. The following **hierarchy** is used to determine what recognition, valuation, and disclosure requirements should be used. Companies first look to:

1. International Financial Reporting Standards, International Accounting Standards (issued by the predecessor to the IASB), and IFRS interpretations originated by the IFRS Interpretations Committee (and its predecessor, the IAS Interpretations Committee);
2. The Conceptual Framework for Financial Reporting; and
3. Pronouncements of other standard-setting bodies that use a similar conceptual framework (e.g., U.S. GAAP).

In the absence of a standard or an interpretation in item 1 above, companies look to the Conceptual Framework for Financial Reporting and then to most recent pronouncements of other standard-setting bodies that use a similar conceptual framework to develop accounting standards (or other accounting literature and accepted industry practices to the extent they do not conflict with the above). The overriding requirement of IFRS is that the financial statements provide a fair presentation (often referred to as a “true and fair view”). Fair representation is assumed to occur if a company follows the guidelines established in IFRS.⁵ [3]

Financial Reporting Challenges

LEARNING OBJECTIVE 4

Discuss the challenges facing financial reporting.

Much is right about international financial reporting. One reason for this success is that financial statements and related disclosures capture and organize financial information in a useful and reliable fashion. However, much still needs to be done. Here are some of the major challenges.

IFRS in a Political Environment

User groups are possibly the most powerful force influencing the development of IFRS. User groups consist of those most interested in or affected by accounting rules. Various participants in the financial reporting environment may want particular economic events accounted for or reported in a particular way, and they fight hard to get what they want. They know that the most effective way to influence IFRS is to participate in the formulation of these rules or to try to influence or persuade the formulators of them.⁶

These user groups often target the IASB, to pressure it to change the existing rules and develop new ones. In fact, these pressures have been multiplying. Some influential groups demand that the accounting profession act more quickly and decisively to solve its problems. Other groups resist such action, preferring to implement change more slowly, if at all. [Illustration 1.6](#) shows the various user groups that apply pressure.

Should there be politics in establishing IFRS for financial accounting and reporting? Why not? Politics is everywhere: at the office, home, school, church, temple, and mosque. IFRS is part of the real world, and it cannot escape political pressures.

That is not to say that politics in establishing IFRS is a negative force. Considering the **economic consequences** of many accounting rules, special interest groups are expected to vocalize their reactions to proposed rules.⁷ What the Board should *not* do is issue standards that are primarily politically motivated. While paying attention to its

constituencies, the Board should base IFRS on sound research and a conceptual framework that has its foundation in economic reality.

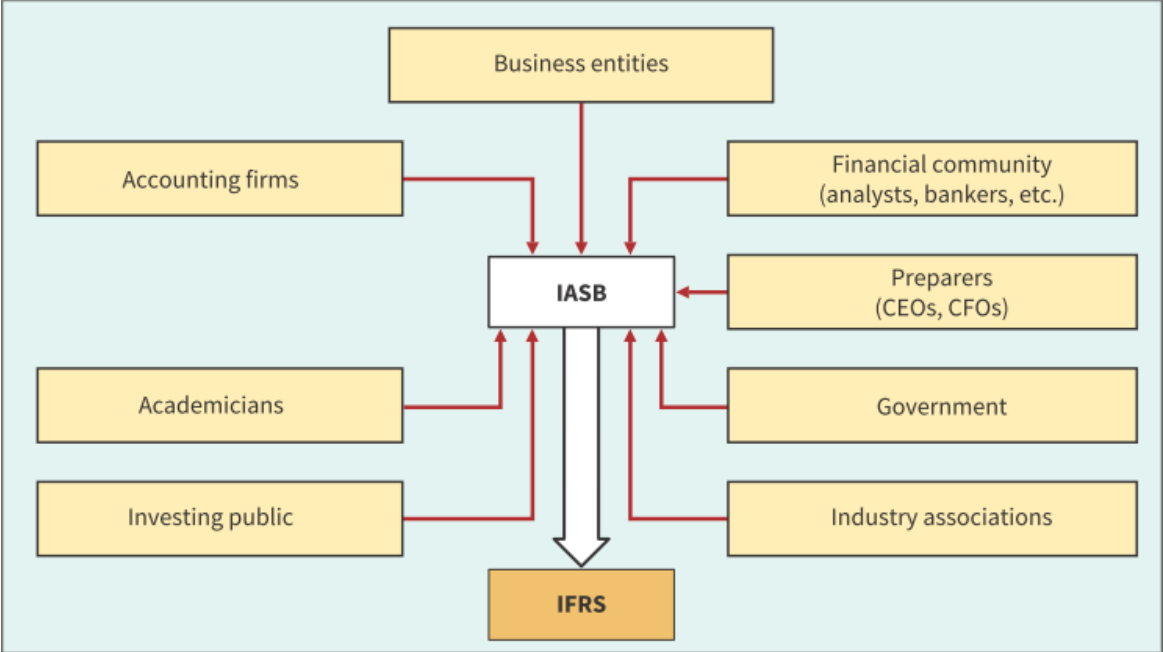

ILLUSTRATION 1.6 User Groups that Influence the Formulation of Accounting Standards

What Do the Numbers Mean?

Fair Consequences?

No accounting issue better illustrates the economic consequences of accounting than the current debate over the use of fair value accounting for financial assets. The IASB has had long-standing standards requiring the use of fair value accounting for financial assets, such as investments and other financial instruments. Fair value provides the most relevant and reliable information for investors about these assets and liabilities. However, in the wake of the credit crisis of 2008, some countries, their central banks, and bank regulators wanted to suspend fair value accounting based on concerns that use of fair value accounting, which calls for recording significant losses on poorly performing loans and investments, would scare investors and depositors and lead to a “run on the bank.”

Most notable was the lobbying of then French President Nicolas Sarkozy in urging his European Union counterparts to back changes to accounting rules and give banks and insurers some breathing space amid the market turmoil. Mr. Sarkozy sought agreement to the new regulations, including changes to the mark-to-market accounting rules that have been blamed for aggravating the crisis. International regulators also have conducted studies of fair value accounting and its role in the credit crisis. It is clear that political pressure affected the final standard on financial instruments. The standard (issued in 2016) permits companies to use amortized cost instead of fair value for held-for-collection financial assets. The amortized cost approach was favored by financial institutions with substantial portfolios of held-for-collection financial assets. These financial institutions applied much pressure on regulators, noting the dire economic consequences that might follow if they had to use fair value in reporting on these financial assets. In short, numbers have consequences.

Sources: Adapted from Ben Hall and Nikki Tait, “Sarkozy Seeks EU Accounting Change,” *The Financial Times Limited* (September 30, 2008).

The Expectations Gap

Accounting scandals at companies like **Parmalat** (ITA), **Siemens** (DEU), and **Carillion** (GBR) have attracted the attention of regulators, investors, and the general public. Due to the size and the number of fraudulent reporting cases, some question whether the accounting profession is doing enough. The **expectations gap**—what the public thinks accountants should do and what accountants think they can do—is difficult to close.

Although the profession can argue rightfully that accounting cannot be responsible for every financial catastrophe, it must continue to strive to meet the needs of society. However, efforts to meet these needs will become more costly to society. The development of highly transparent, clear, and reliable systems to meet public expectations requires considerable resources.

Significant Financial Reporting Issues

While our reporting model has worked well in capturing and organizing financial information in a useful and reliable fashion, much still needs to be done. For example, if we move ahead to the year 2030 and look back at financial reporting today, we might read the following.

- **Non-financial measurements.** Financial reports failed to provide some key performance measures widely used by management, such as customer satisfaction indexes, backlog information, and reject rates on goods purchased.
- **Forward-looking information.** Financial reports failed to provide forward-looking information needed by present and potential investors and creditors. One individual noted that financial statements in 2022 should have started with the phrase, “Once upon a time,” to signify their use of historical cost and accumulation of past events.
- **Soft assets.** Financial reports focused on hard assets (inventory, plant assets) but failed to provide much information about a company’s soft assets (intangibles). The most valuable assets are often intangible. Consider **Sony**’s (JPN) expertise in electronics and **Ikea**’s (NLD) brand image.

- **Timeliness.** Companies only prepared financial statements quarterly and provided audited financials annually. Little to no real-time financial statement information was available.

We believe each of these challenges must be met for the accounting profession to provide the type of information needed for an efficient capital allocation process. We are confident that changes will occur, based on these positive signs:

- Already, some companies voluntarily disclose information deemed relevant to investors. Often such information is non-financial. For example, banking companies now disclose data on loan growth, credit quality, operating efficiency, capital management, and management strategy.
- Initially, companies used the Internet to provide limited financial data. Now, most companies publish their annual reports in several formats on the Web. The most innovative companies offer sections of their annual reports in a format that the user can readily manipulate, such as in an electronic spreadsheet format. Companies also format their financial reports using eXtensible Business Reporting Language (XBRL), which permits quicker and lower-cost access to companies' financial information.
- More accounting standards now require the recording or disclosing of fair value information. For example, companies either record investments in shares and bonds, debt obligations, and derivatives at fair value, or companies show information related to fair values in the notes to the financial statements.

Changes in these directions will enhance the relevance of financial reporting and provide useful information to financial statement readers.

Ethics in the Environment of Financial Accounting

A noted commentator on the subject of accounting ethics observed, "Based on my experience, new graduates tend to be idealistic ... thank goodness for that! Still it is very dangerous to think that your armor is all in place and say to yourself, 'I would have never given in to that.' The pressures don't explode on us; they build, and we often don't recognize

them until they have us.” These observations are particularly appropriate for anyone entering the business world.

In accounting, as in other areas of business, we frequently encounter ethical dilemmas. Some of these dilemmas are simple and easy to resolve. However, many are not, requiring difficult choices among allowable alternatives. Companies that concentrate on “maximizing the bottom line,” “facing the challenges of competition,” and “stressing short-term results” place accountants in an environment of conflict and pressure. Basic questions such as, “Is this way of communicating financial information good or bad?” “Is it right or wrong?” and “What should I do in the circumstance?” cannot always be answered by simply adhering to IFRS or following the rules of the profession. Technical competence is not enough when encountering ethical decisions.

Doing the right thing is not always easy or obvious. The pressures “to bend the rules,” “to play the game,” or “to just ignore it” can be considerable. For example, “Will my decision affect my job performance negatively?” “Will my superiors be upset?” or “Will my colleagues be unhappy with me?” are often questions businesspeople face in making a tough ethical decision. The decision is more difficult because there is no comprehensive ethical system to provide guidelines. Time, job, client, personal, and peer pressures can complicate the process of ethical sensitivity and selection among alternatives. Throughout this textbook, **we present ethical considerations to help sensitize you** to the type of situations you may encounter in the performance of your professional responsibility.

International Convergence

As discussed in the opening story, convergence to a single set of high-quality financial reporting standards is desirable. Here are some examples of how convergence is occurring:

1. China is reforming its financial reporting system through an approach called a continuous convergence process. The goal is to eliminate differences between its standards and IFRS.
2. Japan now permits the use of IFRS for domestic companies. The number of companies electing to use IFRS is expected to increase

substantially in the near future.

3. The IASB and the FASB (of the United States) have spent the last 19 years working to converge their standards. The two Boards issued standards on revenue recognition, financial instruments, and lease accounting, which mark the end of the Boards' formal convergence project. Although the IASB and FASB standards in these three areas are similar, there are significant differences as well.⁸
4. Recently, Malaysia was instrumental in helping to amend the accounting for agricultural assets.
5. Italy's standard-setting group has provided advice and counsel on the accounting for business combinations under common control.

In addition, U.S. and European regulators have agreed to recognize each other's standards for listing on the various world securities exchanges. As a result, costly reconciliation requirements have been eliminated, which should lead to greater comparability and transparency. Because international accounting issues are so important, we provide in each chapter of this textbook **Global Accounting Insights**, which highlight non-IFRS standards, mostly those from the United States. This feature will help you to understand the changes that are taking place in the financial reporting area as we move toward converged global accounting standards.

What Do the Numbers Mean?

Can You Do That?

One of the more difficult issues related to convergence and international accounting standards is that countries have different cultures and customs. For example, the former chair of the IASB explained it this way regarding Europe:

“In the U.K. everything is permitted unless it is prohibited. In Germany, it is the other way around; everything is prohibited unless it is permitted. In the Netherlands, everything is prohibited even if it is permitted. And in France, everything is permitted even if it is prohibited. Add in countries like Japan, the United States, and China, it becomes very difficult to meet the needs of each of these countries.”

With this diversity of thinking around the world, it understandable why accounting convergence has been so elusive.

Source: Sir D. Tweedie, “Remarks at the Robert P. Maxon Lectureship,” George Washington University (April 7, 2010).

Conclusion

International financial reporting continues to evolve. A number of convergence projects already are completed and differences eliminated. However, as one international regulator indicates, “the ultimate question remains whether IFRS will in fact function as the single set of high-quality, global accounting standards that the world has been seeking for so long. At least, when it comes to satisfying investors’ concerns, there is no question of the attractiveness of the promise of a truly global accounting standard. The only real question is not whether this is good for investors, but how quickly both the accounting standards and the process by which they are established and developed can be globally recognized as world-class.”

Learning Objectives Review

1 Describe the global financial markets and their relation to financial reporting.

World markets are increasingly intertwined. With the integration of capital markets, the automatic linkage between the location of the company and the location of the capital market is loosening. As a result, companies have expanded choices of where to raise capital, either equity or debt. The move toward adoption of global accounting standards has facilitated and will continue to facilitate this trend.

Financial statements and other means of financial reporting.

Companies most frequently provide (1) the statement of financial position, (2) the income statement or statement of comprehensive income, (3) the statement of cash flows, and (4) the statement of changes in equity. Financial reporting other than financial statements may take various forms. Examples include the president's letter and supplementary schedules in the company annual report, prospectuses, reports filed with government agencies, news releases, management's forecasts, and descriptions of a company's social or environmental impact.

Efficient use of scarce resources. Accounting provides reliable, relevant, and timely information to managers, investors, and creditors to allow resource allocation to the most efficient enterprises. Accounting also provides measurements of efficiency (profitability) and financial soundness.

High-quality standards. A single, widely accepted set of high-quality accounting standards is a necessity to ensure adequate comparability. Investors are increasingly making investing decisions across international jurisdictions. As a result, investors need financial information that is comparable across national boundaries. But what are high-quality accounting standards, how should they be developed, and how should they be enforced is still a much debated issue.

2 Explain the objective of financial reporting.

The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is useful to present and potential equity investors, lenders, and other creditors in making decisions about providing resources to the entity. Information that is

decision-useful to investors may also be useful to other users of financial reporting who are not investors.

3 Identify the major policy-setting bodies and their role in the standard-setting process.

The International Organization of Securities Commissions (IOSCO) does not set accounting standards but is dedicated to ensuring that the global markets can operate in an efficient and effective manner. The International Accounting Standards Board (IASB) is the leading international accounting standard-setting organization. Its mission is to develop, in the public interest, a single set of high-quality and understandable International Financial Reporting Standards (IFRS) for general-purpose financial statements. Standards issued by the IASB have been adopted by over 149 jurisdictions (similar to countries) worldwide, and all publicly traded European companies must use IFRS.

IFRS is comprised of (a) International Financial Reporting Standards, (b) International Accounting Standards, and (c) interpretations issued by the IFRS Interpretations Committee or the former Standing Interpretations Committee (SIC). In the absence of a standard or an interpretation, other accounting literature, including that contained in the Conceptual Framework for Financial Reporting and recent pronouncements of other standard-setting bodies that use a similar conceptual framework, can be applied.

4 Discuss the challenges facing financial reporting.

Challenges include (1) the development of IFRS in a political environment; (2) the expectations gap; (3) financial reporting issues related to key performance measures widely used by management, forward-looking information needed by investors and creditors, sufficient information on a company's soft assets (intangibles), and real-time financial information, including fair values; (4) ethics in accounting; and (5) international convergence.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

At the completion of Bloom NV's audit, the president, Judy Bloom, asks about the meaning of the phrase "in conformity with IFRS" that appears in your audit report on the management's financial statements. Judy observes that the meaning of the phrase must include something more and different than what she thinks of as "standards." Judy is curious about the pronouncements that are encompassed in IFRS and wonders, if there are different types of pronouncements, which are more authoritative than others?

Instructions

- a. Describe the pronouncements that comprise IFRS.
- b. Explain to Judy how a company determines which type of pronouncement takes precedence when deciding the recognition, valuation, and disclosure related to a particular transaction.

Solution

- a. The IASB issues three major types of pronouncements:
 1. International Financial Reporting Standards.
 2. Conceptual Framework for Financial Reporting.
 3. International Financial Reporting Standards Interpretations.

IASB standards are financial accounting standards issued by the IASB and are referred to as International Financial Reporting Standards (IFRS). The Conceptual Framework for Financial Reporting sets forth the fundamental objective and concepts that the Board uses in developing accounting standards that will serve

as tools for solving existing and emerging problems in a consistent manner.

- b. The hierarchy of IFRS to determine what recognition, valuation, and disclosure requirements should be used is:
1. International Financial Reporting Standards, including International Accounting Standards, and interpretations from the International Financial Reporting Standards Interpretations Committee.
 2. If not addressed in 1., refer to IFRS Concepts Statements.
 3. If not addressed in 1. and 2., refer to pronouncements of other standard-setting bodies that use a similar conceptual framework (e.g. U.S. GAAP).

Any company indicating that it is preparing its financial statements in conformity with IFRS must comply with the standards and interpretations.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. What is happening to world markets, and what are the implications for financial reporting?
2. Differentiate broadly between financial accounting and managerial accounting.
3. What are the major financial statements, and what is the difference between financial statements and financial reporting?
4. How does accounting help in the capital allocation process?
5. What is the benefit of a single set of high-quality accounting standards?
6. What is the objective of financial reporting?
7. What is meant by general-purpose financial statements?

- 8.** Who is the primary user group for general-purpose financial statements?
- 9.** Comment on the following statement: A perspective that financial reporting should be focused only on the needs of the shareholders—often referred to as the *proprietary perspective*—is considered appropriate.
- 10.** Comment on the following statement: The objective of financial reporting is primarily to provide decision-useful information for assessing the performance of management.
- 11.** What are the two key organizations in the development of international accounting standards? Explain their role.
- 12.** What is IOSCO?
- 13.** What is the mission of the IASB?
- 14.** What is the purpose of the Monitoring Board?
- 15.** How are IASB preliminary views and IASB exposure drafts related to IASB standards?
- 16.** Distinguish between IASB standards and the Conceptual Framework for Financial Reporting.
- 17.** Rank from most authoritative to least authoritative the following three items: Conceptual Framework for Financial Reporting, International Financial Reporting Standards, and International Financial Reporting Standards Interpretations.
- 18.** Explain the role of the IFRS Interpretations Committee.
- 19.** What are some of the major challenges facing the accounting profession?
- 20.** What are the sources of pressure that change and influence the development of IFRS?
- 21.** Some individuals have indicated that the IASB must be cognizant of the economic consequences of its pronouncements. What is meant by “economic consequences”? What dangers exist if politics play too much of a role in the development of IFRS?

22. If you were given complete authority in the matter, how would you propose that IFRS should be developed and enforced?

23. One writer recently noted that a high percentage of all companies prepare statements that are in accordance with IFRS. Why then is there such concern about fraudulent financial reporting?

24. What is the “expectations gap”? What is the profession doing to try to close this gap?

25. How are financial accountants challenged in their work to make ethical decisions? Is technical mastery of IFRS not sufficient to the practice of financial accounting?

Concepts for Analysis

CA1.1 (LO 3) (IFRS and Standard-Setting) Presented below are five statements to identify as true or false. If false, explain why the statement is incorrect.

1. IFRS is the term used to indicate the whole body of IASB authoritative literature.
2. Any company claiming compliance with IFRS must follow most standards and interpretations but not the disclosure requirements.
3. The primary governmental body that has influence over the IASB is the IFRS Advisory Council.
4. The overriding requirement of IFRS is for the financial statements to give a fair presentation (or true and fair view).
5. The IASB has a government mandate and therefore does not have to follow due process in issuing an IFRS.

CA1.2 (LO 2, 3) (IFRS and Standard-Setting) Presented below are four statements to identify as true or false. If false, explain why the statement is incorrect.

1. The objective of financial statements emphasizes a stewardship approach for reporting financial information.

2. The objective of financial reporting is to prepare a statement of financial position, a statement of comprehensive income, a statement of cash flows, and a statement of changes in equity.
3. The difference between International Accounting Standards and IFRS is that International Accounting Standards are more authoritative.
4. The objective of financial reporting uses an entity rather than a proprietary approach in determining what information to report.

CA1.3 (LO 2, 3, 4) (Financial Reporting and Accounting Standards) Answer the following multiple-choice questions.

1. IFRS stands for:
 - a. International Federation of Reporting Services.
 - b. Independent Financial Reporting Standards.
 - c. International Financial Reporting Standards.
 - d. Integrated Financial Reporting Services.
2. The major key organizations on the international side are the:
 - a. IASB and IFRS Advisory Council.
 - b. IOSCO and the U.S. SEC.
 - c. London Stock Exchange and International Securities Exchange.
 - d. IASB and IOSCO.
3. Which governmental body is most influential in enforcing IFRS?
 - a. Monitoring Board.
 - b. IFRS Advisory Council.
 - c. IOSCO.
 - d. IFRS Foundation.
4. Accounting standard-setters use the following process in establishing international standards:
 - a. Research, exposure draft, discussion paper, standard.

- b. Discussion paper, research, exposure draft, standard.
 - c. Research, preliminary views, discussion paper, standard.
 - d. Research, preliminary views, exposure draft, standard.
5. IFRS is comprised of:
- a. International Financial Reporting Standards and FASB financial reporting standards.
 - b. International Financial Reporting Standards, International Accounting Standards, and International Accounting Standards Interpretations.
 - c. International Accounting Standards and International Accounting Standards Interpretations.
 - d. FASB financial reporting standards and International Accounting Standards.
6. The authoritative status of the Conceptual Framework for Financial Reporting is as follows:
- a. It is used when there is no standard or interpretation related to the reporting issues under consideration.
 - b. It is not as authoritative as a standard but takes precedence over any interpretation related to the reporting issue.
 - c. It takes precedence over all other authoritative literature.
 - d. It has no authoritative status.
7. The objective of financial reporting places most emphasis on:
- a. reporting to capital providers.
 - b. reporting on stewardship.
 - c. providing specific guidance related to specific needs.
 - d. providing information to individuals who are experts in the field.
8. General-purpose financial statements are prepared primarily for:
- a. internal users.

- b. external users.
- c. auditors.
- d. government regulators.

9. Economic consequences of accounting standard-setting means:

- a. standard-setters must give first priority to ensuring that companies do not suffer any adverse effect as a result of a new standard.
- b. standard-setters must ensure that no new costs are incurred when a new standard is issued.
- c. the objective of financial reporting should be politically motivated to ensure acceptance by the general public.
- d. accounting standards can have detrimental impacts on the wealth levels of the providers of financial information.

10. The expectations gap is the difference between:

- a. what financial information management provides and what users want.
- b. what the public thinks accountants should do and what accountants think they can do.
- c. what the governmental agencies want from standard-setting and what the standard-setters provide.
- d. what the users of financial statements want from the government and what is provided.

CA1.4 (LO 1) (Financial Accounting) Omar Morena has recently completed his first year of studying accounting. His instructor for next semester has indicated that the primary focus will be the area of financial accounting.

Instructions

- a. Differentiate between financial accounting and managerial accounting.

- b. One part of financial accounting involves the preparation of financial statements. What are the financial statements most frequently provided?
- c. What is the difference between financial statements and financial reporting?

CA1.5 (LO 3) Writing (Need for IASB) Some argue that having various organizations establish accounting principles is wasteful and inefficient. Rather than mandating accounting rules, each company could voluntarily disclose the type of information it considered important. In addition, if an investor wants additional information, the investor could contact the company and pay to receive the additional information desired.

Instructions

Comment on the appropriateness of this viewpoint.

CA1.6 (LO 3) (IASB Role in Standard-Setting) A press release announcing the appointment of the trustees of the new IFRS Foundation stated that the International Accounting Standards Board (to be appointed by the trustees) “... will become the established authority for setting accounting Standards.”

Instructions

- a. Identify the sponsoring organization of the IASB and the process by which the IASB arrives at a decision and issues an accounting standard.
- b. Indicate the major types of pronouncements issued by the IASB and the purposes of each of these pronouncements.

CA1.7 (LO 4) (Accounting Numbers and the Environment)

Hardly a day goes by without an article appearing on the crises affecting many of our financial institutions. It is estimated that the financial crisis of 2007–2008, for example, caused a deep recession. Some argue that if financial institutions had been required to report their investments at fair value instead of cost, large losses would have been reported earlier,

which would have signaled regulators to close these financial institutions, therefore minimizing the losses to many investors.

Instructions

Explain how reported accounting numbers might affect an individual's perceptions and actions. Cite two examples.

CA1.8 (LO 3, 4) Writing (Politicization of IFRS) Some accountants have said that politicization in the development and acceptance of International Financial Reporting Standards (IFRS) is taking place. Some use the term “politicization” in a narrow sense to mean the influence by governmental agencies, such as the European Union and the U.S. Securities and Exchange Commission, on the development of IFRS. Others use it more broadly to mean the compromise that results when the bodies responsible for developing IFRS are pressured by interest groups, businesses through their various organizations, financial analysts, bankers, lawyers, academics, auditors, and so on.

Instructions

- a. What arguments can be raised to support the “politicization” of accounting rule-making?
- b. What arguments can be raised against the “politicization” of accounting rule-making?

CA1.9 (LO 3) (Models for Setting IFRS) Presented below are three models for setting IFRS.

1. The purely political approach, where national legislative action decrees IFRS.
2. The private, professional approach, where IFRS is set and enforced by private professional actions only.
3. The public/private mixed approach, where IFRS is basically set by private-sector bodies that behave as though they were public agencies and whose standards to a great extent are enforced through governmental agencies.

Instructions

- a. Which of these three models best describes international standard-setting? Comment on your answer.
- b. Why do companies, financial analysts, labor unions, industry trade associations, and others take such an active interest in standard-setting?

CA1.10 (LO 4) (Economic Consequences) Several years ago, then French President Nicolas Sarkozy urged his European Union counterparts to put pressure on the IASB to change accounting rules to give banks and insurers some relief from fair value accounting rules amid market turmoil. Mr. Sarkozy sought changes to the mark-to-market accounting rules that have been blamed for aggravating the crisis.

Instructions

Explain how government intervention could possibly affect capital markets adversely.

CA1.11 (LO 3, 4) Ethics (Rule-Making Issues) When the IASB issues new pronouncements, the implementation date is usually delayed for several months from date of issuance, with early implementation encouraged. Karen Weller, controller, discusses with her financial vice president the need for early implementation of a rule that would result in a fairer presentation of the company's financial condition and earnings. When the financial vice president determines that early implementation of the rule will adversely affect the reported net income for the year, he discourages Weller from implementing the rule until it is required.

Instructions

Answer the following questions.

- a. What, if any, is the ethical issue involved in this case?
- b. Is the financial vice president acting improperly or immorally?
- c. What does Weller have to gain by advocacy of early implementation?

d. Which stakeholders might be affected by the early implementation decision?

CA1.12 (LO 4) Ethics (Financial Reporting Pressures) The following is abbreviated testimony from Troy Normand in the **WorldCom** (USA) case. He was a manager in the company reporting department and was one of five individuals who pleaded guilty. He testified to avoid prison time.

Q. Mr. Normand, if you could just describe for the jury how the meeting started and what was said during the meeting?

A. I can't recall exactly who initiated the discussion, but right away Scott Sullivan acknowledged that he was aware we had problems with the entries, David Myers had informed him, and we were considering resigning.

He said that he respected our concerns but that we weren't being asked to do anything that he believed was wrong. He mentioned that he acknowledged that the company had lost focus quite a bit due to the preparations for the Sprint merger, and that he was putting plans in place and projects in place to try to determine where the problems were, why the costs were so high.

He did say he believed that the initial statements that we produced, that the line costs in those statements could not have been as high as they were, that he believes something was wrong and there was no way that the costs were that high.

I informed him that I didn't believe the entry we were being asked to do was right, that I was scared, and I didn't want to put myself in a position of going to jail for him or the company. He responded that he didn't believe anything was wrong, nobody was going to be going to jail, but that if it later was found to be wrong, that he would be the person going to jail, not me.

He asked that I stay, don't jump off the plane, let him land it softly, that's basically how he put it. And he mentioned that he had a discussion with Bernie Ebbers asking Bernie to reduce projections going forward and that Bernie had refused.

Q. Mr. Normand, you said that Mr. Sullivan said something about don't jump out of the plane. What did you understand him to mean when he said that?

A. Not to quit.

Q. During this meeting, did Mr. Sullivan say anything about whether you would be asked to make entries like this in the future?

A. Yes, he made a comment that from that point going forward we wouldn't be asked to record any entries, high-level late adjustments, that the numbers would be the numbers.

Q. What did you understand that to be mean, the numbers would be the numbers?

A. That after the preliminary statements were issued, with the exception of any normal transaction, valid transaction, we wouldn't be asked to be recording any more late entries.

Q. I believe you testified that Mr. Sullivan said something about the line cost numbers not being accurate. Did he ask you to conduct any analysis to determine whether the line cost numbers were accurate?

A. No, he did not.

Q. Did anyone ever ask you to do that?

A. No.

Q. Did you ever conduct any such analysis?

A. No, I didn't.

Q. During this meeting, did Mr. Sullivan ever provide any accounting justification for the entry you were asked to make?

A. No, he did not.

Q. Did anything else happen during the meeting?

A. I don't recall anything else.

Q. How did you feel after this meeting?

A. Not much better actually. I left his office not convinced in any way that what we were asked to do was right. However, I did question myself

to some degree after talking with him wondering whether I was making something more out of what was really there.

Instructions

Answer the following questions.

- a. What appears to be the ethical issue involved in this case?
- b. Is Troy Normand acting improperly or immorally?
- c. What would you do if you were Troy Normand?
- d. Who are the major stakeholders in this case?

Using Your Judgment

Financial Reporting Problem

Lola Otero, a new staff accountant, is confused because of the complexities involving accounting standard-setting. Specifically, she is confused by the number of bodies issuing financial reporting standards of one kind or another and the level of authoritative support that can be attached to these reporting standards. Lola decides that she must review the environment in which accounting standards are set, if she is to increase her understanding of the accounting profession.

Lola recalls that during her accounting education there was a chapter or two regarding the environment of financial accounting and the development of IFRS. However, she remembers that her instructor placed little emphasis on these chapters.

Instructions

- a. Help Lola by identifying key organizations involved in accounting rule-making at the international level.
- b. Lola asks for guidance regarding authoritative support. Please assist her by explaining what is meant by authoritative support.

Financial Reporting Case

The following comments were made at an Annual Conference of the Financial Executives Institute (FEI).

There is an irreversible movement toward a single set of rules for financial reporting throughout the world. The international capital markets require an end to:

1. The confusion caused by international companies announcing different results depending on the set of accounting standards applied.
2. Companies in some countries obtaining unfair commercial advantages from the use of particular national accounting standards.
3. The complications in negotiating commercial arrangements for international joint ventures caused by different accounting requirements.
4. The inefficiency of international companies having to understand and use myriad accounting standards depending on the countries in which they operate and the countries in which they raise capital and debt. Executive talent is wasted on keeping up to date with numerous sets of accounting standards and the never-ending changes to them.
5. The inefficiency of investment managers, bankers, and financial analysts as they seek to compare financial reporting drawn up in accordance with different sets of accounting standards.

Instructions

- a. What is the International Accounting Standards Board?
- b. What stakeholders might benefit from the use of international accounting standards?
- c. What do you believe are some of the major obstacles to convergence?

Accounting, Analysis, and Principles

The founders of Oslo Group, Finn Elo and Venden Hakala, are about to realize their dream of taking their company public. They are trying to better understand the various legal and accounting issues they will face as a public company.

Accounting

- a. What are some of the reporting requirements that their company will have to comply with when they offer securities to investors and creditors?
- b. Identify the two entities that are primarily responsible for establishing IFRS, which will be applied when preparing their financial statements. Explain the relationship of these two organizations to one another.

Analysis

- a. What is decision-usefulness?
- b. Briefly describe how the financial statements that Oslo prepares for its investors and creditors will contribute to decision-usefulness.

Principles

Oslo will prepare its statements in conformity with IFRS. Finn and Venden have heard about an IFRS hierarchy. Briefly explain this hierarchy and advise them on how the hierarchy affects the application of IFRS.

Bridge to the Profession

[3] International Accounting Standard 8, *Accounting Policies, Changes in Accounting Estimates and Errors* (London, U.K.: IASB, 1993), par. 12.

Research Case

As a newly enrolled accounting major, you are anxious to better understand accounting institutions and sources of accounting literature. As a first step, you decide to explore the IASB's Conceptual Framework for Financial Reporting.

Instructions

Access the Conceptual Framework at the IFRS website (you may register for free IFRS access at this site). When you have accessed the document, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- a. What is the objective of financial reporting?
- b. Explain the role of presentation and disclosure principles to facilitate communication in financial statements.
- c. Indicate some of the users and the information they are most directly concerned with in economic decision-making.

Global Accounting Insights

LEARNING OBJECTIVE 5

Compare IFRS and U.S. GAAP and their standard-setting processes.

Most agree that there is a need for one set of international accounting standards. Here is why:

- **Multinational companies.** Today's companies view the entire world as their market. For example, many companies find their largest market is not in their home country.
- **Mergers and acquisitions.** The mergers that led to international giants **Kraft/Cadbury** (USA and GBR) and

Vodafone/Mannesmann (GBR and DEU) suggest that we will see even more such mergers in the future.

- A single set of high-quality accounting standards ensures **adequate comparability**. Investors are able to make better investment decisions if they receive financial information from a U.S. company that is comparable to an international competitor.
- **Information technology**. As communication barriers continue to topple through advances in technology, companies and individuals in different countries and markets are becoming comfortable buying and selling goods and services from one another.
- **Financial markets**. Financial markets are some of the most significant international markets today. Whether it is currency, equity securities (shares), bonds, or derivatives, there are active markets throughout the world trading these types of instruments.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP (the standards issued by the Financial Accounting Standards Board) and IFRS related to the financial reporting environment.

Similarities

- Generally accepted accounting principles (GAAP) for U.S. companies are developed by the Financial Accounting Standards Board (FASB). The FASB is a private organization. The U.S. Securities and Exchange Commission (SEC) exercises oversight over the actions of the FASB. The IASB is also a private organization. Oversight over the actions of the IASB is regulated by IOSCO.
- Both the IASB and the FASB have essentially the same governance structure, that is, a Foundation that provides oversight, a Board, an Advisory Council, and an Interpretations Committee. In addition, a general body that involves the public interest is part of the governance structure.
- The FASB relies on the U.S. SEC for regulation and enforcement of its standards. The IASB relies primarily on IOSCO for regulation

and enforcement of its standards.

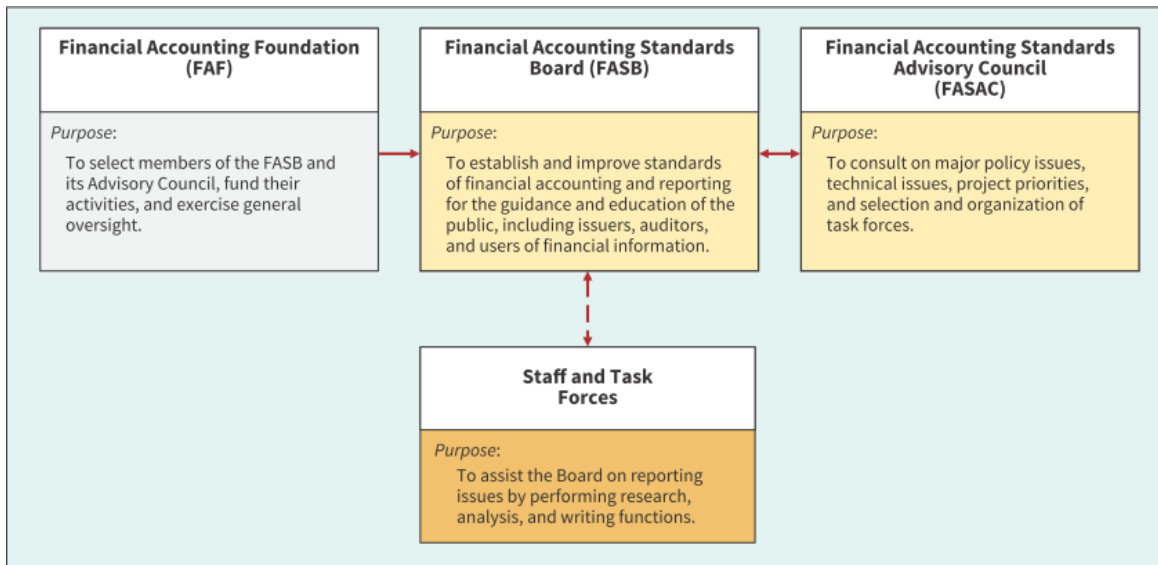

- Both the IASB and the FASB are working together to find common ground wherever possible.

Differences

- U.S. GAAP is more detailed or rules-based. IFRS tends to be simpler and more flexible in the accounting and disclosure requirements. The difference in approach has resulted in a debate about the merits of principles-based versus rules-based standards.
- Differences between U.S. GAAP and IFRS should not be surprising because standard-setters have developed standards in response to different user needs. In some countries, the primary users of financial statements are private investors. In others, the primary users are tax authorities or central government planners. In the United States, investors and creditors have driven accounting-standard formulation.

About the Numbers

The FASB and its predecessor organizations have been developing standards for nearly 80 years. The IASB is a relatively new organization (formed in 2001). As a result, it has looked to the United States to determine the structure it should follow in establishing IFRS. Thus, the international standard-setting structure (presented in [Illustration 1.4](#)) is very similar to the U.S. standard-setting structure. Presented below is a chart of the FASB's standard-setting structure.

On the Horizon

Both the IASB and the FASB are hard at work developing standards that will lead to the elimination of major differences in the way certain transactions are accounted for and reported. In fact, beginning in 2010, the IASB (and the FASB on its joint projects with the IASB) started its policy of phasing in adoption of new major standards over several years. The major reason for this policy is to provide companies time to translate and implement international standards into practice.

GAAP Self-Test Questions

1. GAAP (for U.S. companies) stands for:
 - a. Government accepted accounting practices.
 - b. Generally accepted auditing policies.
 - c. Generally accepted accounting principles.
 - d. Government approved accounting principles.

2. Oversight of accounting standard-setting is as follows:
 - a. IASB oversees FASB.
 - b. IOSCO oversees both the IASB and FASB.
 - c. SEC oversees both the IASB and FASB.

d. SEC oversees FASB, IOSCO oversees IASB.

3. Governance of the FASB involves:

- a. FASB, FAF, FASAC, and IOSCO.
- b. FASB, FAF, FASAC, and staff and task forces.
- c. FASB, FAF, IASB, and task forces.
- d. FASB, FAF, IASB, and the SEC.

4. Which of the following statements is **false**?

- a. FASB is a government office within the SEC.
- b. The FASB and IASB have similar governance structures.
- c. U.S. GAAP is generally viewed as more detailed or rules-based; IFRS is viewed as more principles-based.
- d. The SEC oversees FASB standard-setting.

5. Which of the following statements is **true**?

- a. The IASB does not include the public interest in its governance.
- b. The IASB structure has both advisory and interpretation functions, but no Foundation.
- c. The IASB has been in existence longer than the FASB.
- d. The IASB structure is quite similar to the FASB's, with a Foundation, Board, Advisory Council, and Interpretations Committee.

GAAP Concepts and Application

GAAP1.1 What organizations are the two key players in the development of U.S. GAAP? Explain their role.

GAAP1.2 What might explain the fact that different accounting standard-setters have developed accounting standards that are sometimes quite different in nature?

Answers to GAAP Self-Test Questions

1. c 2. d 3. b 4. a 5. d

Notes

- 1 Robert H. Herz, “Towards a Global Reporting System: Where Are We and Where Are We Going?” *AICPA National Conference on SEC and PCAOB Reporting Developments* (December 10, 2007).
- 2 As used here, cash flow means “cash generated and used in operations.” The term *cash flows* also frequently means cash obtained by borrowing and used to repay borrowing, cash used for investments in resources and obtained from the disposal of investments, and cash contributed by or distributed to owners.
- 3 The IASB was preceded by the International Accounting Standards Committee (IASC), which came into existence on June 29, 1973, as a result of an agreement by professional accountancy bodies in Australia, Canada, France, Germany, Japan, Mexico, the Netherlands, the United Kingdom and Ireland, and the United States. A revised agreement and constitution was signed in November 1982 and was updated most recently in 2009. The constitution mandates that all standards and interpretations issued under previous constitutions continue to be applicable unless and until they are amended or withdrawn. When the term *IFRS* is used in this textbook, it includes standards and interpretations approved by the IASB, and International Accounting Standards (IAS) and Standards Interpretations Committee (SIC) interpretations issued under previous constitutions.
- 4 IASB membership reflects geographical representation, generally with members from Europe, the Americas, Asia–Oceania, and Africa.
- 5 In rare cases, compliance with a standard or interpretation is judged to be misleading when it conflicts with the objective of financial reporting. In this case, it is possible to have what is referred to as a “true and fair override.” If this occurs, extensive disclosure is required to explain the rationale for this unusual exception.

- 6 However, as IASB chairperson Hans Hoogervorst noted, “It is not always obvious what is lobbying by vested interests and what is public interest feedback whose purpose is to help us deliver a high quality standard. More often than not the vested interest is packaged in public interest arguments. Sometimes even users do not want change. Analysts are so much in love with their own models that they do not want our standards to shed light on complex issues.” See “Strengthening Institutional Relationships,” www.ifrs.org/-/media/feature/news/speeches/2013/hans-hoogervorst-wss-september-2013.pdf.
- 7 *Economic consequences* means the impact of accounting reports on the wealth positions of issuers and users of financial information and the decision-making behavior resulting from that impact. The resulting behavior of these individuals and groups could have detrimental financial effects on the providers of the financial information. See Stephen A. Zeff, “The Rise of ‘Economic Consequences’,” *Journal of Accountancy* (December 1978), pp. 56–63.
- 8 The chairperson of the IASB recently noted that the notion of the United States embracing IFRS is politically dead. The IASB is now taking the position that it will attempt both to avoid divergence and to favor convergence between IFRS and U.S. GAAP wherever possible. Staying converged can be challenging, as illustrated by the Boards’ deliberations on sustainability reporting and the accounting for goodwill. In the case of goodwill, the FASB has floated the idea of allowing companies to amortize goodwill (and avoid the cost of annual impairment testing). The IASB has been opposed to such an approach. See M. Cohn, “Sustainability Standards Seen as Too Fragmented,” www.accountingtoday.com/news/sustainability-standards-seen-as-too-fragmented (October 17, 2019); and M. Mauer, “U.S., International Accounting Rule Makers Differ on Goodwill Amortization,” *Wall Street Journal* (October 17, 2019).

CHAPTER 2

Conceptual Framework for Financial Reporting

LEARNING OBJECTIVES

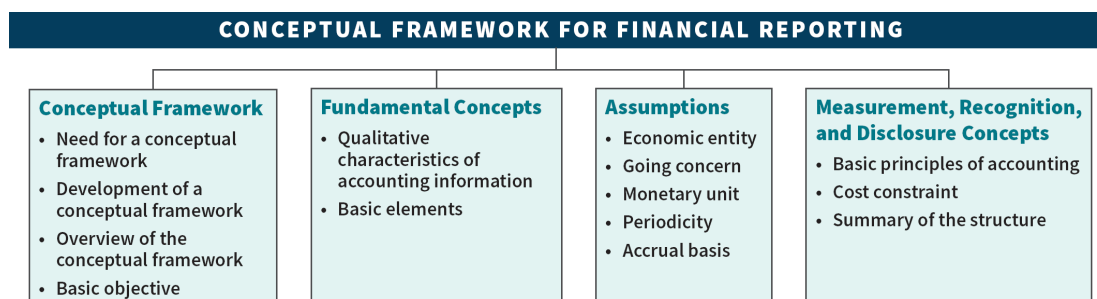

After studying this chapter, you should be able to:

1. Describe the usefulness of a conceptual framework and the objective of financial reporting.
2. Identify the qualitative characteristics of accounting information and the basic elements of financial statements.
3. Review the basic assumptions of accounting.
4. Explain the application of the basic principles of accounting.

This chapter provides a foundation for numerous conceptual discussions that are integral to the topics in subsequent chapters.

PREVIEW OF CHAPTER 2

As the following opening story indicates, users of financial statements can face difficult questions about the recognition and measurement of financial items. To help develop the type of financial information that can be used to answer these questions, financial accounting and reporting relies on a conceptual framework. In this chapter, we discuss the basic concepts underlying the conceptual framework, as follows.

What Is It?

Everyone agrees that accounting needs a framework—a conceptual framework, so to speak—that will help guide the development of standards. To understand the importance of developing this framework, let’s see how you would respond in the following two situations.

Situation 1: “Taking a Long Shot ... ”

To supplement donations collected from its general community solicitation, Tri-Cities United Charities holds an Annual Lottery Sweepstakes. In this year’s sweepstakes, United Charities is offering a grand prize of \$1,000,000 to a single winning ticket holder. A total of 10,000 tickets have been printed, and United Charities plans to sell all the tickets at a price of \$150 each.

Since its inception, the Sweepstakes has attracted area-wide interest, and United Charities has always been able to meet its sales target. However, in the unlikely event that it might fail to sell a sufficient number of tickets to cover the grand prize, United Charities has reserved the right to cancel the Sweepstakes and to refund the price of the tickets to holders.

In recent years, a fairly active secondary market for tickets has developed. This year, buying–selling prices have varied between \$75 and \$95 before stabilizing at about \$90.

When the tickets first went on sale this year, multimillionaire Phil N. Tropic, well-known in Tri-Cities civic circles as a generous but sometimes eccentric donor, bought one of the tickets from United Charities, paying \$150 cash.

How would you answer the following questions?

1. Should Phil N. Tropic recognize his lottery ticket as an asset in his financial statements?
2. Assuming that Phil N. Tropic recognizes the lottery ticket as an asset, at what amount should it be reported? Some possible answers are \$150, \$100, and \$90.

Situation 2: The \$20 Million Question

The Hard Rock Mining Company has just completed the first year of operations at its new strip mine, the Lonesome Doe. Hard Rock spent \$10 million for the land and \$20 million in preparing the site for mining operations. The mine is expected to operate for 20 years. Hard Rock is subject to environmental statutes requiring it to restore the Lonesome Doe mine site on completion of mining operations.

Based on its experience and industry data, as well as current technology, Hard Rock forecasts that restoration will cost about \$10 million when it is undertaken. Of those costs, about \$4 million is for restoring the topsoil that was removed in preparing the site for mining operations (prior to opening the mine); the rest is directly proportional to the depth of the mine, which in turn is directly proportional to the amount of ore extracted.

How would you answer the following questions?

1. Should Hard Rock recognize a liability for site restoration in conjunction with the opening of the Lonesome Doe Mine? If so, what is the amount of that liability?
2. After Hard Rock has operated the Lonesome Doe Mine for five years, new technology is introduced that reduces Hard Rock's estimated future restoration costs to \$7 million, \$3 million of which relates to restoring the topsoil. How should Hard Rock account for this change in its estimated future liability?

The answers to these questions depend on how assets and liabilities are defined and how they should be valued. The International Accounting Standards Board (IASB) recently issued an update to its conceptual framework with what are hoped to be improved definitions for assets and liabilities. This chapter reflects those new definitions as well as measurement concepts, which provide the IASB and you with a framework to resolve questions like these.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Conceptual Framework

LEARNING OBJECTIVE 1

Describe the usefulness of a conceptual framework and the objective of financial reporting.

A **conceptual framework** establishes the concepts that underlie financial reporting. A conceptual framework is a coherent system of concepts that flow from an objective. The objective identifies the purpose of financial reporting. The other concepts provide guidance on (1) identifying the boundaries of financial reporting; (2) selecting the transactions, other events, and circumstances to be represented; (3) how they should be recognized and measured; and (4) how they should be summarized and reported.¹

Need for a Conceptual Framework

Why do we need a conceptual framework? First, to be useful, rule-making should build on and relate to an established body of concepts. A soundly developed conceptual framework thus enables the IASB to issue **more useful and consistent pronouncements over time**, and a coherent set of standards should result. Indeed, without the guidance provided by a soundly developed framework, standard-setting ends up being based on individual concepts developed by each member of the standard-setting body. The following observation by a former standard-setter highlights the problem.

“As our professional careers unfold, each of us develops a technical conceptual framework. Some individual frameworks are sharply defined and firmly held; others are vague and weakly held; still others are vague and firmly held.... At one time or another, most of us have felt the discomfort of listening to somebody buttress a preconceived conclusion by building a convoluted chain of shaky reasoning. Indeed, perhaps on occasion we have voiced such thinking ourselves.... My experience ... taught me many lessons. A major one was that most of us have a natural tendency and an incredible talent for processing new facts in such a way that our prior conclusions remain intact.”²

In other words, standard-setting that is based on personal conceptual frameworks will lead to different conclusions about identical or similar issues than it did previously. As a result, standards will not be consistent with one another, and past decisions may not be indicative of future ones. Furthermore, the framework should increase financial statement users’ understanding of and confidence in financial reporting. It should also enhance comparability among companies’ financial statements.

Second, as a result of a soundly developed conceptual framework, the profession should be able to more quickly solve new and emerging **practical problems by referring to an existing framework of basic theory**. For example, assume that **Aphrodite Gold Ltd.** (AUS) issued bonds with two payment options. It can redeem them either with \$2,000 in cash or with 5 ounces of gold, whichever is worth more at maturity. The bonds have a stated interest rate of 8.5 percent. At what amounts should Aphrodite or the buyers of the bonds record them? What is the amount of the premium or discount on the bonds? And how should Aphrodite amortize this amount, if the bond redemption payments are to be made in gold (the future value of which is unknown at the date of issuance)? Consider that Aphrodite cannot know, at the date of issuance, the value of future gold bond redemption payments.

It is difficult, if not impossible, for the IASB to prescribe the proper accounting treatment quickly for situations like this or like those

represented in our opening story. Practicing accountants, however, must resolve such problems on a daily basis. How? Through good judgment and with the help of a universally accepted conceptual framework, practitioners can quickly focus on an acceptable treatment.

What Do the Numbers Mean?

What's Your Principle?

The need for a conceptual framework is highlighted by accounting scandals such as those at **Royal Ahold** (NLD), **Enron** (USA), **Satyan Computer Services** (IND), and, most recently, **Carillion** (GBR). To restore public confidence in the financial reporting process, many have argued that regulators should move toward principles-based rules. They believe that companies exploited the detailed provisions in rules-based pronouncements to manage accounting reports, rather than report the economic substance of transactions.

For example, many of the off-balance-sheet arrangements of Enron avoided transparent reporting by barely achieving 3 percent outside equity ownership, a requirement in an obscure accounting rule interpretation. Enron's financial engineers were able to structure transactions to achieve a desired accounting treatment, even if that accounting treatment did not reflect the transaction's true nature. Under principles-based rules, hopefully top management's financial reporting focus will shift from demonstrating compliance with rules to demonstrating that a company has attained financial reporting objectives.

Development of a Conceptual Framework

In 2018, the IASB published the *Conceptual Framework for Financial Reporting* (the Conceptual Framework). This fully revised document replaced the section of the 2010 version of the Conceptual Framework that had been carried forward from the 1989 version, as well as

addressed some changes introduced in 2010. The Conceptual Framework comprises eight chapters, as follows.

[Chapter 1](#), The Objective of General Purpose Financial Statements.

Chapter 2, Qualitative Characteristics of Useful Financial Information.

[Chapter 3](#), Financial Statements and the Reporting Entity.

[Chapter 4](#), The Elements of Financial Statements.

[Chapter 5](#), Recognition and Derecognition.

[Chapter 6](#), Measurement.

[Chapter 7](#), Presentation and Disclosure.

[Chapter 8](#), Concepts of Capital and Capital Maintenance.

The IASB worked diligently to complete the Conceptual Framework, as the Board recognized the need for such a document to serve its diverse users. It should be emphasized that while the Conceptual Framework is not an IFRS, it is part of the authoritative literature. Thus, the Conceptual Framework can provide guidance in many situations where an IFRS does not cover the issue under consideration.³ [2]

Overview of the Conceptual Framework

[Illustration 2.1](#) provides an overview of the IASB's Conceptual Framework for Financial Reporting, also referred to simply as the Conceptual Framework.

ILLUSTRATION 2.1 Conceptual Framework for Financial Reporting

The first level identifies the **objective of financial reporting**—that is, the purpose of financial reporting. The second level provides the **qualitative characteristics** that make accounting information useful and the **elements of financial statements** (assets, liabilities, and so on). The third level identifies the **recognition, measurement, and disclosure** concepts used in establishing and applying accounting standards and the specific concepts to implement the objective. These concepts include assumptions, principles, and a

cost constraint that describe the present reporting environment. We examine these three levels of the Conceptual Framework next.

Basic Objective

The **objective of financial reporting** is the foundation of the Conceptual Framework. Other aspects of the Conceptual Framework—qualitative characteristics, elements of financial statements, recognition, measurement, and disclosure—flow logically from the objective. Those aspects of the Conceptual Framework help to ensure that financial reporting achieves its objective.

The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors** in making decisions about providing resources to the entity. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. To make effective decisions, these parties need information to help them assess a company's prospects for future net cash flows and/or provide a return to existing and potential investors, lenders, and other creditors. For example, a lender may need information in order to decide whether to loan money to a company. Similarly, an equity investor may need information about a company's profitability in order to decide whether to purchase or sell shares.

Management stewardship is how well management uses a company's resources to create and sustain value. To evaluate stewardship, companies should provide information about their financial position, changes in financial position, and performance. They should also show how efficiently and effectively management and the board of directors have discharged their responsibilities to use the company's resources wisely. Therefore, information that is useful in assessing stewardship can also be useful for assessing a company's prospects for future net cash inflows. [3]

Information that is **decision-useful** to capital providers may also be helpful to users of financial reporting who are not capital providers. As indicated in [Chapter 1](#), to provide information to decision-makers,

companies prepare general-purpose financial statements. **General-purpose financial reporting** helps users who lack the ability to demand all the financial information they need from a company and who must therefore rely, at least partly, on the information provided in financial reports. However, an implicit assumption is that users need reasonable knowledge of business and financial accounting matters to understand the information contained in financial statements. This point is important. It means that financial statement preparers assume a level of competence on the part of users. This assumption impacts the way and the extent to which companies report information.

Fundamental Concepts

LEARNING OBJECTIVE 2

Identify the qualitative characteristics of accounting information and the basic elements of financial statements.

The objective (first level) focuses on the purpose of financial reporting. Later, we will discuss the ways in which this purpose is implemented (third level). What, then, is the purpose of the second level? The second level provides conceptual building blocks that explain the qualitative characteristics of accounting information and define the elements of financial statements. [4] That is, the second level forms a bridge between the why of accounting (the objective) and the how of accounting (recognition, measurement, and financial statement presentation).

Qualitative Characteristics of Accounting Information

Should a company like **Marks and Spencer plc** (GBR) provide information in its financial statements on how much it costs to acquire its assets (historical cost basis), or how much the assets are currently worth (fair value basis)? Should **Samsung** (KOR) combine and show as one company the main segments of its business, or should it report Consumer Electronics, Information Technology &

Mobile Communications, Device Solutions, and Harman as separate segments?

How does a company choose an acceptable accounting method, the amount and types of information to disclose, and the format in which to present it? The answer: By determining **which alternative provides the most useful information for decision-making purposes (decision-usefulness)**. The IASB identified the **qualitative characteristics** of accounting information that distinguish better (more useful) information from inferior (less useful) information for decision-making purposes. In addition, the IASB identified a cost constraint as part of the Conceptual Framework (discussed later in the chapter). As **Illustration 2.2** shows, the characteristics may be viewed as a hierarchy.

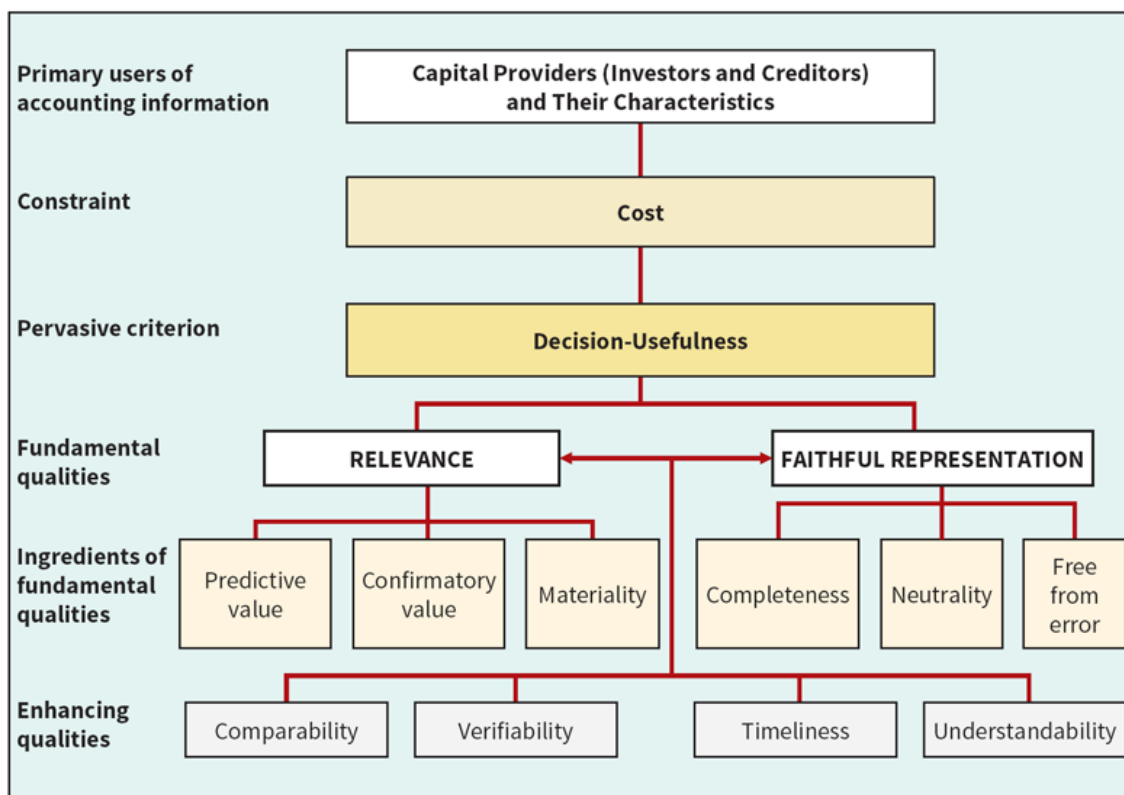

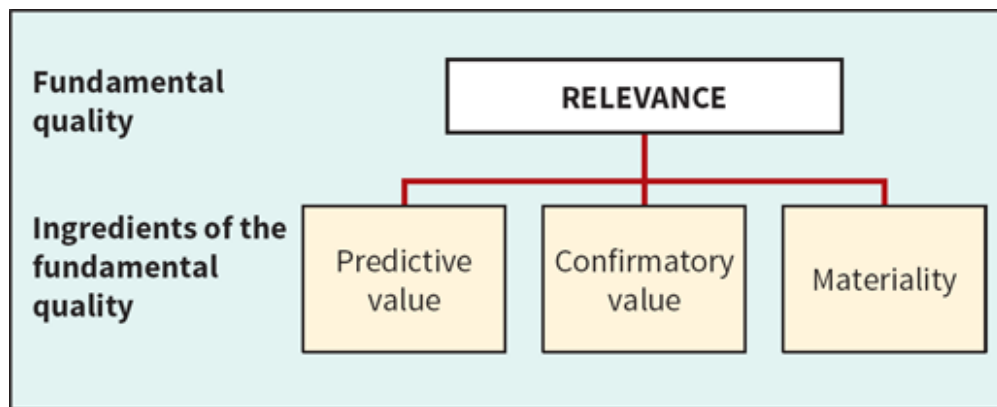

ILLUSTRATION 2.2 Hierarchy of Accounting Qualities

As indicated by **Illustration 2.2**, qualitative characteristics are either fundamental or enhancing characteristics, depending on how they

affect the decision-usefulness of information. Regardless of classification, each qualitative characteristic contributes to the decision-usefulness of financial reporting information. However, providing useful financial information is limited by a pervasive constraint on financial reporting—cost should not exceed the benefits of a reporting practice.

Fundamental Quality—Relevance

Relevance is one of the two fundamental qualities that make accounting information useful for decision-making. Relevance and related ingredients of this fundamental quality are shown below.

To be **relevant**, accounting information must be capable of making a difference in a decision. Information with no bearing on a decision is irrelevant. Financial information is capable of making a difference when it has predictive value, confirmatory value, or both.

Financial information has **predictive value** if it has value as an input to predictive processes used by investors to form their own expectations about the future. For example, if potential investors are interested in purchasing ordinary shares in **Nippon** (JPN), they may analyze its current resources and claims to those resources, its dividend payments, and its past income performance to predict the amount, timing, and uncertainty of Nippon's future cash flows.

Relevant information also helps users confirm or correct prior expectations; it has **confirmatory value**. For example, when Nippon issues its year-end financial statements, it confirms or changes past (or present) expectations based on previous evaluations. It follows

that predictive value and confirmatory value are interrelated. For example, information about the current level and structure of Nippon's assets and liabilities helps users predict its ability to take advantage of opportunities and to react to adverse situations. The same information helps to confirm or correct users' past predictions about that ability.

Materiality is a company-specific aspect of relevance. Information is material if omitting it or misstating it could influence decisions that users make on the basis of the reported financial information. An individual company determines whether information is material because both the nature and/or magnitude of the item(s) to which the information relates must be considered in the context of an individual company's financial report. Information is *immaterial*, and therefore irrelevant, if it would have no impact on a decision-maker. In short, it **must make a difference** or a company need not disclose it.

Assessing materiality is one of the more challenging aspects of accounting because it requires evaluating both the **relative size and importance** of an item. However, it is difficult to provide firm guidelines in judging when a given item is or is not material. Materiality varies both with relative amount and with relative importance. For example, the two sets of numbers in **Illustration 2.3** indicate relative size.

	Company A	Company B
Sales	\$10,000,000	\$100,000
Costs and expenses	9,000,000	90,000
Income from operations	<u>\$ 1,000,000</u>	<u>\$ 10,000</u>
Unusual gain	\$ 20,000	\$ 5,000

ILLUSTRATION 2.3 Materiality Comparison

During the period in question, the revenues and expenses, and therefore the net incomes of Company A and Company B, are proportional. Each reported an unusual gain. In looking at the abbreviated income figures for Company A, it appears insignificant whether the amount of the unusual gain is set out separately or

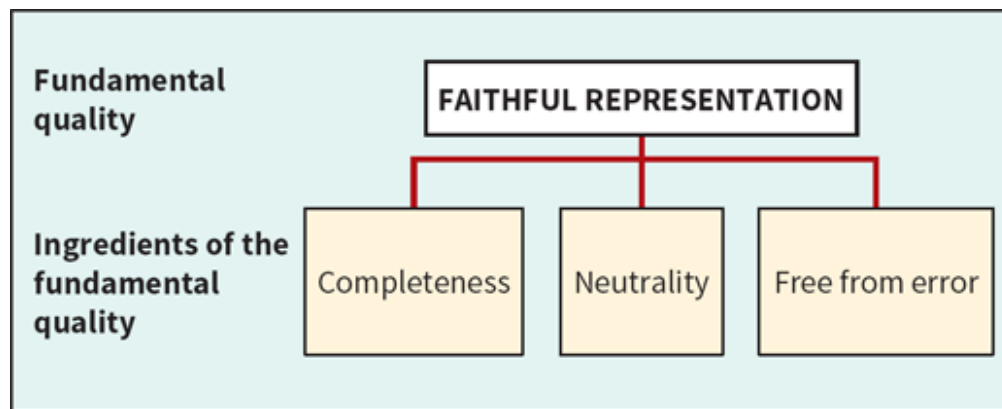

merged with the regular operating income. The gain is only 2 percent of the operating income. If merged, it would not seriously distort the income figure. Company B has had an unusual gain of only \$5,000. However, it is relatively much more significant than the larger gain realized by Company A. For Company B, an item of \$5,000 amounts to 50 percent of its income from operations. Obviously, the inclusion of such an item in operating income would affect the amount of that income materially. Thus, we see the importance of the **relative size** of an item in determining its materiality.

Companies and their auditors generally adopt the rule of thumb that anything under 5 percent of net income is considered immaterial. However, much can depend on specific rules. For example, one market regulator indicates that a company may use this percentage for an initial assessment of materiality, but it must also consider other factors. For example, companies can no longer fail to record items in order to meet consensus analysts' earnings numbers, preserve a positive earnings trend, convert a loss to a profit or vice versa, increase management compensation, or hide an illegal transaction like a bribe. In other words, **companies must consider both quantitative and qualitative factors in determining whether an item is material.**

Thus, it is generally not feasible to specify uniform quantitative thresholds at which an item becomes material. Rather, materiality judgments should be made in the context of the nature and the amount of an item. Materiality factors into a great many internal accounting decisions, too. Examples of such judgments that companies must make include the amount of classification required in a subsidiary expense ledger, the degree of accuracy required in allocating expenses among the departments of a company, and the extent to which adjustments should be made for accrued and deferred items. Only by **the exercise of good judgment and professional expertise** can reasonable and appropriate answers be found, which is the materiality concept sensibly applied.

Fundamental Quality—Faithful Representation

Faithful representation is the second fundamental quality that makes accounting information useful for decision-making. Faithful representation and related ingredients of this fundamental quality are shown as follows.

Faithful representation means that the numbers and descriptions match what really existed or happened. Faithful representation is a necessity because most users have neither the time nor the expertise to evaluate the factual content of the information. For example, if **Siemens AG**'s (DEU) income statement reports sales of €92,403 million when it had sales of €79,644 million, then the statement fails to faithfully represent the proper sales amount. To be a faithful representation, information must be complete, neutral, and free of material error.

Completeness

Completeness means that all the information that is necessary for faithful representation is provided. An omission can cause information to be false or misleading and thus not be helpful to the users of financial reports. For example, when **Société Générale** (FRA) fails to provide information needed to assess the value of its subprime loan receivables (toxic assets), the information is not complete and therefore not a faithful representation of the value of the receivable.

Neutrality

Neutrality means that a company cannot select information to favor one set of interested parties over another. Providing neutral or unbiased information must be the overriding consideration. For example, in the notes to financial statements, tobacco companies such as **British American Tobacco** (GBR) should not suppress information about the numerous lawsuits that have been filed because of tobacco-related health concerns—even though such disclosure is damaging to the company.

Neutrality in rule-making has come under increasing attack. Some argue that the IASB should not issue pronouncements that cause undesirable economic effects on an industry or company. We disagree. Accounting rules (and the standard-setting process) must be free from bias, or we will no longer have credible financial statements. Without credible financial statements, individuals will no longer use this information. An analogy demonstrates the point: Many individuals bet on boxing matches because such contests are assumed not to be fixed. But nobody bets on wrestling matches. Why? Because the public assumes that wrestling matches are rigged. If financial information is biased or rigged, the public will lose confidence and no longer use it.

The IASB indicates that neutrality is supported by prudence. **Prudence** is the exercise of caution when making judgments under conditions of uncertainty. That is, the exercise of prudence means that assets and income are not overstated, and liabilities and expenses are not understated. Furthermore, exercising prudence does not mean a decision maker should give primacy to the understatement of assets or income, or the overstatement of liabilities or expenses. Such misstatements can lead to the overstatement or understatement of income or expenses in future periods. Similarly, exercising prudence need not be biased against recognition of assets or income relative to recognition of liabilities or expenses. Such bias is inconsistent with neutrality—the attribute that supports faithful representation and useful information. [5]

Free from Error

An information item that is **free from error** will be a more accurate (faithful) representation of a financial item. For example, if **UBS** (CHE) misstates its loan losses, its financial statements are misleading and not a faithful representation of its financial results. However, faithful representation does not imply total freedom from error. This is because most financial reporting measures involve estimates of various types that incorporate management's judgment. For example, management must estimate the amount of uncollectible accounts to determine bad debt expense. And determination of depreciation expense requires estimation of useful lives of plant and equipment, as well as the residual value of the assets.

What Do the Numbers Mean?

Unfaithful—For 20 Years

The importance of faithful representation is illustrated by the fraud at **Olympus Corporation** (JPN). Here's what happened, as revealed in the report on the fraud by an investigative committee. In transactions dating back nearly 20 years, Olympus was hiding losses related to export sales. The losses arose when the exchange rate between the dollar and yen moved in an unfavorable direction for Olympus, which negatively impacted investments related to the export sales. However, the losses were not reported; that is, the financial statements were not faithful representations.

How could such a loss be hidden? At the time, accounting rules in Japan, as well as in other countries, allowed investments to be carried at cost. Theoretically, there should eventually have been a write-down, but there never was. Rather, management hoped that with additional risky investments, the losses could somehow be made up. They were not, and eventually the losses grew to more than \$1 billion. Olympus seems to have been content to sit on the losses until 1997, when accounting rules changed and some investments had to be marked to market.

Olympus then dug the hole deeper; it developed a plan to “sell” the losing investments, at original cost, to shell companies set up by Olympus for that purpose. Under lenient accounting rules, those shell companies would not have to be consolidated with Olympus, so the losses could remain hidden. That all ended when the investigation uncovered the sham adjustments and the losses were finally revealed.

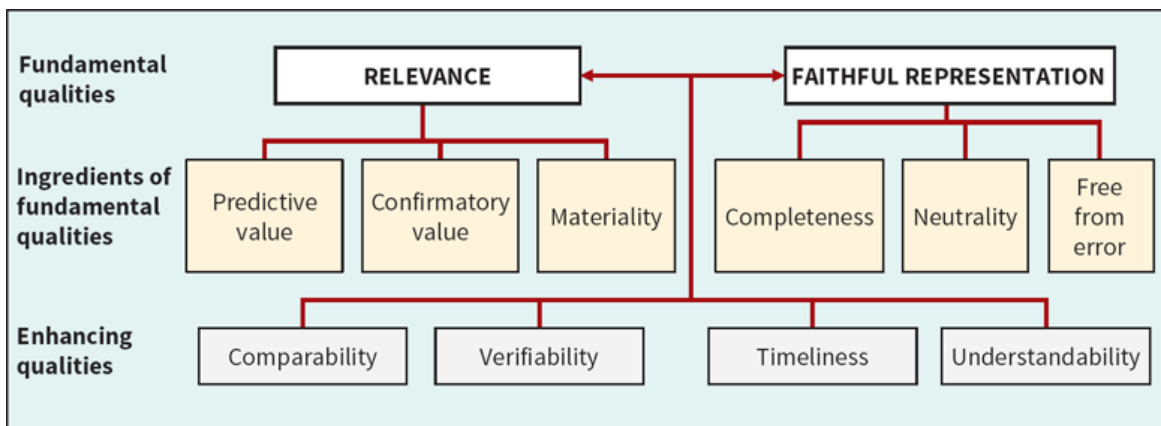

The scandal and the recent case of opaque accounting for goodwill and impairments at **Carillion** (GBR) highlight the importance of accounting rules that result in faithful representation of company performance and financial position. That is, until accounting rule-makers finally started to require fair value accounting for some financial instruments in 1997—seven years after the Olympus

fraud began—covering up the losses was easy. Furthermore, subsequent rule changes (in the wake of the **Enron** (USA) scandal) forced companies to stop hiding losses in off-balance-sheet entities. Indeed, the Olympus scandal might never have occurred if the accounting had kept a focus on faithful representation.

Sources: F. Norris, “Deep Roots of Fraud at Olympus,” *The New York Times* (December 8, 2011); and J. Ford, “Carillion’s Troubles Were Shrouded in a Fog of Goodwill,” *Financial Times* (June 17, 2018).

Enhancing Qualities

Enhancing qualitative characteristics are complementary to the fundamental qualitative characteristics. These characteristics distinguish more useful information from less useful information. Enhancing characteristics, shown in the following diagram, are comparability, verifiability, timeliness, and understandability.

Comparability

Information that is measured and reported in a similar manner for different companies is considered comparable. **Comparability** enables users to identify the real similarities and differences in economic events between companies. For example, historically, the accounting for pensions in Japan differed from that in the United States. In Japan, companies generally recorded little or no charge to income for these costs. U.S. companies recorded pension cost as

incurred. As a result, it is difficult to compare the financial results of **Toyota** (JPN) or **Honda** (JPN) to **General Motors** (USA) or **Ford** (USA). Investors can only make valid evaluations if comparable information is available.

Another type of comparability, **consistency**, is present when a company applies the same accounting treatment to similar events, from period to period. Through such application, the company shows consistent use of accounting standards. The idea of consistency does not mean, however, that companies cannot switch from one accounting method to another. A company can change methods, but it must first demonstrate that the newly adopted method is preferable to the old. If deemed appropriate by the auditor, the company must then disclose the nature and effect of the accounting change, as well as the justification for it, in the financial statements for the period in which it made the change.⁴ When a change in accounting principles occurs, the auditor generally refers to it in an explanatory paragraph of the audit report. This paragraph identifies the nature of the change and refers the reader to the note in the financial statements that discusses the change in detail.

Verifiability

Verifiability means that different knowledgeable and independent observers could reach consensus, although not necessarily complete agreement, that a particular depiction is a faithful representation. [6] Verifiability occurs in the following situations.

1. Two independent auditors count **Tata Motors'** (IND) inventory and arrive at the same physical quantity amount for inventory. Verification of an amount for an asset therefore can occur by simply counting the inventory (referred to as *direct verification*).
2. Two independent auditors compute Tata Motors' inventory value at the end of the year using the FIFO method of inventory valuation. Verification may occur by checking the inputs (quantity and costs) and recalculating the outputs (ending

inventory value) using the same accounting convention or methodology (referred to as *indirect verification*).

Timeliness

Timeliness means having information available to decision-makers before it loses its capacity to influence decisions. Having relevant information available sooner can enhance its capacity to influence decisions, and a lack of timeliness can rob information of its usefulness. For example, if **Lenovo Group** (CHN) waited to report its interim results until nine months after the period, the information would be much less useful for decision-making purposes.

Understandability

Decision-makers vary widely in the types of decisions they make, how they make decisions, the information they already possess or can obtain from other sources, and their ability to process the information. For information to be useful, there must be a connection (linkage) between these users and the decisions they make. This link, **understandability**, is the quality of information that lets reasonably informed users see its significance. Understandability is enhanced when information is classified, characterized, and presented clearly and concisely.

For example, assume that **Tomkins plc** (GBR) issues a three-months' report that shows interim earnings have declined significantly. This interim report provides relevant and faithfully represented information for decision-making purposes. Some users, upon reading the report, decide to sell their shares. Other users, however, do not understand the report's content and significance. They are surprised when Tomkins declares a smaller year-end dividend and the share price declines. Thus, although Tomkins presented highly relevant information that was a faithful representation, it was useless to those who did not understand it.

Users of financial reports are assumed to have a reasonable knowledge of business and economic activities. In making decisions,

users also should review and analyze the information with reasonable diligence. Information that is relevant and faithfully represented should not be excluded from financial reports solely because it is too complex or difficult for some users to understand without assistance.

[7]

What Do the Numbers Mean?

Show Me the Earnings!

Some young technology companies, in an effort to attract investors who will help them strike it rich, are using unconventional financial terms in their financial reports. As an example, instead of revenue, these privately held companies use terms such as “bookings,” annual recurring revenues, or other numbers that often exceed actual revenue.

Hortonworks Inc. (a U.S. software company) is a classic illustration. It forecast in March 2014 that it would have a strong \$100 million in billings by year-end. It turns out the company was not talking about revenues but rather a non-U.S. GAAP number (referred to as an alternative performance measure, or APM) that it uses to gauge future business. This number looked a lot smaller after Hortonworks went public and reported financial results—just \$46 million in revenues, as shown in the following chart.

Another example is **Uber Technologies** (the sometimes controversial U.S. ride service). Uber noted that it was on target to reach \$10 billion in bookings for 2014. Uber defines bookings as total fares paid by customers. But Uber keeps little of the money

from these bookings. As shown in the following chart, Uber gets only 25 cents on each \$1 of bookings.

Now that Uber is a public company, it would report the 25 cents as revenues, not the one dollar. Similar income reporting disconnects were apparent at **Lululemon** (CAN), which showed gains in its store openings and top line (sales) but not a corresponding increase in profit margin.

Given these examples, it is understandable that standard-setters have increased their scrutiny of the reporting of APMs. The lesson for investors: Keep an eye on verifiable and comparable financial measures of performance and be sure to count expenses and net income according to IFRS. Using gross measures such as billings, recurring revenues, or some non-financial measures, and APMs to determine success may be hazardous to your financial health.

Beilfuss, "Lululemon Sales Rise, Gross Margin Declines," *Wall Street Journal* (September 10, 2015); and PwC, "Alternative Performance Measures—Better Described as 'Profits Before Unfortunate Debits?'" *IFRS News* (March 2016).

Basic Elements

An important aspect of developing any theoretical structure is the body of **basic elements** or definitions to be included in it.

Accounting uses many terms with distinctive and specific meanings. These terms constitute the language of business or the jargon of accounting.

One such term is **asset**. Is it merely something we own? Or is an asset something we have the right to use, as in the case of leased equipment? Or is it anything of value used by a company to generate revenues—in which case, should we also consider the managers of a company as an asset?

As this example and the lottery ticket example in the opening story illustrate, it is necessary, therefore, to develop basic definitions for the elements of financial statements. The Conceptual Framework defines the five interrelated elements that most directly relate to measuring the performance and financial status of a business enterprise. We list them below for review and information purposes; you need not memorize these definitions at this point. We will explain and examine each of these elements in more detail in subsequent chapters.

Elements of Financial Statements

The elements directly related to the measurement of financial position are assets, liabilities, and equity. These are defined as follows.

Asset. A present economic resource controlled by the entity as a result of past events. (An economic resource is a right that has the potential to produce economic benefits).

Liability. A present obligation of the entity to transfer an economic resource as a result of past events.

Equity. The residual interest in the assets of the entity after deducting all its liabilities.

The elements of income and expenses are defined as follows.

Income. Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.

Expenses. Decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims.

As indicated, the IASB classifies the elements into two distinct groups. [8] The first group of three elements—assets, liabilities, and equity—describes amounts of resources and claims to resources at a **moment in time**. The second group of two elements describes transactions, events, and circumstances that affect a company during a **period of time**. The first group, affected by elements of the second group, provides at any time the cumulative result of all changes. This interaction is referred to as “articulation.” That is, key figures in one financial statement correspond to balances in another.

Assumptions

LEARNING OBJECTIVE 3

Review the basic assumptions of accounting.

The third level of the Conceptual Framework consists of concepts that implement the basic objectives of level one. These concepts explain how companies should recognize, measure, and report financial elements and events. Here, we identify the concepts as basic assumptions, principles, and a cost constraint. Not everyone uses this classification system, so focus your attention more on **understanding the concepts** than on how we classify and organize them. These concepts serve as guidelines in responding to controversial financial reporting issues.

As indicated earlier, the Conceptual Framework specifically identifies only one assumption—the going concern assumption. Yet, we believe there are a number of other **assumptions** that are present in the reporting environment. As a result, for completeness, we discuss each of these five basic assumptions in turn: (1) **economic entity**, (2) **going concern**, (3) **monetary unit**, (4) **periodicity**, and (5) **accrual basis**.

Economic Entity Assumption

The **economic entity assumption** means that **economic activity can be identified with a particular unit of accountability**. In other words, a company keeps its activity separate and distinct from its owners and any other business unit. At the most basic level, the economic entity assumption dictates that **Sappi Limited** (ZAF) record the company's financial activities separately from those of its owners and managers. Equally important, financial statement users need to be able to distinguish the activities and elements of different companies, such as **Volvo** (SWE), **Ford** (USA), and **Volkswagen AG** (DEU). If users could not distinguish the activities of different companies, how would they know which company financially outperformed the other?

The entity concept does not apply solely to the segregation of activities among competing companies, such as **Toyota** (JPN) and **Hyundai** (KOR). An individual, department, division, or an entire industry could be considered a separate entity if we choose to define it in this manner. Thus, **the entity concept does not necessarily refer to a legal entity**. A parent company and its subsidiaries are separate **legal entities**, but merging their activities for accounting and reporting purposes does not violate the **economic entity** assumption.⁵ [9]

Going Concern Assumption

Most accounting methods rely on the **going concern assumption** —**that the company will have a long life**. Despite numerous business failures, most companies have a fairly high continuance rate. As a rule, we expect companies to last long enough to fulfill their objectives and commitments.

This assumption has significant implications. The historical cost principle would be of limited usefulness if we assumed eventual liquidation. Under a liquidation approach, for example, a company would better state asset values at fair value than at acquisition cost. **Depreciation and amortization policies are justifiable and appropriate only if we assume some permanence to the company**. If a company adopts the liquidation approach, the current/non-current classification of assets and liabilities loses much of its significance. Labeling anything a long-lived or non-current asset would be difficult to justify. Indeed, listing liabilities on the basis of priority in liquidation would be more reasonable.

The going concern assumption applies in most business situations. **Only where liquidation appears imminent is the assumption inapplicable**. In these cases, a total revaluation of assets and liabilities can provide information that closely approximates the company's fair value. You will learn more about accounting problems related to a company in liquidation in advanced accounting courses.

[10]

Monetary Unit Assumption

The **monetary unit assumption** means that money is the common denominator of economic activity and provides an appropriate basis for accounting measurement and analysis. That is, the monetary unit is the most effective means of expressing to interested parties changes in capital and exchanges of goods and services. Application of this assumption depends on the even more basic assumption that quantitative data are useful in communicating economic information and in making rational economic decisions.

Furthermore, accounting generally ignores price-level changes (inflation and deflation) and assumes that the unit of measure—euros, dollars, or yen—remains reasonably stable. We therefore use the monetary unit assumption to justify adding 1985 pounds to 2015 pounds sterling without any adjustment. It is expected that the pound or other currency, unadjusted for inflation or deflation, will continue to be used to measure items recognized in financial statements. Only if circumstances change dramatically (such as high inflation rates similar to that in some South American countries) will “inflation accounting” be considered.⁶

Periodicity Assumption

To measure the results of a company’s activity accurately, we would need to wait until it liquidates. Decision-makers, however, cannot wait that long for such information. Users need to know a company’s performance and economic status on a timely basis so that they can evaluate and compare companies, and take appropriate actions. Therefore, companies must report information periodically. **[13]**

The **periodicity** (or **time period**) **assumption** implies that a company can divide its economic activities into artificial time periods. These time periods vary, but the most common are monthly, quarterly, and yearly.

The shorter the time period, the more difficult it is to determine the proper net income for the period. A month’s results usually prove less reliable than a quarter’s results, and a quarter’s results are likely to be less reliable than a year’s results. Investors desire and demand that a company quickly process and disseminate information. Yet the

quicker a company releases the information, the more likely the information will include errors. **This phenomenon provides an interesting example of the trade-off between relevance and faithful representation in preparing financial data.**

The problem of defining the time period becomes more serious as product cycles shorten and products become obsolete more quickly. Many believe that, given technology advances, companies need to provide more online, real-time financial information to ensure the availability of relevant information.

Accrual Basis of Accounting

Companies prepare financial statements using the accrual basis of accounting. **Accrual-basis accounting** means that transactions that change a company's financial statements are recorded in the periods in which the events occur. [14] For example, using the accrual basis means that companies recognize revenues when they satisfy a performance obligation (the revenue recognition principle). This is in contrast to recognition based on receipt of cash. Likewise, under the accrual basis, companies recognize expenses when incurred (the expense recognition principle) rather than when paid.

An alternative to the accrual basis is the cash basis. Under cash-basis accounting, companies record revenue only when cash is received. They record expenses only when cash is paid. The cash basis of accounting is prohibited under IFRS. Why? Because it does not record revenue according to the revenue recognition principle (discussed in the next section). Similarly, under the cash basis companies do not record expenses when incurred, which violates the expense recognition principle (discussed in the next section).

Financial statements prepared on the accrual basis inform users not only of past transactions involving the payment and receipt of cash but also of obligations to pay cash in the future and of resources that represent cash to be received in the future. Hence, they provide the type of information about past transactions and other events that is most useful in making economic decisions.

Measurement, Recognition, and Disclosure Concepts

LEARNING OBJECTIVE 4

Explain the application of the basic principles of accounting.

Basic Principles of Accounting

We generally use four basic **principles of accounting** to record and report transactions: (1) measurement, (2) revenue recognition, (3) expense recognition, and (4) full disclosure. We look at each in turn.

Measurement Principles

We presently have a “mixed-attribute” system in which one of two measurement principles is used. The most commonly used measurements are based on historical cost and current cost. Selection of which principle to follow generally reflects a trade-off between relevance and faithful representation. Here, we discuss each measurement principle.

Historical Cost

IFRS requires that companies account for and report many assets and liabilities on the basis of acquisition price. This is often referred to as the **historical cost principle**. Cost has an important advantage over other valuations: **It is generally thought to be a faithful representation of the amount paid for a given item.**

To illustrate this advantage, consider the problems if companies select current selling price instead. Companies might have difficulty establishing a value for unsold items. Every member of the accounting department might value the assets differently. Further, how often would it be necessary to establish sales value? All companies close their accounts at least annually. But some compute their net income every month. Those companies would have to place a sales value on

every asset each time they wished to determine income. Critics raise similar objections against current cost (replacement cost, present value of future cash flows) and any other basis of valuation **except historical cost**.

What about liabilities? Do companies account for them on a cost basis? Yes, they do. Companies issue liabilities, such as bonds, notes, and accounts payable, in exchange for assets (or services), for an agreed-upon price. **This price, established by the exchange transaction, is the “cost” of the liability.** A company uses this amount to record the liability in the accounts and report it in financial statements. Thus, many users prefer historical cost because it provides them with a **verifiable benchmark** for measuring historical trends. [15]

Current Value

Current value measures provide monetary information about assets, liabilities, and related income and expenses, using information updated to reflect conditions at the measurement date. Because of the updating, current values of assets and liabilities reflect changes in amounts since the previous measurement date. Current value bases include:

1. Fair value.
2. Value in use for assets and fulfillment value for liabilities.
3. Current cost. [16]

Fair Value

Fair value is defined as “the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.” Fair value is therefore a market-based measure. [17] Recently, IFRS has increasingly called for use of fair value measurements in the financial statements. This is often referred to as the **fair value principle**. Fair value information

may be more useful than historical cost for certain types of assets and liabilities and in certain industries. For example, companies report many financial instruments, including derivatives, at fair value. Certain industries, such as brokerage houses and mutual funds, prepare their basic financial statements on a fair value basis. At initial acquisition, historical cost equals fair value. In subsequent periods, as market and economic conditions change, historical cost and fair value often diverge. Thus, fair value measures or estimates often provide more relevant information about the expected future cash flows related to the asset or liability. For example, when long-lived assets decline in value, a fair value measure determines any impairment loss.

The IASB believes that fair value information in some circumstances is more relevant to users than historical cost. In these cases, fair value measurement provides better insight into the value of a company's assets and liabilities (its financial position) and a better basis for assessing future cash flow prospects. The IASB provides an option to use fair value (referred to as the **fair value option**) as the basis for measurement of financial assets and financial liabilities. [18] The primary purpose of this option is to increase the relevance of the accounting information by eliminating cases where an accounting mismatch is created by using a different measurement method. As a result, companies now have the option to record fair value in their accounts for most financial instruments, including such items as receivables, investments, and debt securities.

Use of fair value in financial reporting is increasing. However, measurement based on fair value introduces increased subjectivity into accounting reports when fair value information is not readily available. To increase consistency and comparability in fair value measures, the IASB established a fair value hierarchy that provides insight into the priority of valuation techniques to use to determine fair value. As shown in **Illustration 2.4**, the fair value hierarchy is divided into three broad levels.

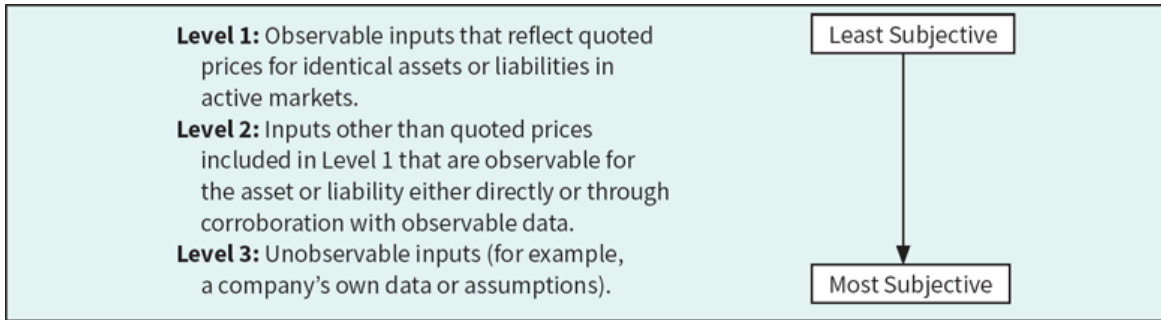

ILLUSTRATION 2.4 Fair Value Hierarchy

As [Illustration 2.4](#) indicates, Level 1 is the least subjective because it is based on quoted prices, like a closing share price in the *Financial Times*. Level 2 is more subjective and would rely on evaluating similar assets or liabilities in active markets. At the most subjective level, Level 3, much judgment is needed, based on the best information available, to arrive at a relevant and representationally faithful fair value measurement.⁷

It is easy to arrive at fair values when markets are liquid with many traders, but fair value answers are not readily available in other situations. For example, how do you value the mortgage assets of a subprime lender such as **New Century** (USA) given that the market for these securities has essentially disappeared? A great deal of expertise and sound judgment will be needed to arrive at appropriate answers. IFRS also provides guidance on estimating fair values when market-related data are not available. In general, these valuation issues relate to Level 3 fair value measurements. These measurements may be developed using expected cash flow and present value techniques, as described in [Chapter 6](#).

Value in Use / Fulfillment Value

Value in use is the present value of the cash flows, or other economic benefits that a company expects to derive **from the use of an asset** and from its ultimate disposal. **Fulfillment value** is the present value of the cash, or other economic resources that a company expects to be **obliged to transfer as it fulfills a liability**. Value in use and fulfillment value cannot be observed directly and are

determined using cash-flow-based measurement techniques. Value in use and fulfillment value reflect the same factors described for fair value but from a company-specific perspective rather than from a market-participant perspective.

Current Cost

The **current cost** of an asset is the cost of an equivalent asset at the measurement date, comprising the consideration that would be paid at the measurement date plus the transaction costs that would be incurred at that date. The current cost of a liability is the consideration that would be received for an equivalent liability at the measurement date minus the transaction costs that would be incurred at that date. Similar to historical cost, current cost is an entry value: It reflects prices in the market in which the company would acquire the asset or would incur the liability. As a result, current cost is distinguished from fair value, value in use, and fulfillment value, which are exit values.

However, unlike historical cost, current cost reflects conditions at the measurement date. Current cost frequently cannot be determined directly by observing prices in an active market and must be determined indirectly by other means. For example, if prices are available only for new assets, the current cost of a used asset might need to be estimated by adjusting the current price of a new asset to reflect the current age and condition of the asset held by the entity.⁸

Summary

As indicated above, we presently have a “mixed-attribute” system that permits the use of both historical cost and current value. Although the historical cost principle continues to be an important basis for valuation, recording and reporting of current (fair value) information is increasing. How do we determine which measurement basis should be used? In many cases, IFRSs specify which basis should be used. For instance, inventory is generally recorded at cost unless it is obsolete or the value is impaired. As a general principle, the choice

should result in the most useful information. That is, the measurement basis selected should provide relevant information that faithfully represents the event or transaction. The recent measurement and disclosure guidance should increase consistency and comparability when current (fair) value measurements are used in the financial statements and related notes.⁹

Recognition

Recognition is the process of capturing for inclusion in the statement of financial position or the statement(s) of financial performance an item that meets the definition of one of the elements of financial statements—an asset, a liability, equity, income, or expenses. **[20]** Recognition involves depicting the item in one of those statements—either alone or in aggregation with other items—in words and by a monetary amount, and including that amount in one or more totals in that statement. The amount at which an asset, a liability, or equity is recognized in the statement of financial position is referred to as its “carrying amount.” Two important recognition principles relate to revenue and expense recognition.¹⁰

Revenue Recognition Principle

When a company agrees to perform a service or sell a product to a customer, it has a **performance obligation**. When the company satisfies this performance obligation, it recognizes revenue. The **revenue recognition principle** therefore requires that companies recognize revenue in the accounting period in which the performance obligation is satisfied.

To illustrate, assume that Klinke Cleaners cleans clothing on June 30 but customers do not claim and pay for their clothes until the first week of July. Klinke should record revenue in June when it performed the service (satisfied the performance obligation) rather than in July when it received the cash. At June 30, Klinke would report a receivable on its statement of financial position and revenue in its income statement for the service performed. To illustrate the revenue recognition principle in more detail, assume that **Airbus** (DEU) signs

a contract to sell airplanes to **British Airways** (GBR) for €100 million. To determine when to recognize revenue, Airbus uses the five steps shown in [Illustration 2.5](#).¹¹

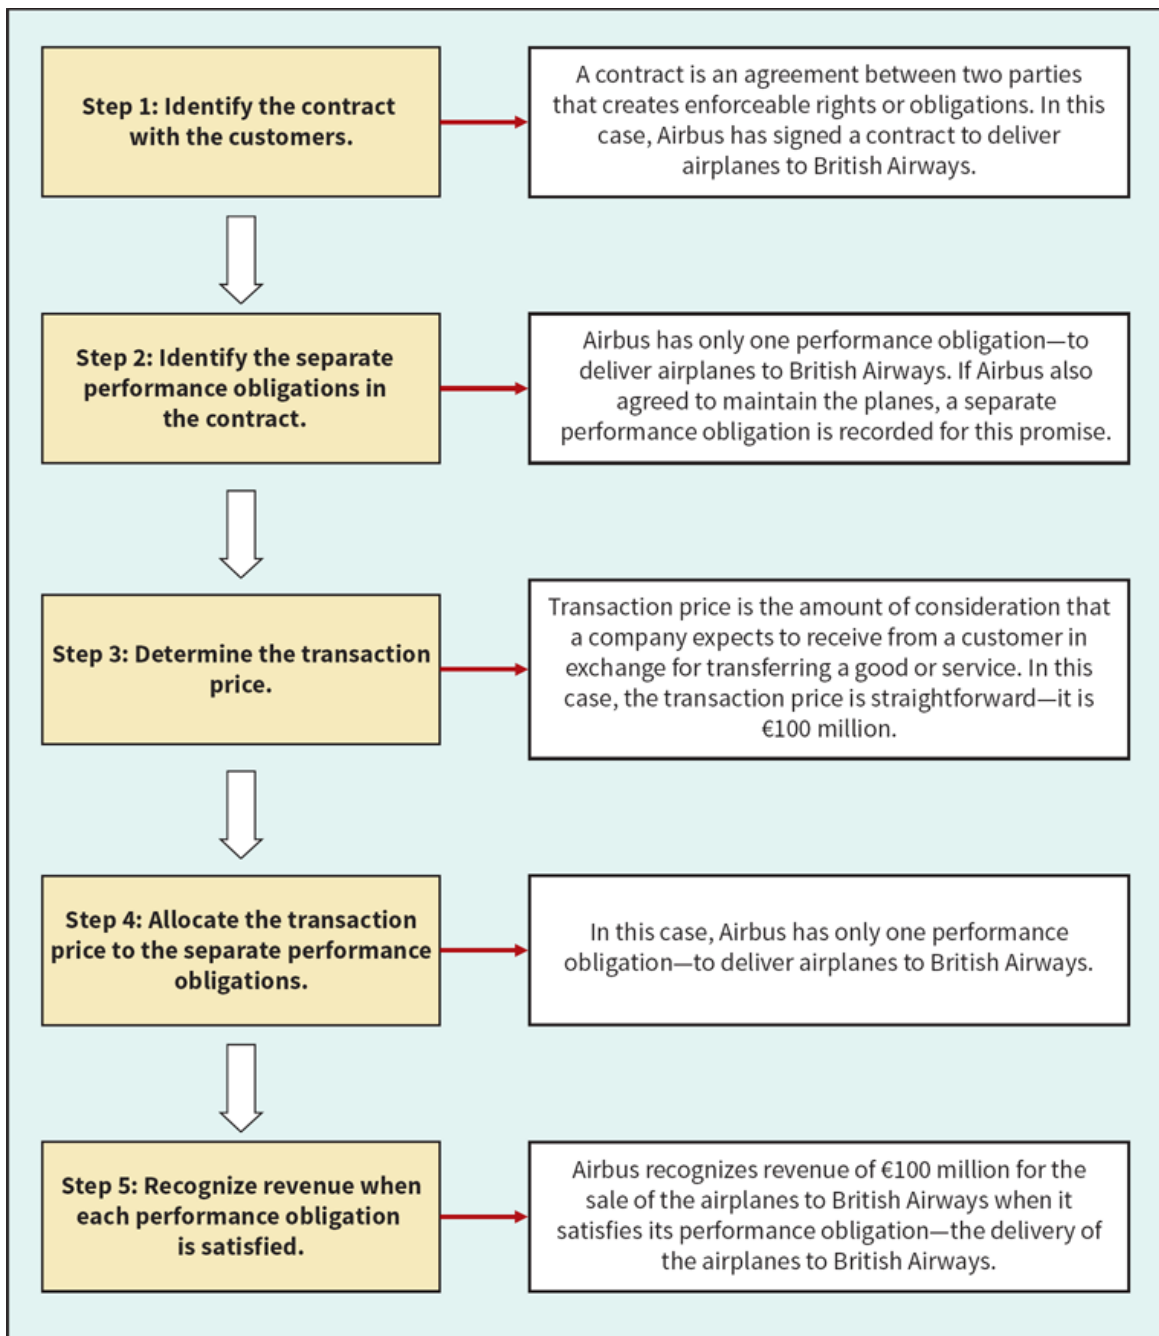

ILLUSTRATION 2.5 The Five Steps of Revenue Recognition

Many revenue transactions pose few problems because the transaction is initiated and completed at the same time. However,

when to recognize revenue in other certain situations is often more difficult. The risk of errors and misstatements is significant. [Chapter 18](#) discusses revenue recognition issues in more detail.

Expense Recognition Principle

Expenses are defined as outflows or other “using up” of assets or incurring of liabilities (or a combination of both) during a period as a result of delivering or producing goods and/or rendering services. It follows, then, that recognition of expenses is related to net changes in assets and earning revenues. In practice, the approach for recognizing expenses is, “Let the expense follow the revenues.” This approach is the **expense recognition principle**.

To illustrate, companies recognize expenses not when they pay wages or make a product, but when the work (service) or the product actually contributes to revenue. Thus, companies tie expense recognition to revenue recognition. That is, by matching **efforts (expenses) with accomplishment (revenues)**, the **expense recognition principle is implemented** in accordance with the definition of expense (outflows or other using up of assets or incurring of liabilities).¹²

Some costs, however, are difficult to associate with revenue. As a result, some other approach must be developed. Often, companies use a “rational and systematic” allocation policy to apply the expense recognition principle. This type of expense recognition involves assumptions about the benefits that a company receives as well as the cost associated with those benefits. For example, a company like **Nokia** (FIN) allocates the cost of equipment over all of the accounting periods during which it uses the asset because the asset contributes to the generation of revenue throughout its useful life.

Companies charge some costs to the current period as expenses (or losses) simply because they cannot determine a connection with revenue. Examples of these types of costs are officers’ salaries and other administrative expenses.

Costs are generally classified into two groups: **product costs** and **period costs**. **Product costs**, such as material, labor, and overhead, attach to the product. Companies carry these costs into future periods if they recognize the revenue from the product in subsequent periods. **Period costs**, such as officers' salaries and other administrative expenses, attach to the period. Companies charge off such costs in the immediate period, even though benefits associated with these costs may occur in the future. Why? Because companies cannot determine a direct relationship between period costs and revenue. [Illustration 2.6](#) summarizes these expense recognition procedures.

Type of Cost	Relationship	Recognition
Product costs: <ul style="list-style-type: none"> • Material • Labor • Overhead 	Direct relationship between cost and revenue.	Recognize in period of revenue (matching).
Period costs: <ul style="list-style-type: none"> • Salaries • Administrative costs 	No direct relationship between cost and revenue.	Expense as incurred.

ILLUSTRATION 2.6 Expense Recognition Procedures for Product and Period Costs

Full Disclosure Principle

In deciding what information to report, companies follow the general practice of providing information that is of sufficient importance to influence the judgment and decisions of an informed user. Often referred to as the **full disclosure principle**, this practice recognizes that the nature and amount of information included in financial reports reflects a series of judgmental trade-offs. These trade-offs strive for (1) sufficient detail to disclose matters that **make a**

difference to users, yet (2) sufficient condensation to make the **information understandable**, keeping in mind costs of preparing and using it.

Users find information about financial position, income, cash flows, and investments in one of three places: (1) within the main body of financial statements, (2) in the notes to those statements, or (3) as supplementary information.

As discussed in [Chapter 1](#), the **financial statements** are the statement of financial position, income statement (or statement of comprehensive income), statement of cash flows, and statement of changes in equity. They are a structured means of communicating financial information. As discussed earlier, an item that meets the definition of an element should be recognized in the financial statements. In situations in which an element is not recognized in the financial statements (for example, due to existence or measurement uncertainty), the company may provide information relevant to the item through disclosure in the notes. [22]

Disclosure is not a substitute for proper accounting. As a noted accountant indicated, “Good disclosure does not cure bad accounting any more than an adjective or adverb can be used without, or in place of, a noun or verb.” Thus, for example, cash-basis accounting for cost of goods sold is misleading, even if a company discloses accrual-basis amounts in the notes to the financial statements.

The **notes to financial statements** generally amplify or explain the items presented in the main body of the statements. If the main body of the financial statements gives an incomplete picture of the performance and position of the company, the notes should provide the additional information needed. Information in the notes does not have to be quantifiable, nor does it need to qualify as an element. Notes can be partially or totally narrative. Examples of notes include descriptions of the accounting policies and methods used in measuring the elements reported in the statements, explanations of uncertainties and contingencies, and statistics and details too voluminous for presentation in the financial statements. The notes

can be essential to understanding the company's performance and position.

Supplementary information may include details or amounts that present a different perspective from that adopted in the financial statements. It may be quantifiable information that is high in relevance but low in reliability. For example, oil and gas companies typically provide information on proven reserves as well as the related discounted cash flows.

Supplementary information may also include management's explanation of the financial information and its discussion of the significance of that information. For example, many business combinations have produced financing arrangements that demand new accounting and reporting practices and principles. In each of these situations, the same problem must be faced: making sure the company presents enough information to ensure that the **reasonably prudent investor** will not be misled.¹³

We discuss the content, arrangement, and display of financial statements, along with other facets of full disclosure, in [Chapters 4, 5, and 24](#).

Cost Constraint

In providing information with the qualitative characteristics that make it useful, companies must consider an overriding factor that limits (constrains) the reporting. This is referred to as the **cost constraint**. That is, companies must weigh the costs of providing the information against the benefits that can be derived from using it. Rule-making bodies and governmental agencies use cost-benefit analysis before making final their informational requirements. In order to justify requiring a particular measurement or disclosure, the benefits perceived to be derived from it must exceed the costs perceived to be associated with it. **[23]**

A company executive made the following remark to a standard-setter about a proposed rule: "In all my years in the financial arena, I have never seen such an absolutely ridiculous proposal.... To dignify these

‘actuarial’ estimates by recording them as assets and liabilities would be virtually unthinkable except for the fact that the FASB has done equally stupid things in the past.... For God’s sake, use common sense just this once.”¹⁴ Although extreme, this remark indicates the frustration expressed by members of the business community about accounting standard-setting, and whether the benefits of a given pronouncement exceed the costs.

The difficulty in cost-benefit analysis is that the costs and especially the benefits are not always evident or measurable. The costs are of several kinds: costs of collecting and processing, of disseminating, of auditing, of potential litigation, of disclosure to competitors, and of analysis and interpretation. Benefits to preparers may include greater management control and access to capital at a lower cost. Users may receive better information for allocation of resources, tax assessment, and rate regulation. As noted earlier, benefits are generally more difficult to quantify than are costs.

The implementation of the provisions of the Sarbanes-Oxley Act in the United States illustrates the challenges in assessing costs and benefits of standards. One study estimated the increased costs of complying with the new internal-control standards related to the financial reporting process to be an average of \$7.8 million per company. However, the study concluded that “... quantifying the benefits of improved more reliable financial reporting is not fully possible.”¹⁵

Despite the difficulty in assessing the costs and benefits of its rules, the IASB attempts to determine that each proposed pronouncement will fill a significant need and that the costs imposed to meet the standard are justified in relation to overall benefits of the resulting information. In addition, they seek input on costs and benefits as part of their due process.

What Do the Numbers Mean?

Let's Be Prudent

Historically, it has been acceptable practice to invoke the additional constraint of prudence or conservatism as a justification for an accounting treatment under conditions of uncertainty.

Prudence or **conservatism** means the exercise of caution when making decisions under conditions of uncertainty. However, the Conceptual Framework, when updated in 2010, indicated that prudence or conservatism is generally in conflict with the quality of neutrality. This is because being prudent or conservative can lead to bias in the reported financial position and financial performance. In fact, introducing biased understatement of assets (or overstatement of liabilities) in one period frequently leads to overstating financial performance in later periods—a result that cannot be described as prudent. This is inconsistent with neutrality, which encompasses freedom from bias. Accordingly, the Conceptual Framework issued in 2010 did not include prudence or conservatism as desirable qualities of financial reporting information.

The IASB heard many calls to bring prudence back into the Conceptual Framework, arguing that prudence is one of the most important tenets of accounting. The IASB was persuaded by arguments that prudence can actually help achieve neutrality when selecting and applying accounting policies. As a result, the IASB reintroduced the term “prudence,” describing it in the 2018 Conceptual Framework as “cautious prudence,” which it says is “the exercise of caution when making judgments under conditions of uncertainty.” The Board hoped that would satisfy stakeholders. “The previous conceptual framework led a lot of people to believe that the Board did not think prudence to be important,” said Hans Hoogervorst, IASB Chair. “And I think in the new conceptual framework, that confusion will be gone.”

Sources: Peter Hogarth, “Dear Prudence,” PricewaterhouseCoopers blog, pwc.blogs.com/ifrs/2015/06/dear-prudence.html (June 3, 2015); and H. Hoogervorst, “IASB Completes Revisions to Its Conceptual Framework,” (IASB, March 29, 2018).

Summary of the Structure

Illustration 2.7 presents the Conceptual Framework for Financial Reporting discussed in this chapter. It is similar to **Illustration 2.1** except that it provides additional information for each level. We cannot overemphasize the usefulness of this conceptual framework in helping to understand many of the problem areas that we examine in later chapters.

Learning Objectives Review

1 Describe the usefulness of a conceptual framework and the objective of financial reporting.

The accounting profession needs a conceptual framework to: (1) build on and relate to an established body of concepts and objectives, (2) provide a framework for solving new and emerging practical problems, (3) increase financial statement users' understanding of and confidence in financial reporting, and (4) enhance comparability among companies' financial statements. The IASB's conceptual

framework, The Conceptual Framework for Financial Reporting, is described in one document.

The objective of general-purpose financial reporting is to provide financial information about the reporting entity that is **useful to present and potential equity investors, lenders, and other creditors** in making decisions about providing resources to the entity. Those decisions involve buying, selling, or holding equity and debt instruments, and providing or settling loans and other forms of credit. Information that is decision-useful to capital providers may also be helpful to other users of financial reporting who are not capital providers.

2 Identify the qualitative characteristics of accounting information and the basic elements of financial statements.

The overriding criterion by which accounting choices can be judged is decision-usefulness—that is, providing information that is most useful for decision-making. Relevance and faithful representation are the two fundamental qualities that make information decision-useful. Relevant information makes a difference in a decision by having predictive or confirmatory value and by being material. Faithful representation is characterized by completeness, neutrality, and being free from error. Enhancing qualities of useful information are: (1) comparability, (2) verifiability, (3) timeliness, and (4) understandability.

The basic elements of financial statements are: (1) assets, (2) liabilities, (3) equity, (4) income, and (5) expenses. We define these elements in the “Elements of Financial Statements” box in the chapter.

3 Review the basic assumptions of accounting.

Five basic assumptions underlying financial accounting are as follows. (1) *Economic entity*: The activity of a company can be kept separate

and distinct from its owners and any other business unit. (2) *Going concern*: Without information to the contrary, the company will have a long life. (3) *Monetary unit*: Money is the common denominator by which economic activity is conducted, and the monetary unit provides an appropriate basis for measurement and analysis. (4) *Periodicity*: The economic activities of a company can be divided into artificial time periods. (5) *Accrual basis*: Transactions that change a company's financial statements are recorded in the periods in which the events occur, rather than when cash is paid or received.

4 Explain the application of the basic principles of accounting.

(1) *Measurement principle*: IFRS requires the use of historical cost or fair value depending on the situation. Although the historical cost principle (measurement based on acquisition price) continues to be an important basis for valuation, recording and reporting of fair value information is increasing. (2) *Revenue recognition principle*: A company generally recognizes revenue when it satisfies a performance obligation. (3) *Expense recognition principle*: As a general rule, companies recognize expenses when the service or the product actually makes its contribution to revenue (commonly referred to as *matching*). (4) *Full disclosure principle*: Companies generally provide information that is of sufficient importance to influence the judgment and decisions of an informed user.

The cost of providing the information must be weighed against the benefits that can be derived from using the information.

Enhanced Review and Practice

Practice Problem

Meadow plc has hired you to review its accounting records prior to the closing of the revenue and expense accounts as of December 31, the end of the current fiscal year. The following information comes to your attention.

1. During the current year, Meadow plc changed its policy in regard to expensing purchases of small tools. In the past, it had expensed these purchases because they amounted to less than 2% of net income. Now, the president has decided that the company should follow a policy of capitalization and subsequent depreciation. It is expected that purchases of small tools will not fluctuate greatly from year to year.
2. The company constructed a warehouse at a cost of £1,000,000. It had been depreciating the asset on a straight-line basis over 10 years. In the current year, the controller doubled depreciation expense because the replacement cost of the warehouse had increased significantly.
3. When the statement of financial position was prepared, the preparer omitted detailed information as to the amount of cash on deposit in each of several banks. Only the total amount of cash under a caption "Cash in banks" was presented.
4. On July 15 of the current year, Meadow plc purchased an undeveloped tract of land at a cost of £320,000. The company spent £80,000 in subdividing the land and getting it ready for sale. An appraisal of the property at the end of the year indicated that the land was now worth £500,000. Although none of the lots were sold, the company recognized revenue of £180,000, less related expenses of £80,000, for a net income on the project of £100,000.
5. For a number of years, the company used the FIFO method for inventory valuation purposes. During the current year, the president noted that all the other companies in the industry had switched to the average-cost method. The company decided

not to switch to average-cost because net income would decrease £830,000.

Instructions

State whether or not you agree with the decisions made by Meadow plc. Support your answers with reference, whenever possible, to the generally accepted principles, assumptions, and cost constraint applicable in the circumstances.

Solution

1. From the facts, it is difficult to determine whether to agree or disagree. Consistency, of course, is violated in this situation although its violation may not be material. Furthermore, the change of accounting policies regarding the treatment of small tools cannot be judged good or bad but would depend on the circumstances. In this case, it seems that the result will be approximately the same whether the company capitalizes and expenses, or simply expenses each period, since the purchases are fairly uniform. Perhaps from a cost standpoint (expediency), it might be best to continue the present policy rather than become involved in detailed depreciation schedules, assuming that purchases remain fairly uniform. On the other hand, the president may believe there is a significant unrecorded asset that should be shown on the statement of financial position. If such is the case, capitalization and subsequent depreciation would be more appropriate.
2. Disagree. At the present time, accountants do not recognize price level or current value adjustments in the accounts. Hence, unless the controller is proposing use of revaluation accounting for all warehouses, it is misleading to deviate from the historical cost principle because conjecture or opinion can take place. Also, depreciation is not so much a matter of valuation as it is a means of cost allocation. Assets are not depreciated on the basis of a

decline in their fair value. Rather, they are depreciated on the basis of a systematic charge of expired cost against revenues.

3. Agree. The full disclosure principle recognizes that reasonable condensation and summarization of the details of a company's operations and financial position are essential to readability and comprehension. Thus, in determining what is full disclosure, the accountant must decide whether omission will mislead readers of the financial statements. Generally, companies present only the total amount of cash on a statement of financial position unless some special circumstance is involved (such as a possible restriction on the use of the cash). In most cases, however, the company's presentation would be considered appropriate and in accordance with the full disclosure principle.
4. Disagree. The historical cost principle indicates that companies account for assets and liabilities on the basis of cost. If sales value were selected, for example, it would be extremely difficult to establish an appraisal value for the given item without selling it. Note, too, that the revenue recognition principle provides guidance on when revenue should be recognized. Revenue should be recognized when the performance obligation is satisfied. In this case, the revenue was not recognized because the critical event for satisfying the performance obligation, "sale of the land with transfer to the buyer," had not occurred.
5. From the facts, it is difficult to determine whether to agree or disagree with the president. The president's approach is not a violation of any principle. Consistency requires that accounting entities give accountable events the same accounting treatment from period to period for a given business enterprise. It says nothing concerning consistency of accounting principles among business enterprises. From a comparability viewpoint, it might be useful to report the information on an average-cost basis. But, as indicated above, there is no requirement to do so.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

- 1.** What is a conceptual framework? Why is a conceptual framework necessary in financial accounting?
- 2.** What is the primary objective of financial reporting?
- 3.** Does management stewardship have a role in the objective of financial reporting? Explain.
- 4.** What is meant by the term “qualitative characteristics of accounting information”?
- 5.** Briefly describe the two fundamental qualities of useful accounting information.
- 6.** How are materiality (and immateriality) related to the proper presentation of financial statements? What factors and measures should be considered in assessing the materiality of a misstatement in the presentation of a financial statement?
- 7.** Your friend (not an accounting major) thinks that prudence in the Conceptual Framework means being conservative. Do you agree? Explain.
- 8.** What are the enhancing qualities of the qualitative characteristics? What is the role of enhancing qualities in the Conceptual Framework?
- 9.** According to the Conceptual Framework, the objective of financial reporting for business enterprises is based on the needs of the users of financial statements. Explain the level of sophistication that the IASB assumes about the users of financial statements.
- 10.** What is the distinction between comparability and consistency?
- 11.** Why is it necessary to develop a definitional framework for the basic elements of accounting?

12. What are the basic elements of the Conceptual Framework? Briefly describe the relationship between the “moment in time” and “period of time” elements.

13. What are the five basic assumptions that underlie the financial accounting structure?

14. The life of a business is divided into specific time periods, usually a year, to measure results of operations for each such time period and to portray financial conditions at the end of each period.

- a. This practice is based on the accounting assumption that the life of the business consists of a series of time periods and that it is possible to measure accurately the results of operations for each period. Comment on the validity and necessity of this assumption.
- b. What has been the effect of this practice on accounting? What is its relation to the accrual basis of accounting? What influence has it had on accounting entries and practices?

15. What is the basic accounting problem created by the monetary unit assumption when there is significant inflation? What appears to be the IASB position on a stable monetary unit?

16. The chairman of the board of directors of the company for which you are chief accountant has told you that he has little use for accounting figures based on historical cost. He believes that fair values are of far more significance to the board of directors than “out-of-date costs.” Present some arguments to convince him that accounting data should still be based on historical cost.

17. Briefly describe the three bases for measuring current value.

18. What is the definition of fair value?

19. What is the fair value option? Explain how use of the fair value option reflects application of the fair value principle.

20. Briefly describe the fair value hierarchy.

21. Explain the revenue recognition principle.

22. What is a performance obligation, and how is it used to determine when revenue should be recognized?

23. What are the five steps used to determine the proper time to recognize revenue?

24. Selane Eatery operates a catering service specializing in business luncheons for large companies. Selane requires customers to place their orders 2 weeks in advance of the scheduled events. Selane bills its customers on the tenth day of the month following the date of service and requires that payment be made within 30 days of the billing date. Conceptually, when should Selane recognize revenue related to its catering service?

25. Mogilny Company paid \$135,000 for a machine. The Accumulated Depreciation account has a balance of \$46,500 at the present time. The company could sell the machine today for \$150,000. The company president believes that the company has a “right to this gain.” What does the president mean by this statement? Do you agree?

26. Three expense recognition methods (associating cause and effect, systematic and rational allocation, and immediate recognition) were discussed in the chapter under the expense recognition principle. Indicate the basic nature of each of these expense recognition methods and give two examples of each.

27. Under what conditions should an item be recognized in the financial statements?

28. Briefly describe the types of information concerning financial position, income, and cash flows that might be provided (a) within the main body of the financial statements, (b) in the notes to the financial statements, or (c) as supplementary information.

29. In January 2022, Janeway AG doubled the amount of its outstanding shares by selling an additional 10,000 shares to finance an expansion of the business. You propose that this information be shown by a footnote to the statement of financial position as of December 31, 2022. The president objects, claiming that this sale took

place after December 31, 2022, and, therefore, should not be shown. Explain your position.

30. Describe the major constraint inherent in the presentation of accounting information.

31. What are some of the costs of providing accounting information? What are some of the benefits of accounting information? Describe the cost-benefit factors that should be considered when new accounting standards are being proposed.

Brief Exercises

BE2.1 (LO 2) Match the qualitative characteristics below with the following statements.

1. Relevance
 2. Faithful representation
 3. Predictive value
 4. Confirmatory value
 5. Comparability
 6. Completeness
 7. Neutrality
 8. Timeliness
- a. Quality of information that permits users to identify similarities in and differences between two sets of economic phenomena.
 - b. Having information available to users before it loses its capacity to influence decisions.
 - c. Information about an economic phenomenon that has value as an input to the processes used by capital providers to form their own expectations about the future.
 - d. Information that is capable of making a difference in the decisions of users in their capacity as capital providers.

- e. Absence of bias intended to attain a predetermined result or to induce a particular behavior.

BE2.2 (LO 2) Match the qualitative characteristics below with the following statements.

1. Timeliness
 2. Completeness
 3. Free from error
 4. Understandability
 5. Faithful representation
 6. Relevance
 7. Neutrality
 8. Confirmatory value
- a. Quality of information that assures users that information represents the economic phenomena that it purports to represent.
 - b. Information about an economic phenomenon that changes past or present expectations based on previous evaluations.
 - c. The extent to which information is accurate in representing the economic substance of a transaction.
 - d. Includes all the information that is necessary for a faithful representation of the economic phenomena that it purports to represent.
 - e. Quality of information that allows users to comprehend its meaning.

BE2.3 (LO 2) Discuss whether the changes described in each of the situations below require recognition in the audit report as to consistency. (Assume that the amounts are material.)

- a. The company changed its inventory method to FIFO from weighted-average, which had been used in prior years.

- b. The company disposed of one of the two subsidiaries that had been included in its consolidated statements for prior years.
- c. The estimated remaining useful life of plant property was reduced because of obsolescence.
- d. The company is using an inventory valuation method that is different from those used by all other companies in its industry.

BE2.4 (LO 2) Identify which qualitative characteristic of accounting information is best described in each of the following items. (Do not use relevance and faithful representation.)

- a. The annual reports of **Best Buy Co.** (USA) are audited by certified public accountants.
- b. **Motorola** (USA) and **Nokia** (FIN) both use the FIFO cost flow assumption.
- c. **Starbucks Corporation** (USA) has used straight-line depreciation since it began operations.
- d. **Heineken Holdings** (NLD) issues its quarterly reports immediately after each quarter ends.

BE2.5 (LO 2) Explain how you would decide whether to record each of the following expenditures as an asset or an expense. Assume all items are material.

- a. Legal fees paid in connection with the purchase of land are €1,500.
- b. Eduardo SA paves the driveway leading to the office building at a cost of €21,000.
- c. A meat market purchases a meat-grinding machine at a cost of €3,500.
- d. On June 30, Monroe and Meno, medical doctors, pay 6 months' office rent to cover the month of July and the next 5 months.
- e. Smith's Hardware pays €9,000 in wages to laborers for construction on a building to be used in the business.

f. Alvarez's Florists pays wages of €2,100 for November to an employee who serves as driver of their delivery truck.

BE2.6 (LO 2) For each item below, indicate to which category of elements of financial statements it belongs.

- a. Retained earnings.
- b. Sales.
- c. Share Premium.
- d. Inventory.
- e. Depreciation.
- f. Loss on sale of equipment.
- g. Interest payable.
- h. Dividends.
- i. Gain on sale of investment.
- j. Issuance of ordinary shares.

BE2.7 (LO 3) If the going concern assumption is not made in accounting, discuss the differences in the amounts shown in the financial statements for the following items.

- a. Land.
- b. Depreciation expense on equipment.
- c. Inventory.
- d. Prepaid insurance.

BE2.8 (LO 3) Identify which basic assumption of accounting is best described in each of the following items.

- a. The economic activities of **FedEx Corporation** (USA) are divided into 12-month periods for the purpose of issuing annual reports.

- b. **Total S.A.** (FRA) does not adjust amounts in its financial statements for the effects of inflation.
- c. **Barclays** (GBR) reports current and non-current classifications in its statement of financial position.
- d. The economic activities of **Tokai Rubber Industries** (JPN) and its subsidiaries are merged for accounting and reporting purposes.

BE2.9 (LO 4) Identify which basic principle of accounting is best described in each of the following items.

- a. **Parmalat** (ITA) reports revenue in its income statement when it delivers goods instead of when the cash is collected.
- b. **Google** (USA) recognizes depreciation expense for a machine over the 2-year period during which that machine helps the company earn revenue.
- c. **Oracle Corporation** (USA) reports information about pending lawsuits in the notes to its financial statements.
- d. **Fuji Film** (JPN) reports land on its statement of financial position at the amount paid to acquire it, even though the estimated fair value is greater.

BE2.10 (LO 4) Vande Velde Company made three investments during 2022. (1) It purchased 1,000 shares of Sastre Company, a start-up company. Vande Velde made the investment based on valuation estimates from an internally developed model. (2) It purchased 2,000 shares of **Fuji Film** (JPN), which trades on the Nikkei. (3) It invested \$10,000 in local development authority bonds. Although these bonds do not trade on an active market, their value closely tracks movements in U.S. Treasury bonds. Rank these three investments in terms of the verifiability of fair value.

BE2.11 (LO 2) The following three different transactions relate to materiality. Explain whether you would classify these transactions as material.

- a. Blair Co. has reported a positive trend in earnings over the last 3 years. In the current year, it reduces its bad debt expense to ensure another positive earnings year. The impact of this adjustment is equal to 3% of net income.
- b. Hindi SE has a gain of €3.1 million on the sale of plant assets and a €3.3 million loss on the sale of investments. It decides to net the gain and loss because the net effect is considered immaterial. Hindi SE's income for the current year was €10 million.
- c. Damon SpA expenses all capital equipment under €2,500 on the basis that it is immaterial. The company has followed this practice for a number of years.

BE2.12 (LO 3, 4) What accounting assumption, principle, or constraint would **Marks and Spencer plc (M&S)** (GBR) use in each of the situations below?

- a. M&S records expenses when incurred, rather than when cash is paid.
- b. M&S was involved in litigation over the last year. This litigation is disclosed in the financial statements.
- c. M&S allocates the cost of its depreciable assets over the life it expects to receive revenue from these assets.
- d. M&S records the purchase of a new **Lenovo** (CHN) PC at its cash equivalent price.

BE2.13 (LO 1, 2, 4) Fill in the blanks related to the following statements.

1. Financial reporting imposes _____; the benefits of financial reporting should justify those _____.
2. The information provided by _____ focuses on the needs of all capital providers, not just the needs of a particular group.

3. A depiction of economic phenomena is _____ if it includes all the information that is necessary for faithful representation of the economic phenomena that it purports to represent.
4. _____ is the quality of information that allows users to comprehend its meaning.
5. _____ is the quality of information that permits users to identify similarities in and differences between two sets of economic phenomena.
6. Information about economic phenomena has _____ if it confirms or changes past or present expectations based on previous evaluations.

Exercises

E2.1 (LO 1) (Usefulness, Objective of Financial Reporting)

Indicate whether the following statements about the Conceptual Framework are true or false. If false, provide a brief explanation supporting your position.

- a. Accounting rule-making that relies on a body of concepts will result in useful and consistent pronouncements.
- b. General-purpose financial reports are most useful to company insiders in making strategic business decisions.
- c. Accounting standards based on individual conceptual frameworks generally will result in consistent and comparable accounting reports.
- d. Capital providers are the only users who benefit from general-purpose financial reporting.
- e. Accounting reports should be developed so that users without knowledge of economics and business can become informed about the financial results of a company.
- f. The objective of financial reporting is the foundation from which the other aspects of the framework logically result.

E2.2 (LO 1, 2) (Usefulness, Objective of Financial Reporting, Qualitative Characteristics) Indicate whether the following statements about the Conceptual Framework are true or false. If false, provide a brief explanation supporting your position.

- a. The fundamental qualitative characteristics that make accounting information useful are relevance and verifiability.
- b. Relevant information has predictive value, confirmatory value, or both.
- c. Conservatism, a prudent reaction to uncertainty, is considered a constraint of financial reporting.
- d. Information that is a faithful representation is characterized as having predictive or confirmatory value.
- e. Comparability pertains only to the reporting of information in a similar manner for different companies.
- f. Verifiability is solely an enhancing characteristic for faithful representation.
- g. In preparing financial reports, it is assumed that users of the reports have reasonable knowledge of business and economic activities.

E2.3 (LO 2, 4) Groupwork (Qualitative Characteristics) The Conceptual Framework identifies the qualitative characteristics that make accounting information useful. Presented below are a number of questions related to these qualitative characteristics and underlying constraint.

- a. What is the quality of information that enables users to confirm or correct prior expectations?
- b. Identify the overall or pervasive constraint developed in the Conceptual Framework.
- c. A noted accountant once remarked, “If it becomes accepted or expected that accounting principles are determined or modified in order to secure purposes other than economic measurement, we

assume a grave risk that confidence in the credibility of our financial information system will be undermined.” Which qualitative characteristic of accounting information should ensure that such a situation will not occur? (Do not use faithful representation.)

- d. Muruyama Group switches from FIFO to average-cost and then back to FIFO over a 2-year period. Which qualitative characteristic of accounting information is not followed?
- e. Assume that the profession permits the savings and loan industry to defer losses on investments it sells, because immediate recognition of the loss may have adverse economic consequences on the industry. Which qualitative characteristic of accounting information is not followed? (Do not use relevance or faithful representation.)
- f. What are the two fundamental qualities that make accounting information useful for decision-making?
- g. Watteau Inc. does not issue its first-quarter report until after the second quarter’s results are reported. Which qualitative characteristic of accounting is not followed? (Do not use relevance.)
- h. Predictive value is an ingredient of which of the two fundamental qualities that make accounting information useful for decision-making purposes?
- i. Duggan, Inc. is the only company in its industry to depreciate its plant assets on a straight-line basis. Which qualitative characteristic of accounting information may not be present?
- j. Nadal Company has attempted to determine the replacement cost of its inventory. Three different appraisers arrive at substantially different amounts for this value. The president, nevertheless, decides to report the middle value for external reporting purposes. Which qualitative characteristic of information is lacking in these data? (Do not use reliability or representational faithfulness.)

E2.4 (LO 2) (Qualitative Characteristics) The qualitative characteristics that make accounting information useful for decision-making purposes are as follows.

Relevance	Neutrality	Verifiability
Faithful representation	Completeness	Understandability
Predictive value	Timeliness	Comparability
Confirmatory value	Materiality	Free from error

Instructions

Identify the appropriate qualitative characteristic(s) to be used given the information provided below.

- a. Qualitative characteristic being displayed when companies in the same industry are using the same accounting principles.
- b. Quality of information that confirms users' earlier expectations.
- c. Imperative for providing comparisons of a company from period to period.
- d. Ignores the economic consequences of a standard or rule.
- e. Requires a high degree of consensus among individuals on a given measurement.
- f. Predictive value is an ingredient of this fundamental quality of information.
- g. Four qualitative characteristics that enhance both relevance and faithful representation.
- h. An item is not reported because its effect on income would not change a decision.
- i. Neutrality is a key ingredient of this fundamental quality of accounting information.
- j. Two fundamental qualities that make accounting information useful for decision-making purposes.

- k. Issuance of interim reports is an example of what enhancing ingredient?

E2.5 (LO 2) (Elements of Financial Statements) Five interrelated elements that are most directly related to measuring the performance and financial status of an enterprise are provided below.

Assets	Income
Liabilities	Expenses
Equity	

Instructions

Identify the element or elements associated with the following nine items.

- a. Obligation to transfer resources arising from a past transaction.
- b. Increases ownership interest by issuance of shares.
- c. Declares and pays cash dividends to owners.
- d. Increases in net assets in a period from non-owner sources.
- e. Items characterized by service potential or future economic benefit.
- f. Equals increase in assets less liabilities during the year, after adding distributions to owners and subtracting investments by owners.
- g. Residual interest in the assets of the enterprise after deducting its liabilities.
- h. Increases assets during a period through sale of product.
- i. Decreases assets during the period by purchasing the company's own shares.

E2.6 (LO 3, 4) (Assumptions, Principles, and Constraint) Presented below are the assumptions, principles, and constraint used in this chapter.

1. Economic entity assumption
2. Going concern assumption
3. Monetary unit assumption
4. Periodicity assumption
5. Accrual-basis assumption
6. Historical cost principle
7. Fair value principle
8. Expense recognition principle
9. Full disclosure principle
10. Revenue recognition principle
11. Cost constraint

Instructions

Identify by number the accounting assumption, principle, or constraint that describes each situation below. Do not use a number more than once.

- a. Allocates expenses to revenues in the proper period.
- b. Indicates that fair value changes subsequent to purchase are not recorded in the accounts. (Do not use revenue recognition principle.)
- c. Ensures that all relevant financial information is reported.
- d. Explains why plant assets are not reported at liquidation value. (Do not use historical cost principle.)
- e. Generally records revenue at the point of sale.
- f. Indicates that personal and business record keeping should be separately maintained.
- g. Separates financial information into time periods for reporting purposes.

- h. Permits the use of fair value valuation in certain situations.
- i. Assumes that the yen is the “measuring stick” used to report on financial performance of a Japanese company.

E2.7 (LO 3, 4) (Assumptions, Principles, and Constraint)

Presented below are a number of operational guidelines and practices that have developed over time.

Instructions

Select the assumption, principle, or constraint that most appropriately justifies these procedures and practices. (Do not use qualitative characteristics.)

- a. Fair value changes are not recognized in the accounting records.
- b. Accounts receivable are recorded for sales on account rather than waiting until cash is received.
- c. Financial information is presented so that investors will not be misled.
- d. Intangible assets are capitalized and amortized over periods benefited.
- e. Brokerage companies use fair value for purposes of valuing financial securities.
- f. Each enterprise is kept as a unit distinct from its owner or owners.
- g. All significant post-statement of financial position events are reported.
- h. Revenue is recorded at point of sale.
- i. All important aspects of bond indentures are presented in financial statements.
- j. Rationale for accrual accounting.
- k. The use of consolidated statements is justified.
- l. Reporting must be done at defined time intervals.

- m. An allowance for doubtful accounts is established.
- n. All payments out of petty cash are charged to Miscellaneous Expense.
- o. Goodwill is recorded only at time of purchase.
- p. Cash received and paid is not the basis used to recognize revenues and expenses.
- q. A company charges its sales commission costs to expense.

E2.8 (LO 4) (Full Disclosure Principle) The following facts relate to Weller AG. Assume that no mention of these facts was made in the financial statements and the related notes.

Instructions

Assume that you are the auditor of Weller AG and that you have been asked to explain the appropriate accounting and related disclosure necessary for each of these items.

- a. The company decided that, for the sake of conciseness, only net income should be reported on the income statement. Details as to revenues, cost of goods sold, and expenses were omitted.
- b. Equipment purchases of €170,000 were partly financed during the year through the issuance of a €110,000 notes payable. The company offset the equipment against the notes payable and reported plant assets at €60,000.
- c. Weller has reported its ending inventory at €2,100,000 in the financial statements. No other information related to inventories is presented in the financial statements and related notes.
- d. The company changed its method of valuing inventories from weighted-average to FIFO. No mention of this change was made in the financial statements.

E2.9 (LO 4) Groupwork (Accounting Principles—Comprehensive) Presented below are a number of business transactions that occurred during the current year for Gonzales SpA.

Instructions

In each of the situations, discuss the appropriateness of the journal entries.

- a. The president of Gonzales SpA used his expense account to purchase a new Suburban solely for personal use. The following journal entry was made.

Miscellaneous Expense	29,000	
Cash		29,000

- b. Merchandise inventory that cost €620,000 is reported on the statement of financial position at €690,000, the expected selling price less estimated selling costs. The following entry was made to record this increase in value.

Inventory	70,000	
Sales Revenue		70,000

- c. The company is being sued for €500,000 by a customer who claims damages for personal injury apparently caused by a defective product. Company attorneys feel extremely confident that the company will have no liability for damages resulting from the situation. Nevertheless, the company decides to make the following entry.

Loss from Lawsuit	500,000	
Liability for Lawsuit		500,000

- d. Because the general level of prices increased during the current year, Gonzales SpA determined that there was a €16,000 understatement of depreciation expense on its equipment and decided to record it in its accounts. The following entry was made.

Depreciation Expense	16,000	
Accumulated Depreciation—Equipment		16,000

- e. Gonzales SpA has been concerned about whether intangible assets could generate cash in case of liquidation. As a consequence, goodwill arising from a purchase transaction during

the current year and recorded at €800,000 was written off as follows.

Retained Earnings	800,000	
Goodwill		800,000

- f. Because of a “fire sale,” equipment obviously worth €200,000 was acquired at a cost of €155,000. The following entry was made.

Equipment	200,000	
Cash		155,000
Sales Revenue		45,000

E2.10 (LO 4) Groupwork (Accounting Principles—Comprehensive) The following information relates to Wang Group.

Instructions

Comment on the appropriateness of the accounting procedures followed by Wang Group.

- a. Depreciation expense on the building for the year was ¥60,000. Because the building was increasing in value during the year, the controller decided to charge the depreciation expense to retained earnings instead of to net income. The following entry is recorded.

Retained Earnings	60,000	
Accumulated Depreciation—Buildings		60,000

- b. Materials were purchased on January 1, 2022, for ¥120,000 and this amount was entered in the Materials account. On December 31, 2022, the materials would have cost ¥141,000, so the following entry is made.

Inventory	21,000	
Gain on Inventories		21,000

- c. During the year, the company purchased equipment through the issuance of ordinary shares. The shares had a par value of ¥

135,000 and a fair value of ¥450,000. The fair value of the equipment was not easily determinable. The company recorded this transaction as follows.

Equipment	135,000	
Share Capital		135,000

- d. During the year, the company sold certain equipment for ¥285,000, recognizing a gain of ¥69,000. Because the controller believed that new equipment would be needed in the near future, she decided to defer the gain and amortize it over the life of any new equipment purchased.
- e. An order for ¥61,500 has been received from a customer for products on hand. This order was shipped on January 9, 2022. The company made the following entry in 2021.

Accounts Receivable	61,500	
Sales Revenue		61,500

Concepts for Analysis

CA2.1 (LO 1) (Conceptual Framework—General) Wayne Cooper has some questions regarding the theoretical framework in which IFRS is established. He knows that the IASB has attempted to develop a conceptual framework for accounting theory formulation. Yet, Wayne’s supervisors have indicated that these theoretical frameworks have little value in the practical sense (i.e., in the real world). Wayne did notice that accounting rules seem to be established after the fact rather than before. He thought this indicated a lack of theory structure but never really questioned the process during his studies because he was too busy doing the homework.

Wayne feels that some of his anxiety about accounting theory and accounting semantics could be alleviated by identifying the basic concepts and definitions accepted by the profession and considering them in light of his current work. By doing this, he hopes to develop an appropriate connection between theory and practice.

Instructions

- a. Help Wayne recognize the purpose of a conceptual framework.
- b. Identify the benefits that arise from a conceptual framework.

CA2.2 (LO 1, 2) Writing (Conceptual Framework—General)

The IASB's Conceptual Framework for Financial Reporting sets forth the objective and fundamentals that will be the basis for developing financial accounting and reporting standards. The objective identifies the purpose of financial reporting. The fundamentals are the underlying concepts of financial accounting that guide the selection of transactions, events, and circumstances to be accounted for; their recognition and measurement; and the means of summarizing and communicating them to interested parties.

The characteristics or qualities of information discussed in the Conceptual Framework are the concepts that make information useful and the qualities to be sought when accounting choices are made.

Instructions

- a. Identify and discuss the benefits that can be expected to be derived from the Conceptual Framework.
- b. What is the most important quality for accounting information as identified in the Conceptual Framework? Explain why it is the most important.
- c. Briefly discuss the importance of any three of the fundamental qualitative characteristics or enhancing qualities of accounting information.

CA2.3 (LO 1) (Objective of Financial Reporting) Homer Winslow and Jane Alexander are discussing various aspects of the Conceptual Framework. Homer indicates that this pronouncement provides little, if any, guidance to the practicing professional in resolving accounting controversies. He believes that the Conceptual Framework provides such broad guidelines that it would be impossible to apply the objective(s) to present-day reporting problems. Jane concedes this point but indicates that objective(s) are

still needed to provide a starting point for the IASB in helping to improve financial reporting.

Instructions

- a. Indicate the basic objective established in the Conceptual Framework.
- b. What do you think is the meaning of Jane's statement that the IASB needs a starting point to resolve accounting controversies about how to improve financial reporting?

CA2.4 (LO 2) Groupwork (Qualitative Characteristics)

Accounting information provides useful information about business transactions and events. Those who provide and use financial reports must often select and evaluate accounting alternatives. The Conceptual Framework examines the characteristics of accounting information that make it useful for decision-making. It also points out that various limitations inherent in the measurement and reporting process may necessitate trade-offs or sacrifices among the characteristics of useful information.

Instructions

- a. Describe briefly the following characteristics of useful accounting information.
 1. Relevance.
 2. Faithful representation.
 3. Understandability.
 4. Comparability (consistency).
 5. Neutrality.
- b. For each of the following pairs of information characteristics, give an example of a situation in which one of the characteristics may be sacrificed in return for a gain in the other.
 1. Relevance and faithful representation.

2. Relevance and consistency.
 3. Comparability and consistency.
 4. Relevance and understandability.
- c. What criterion should be used to evaluate trade-offs between information characteristics?

CA2.5 (LO 4) (Revenue Recognition Principle) After the presentation of your report on the examination of the financial statements to the board of directors of Piper Publishing, one of the new directors expresses surprise that the income statement assumes that an equal proportion of the revenue is earned with the publication of every issue of the company's magazine. She feels that the "crucial event" in the process of recognizing revenue in the magazine business is the cash sale of the subscription. She says that she does not understand why most of the revenue cannot be recognized in the period of the sale.

Instructions

Discuss the propriety of timing the recognition of revenue in Piper Publishing's accounts with respect to the following.

- a. The cash sale of the magazine subscription.
- b. The publication of the magazine every month.
- c. Both events, by recognizing a portion of the revenue with the cash sale of the magazine subscription and a portion of the revenue with the publication of the magazine every month.

CA2.6 (LO 4) (Expense Recognition Principle) An accountant must be familiar with the concepts involved in determining earnings of a business entity. The amount of earnings reported for a business entity is dependent on the proper recognition, in general, of revenue and expense for a given time period. In some situations, costs are recognized as expenses at the time of product sale. In other situations, guidelines have been developed for recognizing costs as expenses or losses by other criteria.

Instructions

- a. Explain the rationale for recognizing costs as expenses at the time of product sale.
- b. What is the rationale underlying the appropriateness of treating costs as expenses of a period instead of assigning the costs to an asset? Explain.
- c. In what general circumstances would it be appropriate to treat a cost as an asset instead of as an expense? Explain.
- d. Some expenses are assigned to specific accounting periods on the basis of systematic and rational allocation of asset cost. Explain the underlying rationale for recognizing expenses on the basis of systematic and rational allocation of asset cost.
- e. Identify the conditions under which it would be appropriate to treat a cost as a loss.

CA2.7 (LO 4) (Expense Recognition Principle) Daniel

Barenboim sells and erects shell houses, that is, frame structures that are completely finished on the outside but are unfinished on the inside except for flooring, partition studding, and ceiling joists. Shell houses are sold chiefly to customers who are handy with tools and who have time to do the interior wiring, plumbing, wall completion and finishing, and other work necessary to make the shell houses livable dwellings.

Barenboim buys shell houses from a manufacturer in unassembled packages consisting of all lumber, roofing, doors, windows, and similar materials necessary to complete a shell house. Upon commencing operations in a new area, Barenboim buys or leases land as a site for his local warehouse, field office, and display houses. Sample display houses are erected at a total cost of \$30,000 to \$44,000 including the cost of the unassembled packages. The chief element of cost of the display houses is the unassembled packages, inasmuch as erection is a short, low-cost operation. Old sample models are torn down or altered into new models every 3 to 7 years. Sample display houses have little residual value because dismantling

and moving costs amount to nearly as much as the cost of an unassembled package.

Instructions

- a. A choice must be made between (1) expensing the costs of sample display houses in the periods in which the expenditure is made and (2) spreading the costs over more than one period. Discuss the advantages of each method.
- b. Would it be preferable to amortize the cost of display houses on the basis of (1) the passage of time or (2) the number of shell houses sold? Explain.

CA2.8 (LO 2) Writing (Qualitative Characteristics) Recently, your Uncle Carlos Beltran, who knows that you always have your eye out for a profitable investment, has discussed the possibility of your purchasing some company bonds. He suggests that you may wish to get in on the “ground floor” of this deal. The bonds being issued by Neville AG are 10-year debentures which promise a 40% rate of return. Neville manufactures novelty/party items.

You have told Neville that, unless you can take a look at its financial statements, you would not feel comfortable about such an investment. Believing that this is the chance of a lifetime, Uncle Carlos has procured a copy of Neville’s most recent, unaudited financial statements, which are a year old. These statements were prepared by Mrs. Andy Neville. You peruse these statements, and they are quite impressive. The statement of financial position showed a debt to equity ratio of 0.10 and, for the year shown, the company reported net income of €2,424,240.

The financial statements are not shown in comparison with amounts from other years. In addition, no significant note disclosures about inventory valuation, depreciation methods, loan agreements, etc. are available.

Instructions

Write a letter to Uncle Carlos explaining why it would be unwise to base an investment decision on the financial statements that he has provided to you. Be sure to explain why these financial statements are neither relevant nor a faithful representation.

CA2.9 (LO 4) Ethics (Expense Recognition Principle) Anderson Nuclear Power Plant will be “mothballed” at the end of its useful life (approximately 20 years) at great expense. Accountants Ana Alicia and Ed Bradley argue whether it is better to allocate the expense of mothballing over the next 20 years or ignore it until mothballing occurs.

Instructions

Answer the following questions.

- a. What stakeholders should be considered?
- b. What ethical issue, if any, underlies the dispute?
- c. What alternatives should be considered?
- d. Assess the consequences of the alternatives.
- e. What decision would you recommend?

CA2.10 (LO 4) (Cost Constraint) A Special Committee on Financial Reporting proposed the following constraints related to financial reporting.

1. Business reporting should exclude information outside of management’s expertise or for which management is not the best source, such as information about competitors.
2. Management should not be required to report information that would significantly harm the company’s competitive position.
3. Management should not be required to provide forecasted financial statements. Rather, management should provide information that helps users forecast for themselves the company’s financial future.

4. Other than for financial statements, management need report only the information it knows. That is, management should be under no obligation to gather information it does not have or does not need to manage the business.
5. Companies should present certain elements of business reporting only if users and management agree they should be reported—a concept of flexible reporting.
6. Companies should not have to report forward-looking information unless there are effective deterrents to unwarranted litigation that discourages companies from doing so.

Instructions

For each item, briefly discuss how the proposed constraint addresses concerns about the costs and benefits of financial reporting.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Using the notes to the consolidated financial statements, determine M&S's revenue recognition policies.
- b. Give two examples of where historical cost information is reported in M&S's financial statements and related notes. Give two examples of the use of fair value information reported in either the financial statements or related notes.

- c. How can we determine that the accounting principles used by M&S are prepared on a basis consistent with those of last year?
- d. What is M&S's accounting policy related to volume-based rebates? How is uncollected supplier income classified in the financial statements?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. Briefly discuss the currency used by each company in its financial statements. Does the currency used affect the comparability of their reports? Briefly explain.
- b. What are the primary segments or product groups of these two companies as shown in their notes to the financial statements?
- c. How are inventories for these two companies valued? How does their accounting for inventories affect comparability between the two companies?
- d. Which company changed its accounting policies, which could affect the consistency of the financial results from the previous year? What were these changes?

Financial Statement Analysis Case

Nokia (FIN) provided the following disclosure in a recent annual report.

Use of Estimates (Partial)

The preparation of financial statements in conformity with IFRS requires the application of judgment by management in selecting appropriate assumptions for calculating financial estimates, which inherently contain some degree of uncertainty ... are areas requiring significant judgment and estimation that may have an impact on reported results and the financial position.

Revenue Recognition

Sales from the majority of the Group are recognized when the significant risks and rewards of ownership have transferred to the buyer, continuing managerial involvement usually associated with ownership and effective control have ceased, the amount of revenue can be measured reliably, it is probable that economic benefits associated with the transaction will flow to the Group and the costs incurred or to be incurred in respect of the transaction can be measured reliably. Sales may materially change if management's assessment of such criteria was determined to be inaccurate. The Group makes price protection adjustments based on estimates of future price reductions and certain agreed customer inventories at the date of the price adjustment. Possible changes in these estimates could result in revisions to the sales in future periods.

Revenue from contracts involving solutions achieved through modification of complex telecommunications equipment is recognized on the percentage of completion basis when the outcome of the contract can be estimated reliably. Recognized revenues and profits are subject to revisions during the project in the event that the assumptions regarding the overall project outcome are revised. Current sales and profit estimates for projects may materially change due to the early stage of a long-term project, new technology, changes in the project scope, changes in costs, changes in timing, changes in customers' plans, realization of penalties, and other corresponding factors.

Instructions

- a. Briefly discuss how Nokia's revenue recognition policies are consistent with the revenue recognition principle. Evaluate both:
 1. Sales.
 2. Revenue from contracts.
- b. Briefly discuss how estimates inherent in Nokia's revenue recognition policies can result in reported revenue numbers that are not relevant and faithful representations.
- c. Assume that Nokia's competitors use similar revenue recognition policies for their sales. What are some of the judgments inherent in applying those policies that could raise concerns with respect to the qualitative characteristic of comparability?

Accounting, Analysis, and Principles

William Murray achieved one of his life-long dreams by opening his own business, The Caddie Shack Driving Range, on May 1, 2022. He invested \$20,000 of his own savings in the business. He paid \$6,000 cash to have a small building constructed to house the operations and spent \$800 on golf clubs, golf balls, and yardage signs. Murray leased 4 acres of land at a cost of \$1,000 per month. (He paid the first month's rent in cash.) During the first month, advertising costs totaled \$750, of which \$150 was unpaid at the end of the month. Murray paid his three nephews \$400 for retrieving golf balls. He deposited in the company's bank account all revenues from customers (\$4,700). On May 15, Murray withdrew \$800 in cash for personal use. On May 31, the company received a utility bill for \$100 but did not immediately pay it. On May 31, the balance in the company bank account was \$15,100.

Murray is feeling pretty good about results for the first month, but his estimate of profitability ranges from a loss of \$4,900 to a profit of \$2,450.

Accounting

Prepare a statement of financial position at May 31, 2022. (Murray appropriately records any depreciation expense on a quarterly basis.)

How could Murray have determined that the business operated at a profit of \$2,450? How could Murray conclude that the business operated at a loss of \$4,900?

Analysis

Assume Murray has asked you to become a partner in his business. Under the partnership agreement, after paying him \$10,000, you would share equally in all future profits. Which of the two income measures above would be more useful in deciding whether to become a partner? Explain.

Principles

What is income according to IFRS? What concepts do the differences in income measures for The Caddie Shack Driving Range illustrate?

Research Case

Your aunt recently received the annual report for a company in which she has invested. The report notes that the statements have been prepared in accordance with IFRS. She has also heard that certain terms have special meanings in accounting relative to everyday use. She would like you to explain the meaning of terms she has come across related to accounting.

Instructions

Access the Conceptual Framework at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to prepare responses to the following items. (Provide paragraph citations.)

- a. How is “materiality” defined in the Conceptual Framework?
- b. Briefly discuss the role of completeness as it relates to faithful representation.
- c. Your aunt observes that under IFRS, the financial statements are prepared on the accrual basis. According to the Conceptual Framework, what does the “accrual basis” mean?

Global Accounting Insights

LEARNING OBJECTIVE 5

Compare the conceptual frameworks underlying IFRS and U.S. GAAP.

The IASB and the FASB originally planned to develop a common conceptual framework. The Boards converged on two subjects: *Objectives of Financial Reporting* and *Qualitative Characteristics of Accounting Information*. However, the IASB decided it was important to move forward and complete other parts of the conceptual framework. The IASB issued its updated conceptual framework in 2018. The FASB did not join this effort although it now appears likely it will start soon on adding to and modifying its existing conceptual framework as well. Both Boards have that same objective, that is, to develop a conceptual framework consisting of standards that are principles-based and internally consistent, thereby leading to the most useful financial reporting. Hopefully, the two Boards will eventually agree on the key components of a common conceptual framework.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the Conceptual Framework for Financial Reporting.

Similarities

- In 2010, the IASB and FASB completed the first phase of a jointly created conceptual framework. In this first phase, they agreed on the objective of financial reporting and a common set of desired qualitative characteristics. These were presented in the Chapter 2 discussion. Note that prior to this converged phase, the Conceptual Framework gave more emphasis to the objective of providing information on management's performance (stewardship).

- The existing conceptual frameworks underlying U.S. GAAP and IFRS are very similar. That is, they are organized in a similar manner (objective, elements, qualitative characteristics, etc.). There is no real need to change many aspects of the existing frameworks other than to converge different ways of discussing essentially the same concepts.
- Both the IASB and FASB have similar measurement principles, based on historical cost and fair value. In 2011, the Boards issued a converged standard on fair value measurement so that the definition of fair value, measurement techniques, and disclosures are the same between U.S. GAAP and IFRS when fair value is used in financial statements.

Differences

- Under the 2018 update to the IASB Conceptual Framework, there are now some subtle differences between the frameworks related to definitions of assets and liabilities (see the following [“About the Numbers”](#) discussion), measurement, and presentation.
- The updated IASB Conceptual Framework makes explicit a role for management stewardship in the objective of financial reporting, and prudence (a form of conservatism) is a dimension of the qualitative characteristic of faithful representation (neutrality).
- Although both U.S. GAAP and IFRS are increasing the use of fair value to report assets, at this point IFRS has adopted it more broadly. As examples, under IFRS, companies can apply fair value to property, plant, and equipment; natural resources; and, in some cases, intangible assets.
- U.S. GAAP has a concept statement to guide estimation of fair values when market-related data are not available (*Statement of Financial Accounting Concepts No. 7, “Using Cash Flow Information and Present Value in Accounting”*). The IASB has not issued a similar concept statement; it has issued a fair value standard (*IFRS 13*) that is converged with U.S. GAAP.

- The monetary unit assumption is part of each framework. However, the unit of measure will vary depending on the currency used in the country in which the company is based (e.g., Chinese yuan, Japanese yen, and British pound).
- The economic entity assumption is also part of each framework, although some cultural differences result in differences in its application. For example, in Japan many companies have formed such strong alliances that they behave more like related divisions in the same company, although they are separate corporations.

About the Numbers

While the conceptual framework that underlies U.S. GAAP is very similar to that used to develop IFRS, the elements identified and their definitions under U.S. GAAP are different. The FASB elements and their definitions are as follows.

Elements of Financial Statements

Asset. Probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

Liabilities. Probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.

Equity. Residual interest in the assets of an entity that remains after deducting its liabilities. In a business enterprise, the equity is the ownership interest.

Investments by Owners. Increases in net assets of a particular enterprise resulting from transfers to it from other entities of something of value to obtain or increase ownership interests (or equity) in it. Assets are most commonly received as investments by owners, but that which is received may also include services or satisfaction or conversion of liabilities of the enterprise.

Distributions to Owners. Decreases in net assets of a particular enterprise resulting from transferring assets, rendering services, or incurring liabilities by the enterprise to owners. Distributions to owners decrease ownership interests (or equity) in an enterprise.

Comprehensive Income. Change in equity (net assets) of an entity during a period from transactions and other events and circumstances from non-owner sources. It includes all changes in equity during a period except those resulting from investments by owners and distributions to owners.

Revenues. Inflows or other enhancements of assets of an entity or settlement of its liabilities (or a combination of both) during a period from delivering or producing goods, rendering services, or other activities that constitute the entity's ongoing major or central operations.

Expenses. Outflows or other using up of assets or incurrences of liabilities (or a combination of both) during a period from

delivering or producing goods, rendering services, or carrying out other activities that constitute the entity's ongoing major or central operations.

Gains. Increases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from revenues or investments by owners.

Losses. Decreases in equity (net assets) from peripheral or incidental transactions of an entity and from all other transactions and other events and circumstances affecting the entity during a period except those that result from expenses or distributions to owners.

Source: "Elements of Financial Statements," *Statement of Financial Accounting Concepts No. 6* (Stamford, Conn.: FASB, December 1985), pp. ix and x.

On the Horizon

The Boards have made much progress in updating and converging their conceptual frameworks. The IASB issuance of its updated *Conceptual Framework for Financial Reporting* in 2018 represents an important milestone. The FASB continues to work on its framework to address remaining elements not converged (definitions of assets and liabilities, measurement, and presentation). Progress to date indicates that the FASB's work has been informed by the IASB's updated framework (go to the FASB website; click on Projects and then Technical Agenda). We are optimistic that these efforts will result in substantially converged conceptual frameworks, which will support the development of standards that help financial statement users to make better decisions.

GAAP Self-Test Questions

1. Which of the following statements about the IASB and FASB conceptual frameworks is **not** correct?

- a. The IASB conceptual framework does not identify the element *comprehensive income*.
- b. The existing IASB and FASB conceptual frameworks are organized in similar ways.
- c. The FASB and IASB agree that the objective of financial reporting is to provide useful information to investors and creditors.
- d. IFRS does not allow use of fair value as a measurement basis.

2. Which of the following statements is **false**?

- a. The monetary unit assumption is used under U.S. GAAP.
- b. Under IFRS, companies may use fair value for property, plant, and equipment.
- c. The FASB and IASB are no longer working on a joint conceptual framework project.
- d. Under IFRS, there are the same number of financial statement elements as in U.S. GAAP.

3. Companies that use U.S. GAAP:

- a. must report all their assets on the balance sheet (statement of financial position) at fair value.
- b. may report property, plant, and equipment and natural resources at fair value.
- c. are guided by a concept statement on estimating fair values when market data are not available.
- d. may only use historical cost as the measurement basis in financial reporting.

4. The issues that the FASB must still address in developing its updated conceptual framework include all of the following **except**:

- a. whether the characteristic of relevance should be traded off in favor of information that is verifiable.

- b. the qualitative characteristics of useful information.
 - c. the objective of financial reporting.
 - d. the asset and liability definitions.
5. With respect to the FASB/IASB conceptual framework projects:
- a. work is being conducted together on each part of the project.
 - b. work is being conducted with other national standard-setters.
 - c. there was never a plan to develop a common conceptual framework.
 - d. the IASB has worked at a faster pace than the FASB.

GAAP Concepts and Application

GAAP2.1 Do the IASB and U.S. GAAP conceptual frameworks differ in terms of fair value measurement? Explain.

GAAP2.2 How do the FASB and IASB conceptual frameworks differ in terms of the elements of financial statements?

GAAP2.3 What is the status of the Boards' efforts to develop a converged conceptual framework?

Answers to GAAP Self-Test Questions

1. d 2. d 3. c 4. d 5. d

Notes

1 Recall from our discussion in [Chapter 1](#) that while the IASB's Conceptual Framework and any changes to it pass through the same due process (discussion paper, preliminary views, public hearing, exposure draft, etc.) as do the IFRSs, the Conceptual Framework is not an IFRS. That is, the Conceptual Framework does not define standards for any particular measurement or disclosure issue, and nothing in the Conceptual Framework overrides any specific IFRS. **[1]** (See the [Authoritative Literature References](#) section near the end of the chapter.)

- [2](#) C. Horngren, “Uses and Limitations of a Conceptual Framework,” *Journal of Accountancy* (April 1981), p. 90.
- [3](#) The IASB and the FASB had worked together to develop converged concepts statements on the objective of financial reporting and qualitative characteristics of accounting information, resulting in updated chapters on those elements in 2010. Since 2010, the Boards worked on their own schedules to address the remaining elements of the conceptual framework project. As discussed at the beginning of the chapter, the IASB issued its updated *Conceptual Framework for Financial Reporting* in 2018. The FASB continues to work on its framework to address concepts related to definitions of assets and liabilities, measurement, and presentation. For more information, go to the FASB website; click on Projects and then Technical Agenda.
- [4](#) Surveys indicate that users highly value consistency. They note that a change tends to destroy the comparability of data before and after the change. Some companies assist users to understand the pre- and post-change data. Generally, however, users say they lose the ability to analyze over time. IFRS guidelines (discussed in [Chapter 22](#)) on accounting changes are designed to improve the comparability of the data before and after the change.
- [5](#) The concept of the entity is changing. For example, defining the “outer edges” of companies is now harder. Public companies often consist of multiple public subsidiaries, each with joint ventures, licensing arrangements, and other affiliations. Increasingly, companies form and dissolve joint ventures or customer-supplier relationships in a matter of months or weeks. These “virtual companies” raise accounting issues about how to account for the entity. See Steven H. Wallman, “The Future of Accounting and Disclosure in an Evolving World: The Need for Dramatic Change,” *Accounting Horizons* (September 1995).
- [6](#) This approach reflects adoption of a financial capital approach to capital maintenance under which the change in capital or a company’s net assets is measured in nominal monetary units

without adjusting for changes in prices. [\[11\]](#) There is a separate IFRS (*IFRS No. 29*, “Financial Reporting in Hyperinflationary Economies”) that provides guidance on how to account for adjustments to the purchasing power of the monetary unit. [\[12\]](#)

- [7](#) For major groups of assets and liabilities, companies must disclose (1) the fair value measurement and (2) the fair value hierarchy level of the measurements as a whole, classified by Level 1, 2, or 3. Given the judgment involved, it follows that the more a company depends on Level 3 to determine fair values, the more information about the valuation process the company will need to disclose. Thus, additional disclosures are required for Level 3 measurements; we discuss these disclosures in more detail in subsequent chapters.
- [8](#) Detailed discussion on measurement bases was not included in the pre-2018 Conceptual Framework. However, these current value measurement bases are reflected in certain IFRS. By including them in the Conceptual Framework, the IASB, when establishing new standards, can be guided by this Framework to ensure consistency. Indeed, while current cost is not often used in IFRS, value in use and fulfillment costs will be discussed in subsequent chapters in this text.
- [9](#) The IFRS Conceptual Framework provides significant guidance on selecting a measurement basis that provides the most useful information. The optimal choice depends on the facts and circumstances of the company. [\[19\]](#)
- [10](#) Derecognition is the removal of all or part of a recognized asset or liability from a company’s statement of financial position. Derecognition normally occurs when that item no longer meets the definition of an asset or of a liability. For assets, derecognition generally occurs when the company loses control of all or part of the recognized asset. For liabilities, derecognition generally occurs when the company no longer has a present obligation related to the liability. [\[21\]](#) We address derecognition as it relates to topics discussed throughout the text.

- [11](#) The framework shown in [Illustration 2.5](#) is based on the recent standard on revenue recognition. The new guidance establishes the principles to report useful information about the nature, timing, and uncertainty of revenue from contracts with customers.
- [12](#) This approach is commonly referred to as the **matching principle**. However, there is some debate about the conceptual validity of the matching principle. A major concern is that matching permits companies to defer certain costs and treat them as assets on the statement of financial position. In fact, these costs may not have future benefits. If abused, this principle permits the statement of financial position to become a “dumping ground” for unmatched costs.
- [13](#) To provide guidance for management disclosures, the IASB issued an IFRS practice statement entitled “Management Commentary—A Framework for Presentation.” The IASB notes that this practice statement is neither an IFRS nor part of the Conceptual Framework. However, the guidance is issued on the basis that management commentary meets the definition of other financial reporting as referenced in the Conceptual Framework.

CHAPTER 3

The Accounting Information System

LEARNING OBJECTIVES

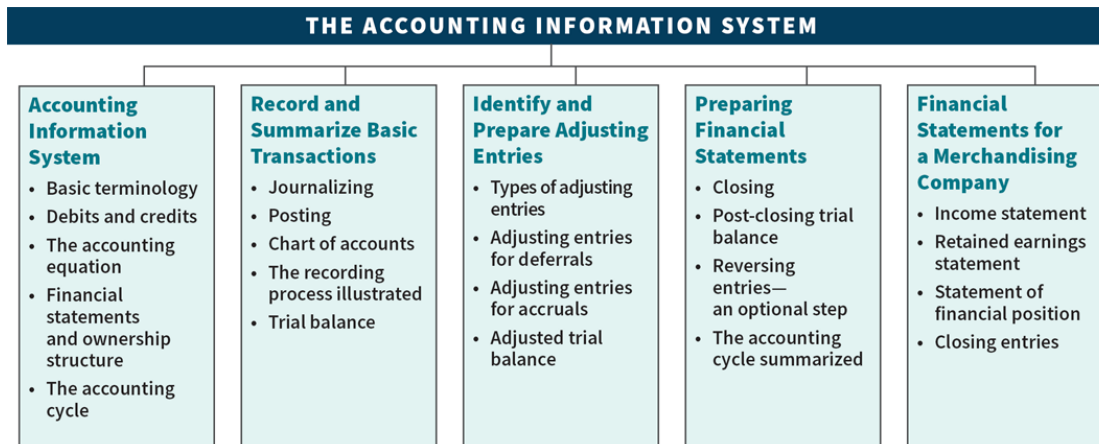

After studying this chapter, you should be able to:

1. Describe the basic accounting information system.
2. Record and summarize basic transactions.
3. Identify and prepare adjusting entries.
4. Prepare financial statements from the adjusted trial balance and prepare closing entries.
5. Prepare financial statements for a merchandising company.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 3

As the following opening story indicates, blockchain technologies hold promise as part of a reliable accounting information system for many companies. The purpose of this chapter is to explain and illustrate the features of an accounting information system. The content and organization of this chapter are as follows.

Working on the Chain Gang

Advanced information technology and accounting have always moved in tandem. For example, consider an emerging technology called blockchain, which has the potential to be deployed in accounting systems. What is blockchain? It is a digital ledger of economic transactions that is fully public, continually updated by countless users in the cloud, and considered by many to be impossible to corrupt. A blockchain database contains two types of records: transactions and blocks. Blocks hold batches of transactions. The blocks are time-stamped and link to a previous block.

Accounting information systems have been built on database technology for a long time. The reason for the recent interest in blockchain technologies for accounting systems has to do with some unique features:

1. Blockchain technologies can be used to create a database of information that is *immutable*. Being immutable means that once information is stored in the blockchain, the original record cannot be altered without detection. This has useful potential for accounting systems, as it is important that accounting records are complete and not altered.
2. Blockchain records are stored in a *distributed* system. In a distributed system, there are always multiple copies of the database, and all copies are the same at any point in time.
3. Blockchain systems can be built using public or shared databases. While this feature is essential for cryptocurrency payment systems such as bitcoin, it is less clear that this would be the case for accounting systems, which typically contain private information. However, it is conceivable that by using a common, public shared ledger, a company might have accounting records that would allow for a much more efficient audit process.

Many accounting firms have established special teams and groups that are focused on blockchain technologies and their applications to accounting. For example, one firm has established a group that can provide blockchain validation. Essentially, this would be an audit of the technologies and data in a blockchain so that others could rely on it. Another large accounting firm has begun to offer its own blockchain for use by large financial services companies, to keep records of stock and other financial product ownership. While the exact future uses of blockchain technologies are not yet clear, all involved are certain that blockchain systems will be a common part of the accounting information system of the future for many organizations.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Accounting Information System

LEARNING OBJECTIVE 1

Describe the basic accounting information system.

An **accounting information system** collects and processes transaction data and then disseminates the financial information to interested parties. Accounting information systems vary widely from one business to another. Various factors shape these systems: the nature of the business and the transactions in which it engages, the size of the firm, the volume of data to be handled, and the informational demands of management and others.

As we discussed in the opening story, companies are placing a renewed focus on their accounting systems in light of blockchain innovations to ensure relevant and representationally faithful information is reported in financial statements. A good accounting information system helps management answer such questions as:

- How much and what kind of debt is outstanding?
- Were our sales higher this period than last?

- What assets do we have?
- What were our cash inflows and outflows?
- Did we make a profit last period?
- Are any of our product lines or divisions operating at a loss?
- Can we safely increase our dividends to shareholders?
- Is our rate of return on net assets increasing?

Management can answer many other questions with the data provided by an efficient accounting system. A well-devised accounting information system benefits every type of company.

Basic Terminology

Financial accounting rests on a set of concepts (discussed in [Chapters 1](#) and [2](#)) for identifying, recording, classifying, and interpreting transactions and other events relating to enterprises. You therefore need to understand the **basic terminology employed in collecting accounting data**.

Basic Terminology

Event. A happening of consequence. An event generally is the source or cause of changes in assets, liabilities, and equity. Events may be external or internal.

Transaction. An **external event** involving a transfer or exchange between two or more entities.

Account. A systematic arrangement that shows the effect of transactions and other events on a specific element (asset, liability, and so on). Companies keep a separate account for each asset, liability, revenue, and expense, and for capital (owners' equity). Because the format of an account often resembles the letter T, it is sometimes referred to as a **T-account** (see [Illustration 3.3](#)).

Real and Nominal Accounts. **Real** (permanent) **accounts** are asset, liability, and equity accounts; they appear on the statement of financial position. **Nominal** (temporary) **accounts** are revenue, expense, and dividend accounts; except for dividends, they appear on the income statement. Companies periodically close nominal accounts; they do not close real accounts.

Ledger. The book (or computer printouts) containing the accounts. A **general ledger** is a collection of all the asset, liability, equity, revenue, and expense accounts. A **subsidiary ledger** contains the details related to a given general ledger account.

Journal. The “book of original entry” where the company initially records transactions and selected other events. Various amounts are transferred from the book of original entry, the journal, to the ledger. Entering transaction data in the journal is known as **journalizing**.

Posting. The process of transferring the essential facts and figures from the book of original entry to the ledger accounts.

Trial Balance. The list of all open accounts in the ledger and their balances. The trial balance taken immediately after all adjustments have been posted is called an **adjusted trial balance**. A trial balance taken immediately after closing entries have been posted is called a **post-closing** (or **after-closing**) **trial balance**. Companies may prepare a trial balance at any time.

Adjusting Entries. Entries made at the end of an accounting period to bring all accounts up to date on an accrual basis, so that the company can prepare correct financial statements.

Financial Statements. Statements that reflect the collection, tabulation, and final summarization of the accounting data. Four statements are involved: (1) The **statement of financial position** shows the financial condition of the enterprise at the end of a period. (2) The **income statement** (or statement of comprehensive income) measures the results of operations during the period. (3) The **statement of cash flows** reports the cash provided and used by operating, investing, and financing activities during the period. (4) The **statement of retained earnings** (or retained earnings statement) reconciles the balance of the Retained Earnings account from the beginning to the end of the period.

Closing Entries. The formal process by which the enterprise reduces all nominal accounts to zero and determines and transfers the net income or net loss to an equity account. Also known as “closing the ledger,” “closing the books,” or merely “closing.”

Debits and Credits

The terms **debit** (Dr.) and **credit** (Cr.) mean left and right, respectively. These terms do not mean increase or decrease, but instead describe *where* a company makes entries in the recording process. That is, when a company enters an amount on the left side of an account, it **debits** the account. When it makes an entry on the right side, it **credits** the account. When comparing the totals of the two sides, an account shows a **debit balance** if the total of the debit amounts exceeds the credits. An account shows a **credit balance** if the credit amounts exceed the debits.

The positioning of debits on the left and credits on the right is simply an accounting custom. We could function just as well if we reversed the sides. However, countries adopted the custom, now the rule, of having debits on the left side of an account and credits on the right side, similar to the custom of driving on one side of the road or the other. This rule applies to all accounts.

The equality of debits and credits provides the basis for the double-entry system of recording transactions (sometimes referred to as double-entry bookkeeping). Under the universally used **double-entry accounting** system, a company records the dual (two-sided) effect of each transaction in appropriate accounts. This system provides a logical method for recording transactions. It also offers a means of proving the accuracy of the recorded amounts. If a company records every transaction with equal debits and credits, then the sum of all the debits to the accounts must equal the sum of all the credits.

Illustration 3.1 presents the basic guidelines for an accounting system. Increases to all asset and expense accounts occur on the left (or debit side) and decreases occur on the right (or credit side). Conversely, increases to all liability and revenue accounts occur on the right (or credit side) and decreases on the left (or debit side). A company increases equity accounts, such as Share Capital and Retained Earnings, on the credit side, but increases Dividends on the debit side.

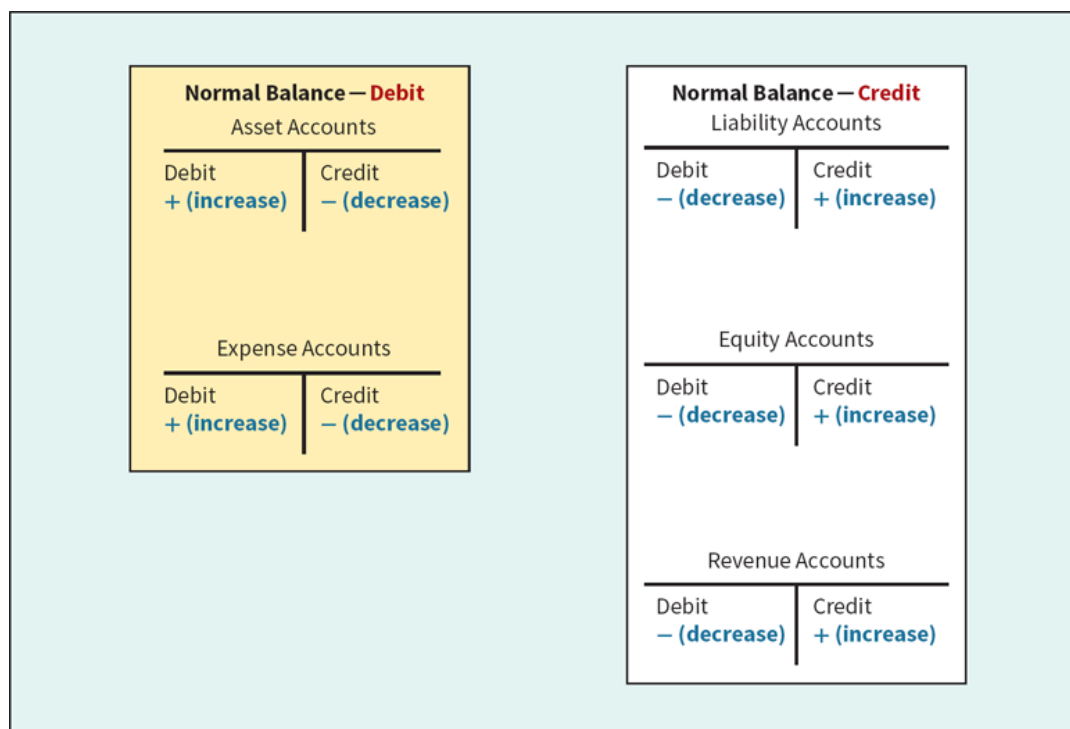

ILLUSTRATION 3.1 Double-Entry (Debit and Credit) Accounting System

The Accounting Equation

In a double-entry system, for every debit there must be a credit, and vice versa. This leads us, then, to the basic equation in accounting (**Illustration 3.2**).

ILLUSTRATION 3.2 The Basic Accounting Equation

Illustration 3.3 expands this equation to show the accounts that make up equity. The figure also shows the debit/credit rules and effects on each type of account. Study this diagram carefully. It will help you understand the fundamentals of the double-entry system. Like the basic equation, the expanded equation must also balance (total debits equal total credits).

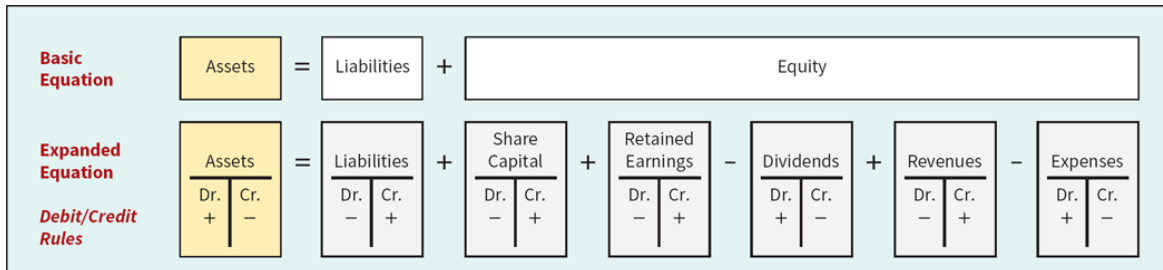

ILLUSTRATION 3.3 Expanded Equation and Debit/Credit Rules and Effects

Every time a transaction occurs, the elements of the accounting equation change. However, the basic equality remains. To illustrate, consider the following eight different transactions for Perez Inc.

1. Owners invest \$40,000 in exchange for ordinary shares.

2. Disburse \$600 cash for administrative wages.

3. Purchase office equipment priced at \$5,200, giving a 6 percent promissory note in exchange.

4. Receive \$4,000 cash for services performed.

5. Pay off a short-term liability of \$7,000.

6. Declare a cash dividend of \$5,000.

7. Convert a non-current liability of \$80,000 into ordinary shares.

8. Pay cash of \$16,000 for a delivery van.

Financial Statements and Ownership Structure

The equity section of the statement of financial position reports share capital and retained earnings. The income statement reports revenues and expenses. The retained earnings statement reports dividends. Because a company transfers dividends, revenues, and expenses to retained earnings at the end of the period, a change in any one of these three items affects equity.

[Illustration 3.4](#) shows the income statement and equity relationships.

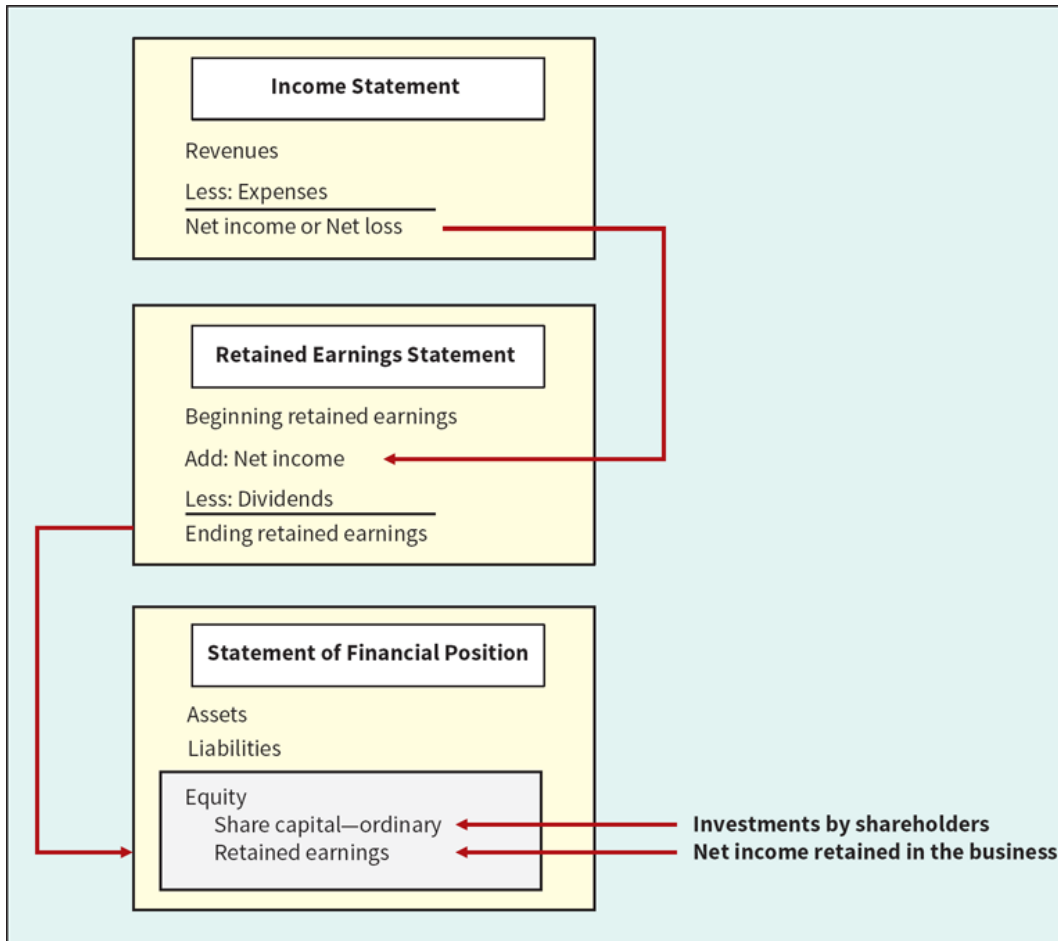

ILLUSTRATION 3.4 Income Statement and Equity Relationships

The company’s ownership structure dictates the types of accounts that are part of or affect the equity section. A corporation commonly uses Share Capital, Share Premium, Dividends, and Retained Earnings accounts. A proprietorship or a partnership uses an Owner’s Capital account and an Owner’s Drawing account. An Owner’s Capital account indicates the owner’s or owners’ investment in the company. An Owner’s Drawing account tracks withdrawals by the owner(s).

Illustration 3.5 summarizes and relates the transactions affecting equity to the nominal (temporary) and real (permanent) classifications and to the types of business ownership.

Transactions Affecting Equity	Impact on Equity	Ownership Structure			
		Proprietorships and Partnerships		Corporations	
		Nominal (Temporary) Accounts	Real (Permanent) Accounts	Nominal (Temporary) Accounts	Real (Permanent) Accounts
Investment by owner(s)	Increase		Capital		Share Capital and related accounts
Revenues recognized	Increase	Revenue	Capital	Revenue	Retained Earnings
Expenses incurred	Decrease	Expense		Expense	
Withdrawal by owner(s)	Decrease	Drawing		Dividends	

ILLUSTRATION 3.5 Effects of Transactions on Equity Accounts

The Accounting Cycle

Illustration 3.6 shows the steps in the **accounting cycle**. A company normally uses these accounting procedures to record transactions and prepare financial statements.

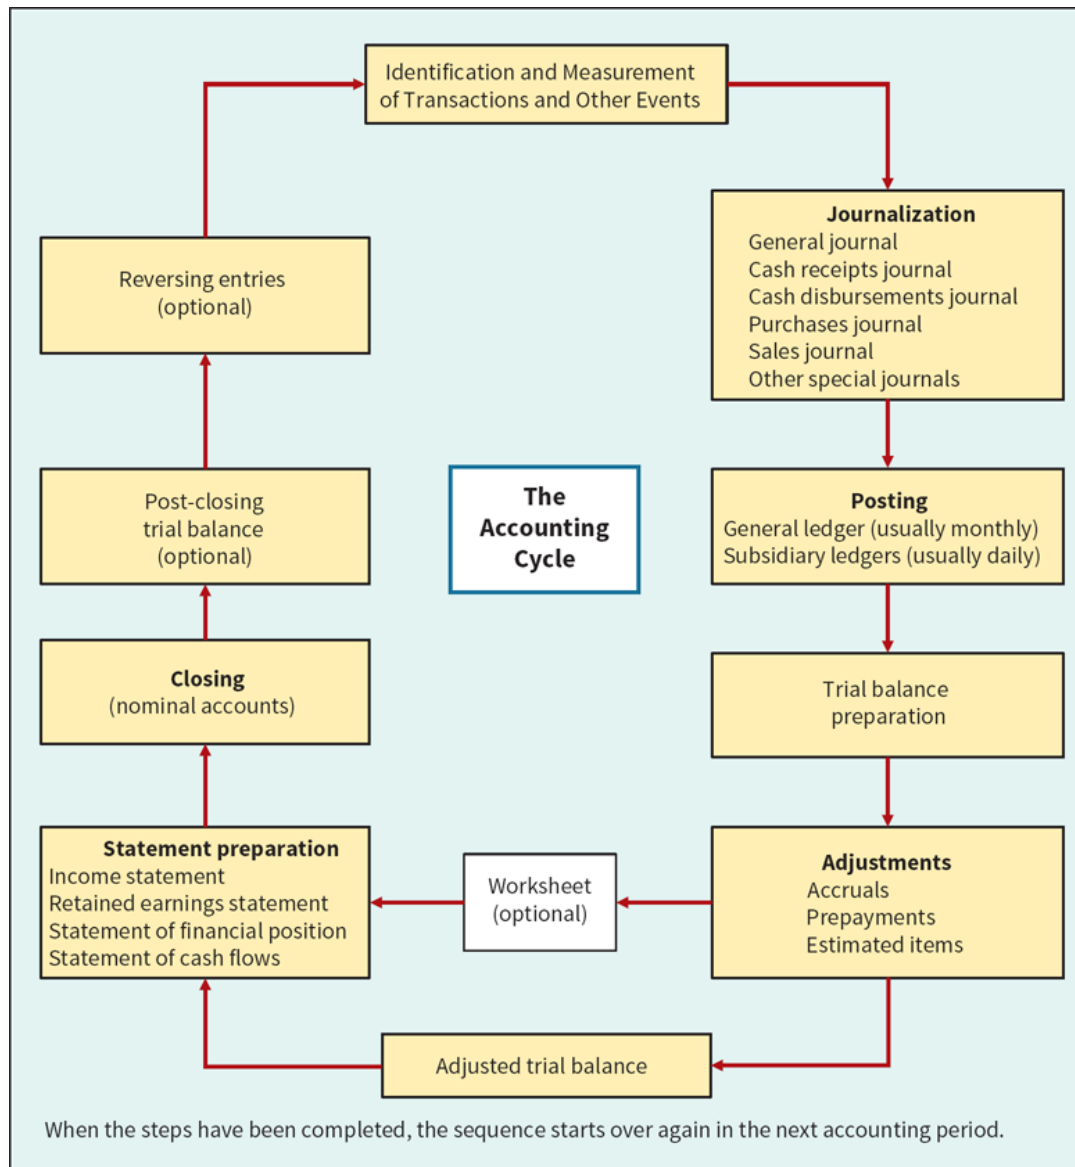

ILLUSTRATION 3.6 The Accounting Cycle

Identifying and Recording Transactions and Other Events

The first step in the accounting cycle is analysis of transactions and selected other events. The first problem is to determine what to record. Although IFRS provides guidelines, no simple rules exist that state which events a company should record. Although changes in a company's personnel or managerial policies may be important, the company should not record these items in the accounts. On the other hand, a company should record all cash sales or purchases—no matter how small.

The concepts we presented in [Chapter 2](#) determine what to recognize in the accounts. An item should be recognized in the financial statements provided that the item meets the definition of one of the elements of financial statements and if such recognition provides users of financial statements with (a) **relevant information** about the asset or the liability and about any income, expenses, or changes in equity; and (b) a **faithful representation** of the asset or the liability and of any income, expenses, or changes in equity. For example, should we value employees for statement of financial position and income statement purposes (see [Underlying Concepts](#))?

Certainly skilled employees are an important asset (highly relevant), but the problems of determining their value and measuring it reliably have not yet been solved. Consequently, human resources are not recorded. Perhaps when measurement techniques become more sophisticated and accepted, such information will be presented, if only in supplemental form.

Underlying Concepts

Assets are present economic resources controlled by the entity as a result of past events. An economic resource is a right that has the potential to produce economic benefits.

Transactions recorded may be an exchange between two entities where each receives and sacrifices value, such as purchases and sales of goods or services. Or, transactions may be transfers in one direction only. For example, an entity may incur a liability without directly receiving value in exchange, such as charitable contributions (see [Underlying Concepts](#)). Other examples include investments by owners, distributions to owners, payment of taxes, gifts, casualty losses, and thefts.

Underlying Concepts

A liability is a present obligation of the entity to transfer an economic resource as a result of past events.

In short, a company records as many transactions as possible that affect its financial position. As discussed earlier in the case of human resources, it omits some events because of tradition and others because of complicated measurement problems. Recently, however, the accounting profession has shown more receptiveness to accepting the challenge of measuring and reporting events previously viewed as too complex and immeasurable.

Record and Summarize Basic Transactions

LEARNING OBJECTIVE 2

Record and summarize basic transactions.

Journalizing

A company records in **accounts** those transactions and events that affect its assets, liabilities, and equities. The **general ledger** contains all the asset, liability, and equity accounts. An account (see [Illustration 3.3](#)) shows the effect of transactions on a particular asset, liability, equity, and revenue, as well as expense accounts.

In practice, companies do not record transactions and selected other events originally in the ledger. A transaction affects two or more accounts, each of which is on a different page in the ledger. Therefore, in order to have a complete record of each transaction or other event in one place, a company uses a **journal** (also called “the book of original entry”). In its simplest form, a **general journal** chronologically lists transactions and other events, expressed in terms of debits and credits to accounts.

As an example, [Illustration 3.7](#) depicts the technique of journalizing, using two transactions for Softbyte A.S. These transactions are:

September 1	Shareholders invested ₺15,000 cash in the company in exchange for ordinary shares.
	Purchased computer equipment for ₺7,000 cash.

General Journal				J1
Date	Account Titles and Explanation	Ref.	Debit	Credit
2022				
Sept. 1	Cash		15,000	
	Share Capital—Ordinary			15,000
	(Issued ordinary shares for cash)			
1	Equipment		7,000	
	Cash			7,000
	(Purchased equipment for cash)			

ILLUSTRATION 3.7 Technique of Journalizing

The J1 indicates these two entries are on the first page of the general journal.

Each **general journal entry** consists of four parts: (1) a date, (2) the accounts and amounts to be debited (Dr.), (3) the accounts and amounts to be credited (Cr.), and (4) an explanation. A company enters debits first, followed by the credits (slightly indented). The explanation begins below the name of the last account to be credited and may take one or more lines. A company completes the “Ref.” column at the time it posts to the accounts.

In some cases, a company uses **special journals** in addition to the general journal. Special journals summarize transactions possessing a common characteristic (e.g., cash receipts, sales, purchases, cash payments). As a result, using them reduces bookkeeping time.

Posting

The procedure of transferring journal entries to the ledger accounts is called **posting**. Posting involves the following steps.

1. In the **ledger**, enter in the appropriate columns of the debited account(s) the date, journal page, and debit amount shown in the journal.
2. In the reference column of the **journal**, write the account number to which the debit amount was posted.
3. In the ledger, enter in the appropriate columns of the credited account(s) the date, journal page, and credit amount shown in the journal.
4. In the reference column of the journal, write the account number to which the credit amount was posted.

Illustration 3.8 diagrams these four steps, using the first journal entry of Softbyte. The illustration shows the general ledger accounts in **standard account form**. Some companies call this form the **three-column form of account** because it has three money columns—debit, credit, and balance. The balance in the account is determined after each transaction. The explanation space and reference columns provide special information about the transaction. The boxed numbers indicate the sequence of the steps.

ILLUSTRATION 3.8 Posting a Journal Entry

The numbers in the “Ref.” column of the general journal refer to the ledger accounts to which a company posts the respective items. For example, the “101” placed in the column to the right of “Cash” indicates that the company posted this ₱15,000 item to Account No. 101 in the ledger.

The posting of the general journal is completed when a company records all of the posting reference numbers opposite the account titles in the journal. Thus, the number in the posting reference column serves two purposes: (1) It indicates the ledger account number of the account involved; and, (2) It indicates the completion of posting for the particular item. Each company selects its own numbering system for its ledger accounts. Many begin numbering with asset accounts and then follow with liabilities, equity, revenue, and expense accounts, in that order.

The ledger accounts in [Illustration 3.8](#) show the accounts after completion of the posting process. The reference J1 (General Journal, page 1) indicates the source of the data transferred to the ledger account.

Chart of Accounts

The number and type of accounts differ for each company. The number of accounts depends on the amount of detail management desires. For example, the management of one company may want a single account for all types of utility expense. Another may keep separate expense accounts for each type of utility, such as gas, electricity, and water. Similarly, a small company like Softbyte will

have fewer accounts than a business giant like **Anheuser-Busch InBev** (BEL). Softbyte may be able to manage and report its activities in 20 to 30 accounts, while Anheuser-Busch InBev may require thousands of accounts to keep track of its worldwide activities.

Most companies have a **chart of accounts**. This chart lists the accounts and the account numbers that identify their location in the ledger. The numbering system that identifies the accounts usually starts with the statement of financial position accounts and follows with the income statement accounts.

In this chapter, we will be explaining the accounting for Yazici Advertising A.Ş. (a service company). The ranges of the account numbers are as follows.

- Accounts 101–199 indicate asset accounts
- 200–299 indicate liabilities
- 300–399 indicate equity accounts
- 400–499, revenues
- 500–799, expenses
- 800–899, other revenues
- 900–999, other expenses

Illustration 3.9 shows the chart of accounts for Yazici Advertising A.Ş. You will notice that there are gaps in the numbering system of the chart of accounts for Yazici Advertising A.Ş. Gaps are left to permit the insertion of new accounts as needed during the life of the business.

Yazici Advertising A.Ş. Chart of Accounts	
Assets	Equity
101 Cash	311 Share Capital—Ordinary
112 Accounts Receivable	320 Retained Earnings
113 Allowance for Doubtful Accounts	332 Dividends
126 Supplies	350 Income Summary
130 Prepaid Insurance	
157 Equipment	Revenues
158 Accumulated Depreciation—Equipment	400 Service Revenue
	Expenses
Liabilities	631 Supplies Expense
200 Notes Payable	711 Depreciation Expense
201 Accounts Payable	722 Insurance Expense
209 Unearned Service Revenue	726 Salaries and Wages Expense
212 Salaries and Wages Payable	729 Rent Expense
230 Interest Payable	732 Utilities Expense
	905 Interest Expense
	910 Bad Debt Expense

ILLUSTRATION 3.9 Chart of Accounts for Yazici Advertising A.Ş.

The Recording Process Illustrated

Illustrations 3.10 through **3.19** show the basic steps in the recording process, using the October transactions of Yazici Advertising A.Ş. Yazici's accounting period is a month. A basic analysis and a debit-credit analysis precede the journalizing and posting of each transaction. For simplicity, we use the T-account form in the illustrations instead of the standard account form.

ILLUSTRATION 3.10 Investment of Cash by Shareholders

Study these transaction analyses carefully. **The purpose of transaction analysis is first to identify the type of account involved, and then to determine whether to make a debit or a credit to the account.** You should always perform this type of analysis before preparing a journal entry. Doing so will help you understand the journal entries discussed in this chapter as well as more complex journal entries in later chapters.

Transaction	On October 1, Yazici Advertising purchases office equipment costing ₺50,000 by signing a 3-month, 12%, ₺50,000 note payable.																		
Basic Analysis	The asset Equipment increases ₺50,000; the liability Notes Payable increases ₺50,000.																		
Equation Analysis	<table border="0"> <tr> <td style="text-align: center;"><u>Assets</u></td> <td style="text-align: center;">=</td> <td style="text-align: center;"><u>Liabilities</u></td> <td style="text-align: center;">+</td> <td style="text-align: center;"><u>Equity</u></td> </tr> <tr> <td style="text-align: center;">Equipment</td> <td style="text-align: center;">=</td> <td style="text-align: center;">Notes Payable</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">+50,000</td> <td></td> <td style="text-align: center;">+50,000</td> <td></td> <td></td> </tr> </table>	<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Equity</u>	Equipment	=	Notes Payable			+50,000		+50,000

ILLUSTRATION 3.11 Purchase of Office Equipment

Transaction	On October 2, Yazici Advertising receives a ₺12,000 cash advance from R. Knox, a client, for advertising services that are expected to be completed by December 31.																		
Basic Analysis	The asset Cash increases ₺12,000; the liability Unearned Service Revenue increases ₺12,000 because the service has not been performed yet. That is, when Yazici receives an advance payment, it should record an unearned revenue (a liability) in order to recognize the obligation that exists. Note also that although many liabilities have the word “payable” in their title, unearned revenue is considered a liability because the liability is satisfied by providing a product or performing a service.																		
Equation Analysis	<table style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;"><u>Assets</u></td> <td style="text-align: center;">=</td> <td style="text-align: center;"><u>Liabilities</u></td> <td style="text-align: center;">+</td> <td style="text-align: center;"><u>Equity</u></td> </tr> <tr> <td style="text-align: center;">Cash</td> <td style="text-align: center;">=</td> <td style="text-align: center;">Unearned Service Revenue</td> <td></td> <td></td> </tr> <tr> <td style="text-align: center;">+12,000</td> <td></td> <td style="text-align: center;">+12,000</td> <td></td> <td></td> </tr> </table>				<u>Assets</u>	=	<u>Liabilities</u>	+	<u>Equity</u>	Cash	=	Unearned Service Revenue			+12,000		+12,000

Trial Balance

A **trial balance** is a list of accounts and their balances at a given time. A company usually prepares a trial balance at the end of an accounting period. The trial balance lists the accounts in the order in which they appear in the ledger, with debit balances listed in the left column and credit balances in the right column. The totals of the two columns must agree.

The trial balance proves the mathematical equality of debits and credits after posting. Under the double-entry system this equality occurs when the sum of the debit account balances equals the sum of the credit account balances. A trial balance also uncovers errors in journalizing and posting. In addition, it is useful in the preparation of financial statements. The procedures for preparing a trial balance consist of:

1. Listing the account titles and their balances.
2. Totaling the debit and credit columns.
3. Proving the equality of the two columns.

Illustration 3.20 presents the trial balance prepared from the ledger of Yazici Advertising A.Ş. Note that the total debits (₺287,000) equal the total credits (₺287,000). A trial balance also often

shows account numbers to the left of the account titles.

Yazici Advertising A.Ş. Trial Balance October 31, 2022		
	Debit	Credit
Cash	₺ 80,000	
Accounts Receivable	72,000	
Supplies	25,000	
Prepaid Insurance	6,000	
Equipment	50,000	
Notes Payable		₺ 50,000
Accounts Payable		25,000
Unearned Service Revenue		12,000
Share Capital—Ordinary		100,000
Dividends	5,000	
Service Revenue		100,000
Salaries and Wages Expense	40,000	
Rent Expense	9,000	
	<u>₺287,000</u>	<u>₺287,000</u>

ILLUSTRATION 3.20 Trial Balance (Unadjusted)

A trial balance does not prove that a company recorded all transactions or that the ledger is correct. Numerous errors may exist even though the trial balance columns agree. For example, the trial balance may balance even when a company (1) fails to journalize a transaction, (2) omits posting a correct journal entry, (3) posts a journal entry twice, (4) uses incorrect accounts in journalizing or posting, or (5) makes offsetting errors in recording the amount of a transaction. In other words, as long as a company posts equal debits and credits, even to the wrong account or in the wrong amount, the total debits will equal the total credits.

What Do the Numbers Mean?

Change Management

For companies considering adoption of IFRS, extensive planning is required to ensure that accounting information system issues are addressed. Identifying the implications of required or elected accounting changes, such as adopting a new set of accounting standards, takes time. And the impact can be broad and vary in significance. The interrelationship of accounting changes with information technology (IT) systems, business processes, taxes, and general operations extends the time required to address all identified issues. In general, this process may require a three- or four-year lead time to prepare the various accounting and reporting systems for first-time adoption of IFRS.

Identify and Prepare Adjusting Entries

LEARNING OBJECTIVE 3

Identify and prepare adjusting entries.

In order for revenues to be recorded in the period in which services are performed and for expenses to be recognized in the period in which they are incurred, companies make **adjusting entries**. In short, adjustments ensure that companies, like **SAP** (DEU), **Cathay Pacific Airways** (HKG), and **Nokia** (FIN), follow the revenue recognition and expense recognition principles.

The use of adjusting entries makes it possible to report on the statement of financial position the appropriate assets, liabilities, and equity at the statement date. Adjusting entries also make it possible to report on the income statement the proper revenues and expenses for the period. However, the trial balance—the first pulling together of the transaction data—may not contain up-to-date and complete data. This occurs for the following reasons.

1. Some events are not journalized daily because it is not expedient. Examples are the consumption of supplies and the earning of salaries and wages by employees.
2. Some costs are not journalized during the accounting period because these costs expire with the passage of time rather than as a result of recurring daily transactions. Examples of such costs are building and equipment depreciation and rent and insurance.
3. Some items may be unrecorded. An example is a utility service bill that will not be received until the next accounting period.

Adjusting entries are required every time a company, such as **Sony** (JPN), prepares financial statements (see **Underlying Concepts**). At that time, Sony must analyze each account in the trial balance to determine whether it is complete and up-to-date for financial statement purposes. The analysis requires a thorough understanding of Sony's operations and the interrelationship of accounts. Because of this involved process, usually a skilled accountant prepares the adjusting entries. In gathering the adjustment data, Sony may need to make inventory counts of supplies and repair parts. Further, it may prepare supporting schedules of insurance policies, rental agreements, and other contractual commitments. Companies often prepare adjustments after the statement of financial position date. However, they date the entries as of the statement of financial position date.

Underlying Concepts

Preparation of financial statements for subperiods such as quarters or months improves the timeliness of the information but raises verifiability concerns due to estimates in preparing adjusting entries.

Types of Adjusting Entries

Adjusting entries are classified as either deferrals or accruals. Each of these classes has two subcategories, as **Illustration 3.21** shows.

Deferrals:
1. Prepaid expenses: Expenses paid in cash before they are used or consumed.
2. Unearned revenues: Cash received before services are performed.
Accruals:
1. Accrued revenues: Revenues for services performed but not yet received in cash or recorded.
2. Accrued expenses: Expenses incurred but not yet paid in cash or recorded.

ILLUSTRATION 3.21 Categories of Adjusting Entries

We review specific examples and explanations of each type of adjustment in subsequent sections. We base each example on the October 31 trial balance of Yazici Advertising A.Ş. ([Illustration 3.20](#)). We assume that Yazici uses an accounting period of one month. Thus, Yazici will make monthly adjusting entries, dated October 31.

Adjusting Entries for Deferrals

To defer means to postpone or delay. **Deferrals** are expenses or revenues that are recognized at a date later than the point when cash was originally exchanged. The two types of deferrals are prepaid expenses and unearned revenues.

If a company does not make an adjustment for these deferrals, the asset and liability are overstated, and the related expense and revenue are understated. For example, in Yazici Advertising's trial balance ([Illustration 3.20](#)), the balance in the asset Supplies shows only supplies purchased. This balance is overstated; the related expense account, Supplies Expense, is understated because the cost of supplies used has not been recognized. Thus, the adjusting entry for deferrals will decrease a statement of financial position account and increase an income statement account. [Illustration 3.22](#) shows the effects of adjusting entries for deferrals.

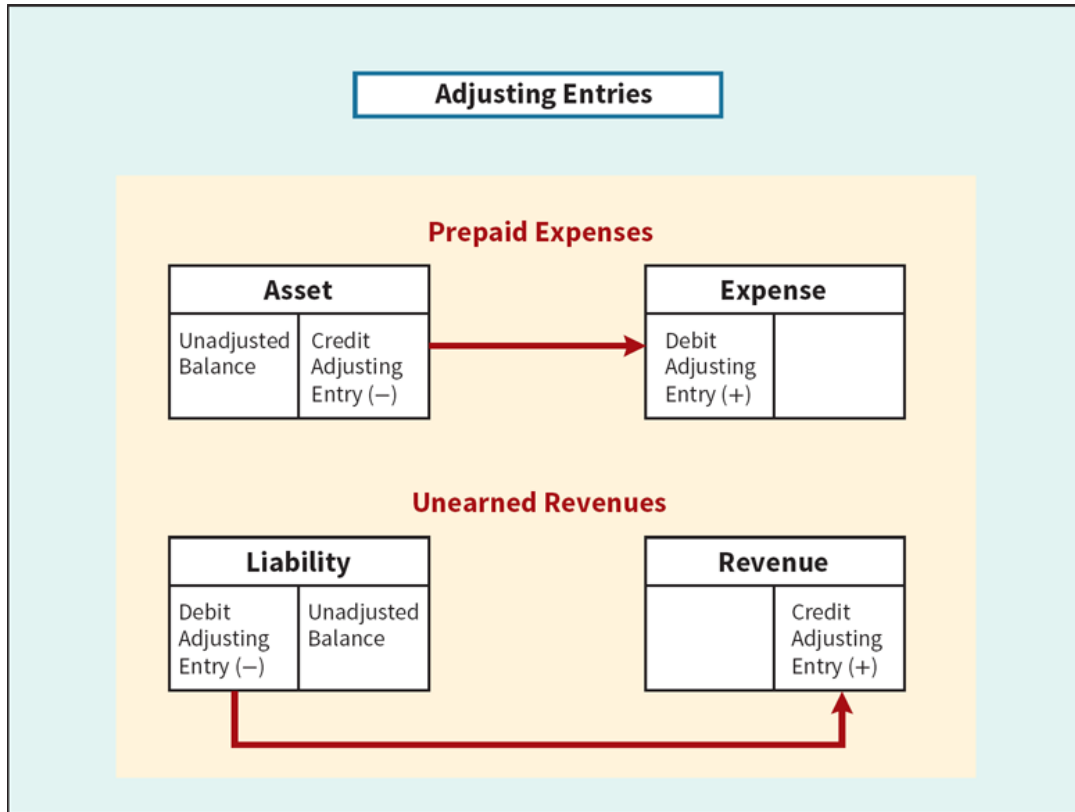

ILLUSTRATION 3.22 Adjusting Entries for Deferrals

Prepaid Expenses

Assets paid for and recorded before a company uses them are called **prepaid expenses**. When expenses are prepaid, a company debits an asset account to show the service or benefit it will receive in the future. Examples of common prepayments are insurance, supplies, advertising, and rent. In addition, companies make prepayments when they purchase buildings and equipment.

Prepaid expenses are costs that expire either with the passage of time (e.g., rent and insurance) or through use and consumption (e.g., supplies). The expiration of these costs does not require daily entries, an unnecessary and impractical task. Accordingly, a company like **Louis Vuitton (LVMH Group)** (FRA) usually postpones the recognition of such cost expirations until it prepares financial statements. At each statement date, Louis Vuitton makes adjusting entries to record the expenses that apply to the current accounting period and to show the remaining amounts in the asset accounts.

As shown above, prior to adjustment, assets are overstated and expenses are understated. **Thus, an adjusting entry for prepaid expenses results in a debit to an expense account and a credit to an asset account.**

Supplies

A business may use several different types of supplies. For example, a public accounting firm will use office supplies such as stationery, envelopes, and accounting paper. An advertising firm will stock advertising supplies such as whiteboard markers and printer cartridges. Supplies are generally debited to an asset account when they are acquired. Recognition of supplies used is generally deferred until the adjustment process. At that time, a physical inventory (count) of

supplies is taken. The difference between the balance in the Supplies (asset) account and the cost of supplies on hand represents the supplies used (expense) for the period.

For example, Yazici Advertising purchased advertising supplies costing ₺25,000 on October 5. Yazici therefore debited the asset Supplies. This account shows a balance of ₺25,000 in the October 31 trial balance (see [Illustration 3.20](#)). An inventory count at the close of business on October 31 reveals that ₺10,000 of supplies are still on hand. Thus, the cost of supplies used is ₺15,000 (₺25,000 – ₺10,000). The analysis and adjustment for Supplies is summarized in [Illustration 3.23](#).

Basic Analysis	The expense Supplies Expense is increased ₺15,000, and the asset Supplies is decreased ₺15,000.

ILLUSTRATION 3.23 Adjustment for Supplies

After adjustment, the asset account Supplies now shows a balance of ₺10,000, which equals the cost of supplies on hand at the statement date. In addition, Supplies Expense shows a balance of ₺15,000, which equals the cost of supplies used in October. **Without an adjusting entry, October expenses are understated and net income overstated by ₺15,000. Moreover, both assets and equity are overstated by ₺15,000 on the October 31 statement of financial position.**

Insurance

Most companies maintain fire and theft insurance on merchandise and equipment, personal liability insurance for accidents suffered by customers, and automobile insurance on company cars and trucks. The extent of protection against loss determines the cost of the insurance (the amount of the premium to be paid). The insurance policy specifies the term and coverage. The minimum term usually covers one year, but three- to five-year terms are available and may offer lower annual premiums. A company typically debits insurance premiums to the asset account Prepaid Insurance when paid. At the financial statement date, it then debits Insurance Expense and credits Prepaid Insurance for the cost that expired during the period.

ILLUSTRATION 3.24 Adjustment for Insurance

The asset Prepaid Insurance shows a balance of ₺5,500, which represents the unexpired cost for the remaining 11 months of coverage. At the same time, the balance in Insurance Expense equals the insurance cost that expired in October. **Without an adjusting entry, October expenses are understated by ₺500 and net income overstated by ₺500. Moreover, both assets and equity also are overstated by ₺500 on the October 31 statement of financial position.**

Depreciation

Companies, like **Caterpillar** (USA) or **Siemens** (DEU), typically own various productive facilities, such as buildings, equipment, and motor vehicles. These assets provide a service for a number of years. The term of service is commonly referred to as the useful life of the asset. Because Siemens, for example, expects an asset such as a building to provide service for many years, Siemens records the building as an asset, rather than an expense, in the year the building is acquired. Siemens records such assets at cost, as required by the historical cost principle.

To follow the expense recognition principle, Siemens should report a portion of the cost of a long-lived asset as an expense during each period of the asset's useful life. **Depreciation** is the process of allocating the cost of an asset to expense over its useful life in a rational and systematic manner.

Need for Depreciation Adjustment

Under IFRS, the acquisition of productive facilities is viewed as a long-term prepayment for services. The need for making periodic adjusting entries for depreciation is therefore the same as we described for other prepaid expenses. That is, a company recognizes the expired cost (expense) during the period and reports the unexpired cost (asset) at the end of the period. The primary causes of depreciation of a productive facility are actual use, deterioration due to the elements, and obsolescence. For example, at the time Siemens acquires an asset, the effects of these factors cannot be known with certainty. Therefore, Siemens must estimate them. **Thus, depreciation is an estimate rather than a factual measurement of the expired cost.**

To estimate depreciation expense, Siemens often divides the cost of the asset by its useful life. For example, if Siemens purchases equipment for ₺10,000 and expects its useful life to be 10 years, Siemens records annual depreciation of ₺1,000.

In the case of Yazici Advertising, it estimates depreciation on its office equipment to be ₺4,800 a year (cost ₺50,000 less residual value ₺2,000 divided by useful life of 10 years), or ₺400 per month. The analysis and adjustment for depreciation is summarized in [Illustration 3.25](#). The balance in the Accumulated Depreciation—Equipment account will increase 400 each month. Therefore, after journalizing and posting the adjusting entry for the second month of use at November 30, the balance will be ₺800.

ILLUSTRATION 3.25 Adjustment for Depreciation

Statement Presentation

Accumulated Depreciation—Equipment is a contra asset account. A **contra asset account** offsets an asset account on the statement of financial position. This means that the Accumulated Depreciation—Equipment account offsets the Equipment account on the statement of financial position. Its normal balance is a credit. Yazici Advertising uses this account instead of crediting Equipment in order to disclose both the original cost of the equipment and the total expired cost to date. In the statement of financial position, Yazici deducts Accumulated Depreciation—Equipment from the related asset account as shown in [Illustration 3.26](#).

Equipment	₺50,000	
Less: Accumulated depreciation—equipment	400	₺49,600

ILLUSTRATION 3.26 Statement of Financial Position Presentation of Accumulated Depreciation

The **book value** (or **carrying value**) of any depreciable asset is the difference between its cost and its related accumulated depreciation. In [Illustration 3.26](#), the book value of the equipment at the statement of financial position date is ₺49,600. Note that the asset's book value generally differs from its fair value. The reason: **Depreciation is an allocation concept, not a valuation concept.** That is, depreciation **allocates an asset's cost to the periods in which it is used. Depreciation does not attempt to report the actual change in the value of the asset.**

Depreciation expense identifies that portion of the asset's cost that expired during the period (in this case, October). **Without this adjusting entry, total assets, total equity, and net income are overstated, and depreciation expense is understated.**

A company records depreciation expense for each piece of equipment, such as trucks or machinery, and for all buildings. A company also establishes related accumulated depreciation accounts for the

above, such as Accumulated Depreciation—Trucks, Accumulated Depreciation—Machinery, and Accumulated Depreciation—Buildings.

Unearned Revenues

When companies receive cash before services are performed, they record a liability by increasing (crediting) a liability account called **unearned revenues**. In other words, a company now has a performance obligation (liability) to provide service to one of its customers. Items like rent, magazine subscriptions, and customer deposits for future service may result in unearned revenues. Airlines, such as **Ryanair** (IRL), **China Southern Airlines** (CHN), and **Southwest** (USA), treat receipts from the sale of tickets as unearned revenue until they satisfy the performance obligation (provide the flight service). Tuition received prior to the start of a semester is another example of unearned revenue.

Unearned revenues are the opposite of prepaid expenses. Indeed, unearned revenue on the books of one company is likely to be a prepayment on the books of the company that made the advance payment. For example, if we assume identical accounting periods, a landlord will have unearned rent revenue when a tenant has prepaid rent.

When a company, such as Ryanair, receives payment for services to be performed in a future accounting period, it credits an unearned revenue (a liability) account to recognize the liability that exists. Ryanair subsequently recognizes revenue when it performs the service. However, making daily recurring entries to record this revenue is impractical. Therefore, Ryanair delays recognition of revenue until the adjustment process. Then, Ryanair makes an adjusting entry to record the revenue for services performed during the period and to show the liability that remains at the end of the accounting period. In the typical case, liabilities are overstated and revenues are understated prior to adjustment. **Thus, the adjusting entry for unearned revenues results in a debit (decrease) to a liability account and a credit (increase) to a revenue account.**

For example, Yazici Advertising received ₱12,000 on October 2 from R. Knox for advertising services expected to be completed by December 31. Yazici credited the payment to Unearned Service Revenue. This liability account shows a balance of ₱12,000 in the October 31 trial balance.

Based on an evaluation of the service Yazici performed for Knox during October, the company determines that it should recognize ₺4,000 of revenue in October. The liability (Unearned Service Revenue) is therefore decreased and equity (Service Revenue) is increased, as shown in [Illustration 3.27](#).

ILLUSTRATION 3.27 Adjustment for Unearned Service Revenue

The liability Unearned Service Revenue now shows a balance of ₺8,000. This amount represents the remaining advertising services expected to be performed in the future. At the same time, Service Revenue shows total revenue recognized in October of ₺104,000. **Without this adjustment, revenues and net income are understated by ₺4,000 in the income statement. Moreover, liabilities are overstated and equity is understated by ₺4,000 on the October 31 statement of financial position.**

Adjusting Entries for Accruals

The second category of adjusting entries is accruals. Companies make adjusting entries for accruals to record revenues for services performed and expenses incurred in the current accounting period. Without an accrual adjustment, the revenue account (and the related asset account) or the expense account (and the related liability account) are understated. Thus, the adjusting entry for accruals **will increase both a statement of financial position and an income statement account.** [Illustration 3.28](#) shows adjusting entries for accruals.

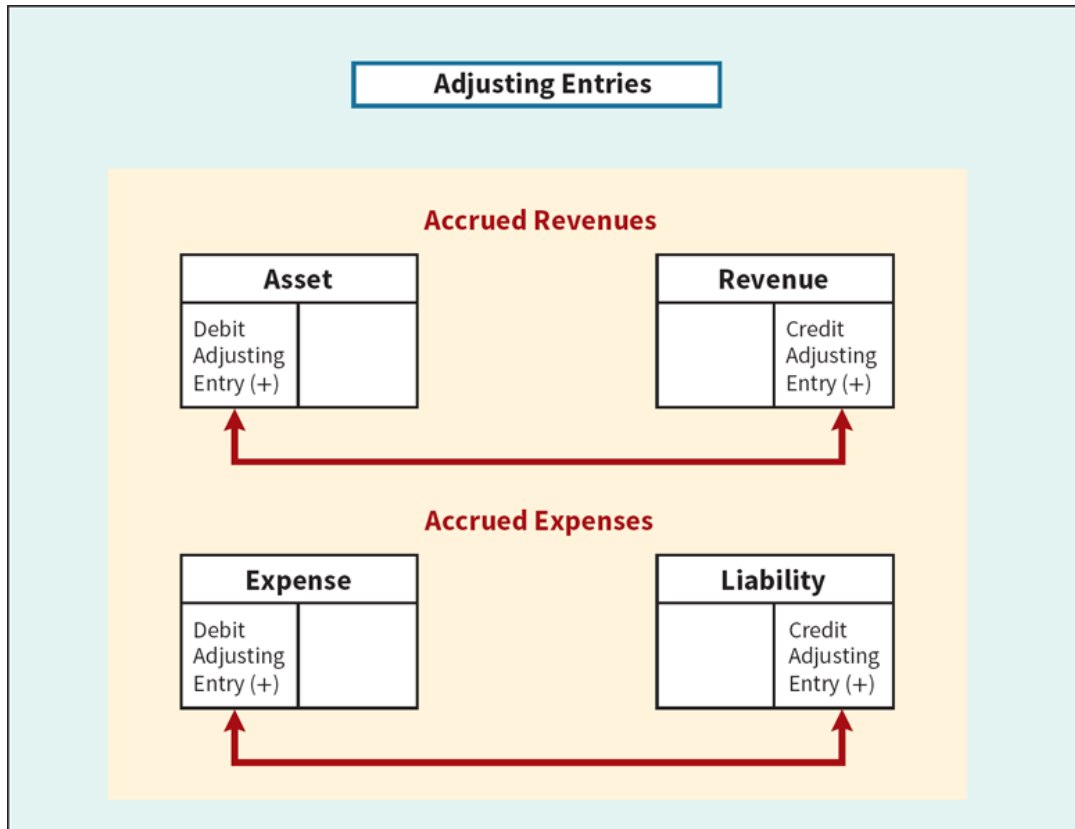

ILLUSTRATION 3.28 Adjusting Entries for Accruals

Accrued Revenues

Revenues for services performed but not yet recorded at the statement date are **accrued revenues**. Accrued revenues may accumulate (accrue) with the passing of time, as in the case of interest revenue. These are unrecorded because the earning of interest does not involve daily transactions. Companies do not record interest revenue on a daily basis because it is often impractical to do so. Accrued revenues also may result from services that have been performed but not yet billed nor collected, as in the case of commissions and fees. These may be unrecorded because only a portion of the total service has been performed and the clients will not be billed until the service has been completed.

An adjusting entry records the receivable that exists at the statement of financial position date and the revenue for the services performed during the period. Prior to adjustment, both assets and

revenues are understated. Accordingly, **an adjusting entry** for accrued revenues results in a debit (increase) to an asset account and a credit (increase) to a revenue account.

In October, Yazici Advertising performed services worth ₺2,000 that were not billed to clients on or before October 31. Because these services are not billed, they are not recorded. The accrual of unrecorded service revenue increases an asset account, Accounts Receivable. It also increases equity by increasing a revenue account, Service Revenue, as shown in [Illustration 3.29](#).

ILLUSTRATION 3.29 Accrual Adjustment for Receivable and Revenue Accounts

The asset Accounts Receivable shows that clients owe ₺74,000 at the statement of financial position date. The balance of ₺106,000 in Service Revenue represents the total revenue for services performed during the month (₺100,000 + ₺4,000 + ₺2,000). **Without an adjusting entry, assets and equity on the statement of financial position, and revenues and net income on the income statement, are understated.**

Accrued Expenses

Expenses incurred but not yet paid or recorded at the statement date are called **accrued expenses**, such as interest, rent, taxes, and salaries. Accrued expenses result from the same causes as accrued revenues. In fact, an accrued expense on the books of one company is an accrued revenue to another company. For example, the ₺2,000 accrual of service revenue by Yazici Advertising is an accrued expense to the client that received the service.

Adjustments for accrued expenses record the obligations that exist at the statement of financial position date and recognize the expenses that apply to the current accounting period. Prior to adjustment, both liabilities and expenses are understated. Therefore, the adjusting entry for accrued expenses results in a debit (increase) to an expense account and a credit (increase) to a liability account.

Accrued Interest

Yazici Advertising signed a three-month note payable in the amount of ₺50,000 on October 1. The note requires interest at an annual rate of 12 percent. Three factors determine the amount of the interest accumulation: (1) the face value of the note; (2) the interest rate, which is always expressed as an annual rate; and (3) the length of time the note is outstanding. For Yazici, the total

interest due on the ₺50,000 note at its maturity date three months in the future is ₺1,500 ($₺50,000 \times .12 \times 3/12$), or ₺500 for one month. [Illustration 3.30](#) shows the formula for computing interest and its application to Yazici. Note that the formula expresses the time period as a fraction of a year.

Face Value of Note	×	Annual Interest Rate	×	Time in Terms of One Year	=	Interest
₺50,000	×	.12	×	1/12	=	₺500

ILLUSTRATION 3.30 Formula for Computing Interest for One Month

As [Illustration 3.31](#) shows, the accrual of interest at October 31 increases a liability account, Interest Payable. It also decreases equity by increasing an expense account, Interest Expense.

Basic Analysis	The expense Interest Expense is increased ₺500, and the liability Interest Payable is increased ₺500.		
Equation Analysis	<u>Assets</u>	=	<u>Liabilities</u> + <u>Equity</u> Interest Payable +₺500 Interest Expense -₺500
Debit-Credit Analysis	Debits increase expenses: debit Interest Expense ₺500. Credits increase liabilities: credit Interest Payable ₺500.		
Journal Entry	Oct. 31	Interest Expense Interest Payable (To record interest on notes payable)	500 500
Post to Ledger	Interest Expense 905		Interest Payable 230
	Oct. 31	Adj. 500	Oct. 31 Adj. 500
	Oct. 31	Bal. 500	Oct. 31 Bal. 500

				-500
				+500
Cash Flows				
no effect				

ILLUSTRATION 3.31 Adjustment for Interest

Interest Expense shows the interest charges for the month of October. Interest Payable shows the amount of interest owed at the statement date. Yazici will not pay this amount until the note comes due at the end of three months. Why does Yazici use the Interest Payable account instead of crediting Notes Payable? By recording interest payable separately, Yazici discloses the two types of obligations (interest and principal) in the accounts and statements. **Without this adjusting entry, both liabilities and interest expense are understated, and both net income and equity are overstated.**

Accrued Salaries and Wages

Companies pay for some types of expenses, such as employee salaries and wages, after the services have been performed. For example, Yazici Advertising last paid salaries and wages on October 26. It will not pay salaries and wages again until November 23. However, as shown in [Illustration 3.32](#), three working days remain in October (October 29–31).

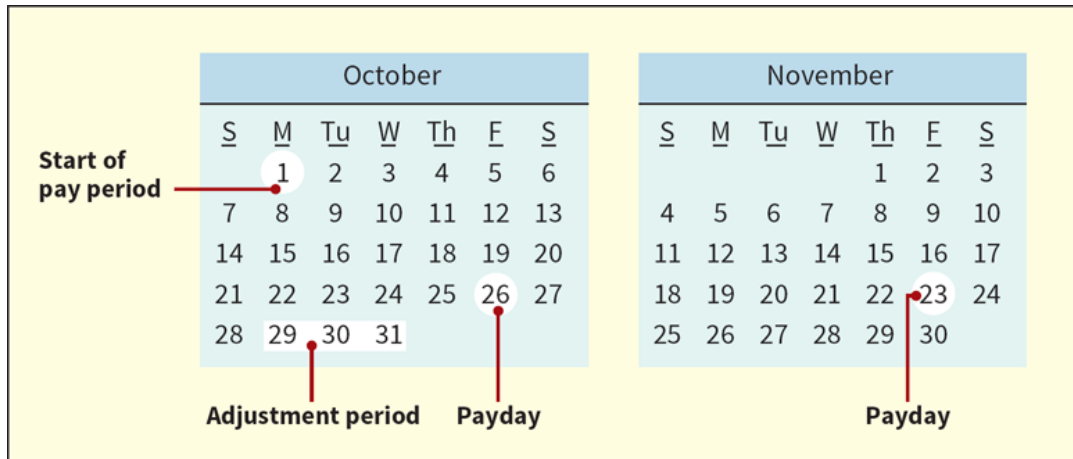

ILLUSTRATION 3.32 Accrued Salaries and Wages

At October 31, the salaries and wages for these days represent an accrued expense and a related liability to Yazici. The employees receive total salaries and wages of ₺10,000 for a five-day work week, or ₺2,000 per day. Thus, accrued salaries and wages at October 31 are ₺6,000 (₺2,000 × 3). The analysis and adjustment process is summarized in **Illustration 3.33**.

Basic Analysis	The expense Salaries and Wages Expense is increased ₺6,000, and the liability Salaries and Wages Payable is increased ₺6,000.																															
Equation Analysis	$\text{Assets} = \frac{\text{Liabilities}}{\text{Salaries and Wages Payable} + \text{₺6,000}} + \frac{\text{Equity}}{\text{Salaries and Wages Expense} - \text{₺6,000}}$

					6,000																											

A	=	L	+	E
		+6,000		-6,000
Cash Flows				
no effect				

ILLUSTRATION 3.33 Adjustment for Salaries and Wages Expense

After this adjustment, the balance in Salaries and Wages Expense of ₺46,000 (23 days × ₺2,000) is the actual salaries and wages expense for October. The balance in Salaries and Wages Payable of ₺6,000 is the amount of the liability for salaries and wages owed as of October 31. **Without the ₺6,000 adjustment for salaries and wages, both Yazici's expenses and liabilities are understated by ₺6,000.**

Yazici pays salaries and wages every four weeks. Consequently, the next payday is November 23, when it will again pay total salaries and wages of ₺40,000. The payment consists of ₺6,000 of salaries and wages payable at October 31 plus ₺34,000 of salaries and wages expense for November (17 working days as shown in the November calendar × ₺2,000). Therefore, Yazici makes the following entry on November 23.

November 23

Salaries and Wages Payable	6,000	
Salaries and Wages Expense	34,000	
Cash		40,000
(To record November 23 payroll)		

This entry eliminates the liability for Salaries and Wages Payable that Yazici recorded in the October 31 adjusting entry. This entry also records the proper amount of Salaries and Wages Expense for the period between November 1 and November 23.

Bad Debts

Proper recognition of revenues and expenses dictates recording bad debts as an expense of the period in which a company records revenue for services performed instead of the period in which the company writes off the accounts or notes. The proper valuation of the receivable balance also requires recognition of uncollectible receivables. Proper recognition and valuation require an adjusting entry.

At the end of each period, a company, such as **Marks and Spencer plc (M&S)** (GBR), estimates the amount of receivables that will later prove to be uncollectible. M&S bases the estimate on various factors: the amount of bad debts it experienced in past years, general economic conditions, how long the receivables are past due, and other factors that indicate the extent of uncollectibility. To illustrate, assume that, based on past experience, Yazici Advertising reasonably estimates a bad debt expense for the month of 1,600. The analysis and adjustment process for bad debts is summarized in [Illustration 3.34](#).

ILLUSTRATION 3.34 Adjustment for Bad Debt

Without this adjustment, assets will be overstated, and expenses will be understated. The Allowance for Doubtful Accounts is a contra asset account and is shown on the statement of financial position, similar to Accumulated Depreciation—Equipment.

A company often computes bad debts by adjusting the Allowance for Doubtful Accounts to a certain percentage of the trade accounts receivable and trade notes receivable at the end of the period.

Adjusted Trial Balance

After journalizing and posting all adjusting entries, Yazici Advertising prepares another trial balance from its ledger accounts (shown in [Illustration 3.35](#)). This trial balance is called an **adjusted trial balance**. The purpose of an adjusted trial balance is to **prove the equality** of the total debit balances and the total credit balances in the ledger after all adjustments. Because the accounts contain all data needed for financial statements, the adjusted trial balance is the **primary basis for the preparation of financial statements**.

Yazici Advertising A.Ş. Adjusted Trial Balance October 31, 2022		
	Debit	Credit
Cash	₺ 80,000	
Accounts Receivable	74,000	
Allowance for Doubtful Accounts		₺ 1,600
Supplies	10,000	
Prepaid Insurance	5,500	
Equipment	50,000

Preparing Financial Statements

LEARNING OBJECTIVE 4

Prepare financial statements from the adjusted trial balance and prepare closing entries.

As indicated above Yazici Advertising can prepare financial statements directly from the adjusted trial balance. [Illustrations 3.36](#) and [3.37](#) show the interrelationships of data in the adjusted trial balance and the financial statements.

As [Illustration 3.36](#) shows, Yazici prepares the income statement from the revenue and expense accounts. Next, it derives the retained earnings statement from the retained earnings and dividends accounts and the net income (or net loss) shown in the income statement.

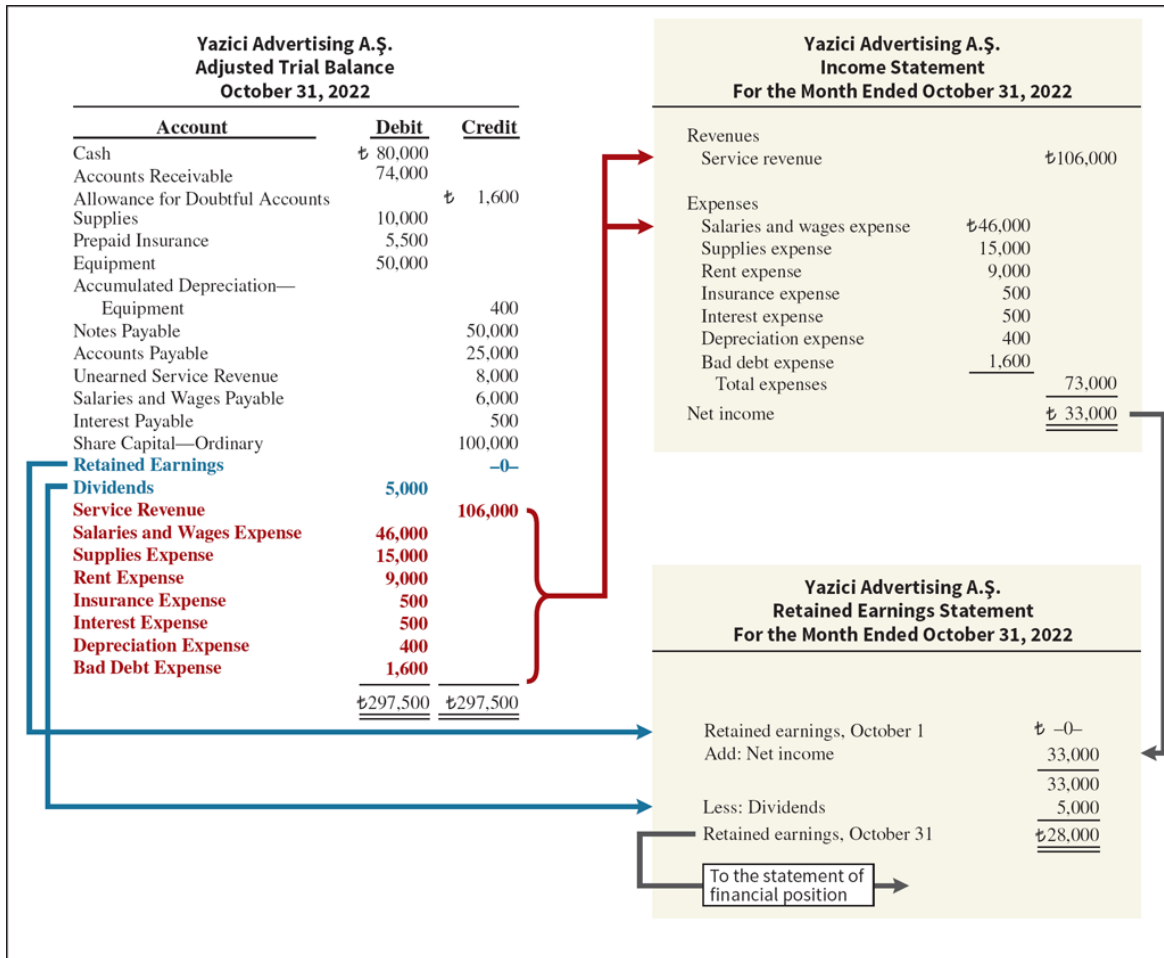

ILLUSTRATION 3.36 Preparation of the Income Statement and Retained Earnings Statement from the Adjusted Trial Balance

As [Illustration 3.37](#) shows, Yazici then prepares the statement of financial position from the asset and liability accounts, the Share Capital—Ordinary account, and the ending retained earnings balance as reported in the retained earnings statement.

Yazici Advertising A.Ş. Adjusted Trial Balance October 31, 2022			Yazici Advertising A.Ş. Statement of Financial Position October 31, 2022

Another arrow points from the 'Accounts Receivable' and 'Allowance for Doubtful Accounts' rows to the 'Accounts receivable' row in the Assets section. A third arrow points from the 'Share Capital—Ordinary' and 'Retained Earnings' rows to the 'Share capital—ordinary' and 'Retained earnings' rows in the Equity section. A box at the bottom of the Statement of Financial Position contains the text: 'Balance at Oct. 31 from retained earnings statement in Illustration 3.36'.

ILLUSTRATION 3.37 Preparation of the Statement of Financial Position from the Adjusted Trial Balance

Closing

The **closing process** reduces the balance of nominal (temporary) accounts to zero in order to prepare the accounts for the next period's transactions. In the closing process Yazici Advertising transfers all of the revenue and expense account balances (income statement items) to a clearing or suspense account called Income Summary. The Income Summary account matches revenues and expenses.

Yazici uses this clearing account only at the end of each accounting period. The account represents the net income or net loss for the period. It then transfers this amount (the net income or net loss) to an equity account. (For a corporation, the equity account is retained earnings; for proprietorships and partnerships, it is a capital account.) Companies post all such **closing entries** to the appropriate general ledger accounts.

Closing Entries

In practice, companies generally prepare closing entries only at the end of a company's annual accounting period. However, to illustrate the journalizing and posting of closing entries, we will assume that Yazici Advertising closes its books monthly. **Illustration 3.38** shows the closing entries at October 31.

GENERAL JOURNAL				J3
Date	Account Titles and Explanation	Ref.	Debit	Credit
	Closing Entries			
	(1)			
Oct. 31	Service Revenue		106,000	
	Income Summary			106,000
	(To close revenue account)			
	(2)			
31	Income Summary		73,000	
	Supplies Expense			15,000
	Depreciation Expense			400
	Insurance Expense			500
	Salaries and Wages Expense			46,000
	Rent Expense			9,000
	Interest Expense			500
	Bad Debt Expense			1,600
	(To close expense accounts)			
	(3)			
31	Income Summary		33,000	
	Retained Earnings			33,000
	(To close net income to retained earnings)			
	(4)			
31	Retained Earnings		5,000	
	Dividends			5,000
	(To close dividends to retained earnings)			

ILLUSTRATION 3.38 Closing Entries Journalized

A couple of cautions about preparing closing entries: (1) Avoid unintentionally doubling the revenue and expense balances rather than zeroing them. (2) Do not close Dividends through the Income Summary account. **Dividends are not expenses, and they are not a factor in determining net income.**

Posting Closing Entries

Illustration 3.39 shows the posting of closing entries and the underlining (ruling) of accounts. All temporary accounts have zero balances after posting the closing entries. In addition, note that the balance in Retained Earnings represents the accumulated undistributed earnings of Yazici Advertising at the end of the accounting period. Yazici reports this amount in the statement of financial position and as the ending amount in the retained earnings statement. As noted above, **Yazici uses the Income Summary account only in closing.** It does not journalize and post entries to this account during the year.

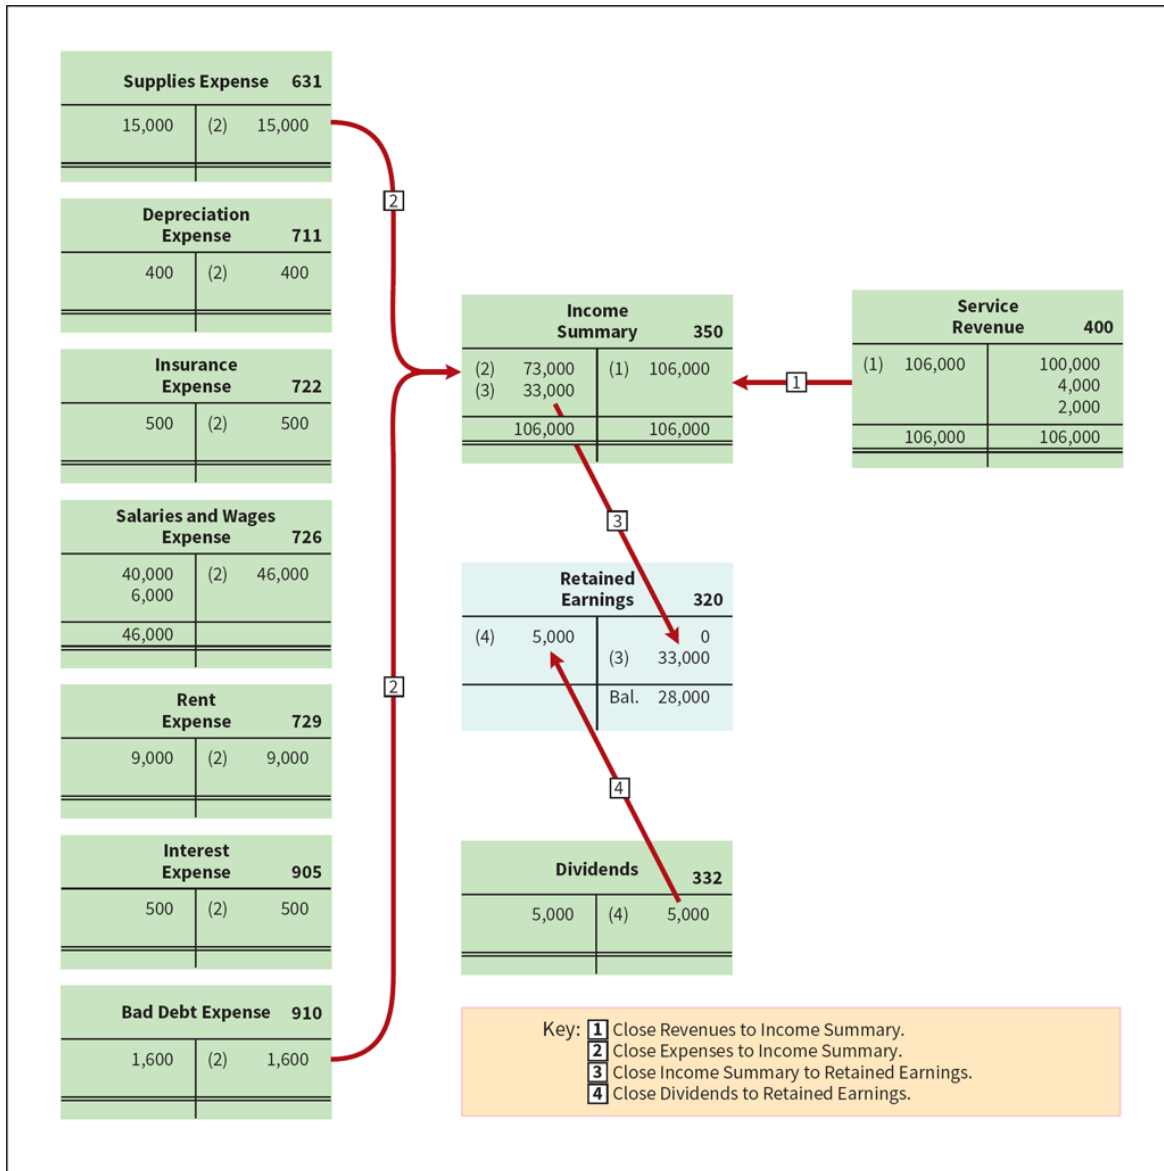

ILLUSTRATION 3.39 Posting of Closing Entries

As part of the closing process, Yazici totals, balances, and double-underlines the **temporary accounts**—revenues, expenses, and dividends—as shown in [Illustration 3.39](#). It does not close the **permanent accounts**—assets, liabilities, and equity (Share Capital—Ordinary and Retained Earnings). Instead, Yazici draws a single underline beneath the current period entries for the permanent accounts. The account balance is then entered below the single underline and is carried forward to the next period (see, for example, Retained Earnings).

After the closing process, each income statement account and the dividend account have zero balances and are ready for use in the next accounting period.

Post-Closing Trial Balance

Recall that a trial balance is prepared after posting the regular transactions of the period, and that a second trial balance (the adjusted trial balance) occurs after posting the adjusting entries. A company may take a third trial balance after posting the closing entries. The trial balance after

closing is called the **post-closing trial balance**. The purpose of the post-closing trial balance is **to prove the equality of the permanent account balances that the company carries forward into the next accounting period**. Since all temporary accounts will have zero balances, **the post-closing trial balance will contain only permanent (real)—statement of financial position—accounts**.

Illustration 3.40 shows the post-closing trial balance of Yazici Advertising A.Ş.

Yazici Advertising A.Ş. Post-Closing Trial Balance October 31, 2022		
Account	Debit	Credit
Cash	₺ 80,000	
Accounts Receivable	74,000	
Allowance for Doubtful Accounts		₺ 1,600
Supplies	10,000	
Prepaid Insurance	5,500	
Equipment	50,000	
Accumulated Depreciation—Equipment		400
Notes Payable		50,000
Accounts Payable		25,000
Unearned Service Revenue		8,000
Salaries and Wages Payable		6,000
Interest Payable		500
Share Capital—Ordinary		100,000
Retained Earnings		28,000
	₺219,500	₺219,500

ILLUSTRATION 3.40 Post-Closing Trial Balance

A post-closing trial balance provides evidence that the company has properly journalized and posted the closing entries. It also shows that the accounting equation is in balance at the end of the accounting period. However, like the other trial balances, it does not prove that Yazici has recorded all transactions or that the ledger is correct. For example, the post-closing trial balance will balance if a transaction is not journalized and posted, or if a transaction is journalized and posted twice.

Reversing Entries—An Optional Step

Some accountants prefer to make a **reversing entry** at the beginning of the next accounting period. A reversing entry is the exact opposite of the adjusting entry made in the previous period. **Use of reversing entries is an optional bookkeeping procedure; it is not a required step in the accounting cycle.** Accordingly, we have chosen to cover this topic in [Appendix 3B](#) at the end of the chapter.

What Do the Numbers Mean?

Hey, It's Complicated

Recent economic volatility has left companies hungering for more timely and uniform financial information to help them react quickly to fast-changing conditions. As one expert noted, companies were extremely focused on trying to reduce costs as well as better plan for the future, but a lot of them discovered that they didn't have the information they needed and they didn't have the ability to get that information. The unsteady recession environment also made it risky for companies to interrupt their operations to get new systems up to speed.

So what to do? Try to piecemeal upgrades each year or start a major overhaul of their internal systems? One company, for example, has standardized as many of its systems as possible and has been steadily upgrading them over the past decade. Acquisitions can also wreak havoc on reporting systems. This company is choosy about when to standardize for companies it acquires, but it sometimes has to implement new systems after international deals.

In other situations, a major overhaul is needed. For example, it is common for companies with a steady stream of acquisitions to have 50 to 70 general ledger systems. In those cases, a company cannot react well unless its systems are made compatible. As discussed in the opening story, blockchain technology, which has been proposed to support audited, real-time financial information, could be part of the solution. So is it the big bang (major overhaul) or the piecemeal approach? It seems to depend. One thing is certain—good accounting systems are a necessity. Without one, the risk of failure is high.

Source: Emily Chasan, "The Financial-Data Dilemma," *Wall Street Journal* (July 24, 2012), p. B4; and Bryce Welker, "What Blockchain Means for the Future of Accounting Practices," Forbes.com (July 12, 2018).

The Accounting Cycle Summarized

A summary of the steps in the accounting cycle shows a logical sequence of the accounting procedures used during a fiscal period:

1. Enter the transactions of the period in appropriate journals.
2. Post from the journals to the ledger (or ledgers).
3. Prepare an unadjusted trial balance (trial balance).
4. Prepare adjusting journal entries and post to the ledger(s).
5. Prepare a trial balance after adjusting (adjusted trial balance).
6. Prepare the financial statements from the adjusted trial balance.
7. Prepare closing journal entries and post to the ledger(s).
8. Prepare a trial balance after closing (post-closing trial balance).
9. Prepare reversing entries (**optional**) and post to the ledger(s).

A company normally completes all of these steps in every fiscal period.

Financial Statements for a Merchandising Company

LEARNING OBJECTIVE 5

Prepare financial statements for a merchandising company.

Yazici Advertising A.Ş. is a service company. In this section, we show a detailed set of financial statements for a merchandising company, Ciner Cabinets. The financial statements are prepared from the adjusted trial balance (not shown).

Income Statement

The income statement for Ciner, shown in [Illustration 3.41](#), is self-explanatory. The income statement classifies amounts into such categories as gross profit on sales, income from operations, income before income taxes, and net income. Although earnings per share information is required to be shown on the face of the income statement for a company, we omit this item here; it will be discussed more fully later in the textbook. *(For homework purposes, do not present earnings per share information unless required to do so.)*

Ciner Cabinets Income Statement For the Year Ended December 31, 2022			
Net sales			₺400,000
Cost of goods sold			316,000
Gross profit on sales			84,000
Selling expenses			
Salaries and wages expense (sales)		₺20,000	
Advertising expense		10,200	
Total selling expenses		30,200	
Administrative expenses			
Salaries and wages expense (general)	₺19,000		
Depreciation expense	6,700		
Property tax expense	5,300		
Rent expense	4,300		
Bad debt expense	1,000		
Telephone and Internet expense	600		
Insurance expense	360		
Total administrative expenses		37,260	
Total selling and administrative expenses			67,460
Income from operations			16,540
Other revenues and gains			
Interest revenue			800
			17,340
Other expenses and losses			
Interest expense			1,700
Income before income taxes			15,640
Income tax			3,440
Net income			₺ 12,200

ILLUSTRATION 3.41 Income Statement for a Merchandising Company

Retained Earnings Statement

A company may retain the net income earned in the business, or it may distribute it to shareholders by payment of dividends. In [Illustration 3.42](#), Ciner added the net income earned during the year to the balance of retained earnings on January 1, thereby increasing the balance of retained earnings. Deducting dividends of ₺2,000 results in the ending retained earnings balance of ₺26,400 on December 31.

Statement of Financial Position

The statement of financial position for Ciner, shown in [Illustration 3.43](#), is a classified statement of financial position. In the property, plant, and equipment section, Ciner deducts Accumulated Depreciation—Equipment from the cost of the equipment. The difference represents the book or carrying value of the equipment.

Ciner Cabinets
Statement of Financial Position
As of December 31, 2022

Total equity and liabilities

₺
145,340

ILLUSTRATION 3.43 Statement of Financial Position for a Merchandising Company

Interest receivable, inventory, prepaid insurance, and prepaid rent are included as current assets. Ciner considers these assets current because they will be converted into cash or used by the business within a relatively short period of time. Ciner deducts the amount of Allowance for Doubtful Accounts from the total of accounts, notes, and interest receivable because it estimates that only ₺54,800 of ₺57,800 will be collected.

Note that the equity section for Ciner differs somewhat from the capital section for a proprietorship. Total equity consists of share capital—ordinary, which is the original investment by shareholders, and the earnings retained in the business. *For homework purposes, unless instructed otherwise, prepare an unclassified statement of financial position.*

The bonds payable, due in 2027, are non-current liabilities. As a result, the statement of financial position shows the account in a separate section. (The company paid interest on the bonds on December 31.)

The statement of financial position shows property taxes payable as a current liability because it is an obligation that is payable within a year. The statement of financial position also shows other short-term liabilities such as accounts payable.

Closing Entries

Ciner makes closing entries in its general journal as follows.

December 31, 2022		
Interest Revenue	800

APPENDIX 3A Cash-Basis Accounting versus Accrual-Basis Accounting

LEARNING OBJECTIVE *6

Differentiate the cash basis of accounting from the accrual basis of accounting.

Most companies use **accrual-basis accounting**: They recognize revenue when the performance obligation is satisfied and expenses in the period are incurred, without regard to the time of receipt or payment of cash.

Some small companies and the average individual taxpayer, however, use a strict or modified cash-basis approach. Under the **strict cash basis**, companies record revenue only when they receive cash, and they record expenses only when they disburse cash. Determining income on the cash basis rests upon collecting revenue and paying expenses. The cash basis ignores two principles: the revenue recognition principle and the expense recognition principle. Consequently, cash-basis financial statements are not in conformity with IFRS.

An illustration will help clarify the differences between accrual-basis and cash-basis accounting. Assume that Eser Contractor signs an agreement to construct a garage for ₺22,000. In January, Eser begins construction, incurs costs of ₺18,000 on credit, and by the end of January delivers a finished garage to the buyer. In February, Eser collects ₺22,000 cash from the customer. In March, Eser pays the ₺18,000 due the creditors. [Illustrations 3A.1](#) and [3A.2](#) show the net incomes for each month under cash-basis accounting and accrual-basis accounting, respectively.

Eser Contractor Income Statement—Cash Basis For the Month of				
	January	February	March	Total
Cash receipts	₺0-	₺22,000	₺0-	₺22,000
Cash payments	-0-	-0-	18,000	18,000
Net income (loss)	₺0-	₺22,000	₺(18,000)	₺4,000

Net income (loss)	₺4,000	₺-0-	₺-0-	₺4,000

ILLUSTRATION 3A.2 Income Statement—Accrual Basis

For the three months combined, total net income is the same under both cash-basis accounting and accrual-basis accounting. The difference is in the **timing** of revenues and expenses. The basis of accounting also affects the statement of financial position. [Illustrations 3A.3](#) and [3A.4](#) show Eser’s statements of financial position at each month-end under the cash basis and the accrual basis.

Total equity and liabilities	₺22,000	₺22,000	₺4,000

ILLUSTRATION 3A.4 Statements of Financial Position—Accrual Basis

Analysis of Eser’s income statements and statements of financial position shows the ways in which cash-basis accounting is inconsistent with basic accounting theory:

1. The cash basis understates revenues and assets from the construction and delivery of the garage in January. It ignores the ₪22,000 of accounts receivable, representing a near-term future cash inflow.
2. The cash basis understates expenses incurred with the construction of the garage and the liability outstanding at the end of January. It ignores the ₪18,000 of accounts payable, representing a near-term future cash outflow.
3. The cash basis understates equity in January by not recognizing the revenues and the asset until February. It also overstates equity in February by not recognizing the expenses and the liability until March.

In short, cash-basis accounting violates the accrual concept underlying financial reporting.

The **modified cash basis** is a mixture of the cash basis and the accrual basis. It is based on the strict cash basis but with modifications that have substantial support, such as capitalizing and depreciating plant assets or recording inventory. This method is often followed by professional services firms (doctors, lawyers, accountants, consultants) and by retail, real estate, and agricultural operations.¹

Conversion from Cash Basis to Accrual Basis

Not infrequently, companies want to convert a cash basis or a modified cash basis set of financial statements to the accrual basis for presentation to investors and creditors. To illustrate this conversion, assume that Dr. L. Liwan, like many small business owners, keeps her accounting records on a cash basis. In the year 2022, Dr. Liwan, a dentist, received ₪300,000 from her patients and paid ₪170,000 for operating expenses, resulting in an excess of cash receipts over disbursements of ₪130,000 (₪300,000 – ₪170,000). At January 1 and December 31, 2022, she has accounts receivable, unearned service revenue, accrued liabilities, and prepaid expenses as shown in **Illustration 3A.5**.

	January 1, 2022	December 31, 2022
Accounts receivable	₪12,000	₪9,000
Unearned service revenue	–0–	4,000
Accrued liabilities	2,000	5,500
Prepaid expenses	1,800	2,700

ILLUSTRATION 3A.5 Financial Information Related to Dr. L. Liwan

Service Revenue Computation

To convert the amount of cash received from patients to service revenue on an accrual basis, we must consider changes in accounts receivable and unearned service revenue during the year. Accounts receivable at the beginning of the year represents revenues that are collected this year. Ending accounts receivable indicates revenues that are not yet collected. Therefore, to compute revenue on an accrual basis, we subtract beginning accounts receivable and add ending accounts receivable, as the formula in **Illustration 3A.6** shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} - \text{ Beginning Accounts Receivable} \\ + \text{ Ending Accounts Receivable} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

ILLUSTRATION 3A.6 Conversion of Cash Receipts to Revenue—Accounts Receivable

Similarly, beginning unearned service revenue represents cash received last year for services to be performed this year. Ending unearned service revenue results from collections this year for services to be performed next year. Therefore, to compute revenue on an accrual basis, we add beginning unearned service revenue and subtract ending unearned service revenue, as the formula in [Illustration 3A.7](#) shows.

$$\text{Cash Receipts from Customers} \left\{ \begin{array}{l} + \text{ Beginning Unearned Service Revenue} \\ - \text{ Ending Unearned Service Revenue} \end{array} \right\} = \text{Revenue on an Accrual Basis}$$

ILLUSTRATION 3A.7 Conversion of Cash Receipts to Revenue—Unearned Service Revenue

Therefore, for Dr. Liwan’s dental practice, to convert cash collected from customers to service revenue on an accrual basis, we would make the computations shown in [Illustration 3A.8](#).

Cash receipts from customers		₺300,000
– Beginning accounts receivable	₺(12,000)	
+ Ending accounts receivable	9,000	
+ Beginning unearned service revenue	–0–	
– Ending unearned service revenue	(4,000)	(7,000)
Service revenue (accrual)		<u>₺293,000</u>

ILLUSTRATION 3A.8 Conversion of Cash Receipts to Service Revenue

Operating Expense Computation

To convert cash paid for operating expenses during the year to operating expenses on an accrual basis, we must consider changes in prepaid expenses and accrued liabilities. First, we need to recognize as this year’s expenses the amount of beginning prepaid expenses. (The cash payment for these occurred last year.) Therefore, to arrive at operating expense on an accrual basis, we add the beginning prepaid expenses balance to cash paid for operating expenses.

Conversely, ending prepaid expenses result from cash payments made this year for expenses to be reported next year. (Under the accrual basis, Dr. Liwan would have deferred recognizing these payments as expenses until a future period.) To convert these cash payments to operating expenses on an accrual basis, we deduct ending prepaid expenses from cash paid for expenses, as the formula in [Illustration 3A.9](#) shows.

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} + \text{ Beginning Prepaid Expenses} \\ - \text{ Ending Prepaid Expenses} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

ILLUSTRATION 3A.9 Conversion of Cash Payments to Expenses—Prepaid Expenses

Similarly, beginning accrued liabilities result from expenses that require cash payments this year. Ending accrued liabilities relate to expenses that have not been paid. To arrive at expense on an accrual basis, we deduct beginning accrued liabilities and add ending accrued liabilities to cash paid for expenses, as the formula in [Illustration 3A.10](#) shows.

$$\text{Cash Paid for Operating Expenses} \left\{ \begin{array}{l} - \text{ Beginning Accrued Liabilities} \\ + \text{ Ending Accrued Liabilities} \end{array} \right\} = \text{Expenses on an Accrual Basis}$$

ILLUSTRATION 3A.10 Conversion of Cash Payments to Expenses—Accrued Liabilities

Therefore, for Dr. Liwan’s dental practice, to convert cash paid for operating expenses to operating expenses on an accrual basis, we would make the computations shown in [Illustration 3A.11](#).

Cash paid for operating expenses		₱170,000
+ Beginning prepaid expense	₱1,800	
– Ending prepaid expense	(2,700)	
– Beginning accrued liabilities	(2,000)	
+ Ending accrued liabilities	5,500	2,600
Operating expenses (accrual)		₱172,600

ILLUSTRATION 3A.11 Conversion of Cash Paid to Operating Expenses

This entire conversion can be completed in worksheet form, as shown in [Illustration 3A.12](#).

Dr. L. Liwan				
Conversion of Income Statement Data from Cash Basis to Accrual Basis For the Year 2022				
Account Titles	Cash Basis	Adjustments		Accrual Basis
		Add	Deduct	
Collections from customers	₪300,000			
– Accounts receivable, Jan. 1			₪12,000	
+ Accounts receivable, Dec. 31		₪9,000		
+ Unearned service revenue, Jan. 1		–	–	
– Unearned service revenue, Dec. 31			4,000	
Service revenue				₪293,000
Disbursement for expenses	170,000			
+ Prepaid expenses, Jan. 1		1,800		
– Prepaid expenses, Dec. 31			2,700	
– Accrued liabilities, Jan. 1			2,000	
+ Accrued liabilities, Dec. 31		5,500		
Operating expenses				172,600
Excess of cash collections over disbursements—cash basis	₪130,000			
Net income—accrual basis				₪120,400

ILLUSTRATION 3A.12 Conversion of Statement of Cash Receipts and Disbursements to Income Statement

Using this approach, we adjust collections and disbursements on a cash basis to revenue and expense on an accrual basis, to arrive at accrual net income. In any conversion from the cash basis to the accrual basis, depreciation or amortization is an additional expense in arriving at net income on an accrual basis.

Theoretical Weaknesses of the Cash Basis

The cash basis reports exactly when cash is received and when cash is disbursed. To many people that information represents something concrete. Isn't cash what it is all about? Does it make sense to invent something, design, produce, market and sell it, if you aren't going to get cash for it in the end? Many frequently say, "Cash is the real bottom line," and also, "Cash is the oil that lubricates the economy." If so, then what is the merit of accrual accounting?

Today's economy is considerably more lubricated by credit than by cash. The accrual basis, not the cash basis, recognizes all aspects of the credit phenomenon. Investors, creditors, and other decision-makers seek timely information about a company's *future* cash flows. Accrual-basis accounting provides this information by reporting the cash inflows and outflows associated with earnings activities as soon as these companies can estimate these cash flows with an acceptable degree of certainty. Receivables and payables are forecasters of future cash inflows and outflows. In other words, accrual-basis accounting aids in predicting future cash flows by reporting

transactions and other events with cash consequences at the time the transactions and events occur, rather than when the cash is received and paid.

APPENDIX 3B Using Reversing Entries

LEARNING OBJECTIVE *7

Identify adjusting entries that may be reversed.

Use of reversing entries simplifies the recording of transactions in the next accounting period. The use of reversing entries, however, does not change the amounts reported in the financial statements for the previous period.

Illustration of Reversing Entries—Accruals

A company most often uses reversing entries to reverse two types of adjusting entries: accrued revenues and accrued expenses. To illustrate the optional use of reversing entries for accrued expenses, we use the following transaction and adjustment data.

1. October 24 (initial salaries and wages entry): Paid ₱4,000 of salaries and wages incurred between October 10 and October 24.
2. October 31 (adjusting entry): Incurred salaries and wages between October 25 and October 31 of ₱1,200, to be paid in the November 8 payroll.
3. November 8 (subsequent salaries and wages entry): Paid salaries and wages of ₱2,500. Of this amount, ₱1,200 applied to accrued salaries and wages payable at October 31 and ₱1,300 to salaries and wages payable for November 1 through November 8.

[Illustration 3B.1](#) shows the comparative entries.

REVERSING ENTRIES NOT USED				REVERSING ENTRIES USED			
Initial Salary Entry							
Oct. 24	Salaries and Wages Expense	4,000		Oct. 24	Salaries and Wages Expense	4,000	
	Cash		4,000		Cash		4,000
Adjusting Entry							
Oct. 31	Salaries and Wages Expense	1,200		Oct. 31	Salaries and Wages Expense	1,200	
	Salaries and Wages Payable		1,200		Salaries and Wages Payable		1,200
Closing Entry							
Oct. 31	Income Summary	5,200		Oct. 31	Income Summary	5,200	
	Salaries and Wages Expense		5,200		Salaries and Wages Expense		5,200
Reversing Entry							
Nov. 1	No entry is made.			Nov. 1	Salaries and Wages Payable	1,200	
					Salaries and Wages Expense		1,200
Subsequent Salary Entry							
Nov. 8	Salaries and Wages Payable	1,200		Nov. 8	Salaries and Wages Expense	2,500	
	Salaries and Wages Expense	1,300			Cash		2,500
	Cash		2,500				

ILLUSTRATION 3B.1 Comparison of Entries for Accruals, with and without Reversing Entries

The comparative entries show that the first three entries are the same whether or not the company uses reversing entries. The last two entries differ. The November 1 reversing entry eliminates the ₱ 1,200 balance in Salaries and Wages Payable, created by the October 31 adjusting entry. The reversing entry also creates a ₱1,200 credit balance in the Salaries and Wages Expense account. As you know, it is unusual for an expense account to have a credit balance. However, the balance is correct in this instance. Why? Because the company will debit the entire amount of the first salaries and wages payment in the new accounting period to Salaries and Wages Expense. This debit eliminates the credit balance. The resulting debit balance in the expense account will equal the salaries and wages expense incurred in the new accounting period (₱1,300 in this example).

When a company makes reversing entries, it debits all cash payments of expenses to the related expense account. This means that on November 8 (and every payday) the company debits Salaries and Wages Expense for the amount paid without regard to the existence of any accrued salaries and wages payable. Repeating the same entry simplifies the recording process in an accounting system.

Illustration of Reversing Entries—Deferrals

Up to this point, we assumed the recording of all deferrals as prepaid expense or unearned revenue. In some cases, though, a company records deferrals directly in expense or revenue accounts. When this occurs, a company may also reverse deferrals.

To illustrate the use of reversing entries for prepaid expenses, we use the following transaction and adjustment data.

1. December 10 (initial entry): Purchased ₱20,000 of supplies with cash.
2. December 31 (adjusting entry): Determined that ₱5,000 of supplies are on hand.

Illustration 3B.2 shows the comparative entries.

REVERSING ENTRIES NOT USED				REVERSING ENTRIES USED			
Initial Purchase of Supplies Entry							
Dec. 10	Supplies	20,000		Dec. 10	Supplies Expense	20,000	
	Cash		20,000		Cash		20,000
Adjusting Entry							
Dec. 31	Supplies Expense	15,000		Dec. 31	Supplies	5,000	
	Supplies		15,000		Supplies Expense		5,000
Closing Entry							
Dec. 31	Income Summary	15,000		Dec. 31	Income Summary	15,000	
	Supplies Expense		15,000		Supplies Expense		15,000
Reversing Entry							
Jan. 1	No entry			Jan. 1	Supplies Expense	5,000	
					Supplies		5,000

ILLUSTRATION 3B.2 Comparison of Entries for Deferrals, with and without Reversing Entries

After the adjusting entry on December 31 (regardless of whether using reversing entries), the asset account Supplies shows a balance of ₱5,000, and Supplies Expense shows a balance of ₱15,000. If the company initially debits Supplies Expense when it purchases the supplies, it then makes a reversing entry to return to the expense account the cost of unconsumed supplies. The company then continues to debit Supplies Expense for additional purchases of office supplies during the next period.

Deferrals are generally entered in real accounts (assets and liabilities), thus making reversing entries unnecessary. This approach is used because it is advantageous for items that a company needs to apportion over several periods (e.g., supplies and parts inventories). However, for other items that do not follow this regular pattern and that may or may not involve two or more periods, a company ordinarily enters them initially in revenue or expense accounts. The revenue and expense accounts may not require adjusting, and the company thus systematically closes them to Income Summary.

Using the nominal accounts adds consistency to the accounting system. It also makes the recording more efficient, particularly when a large number of such transactions occur during the year. For example, the bookkeeper knows to expense invoice items (except for capital asset acquisitions). He or she need not worry whether an item will result in a prepaid expense at the end of the period, because the company will make adjustments at the end of the period.

Summary of Reversing Entries

We summarize guidelines for reversing entries as follows.

1. All accruals should be reversed.
2. All deferrals for which a company debited or credited the original cash transaction to an expense or revenue account should be reversed.
3. Adjusting entries for depreciation and bad debts are not reversed.

Recognize that reversing entries do not have to be used. Therefore, some accountants avoid them entirely.

APPENDIX 3C Using a Worksheet: The Accounting Cycle Revisited

LEARNING OBJECTIVE *8

Prepare a 10-column worksheet.

In this appendix, we provide an additional illustration of the end-of-period steps in the accounting cycle and illustrate the use of a worksheet (usually an electronic spreadsheet) in this process. Using a **worksheet** often facilitates the end-of-period (monthly, quarterly, or annually) accounting and reporting process. Use of a worksheet helps a company prepare the financial statements on a more timely basis. How? With a worksheet, a company need not wait until it journalizes and posts the adjusting and closing entries.

A company can prepare a worksheet either on columnar paper or within a computer spreadsheet. In either form, a company uses the worksheet to adjust account balances and to prepare financial statements.

The worksheet does not replace the financial statements. Instead, it is an informal device for accumulating and sorting information needed for the financial statements. Completing the worksheet provides considerable assurance that a company properly handled all of the details related to the end-of-period accounting and statement preparation. The 10-column worksheet in [Illustration 3C.1](#) provides columns for the first trial balance, adjustments, adjusted trial balance, income statement, and statement of financial position.

Ciner Cabinets Ten-Column Worksheet For the Year Ended December 31, 2022

ILLUSTRATION 3C.1 Use of a Worksheet

Worksheet Columns

Trial Balance Columns

Ciner Cabinets, shown in [Illustration 3C.1](#), obtains data for the trial balance from its ledger balances at December 31. The amount for Inventory, ₪40,000, is the year-end inventory amount, which results from the application of a perpetual inventory system.

Adjustments Columns

After Ciner enters all adjustment data on the worksheet, it establishes the equality of the adjustment columns. It then extends the balances in all accounts to the adjusted trial balance columns.

Adjustments Entered on the Worksheet

Items (a) through (g) below serve as the basis for the adjusting entries made in the worksheet for Ciner shown in [Illustration 3C.1](#).

- a. Depreciation of equipment at the rate of 10% per year based on original cost of ₪67,000.
- b. Estimated bad debt expense of \$1,000 to bring the Allowance for Doubtful Accounts to a balance of \$3,000.
- c. Insurance expired during the year ₪360.
- d. Interest accrued on notes receivable as of December 31, ₪800.
- e. The Rent Expense account contains ₪500 rent paid in advance, which is applicable to next year.
- f. Property taxes accrued December 31, ₪2,000.
- g. Income taxes payable estimated ₪3,440.

The adjusting entries shown on the December 31, 2022, worksheet are as follows.

	(a)		
Depreciation Expense		6,700	
Accumulated Depreciation—Equipment			6,700
	(b)		
Bad Debt Expense		1,000	
Allowance for Doubtful Accounts			1,000
	(c)		
Insurance Expense		360	
Prepaid Insurance			360
	(d)		
Interest Receivable		800	
Interest Revenue			800
	(e)		
Prepaid Rent		500	
Rent Expense			500
	(f)		
Property Tax Expense		2,000	
Property Taxes Payable			2,000
	(g)		
Income Tax Expense		3,440	
Income Taxes Payable			3,440

Ciner Cabinets transfers the adjusting entries to the Adjustments columns of the worksheet, often designating each by letter. The trial balance lists any new accounts resulting from the adjusting entries, as illustrated on the worksheet. (For example, see the accounts listed in rows 32 through 40 in [Illustration 3C.1](#).) Ciner then totals and balances the Adjustments columns.

Adjusted Trial Balance

The adjusted trial balance shows the balance of all accounts after adjustment at the end of the accounting period. For example, Ciner adds the ₺2,000 shown opposite Allowance for Doubtful Accounts in the Trial Balance Cr. column to the ₺1,000 in the Adjustments Cr. column. The company then extends the ₺3,000 total to the Adjusted Trial Balance Cr. column. Similarly, Ciner reduces the ₺900 debit opposite Prepaid Insurance by the ₺360 credit in the Adjustments column. The result, ₺540, is shown in the Adjusted Trial Balance Dr. column.

Income Statement and Statement of Financial Position Columns

Ciner extends all the debit items in the Adjusted Trial Balance columns into the Income Statement or Statement of Financial Position columns to the right. It similarly extends all the credit items.

The next step is to total the Income Statement columns. Ciner needs the amount of net income or loss for the period to balance the debit and credit columns. The net income of ₺12,200 is shown in the Income Statement Dr. column because revenues exceeded expenses by that amount.

Ciner then balances the Income Statement columns. The company also enters the net income of ₺12,200 in the Statement of Financial Position Cr. column as an increase in retained earnings.

Preparing Financial Statements from a Worksheet

The worksheet provides the information needed for preparation of the financial statements without reference to the ledger or other records. In addition, the worksheet sorts that data into appropriate columns, which facilitates the preparation of the statements. The financial statements of Ciner Cabinet are shown in Chapter 3 ([Illustrations 3.41](#), [3.42](#), and [3.43](#)).

Learning Objectives Review

1 Describe the basic accounting information system.

Understanding the following eleven terms helps in understanding **key accounting concepts**: (1) event, (2) transaction, (3) account, (4) real and nominal accounts, (5) ledger, (6) journal, (7) posting, (8) trial balance, (9) adjusting entries, (10) financial statements, and (11) closing entries.

Using **double-entry rules**, the left side of any account is the debit side; the right side is the credit side. All asset and expense accounts are increased on the left or debit side and decreased on the right or credit side. Conversely, all liability and revenue accounts are increased on the right or credit side and decreased on the left or debit side. Equity accounts, Share Capital—Ordinary and Retained Earnings, are increased on the credit side. Dividends is increased on the debit side.

The **basic steps in the accounting cycle** are (1) identifying and measuring transactions and other events; (2) journalizing; (3) posting; (4) preparing an unadjusted trial balance; (5) making adjusting entries; (6) preparing an adjusted trial balance; (7) preparing financial statements; and (8) closing.

2 Record and summarize basic transactions.

The simplest journal form chronologically lists transactions and events expressed in terms of debits and credits to particular accounts. The items entered in a general journal must be transferred (posted) to the general ledger. Companies should prepare an unadjusted trial balance at the end of a given period after they have recorded the entries in the journal and posted them to the ledger.

3 Identify and prepare adjusting entries.

Adjustments achieve a proper recognition of revenues and expenses, so as to determine net income for the current period and to achieve an accurate statement of end-of-the-period balances in assets, liabilities, and equity accounts. The major types of adjusting entries are deferrals (prepaid expenses and unearned revenues) and accruals (accrued revenues and accrued expenses).

4 Prepare financial statements from the adjusted trial balance and prepare closing entries.

Companies can prepare financial statements directly from the adjusted trial balance. The income statement is prepared from the revenue and expense accounts. The retained earnings statement is prepared from the retained earnings account, dividends, and net income (or net loss). The statement of financial position is prepared from the asset, liability, and equity accounts.

In the closing process, the company transfers all of the revenue and expense account balances (income statement items) to a clearing account called Income Summary, which is used only at the end of the fiscal year. Revenues and expenses are matched in the Income Summary account. The net result of this matching represents the net income or net loss for the period. That amount is then transferred to an equity account (Retained Earnings for a company and capital accounts for proprietorships and partnerships).

5 Prepare financial statements for a merchandising company.

The financial statements for a merchandiser differ from those for a service company, as a merchandiser must account for gross profit on sales. The accounting cycle, however, is performed the same way.

***6 Differentiate the cash basis of accounting from the accrual basis of accounting.**

The cash basis of accounting records revenues when cash is received and expenses when cash is paid. Cash-basis accounting is not in conformity with IFRS. The accrual basis recognizes revenue when the performance obligation is satisfied and expenses in the period incurred, without regard to the time of the receipt or payment of cash. Accrual-basis accounting is theoretically preferable because it provides information about future cash inflows and outflows associated with earnings activities as soon as companies can estimate these cash flows with an acceptable degree of certainty.

*7 Identify adjusting entries that may be reversed.

Reversing entries are most often used to reverse two types of adjusting entries: accrued revenues and accrued expenses. Deferrals may also be reversed if the initial entry to record the transaction is made to an expense or revenue account.

*8 Prepare a 10-column worksheet.

The 10-column worksheet provides columns for the first trial balance, adjustments, adjusted trial balance, income statement, and statement of financial position. The worksheet does not replace the financial statements. Instead, it is an informal device for accumulating and sorting information needed for the financial statements.

Practice Problem

Nalezny Advertising was founded by Casey Hayward in January 2012. Presented below are both the adjusted and unadjusted trial balances as of December 31, 2022.

Nalezny Advertising Trial Balance December 31, 2022				
	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.
Cash	€ 11,000		€ 11,000	
Accounts Receivable	20,000		21,500	
Supplies	8,400		5,000	
Equipment	60,000		60,000	
Accumulated Depreciation—Equipment		€ 28,000		€ 35,000
Accounts Payable		5,000		5,000
Unearned Advertising Revenue		7,000		5,600
Salaries and Wages Payable		—0—		1,300
Share Capital—Ordinary		10,000		10,000
Retained Earnings		4,800		4,800
Advertising Revenue		58,600		61,500
Salaries and Wages Expense	10,000		11,300	
Depreciation Expense			7,000	
Supplies Expense			3,400	
Rent Expense	4,000		4,000	
	<u>€113,400</u>	<u>€113,400</u>	<u>€123,200</u>	<u>€123,200</u>

Instructions

- Journalize the annual adjusting entries that were made.
- Prepare an income statement for the year ending December 31, 2022, and a statement of financial position at December 31.
- Describe the remaining steps in the accounting cycle to be completed by Nalezny for 2022.

Solution

a.

Dec. 31	Accounts Receivable	1,500	
	Advertising Revenue		1,500
	31 Unearned Advertising Revenue	1,400	
	Advertising Revenue		1,400
	31 Supplies Expense	3,400	
	Supplies		3,400
	31 Depreciation Expense	7,000	
	Accumulated Depreciation—Equipment		7,000
	31 Salaries and Wages Expense	1,300	
	Salaries and Wages Payable		1,300

b.

Nalezny Advertising Income Statement For the Year Ended December 31, 2022		
Revenues		
Advertising revenue		€61,500
Expenses		
Salaries and wages expense	€11,300	
Depreciation expense	7,000	
Rent expense	4,000	
Supplies expense	3,400	
Total expenses		25,700
Net income		<u>€35,800</u>
Nalezny Advertising Statement of Financial Position December 31, 2022		
Assets		
Equipment	€60,000	
Less: Accumulated depreciation—equipment	<u>35,000</u>	€25,000
Supplies		5,000
Accounts receivable		21,500
Cash		<u>11,000</u>
Total assets		<u>€62,500</u>

Equity and Liabilities		
Equity		
Share capital—ordinary	€10,000	
Retained earnings	40,600*	
Total equity		€50,600
Liabilities		
Accounts payable	5,000	
Unearned advertising revenue	5,600	
Salaries and wage payable	1,300	
Total liabilities		11,900
Total equity and liabilities		€62,500
*Retained earnings, Jan. 1, 2022	€ 4,800	
Add: Net income	35,800	
Retained earnings, Dec. 31, 2022	€40,600	

- c. Following preparation of financial statements (part (b)), Nalezny would prepare closing entries to reduce the temporary accounts to zero. Some companies prepare a post-closing trial balance and reversing entries.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

Questions

- Give an example of a transaction that results in:
 - a decrease in an asset and a decrease in a liability.
 - a decrease in one asset and an increase in another asset.
 - a decrease in one liability and an increase in another liability.
- Do the following events represent business transactions? Explain your answer in each case.
 - A computer is purchased on account.
 - A customer returns merchandise and is given credit on account.
 - A prospective employee is interviewed.
 - The owner of the business withdraws cash from the business for personal use.
 - Merchandise is ordered for delivery next month.
- Name the accounts debited and credited for each of the following transactions.
 - Billing a customer for work done.
 - Receipt of cash from customer on account.

- c. Purchase of office supplies on account.
- d. Purchase of 15 gallons of gasoline for the delivery truck.
4. Why are revenue and expense accounts called temporary or nominal accounts?
5. Andrea Pafko, a fellow student, contends that the double-entry system means that each transaction must be recorded twice. Is Andrea correct? Explain.
6. Is it necessary that a trial balance be prepared periodically? What purpose does it serve?
7. Indicate whether each of the items below is a real or nominal account and whether it appears in the statement of financial position or the income statement.
- Prepaid Rent.
 - Salaries and Wages Payable.
 - Inventory.
 - Accumulated Depreciation—Equipment.
 - Equipment.
 - Service Revenue.
 - Salaries and Wages Expense.
 - Supplies.
8. Employees are paid every Saturday for the preceding work week. If a statement of financial position is prepared on Wednesday, December 31, what does the amount of salaries and wages earned by employees the first three days of the week (12/29, 12/30, 12/31) represent? Explain.
9. (a) How do the components of revenues and expenses differ between a merchandising company and a service enterprise? (b) Explain the income measurement process of a merchandising company.
10. What differences are there between the trial balance before closing and the trial balance after closing with respect to the following accounts?
- Accounts Payable.
 - Expense accounts.
 - Revenue accounts.
 - Retained Earnings account.
 - Cash.
11. What are adjusting entries, and why are they necessary?
12. What are closing entries, and why are they necessary?
13. Carlo Avardo, maintenance supervisor for Lisbon Insurance Co., has purchased a riding lawnmower and accessories to be used in maintaining the grounds around company headquarters. He has sent the following information to the accounting department.

Cost of mower and accessories	€4,000	Date purchased	7/1/22
Estimated useful life	5 yrs	Monthly salary of groundskeeper	€1,100
Residual value	€0	Estimated annual fuel cost	€150

Compute the amount of depreciation expense (related to the mower and accessories) that should be reported on Lisbon's December 31, 2022, income statement. Assume straight-line depreciation.

14. Chen Enterprises made the following entry on December 31, 2022.

Interest Expense	10,000	
Interest Payable		10,000
(To record interest expense due on loan from Hibernia Bank)		

What entry would Hibernia Bank make regarding its outstanding loan to Chen Enterprises? Explain why this must be the case.

*15. Distinguish between cash-basis accounting and accrual-basis accounting. Why is accrual-basis accounting acceptable for most business enterprises and the cash-basis unacceptable in the preparation of an income statement and a statement of financial position?

*16. When salaries and wages expense for the year on an accrual basis is computed, why are beginning accrued salaries and wages subtracted from, and ending accrued salaries and wages added to, salaries and wages paid during the year?

*17. Explain the distinction between accounting using strict cash-basis accounting and a modified cash basis.

*18. What are reversing entries, and why are they used?

*19. "A worksheet is a permanent accounting record, and its use is required in the accounting cycle." Do you agree? Explain.

Brief Exercises

BE3.1 (LO 2) Transactions for Mehta SE for the month of May are presented below. Prepare journal entries for each of these transactions. (You may omit explanations.)

May	1	B.D. Mehta invests €4,000 cash in exchange for ordinary shares to start his welding business.
	3	Buys equipment on account for €1,100.
	13	Pays €400 to landlord for May rent.
	21	Bills Noble Corp. €500 for welding work done.

BE3.2 (LO 2) Agazzi Repair Shop had the following transactions during the first month of business as a proprietorship. Journalize the transactions. (Omit explanations.)

Aug.	2	Invested €12,000 cash and €2,500 of equipment in the business.
	7	Purchased supplies on account for €500. (Debit asset account.)
	12	Performed services for clients, for which €1,300 was collected in cash and €670 was billed to the clients.
	15	Paid August rent €600.
	19	Counted supplies and determined that only €270 of the supplies purchased on August 7 are still on hand.

BE3.3 (LO 2, 3) On July 1, 2022, Crowe NV pays €15,000 to Zubin Insurance for a 3-year insurance policy. Both companies have fiscal years ending December 31. For Crowe NV journalize the entry on July 1 and the adjusting entry on December 31.

BE3.4 (LO 2, 3) Using the data in BE3.3, journalize the entry on July 1 and the adjusting entry on December 31 for Zubin Insurance. Zubin uses the accounts Unearned Insurance Revenue and

Insurance Revenue.

BE3.5 (LO 2, 3) Assume that on February 1, **Marks and Spencer plc (M&S)** (GBR) paid £72,000 in advance for 2 years' insurance coverage. Prepare M&S's February 1 journal entry and the annual adjusting entry on June 30.

BE3.6 (LO 2, 3) LaBouche AG owns a warehouse. On November 1, it rented storage space to a lessee (tenant) for 3 months for a total cash payment of €2,400 received in advance. Prepare LaBouche's November 1 journal entry and the December 31 annual adjusting entry.

BE3.7 (LO 2, 3) Dresser SE's weekly payroll, paid on Fridays, totals €8,000. Employees work a 5-day week. Prepare Dresser's adjusting entry on Wednesday, December 31, and the journal entry to record the €8,000 cash payment on Friday, January 2.

BE3.8 (LO 2, 3) Included in Gonzalez NV's December 31 trial balance is a note receivable of €12,000. The note is a 4-month, 10% note dated October 1. Prepare Gonzalez's December 31 adjusting entry to record €300 of accrued interest, and the February 1 journal entry to record receipt of €12,400 from the borrower.

BE3.9 (LO 2, 3) Prepare the following adjusting entries at August 31 for **Nokia** (FIN).

- a. Interest on notes payable of €300 is accrued.
- b. Unbilled fees for services performed total €1,400.
- c. Salaries and wages earned by employees of €700 have not been recorded.
- d. Bad debt expense for the year is €900.

Use the following account titles: Service Revenue, Accounts Receivable, Interest Expense, Interest Payable, Salaries and Wages Expense, Salaries and Wages Payable, Allowance for Doubtful Accounts, and Bad Debt Expense.

BE3.10 (LO 3, 4) At the end of its first year of operations, the trial balance of Alonzo NV shows Equipment €30,000 and zero balances in Accumulated Depreciation—Equipment and Depreciation Expense. Depreciation for the year is estimated to be €2,000. Prepare the adjusting entry for depreciation at December 31, and indicate the statement of financial position presentation for the equipment at December 31.

BE3.11 (LO 4) Side Kicks has year-end account balances of Sales Revenue €808,900, Interest Revenue €13,500, Cost of Goods Sold €556,200, Operating Expenses €189,000, Income Tax Expense €35,100, and Dividends €18,900. Prepare the year-end closing entries.

***BE3.12 (LO 6)** Kelly SpA had cash receipts from customers in 2022 of €142,000. Cash payments for operating expenses were €97,000. Kelly has determined that at January 1, accounts receivable was €13,000, and prepaid expenses were €17,500. At December 31, accounts receivable was €18,600, and prepaid expenses were €23,200. Compute (a) service revenue and (b) operating expenses.

***BE3.13 (LO 7)** Assume that **GlaxoSmithKline** (GBR) made a December 31 adjusting entry to debit Salaries and Wages Expense and credit Salaries and Wages Payable for £4,200 for one of its departments. On January 2, Glaxo paid the weekly payroll of £7,000. Prepare Glaxo's (a) January 1 reversing entry; (b) January 2 entry (assuming the reversing entry was prepared); and (c) January 2 entry (assuming the reversing entry was not prepared).

Exercises

E3.1 (LO 2) (Transaction Analysis—Service Company) Kai Edo is a licensed public accountant. During the first month of operations of her business (a sole proprietorship), the

following events and transactions occurred (amounts in thousands).

April	2	Invested ¥30,000 cash and equipment valued at ¥14,000 in the business.
	2	Hired administrative assistant at a salary of ¥290 per week payable monthly.
	3	Purchased supplies on account ¥700. (Debit an asset account.)
	7	Paid office rent of ¥600 for the month.
	11	Completed a tax assignment and billed client ¥1,100 for services rendered. (Use Service Revenue account.)
	12	Received ¥3,200 advance on a management consulting engagement.
	17	Received cash of ¥2,300 for services completed for Ferengi Co.
	21	Paid insurance expense ¥110.
	30	Paid administrative assistant ¥1,160 for the month.
	30	A count of supplies indicated that ¥120 of supplies had been used.
	30	Purchased a new computer for ¥5,100 with personal funds. (The computer will be used exclusively for business purposes.)

Instructions

Journalize the transactions in the general journal. (Omit explanations.)

E3.2 (LO 2) (Corrected Trial Balance) The following trial balance of Geronimo AG does not balance. Your review of the ledger reveals the following. (a) Each account had a normal balance. (b) The debit footings in Prepaid Insurance, Accounts Payable, and Property Tax Expense were each understated €1,000. (c) A transposition error was made in Accounts Receivable and Service Revenue; the correct balances for Accounts Receivable and Service Revenue are €2,750 and €6,690, respectively. (d) A debit posting to Advertising Expense of €300 was omitted. (e) A €3,200 cash drawing by the owner was debited to Geronimo, Capital, and credited to Cash.

Geronimo Company Trial Balance April 30, 2022		
	Debit	Credit
Cash	€ 2,100	
Accounts Receivable	2,570	
Prepaid Insurance	700	
Equipment		€ 8,000
Accounts Payable		4,500
Property Taxes Payable	560	
Geronimo, Capital		11,200
Service Revenue	6,960	
Salaries and Wages Expense	4,200	
Advertising Expense	1,100	
Property Tax Expense		800
	<u>€18,190</u>	<u>€24,500</u>

Instructions

Prepare a correct trial balance.

E3.3 (LO 2) (Corrected Trial Balance) The following trial balance of Scarlatti Corporation does not balance.

Scarlatti Corporation Trial Balance April 30, 2022		
	Debit	Credit
Cash	\$ 5,912	
Accounts Receivable	5,240	
Supplies	2,967	
Equipment	6,100	
Accounts Payable		\$ 7,044
Share Capital—Ordinary		8,000
Retained Earnings		2,000
Service Revenue		5,200
Office Expense	4,320	
	<u>\$24,539</u>	<u>\$22,244</u>

An examination of the ledger shows these errors.

1. Cash received from a customer on account was recorded (both debit and credit) as \$1,580 instead of \$1,850.
2. The purchase on account of a computer costing \$1,900 was recorded as a debit to Office Expense and a credit to Accounts Payable.
3. Services were performed on account for a client, \$2,250, for which Accounts Receivable was debited \$2,250 and Service Revenue was credited \$225.
4. A payment of \$95 for telephone charges was entered as a debit to Office Expense and a debit to Cash.
5. The Service Revenue account was totaled at \$5,200 instead of \$5,280.

Instructions

From this information prepare a corrected trial balance.

E3.4 (LO 2) (Corrected Trial Balance) The following trial balance of Oakley NV does not balance.

Oakley NV Trial Balance June 30, 2022		
	Debit	Credit
Cash		€ 2,870
Accounts Receivable	€ 3,231	
Supplies	800	
Equipment	3,800	
Accounts Payable		2,666
Unearned Service Revenue	1,200	

Share Capital—Ordinary		6,000
Retained Earnings		3,000
Service Revenue		2,380
Salaries and Wages Expense	3,400	
Office Expense	940	
	<u>€13,371</u>	<u>€16,916</u>

Each of the listed accounts should have a normal balance per the general ledger. An examination of the ledger and journal reveals the following errors.

1. Cash received from a customer on account was debited for €370, and Accounts Receivable was credited for the same amount. The actual collection was for €730.
2. The purchase of a computer printer on account for €500 was recorded as a debit to Supplies for €500 and a credit to Accounts Payable for €500.
3. Services were performed on account for a client for €890. Accounts Receivable was debited for €890 and Service Revenue was credited for €89.
4. A payment of €65 for telephone charges was recorded as a debit to Office Expense for €65 and a debit to Cash for €65.
5. When the Unearned Service Revenue account was reviewed, it was found that service revenue amounting to €225 was performed prior to June 30.
6. A debit posting to Salaries and Wages Expense of €670 was omitted.
7. A payment on account for €206 was credited to Cash for €206 and credited to Accounts Payable for €260.
8. A dividend of €575 was debited to Salaries and Wages Expense for €575 and credited to Cash for €575.

Instructions

Prepare a correct trial balance. (*Note:* It may be necessary to add one or more accounts to the trial balance.)

E3.5 (LO 3) (Adjusting Entries) The ledger of Chopin Rental Agency on March 31 of the current year includes the following selected accounts before adjusting entries have been prepared.

	Debit	Credit
Prepaid Insurance	€ 3,600	
Supplies	2,800	
Equipment	25,000	
Accumulated Depreciation—Equipment		€ 8,400
Notes Payable		20,000
Unearned Rent Revenue		6,300
Rent Revenue		60,000
Interest Expense	—0—	
Salaries and Wages Expense	14,000	

An analysis of the accounts shows the following.

1. The equipment depreciates €250 per month.
2. One-third of the unearned rent was earned during the quarter.
3. Interest of €500 is accrued on the notes payable.
4. Supplies on hand total €650.
5. Insurance expires at the rate of €300 per month.

Instructions

Prepare the adjusting entries at March 31, assuming that adjusting entries are made quarterly. Additional accounts are Depreciation Expense, Insurance Expense, Interest Payable, and Supplies Expense. (Omit explanations.)

E3.6 (LO 3) (Adjusting Entries) Stephen King, D.D.S., opened a dental practice on January 1, 2022. During the first month of operations, the following transactions occurred.

1. Performed services for patients who had dental plan insurance. At January 31, \$750 of such services were performed but not yet billed to the insurance companies.
2. Utility expenses incurred but not paid prior to January 31 totaled \$520.
3. Purchased dental equipment on January 1 for \$80,000, paying \$20,000 in cash and signing a \$60,000, 3-year note payable. The equipment depreciates \$400 per month. Interest is \$500 per month.
4. Purchased a 1-year malpractice insurance policy on January 1 for \$15,000.
5. Purchased \$1,600 of dental supplies. On January 31, determined that \$400 of supplies were on hand.

Instructions

Prepare the adjusting entries on January 31. (Omit explanations.) Account titles are Accumulated Depreciation—Equipment, Depreciation Expense, Service Revenue, Accounts Receivable, Insurance Expense, Interest Expense, Interest Payable, Prepaid Insurance, Supplies, Supplies Expense, Utilities Expense, and Accounts Payable.

E3.7 (LO 3) (Analyze Adjusted Data) A partial adjusted trial balance of Safin plc at January 31, 2022, shows the following.

Safin plc Adjusted Trial Balance January 31, 2022		
	Debit	Credit
Supplies	£ 900	
Prepaid Insurance	2,400	
Salaries and Wages Payable		£ 800
Unearned Service Revenue		750
Supplies Expense	950	
Insurance Expense	400	
Salaries and Wages Expense	1,800	
Service Revenue		2,000

Instructions

Answer the following questions, assuming the year begins January 1.

- If the amount in Supplies Expense is the January 31 adjusting entry and £850 of supplies were purchased in January, what was the balance in Supplies on January 1?
- If the amount in Insurance Expense is the January 31 adjusting entry and the original insurance premium was for 1 year, what was the total premium and when was the policy purchased?
- If £2,700 of salaries and wages were paid in January, what was the balance in Salaries and Wages Payable at December 31, 2021?
- If £1,600 was received in January for services performed in January, what was the balance in Unearned Service Revenue at December 31, 2021?

E3.8 (LO 3) (Adjusting Entries) William Bryant is the new owner of Ace Computer Services. At the end of August 2022, his first month of ownership, Bryant is trying to prepare monthly financial statements. Below is information related to unrecorded expenses that the business incurred during August.

- At August 31, Bryant owed his employees \$2,900 in salaries and wages that will be paid on September 1.
- At the end of the month, he had not yet received the month's utility bill. Based on past experience, he estimated the bill would be approximately \$600.
- On August 1, Bryant borrowed \$60,000 from a local bank on a 15-year mortgage. The annual interest rate is 8%.
- A telephone bill in the amount of \$117 covering August charges is unpaid at August 31 (use Telephone and Internet Expense account).

Instructions

Prepare the adjusting journal entries as of August 31, 2022, suggested by the information provided.

E3.9 (LO 2, 3) (Adjusting Entries) Selected accounts of Leno Company are shown below.

Supplies				Accounts Receivable			
Beg. Bal.	800	10/31	470	10/17	2,100		
				10/31	1,650		
Salaries and Wages Expense				Salaries and Wages Payable			
10/15	800					10/31	600
10/31	600						
Unearned Service Revenue				Supplies Expense			
10/31	400	10/20	650	10/31	470		
Service Revenue							
		10/17	2,100				
		10/31	1,650				
		10/31	400				

Instructions

From an analysis of the T-accounts, reconstruct (a) the October transaction entries, and (b) the adjusting journal entries that were made on October 31, 2022. Prepare explanations for each

journal entry.

E3.10 (LO 3) (Adjusting Entries) Uhura Resort opened for business on June 1 with eight air-conditioned units. Its trial balance on August 31 is as follows (in thousands).

Uhura Resort Trial Balance August 31, 2022		
	Debit	Credit
Cash	¥ 19,600	
Prepaid Insurance	4,500	
Supplies	2,600	
Land	20,000	
Buildings	120,000	
Equipment	16,000	
Accounts Payable		¥ 4,500
Unearned Rent Revenue		4,600
Mortgage Payable		50,000
Share Capital—Ordinary		100,000
Retained Earnings		0
Dividends	5,000	
Rent Revenue		86,200
Salaries and Wages Expense	44,800	
Utilities Expense	9,200	
Maintenance and Repairs Expense	3,600	
	<u>¥245,300</u>	<u>¥245,300</u>

Other data:

1. The balance in prepaid insurance is a 1-year premium paid on June 1, 2022.
2. An inventory count on August 31 shows ¥650 of supplies on hand.
3. Annual depreciation rates are buildings (4%) and equipment (10%). Residual value is estimated to be 10% of cost.
4. Unearned rent revenue of ¥3,800 should be recognized as revenue prior to August 31.
5. Salaries and wages of ¥375 were unpaid at August 31.
6. Rentals of ¥800 were due from tenants at August 31.
7. The mortgage note is dated 1/1/2022. The mortgage interest rate is 8% per year.

Instructions

- a. Journalize the adjusting entries on August 31 for the 3-month period June 1–August 31. (Omit explanations.)
- b. Prepare an adjusted trial balance on August 31.

E3.11 (LO 4) (Prepare Financial Statements) The adjusted trial balance of Cavamanlis Co. as of December 31, 2022, contains the following.

Cavamanlis Co. Adjusted Trial Balance December 31, 2022		
	Dr.	Cr.
Cash	\$18,972	
Accounts Receivable	6,920	
Prepaid Rent	2,280	
Equipment	18,050	
Accumulated Depreciation—Equipment		\$ 4,895
Notes Payable		5,700
Accounts Payable		4,472
Share Capital—Ordinary		20,000
Retained Earnings		11,310
Dividends	3,000	
Service Revenue		12,590
Salaries and Wages Expense	6,840	
Rent Expense	2,760	
Depreciation Expense	145	
Interest Expense	83	
Interest Payable		83
	<u>\$59,050</u>	<u>\$59,050</u>

Instructions

- a. Prepare an income statement.
- b. Prepare a retained earnings statement.
- c. Prepare a classified statement of financial position.

E3.12 (LO 4) (Prepare Financial Statements) Flynn Design was founded by Kevin Flynn in January 2017. Presented below is the adjusted trial balance as of December 31, 2022.

Flynn Design Adjusted Trial Balance December 31, 2022		
	Dr.	Cr.
Cash	€ 10,000	
Accounts Receivable	21,500	
Supplies	5,000	
Prepaid Insurance	2,500	
Equipment	60,000	
Accumulated Depreciation—Equipment		€ 35,000
Accounts Payable		8,000

Interest Payable		150
Notes Payable		5,000
Unearned Service Revenue		5,600
Salaries and Wages Payable		1,300
Share Capital—Ordinary		10,000
Retained Earnings		3,500
Service Revenue		58,500
Salaries and Wages Expense	12,300	
Insurance Expense	850	
Interest Expense	500	
Depreciation Expense	7,000	
Supplies Expense	3,400	
Rent Expense	4,000	
	<u>€127,050</u>	<u>€127,050</u>

Instructions

- Prepare an income statement and a retained earnings statement for the year ending December 31, 2022, and an unclassified statement of financial position at December 31.
- Answer the following questions.
 - If the note has been outstanding 6 months, what is the annual interest rate on that note?
 - If the company paid €17,500 in salaries and wages in 2022, what was the balance in Salaries and Wages Payable on December 31, 2021?

E3.13 (LO 4, 5) (Closing Entries) The adjusted trial balance of Faulk Ltd. shows the following data pertaining to sales at the end of its fiscal year, October 31, 2022: Sales Revenue £800,000; Delivery Expense £12,000; Sales Returns and Allowances £24,000; and Sales Discounts £12,000.

Instructions

- Prepare the revenues section of the income statement.
- Prepare separate closing entries for (1) sales revenue and (2) the contra accounts to sales revenue.

E3.14 (LO 4, 5) (Closing Entries) Presented below is information related to Russell AG for the month of January 2022.

Cost of goods sold	€202,000	Salaries and wages expense	€ 61,000
Delivery expense	7,000	Sales discounts	8,000
Insurance expense	12,000	Sales returns and allowances	13,000
Rent expense	20,000	Sales revenue	340,000

Instructions

Prepare the necessary closing entries.

E3.15 (LO 5) (Missing Amounts) Presented below is financial information for two different companies.

--	--	--

	Shabbona Company	Jenkins Company
Sales revenue	\$90,000	(d)
Sales returns and allowances	(a)	\$ 5,000
Net sales	85,000	90,000
Cost of goods sold	56,000	(e)
Gross profit	(b)	38,000
Operating expenses	15,000	23,000
Net income	(c)	15,000

Instructions

Compute the missing amounts.

E3.16 (LO 4, 5) (Closing Entries) Presented below are selected account balances for Alistair Co. as of December 31, 2022.

Inventory 12/31/22	\$ 60,000	Cost of Goods Sold	\$235,700
Share Capital—Ordinary	75,000	Selling Expenses	16,000
Retained Earnings	45,000	Administrative Expenses	38,000
Dividends	18,000	Income Tax Expense	30,000
Sales Returns and Allowances	12,000		
Sales Discounts	15,000		
Sales Revenue	390,000		

Instructions

Prepare closing entries for Alistair Co. on December 31, 2022. (Omit explanations.)

E3.17 (LO 2) (Transactions of a Company, Including Investment and Dividend) Snyder Miniature Golf and Driving Range plc was opened on March 1 by Mickey Snyder. The following selected events and transactions occurred during March.

Mar.	1	Invested £60,000 cash in the business in exchange for ordinary shares.
	3	Purchased Michelle Wie's Golf Land for £38,000 cash. The price consists of land £10,000, building £22,000, and equipment £6,000. (Make one compound entry.)
	5	Advertised the opening of the driving range and miniature golf course, paying advertising expenses of £1,600.
	6	Paid cash £1,480 for a 1-year insurance policy.
	10	Purchased golf equipment for £2,500 from Young Company, payable in 30 days.
	18	Received golf fees of £1,200 in cash.
	25	Declared and paid a £1,000 cash dividend.
	30	Paid salaries and wages of £900.
	30	Paid Young Company in full.
	31	Received £750 of fees in cash.

Snyder uses the following accounts: Cash, Prepaid Insurance, Land, Buildings, Equipment, Accounts Payable, Share Capital—Ordinary, Dividends, Service Revenue, Advertising Expense, and Salaries and Wages Expense.

Instructions

Journalize the March transactions. (Provide explanations for the journal entries.)

***E3.18 (LO 6) (Cash to Accrual Basis)** Corinne Dunbar, M.D., maintains the accounting records of Dunbar Clinic on a cash basis. During 2022, Dr. Dunbar collected €142,600 from her patients and paid €60,470 in expenses. At January 1, 2022, and December 31, 2022, she had accounts receivable, unearned service revenue, accrued expenses, and prepaid expenses as follows. (All long-lived assets are rented.)

	January 1, 2022	December 31, 2022
Accounts receivable	€11,250	€15,927
Unearned service revenue	2,840	4,111
Accrued expenses	3,435	2,108
Prepaid expenses	1,917	3,232

Instructions

Prepare a schedule that converts Dr. Dunbar's "excess of cash collected over cash disbursed" for the year 2022 to net income on an accrual basis for the year 2022.

***E3.19 (LO 6) (Cash and Accrual Basis)** Butler Corp. maintains its financial records on the cash basis of accounting. Interested in securing a long-term loan from its regular bank, Butler Corp. requests you to convert its cash-basis income statement data to the accrual basis. You are provided with the following summarized data covering 2021, 2022, and 2023.

	2021	2022	2023
Cash receipts from sales:			
On 2021 sales	\$290,000	\$160,000	\$ 30,000
On 2022 sales	—0—	355,000	90,000
On 2023 sales			408,000
Cash payments for expenses:			
On 2021 expenses	185,000	67,000	25,000
On 2022 expenses	40,000 ^a	170,000	55,000
On 2023 expenses		45,000 ^b	218,000
^a Prepayments of 2022 expenses.			
^b Prepayments of 2023 expenses.			

Instructions

- Using the data above, prepare abbreviated income statements for the years 2021 and 2022 on the cash basis.
- Using the data above, prepare abbreviated income statements for the years 2021 and 2022 on the accrual basis.

***E3.20 (LO 3, 7) (Adjusting and Reversing Entries)** When the accounts of Constantine A.Ş. are examined, the adjusting data listed below are uncovered on December 31, the end of an annual fiscal period.

- The prepaid insurance account shows a debit of ₺6,000, representing the cost of a 2-year fire insurance policy dated August 1 of the current year.

2. On November 1, Rent Revenue was credited for ₪2,400, representing revenue from a subrental for a 3-month period beginning on that date.
3. Purchase of advertising materials for ₪800 during the year was recorded in the Supplies Expense account. On December 31, advertising materials of ₪290 are on hand.
4. Interest of ₪770 has accrued on notes payable.

Instructions

Prepare the following in general journal form.

- a. The adjusting entry for each item.
- b. The reversing entry for each item where appropriate.

***E3.21 (LO 8) (Worksheet)** Presented below are selected accounts for Acevedo Company as reported in the worksheet at the end of May 2022.

During February, no events occurred that affected these accounts. But at the end of February, the following information was available.

(a) Supplies on hand	€515
(b) Monthly depreciation	€257
(c) Accrued interest	€ 50

Instructions

Reproduce the data that would appear in the February worksheet and indicate the amounts that would be shown in the February income statement.

Problems

P3.1 (LO 2, 3, 4) (Transactions, Financial Statements—Service Company) Listed below are the transactions of Yasunari Kawabata, D.D.S., for the month of September (amounts in thousands).

Sept.	1	Kawabata begins practice as a dentist and invests ¥20,000 cash.
	2	Purchases equipment on account from Green Jacket Co. for ¥17,280.
	4	Pays rent for office space, ¥680 for the month.
	4	Employs a receptionist, Michael Bradley.
	5	Purchases dental supplies for cash, ¥942.
	8	Receives cash of ¥1,690 from patients for services performed.
	10	Pays miscellaneous office expenses, ¥430.
	14	Bills patients ¥5,820 for services performed.
	18	Pays Green Jacket Co. on account, ¥3,600.
	19	Withdraws ¥3,000 cash from the business for personal use.
	20	Receives ¥980 from patients on account.
	25	Bills patients ¥2,110 for services performed.
	30	Pays the following expenses in cash: office salaries ¥1,800; miscellaneous office expenses ¥85.
	30	Dental supplies used during September, ¥330.

Instructions

- Enter the transactions shown above in appropriate general ledger accounts (use T-accounts). Use the following ledger accounts: Cash; Accounts Receivable; Supplies; Equipment; Accumulated Depreciation—Equipment; Accounts Payable; Yasunari Kawabata, Capital; Service Revenue; Rent Expense; Office Expense; Salaries and Wages Expense; Supplies Expense; Depreciation Expense; and Income Summary. Allow 10 lines for the Cash and Income Summary accounts, and 5 lines for each of the other accounts needed. Record depreciation using a 5-year life on the equipment, the straight-line method, and no residual value. Do not use a drawing account.
- Prepare a trial balance.
- Prepare an income statement, a statement of owner's equity, and an unclassified statement of financial position.
- Close the ledger.

e. Prepare a post-closing trial balance.

P3.2 (LO 3, 4) (Adjusting Entries and Financial Statements) Mason Advertising Agency was founded in January 2018. The following are adjusted and unadjusted trial balances as of December 31, 2022.

Mason Advertising Agency Trial Balance December 31, 2022				
	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.

	<u>€117,100</u>	<u>€117,100</u>	<u>€127,050</u>	<u>€127,050</u>

Instructions

- a. Journalize the annual adjusting entries that were made. (Omit explanations.)
- b. Prepare an income statement and a retained earnings statement for the year ending December 31, 2022, and an unclassified statement of financial position at December 31.
- c. Answer the following questions.
 1. If the note has been outstanding 3 months, what is the annual interest rate on that note?
 2. If the company paid €12,500 in salaries in 2022, what was the balance in Salaries and Wages Payable on December 31, 2021?

P3.3 (LO 3) (Adjusting Entries) A review of the ledger of Baylor Company at December 31, 2022, produces the following data pertaining to the preparation of annual adjusting entries.

- Salaries and Wages Payable \$0. There are 8 employees. Salaries and wages are paid every Friday for the current week. Five employees receive \$700 each per week, and 3 employees earn \$600 each per week. December 31 is a Tuesday. Employees do not work weekends. All employees worked the last 2 days of December.
- Unearned Rent Revenue \$384,000. The company began subleasing office space in its new building on November 1. Each tenant is required to make a \$5,000 security deposit that is not refundable until occupancy is terminated. At December 31, the company had the following rental contracts that are paid in full for the entire term of the lease.

Date	Term (in months)	Monthly Rent	Number of Leases
Nov. 1	6	\$6,000	5
Dec. 1	6	\$8,500	4

- Prepaid Advertising \$13,200. This balance consists of payments on two advertising contracts. The contracts provide for monthly advertising in two trade magazines. The terms of the contracts are as shown below.

Contract	Date	Amount	Number of Magazine Issues
A650	May 1	\$6,000	12
B974	Oct. 1	\$7,200	24

The first advertisement runs in the month in which the contract is signed.

- Notes Payable \$60,000. This balance consists of a note for one year at an annual interest rate of 12%, dated June 1.

Instructions

Prepare the adjusting entries at December 31, 2022. (Show all computations.)

P3.4 (LO 2, 3, 4, 5) (Financial Statements, Adjusting and Closing Entries) The trial balance of Bellemy Fashion Center contained the following accounts at November 30, the end of the company's fiscal year.

Bellemy Fashion Center Trial Balance November 30, 2022		
	Debit	Credit
Cash	€ 28,700	
Accounts Receivable	33,700	
Inventory	45,000	
Supplies	5,500	
Equipment	133,000	
Accumulated Depreciation—Equipment		€ 24,000
Notes Payable		51,000
Accounts Payable		48,500
Share Capital—Ordinary		90,000
Retained Earnings		8,000

Sales Revenue		757,200
Sales Returns and Allowances	4,200	
Cost of Goods Sold	495,400	
Salaries and Wages Expense	140,000	
Advertising Expense	26,400	
Utilities Expense	14,000	
Maintenance and Repairs Expense	12,100	
Delivery Expense	16,700	
Rent Expense	24,000	
	<u>€978,700</u>	<u>€978,700</u>

Adjustment data:

- Supplies on hand totaled €1,500.
- Depreciation is €15,000 on the equipment.
- Interest of €11,000 is accrued on notes payable at November 30.

Other data:

- Salaries and wages expense is 70% selling and 30% administrative.
- Rent expense and utilities expense are 80% selling and 20% administrative.
- €30,000 of notes payable are due for payment next year.
- Maintenance and repairs expense is 100% administrative.

Instructions

- Journalize the adjusting entries.
- Prepare an adjusted trial balance.
- Prepare an income statement and retained earnings statement for the year and a classified statement of financial position as of November 30, 2022.
- Journalize the closing entries.
- Prepare a post-closing trial balance.

P3.5 (LO 3) (Adjusting Entries) The accounts listed below appeared in the December 31 trial balance of the Savard Theater.

	Debit	Credit
Equipment	€192,000	
Accumulated Depreciation—Equipment		€ 60,000
Notes Payable		90,000
Admissions Revenue		380,000
Advertising Expense	13,680	
Salaries and Wages Expense	57,600	
Interest Expense	1,400	

Instructions

- a. From the account balances listed above and the information given below, prepare the annual adjusting entries necessary on December 31. (Omit explanations.)
 1. The equipment has an estimated life of 16 years and a residual value of €24,000 at the end of that time. (Use straight-line method.)
 2. The note payable is a 90-day note given to the bank October 20 and bearing interest at 8%. (Use 360 days for denominator.)
 3. In December, ₪2,000 coupon admission books were sold at €30 each. They could be used for admission any time after January 1. The proceeds were recorded as Admissions Revenue.
 4. Advertising expense paid in advance and included in Advertising Expense €1,100.
 5. Salaries and wages accrued but unpaid €4,700.
- b. What amounts should be shown for each of the following on the income statement for the year?
 1. Interest expense.
 2. Admissions revenue.
 3. Advertising expense.
 4. Salaries and wages expense.

P3.6 (LO 3, 4) (Adjusting Entries and Financial Statements) The following are the trial balance and other information related to Yorkis Perez, a consulting engineer.

Yorkis Perez, Consulting Engineer Trial Balance December 31, 2022		
	Debit	Credit
Cash	R\$ 29,500	
Accounts Receivable	49,600	
Allowance for Doubtful Accounts		R\$ 750

Office Expense	720	
	<u>R\$149,210</u>	<u>R\$149,210</u>

1. Fees received in advance from clients R\$6,000.
2. Services performed for clients that were not recorded by December 31, R\$4,900.
3. Bad debt expense for the year is R\$1,430.
4. Insurance expired during the year R\$480.
5. Equipment is being depreciated at 10% per year.
6. Yorkis Perez gave the bank a 90-day, 10% note for R\$7,200 on December 1, 2022.
7. Rent of the building is R\$750 per month. The rent for 2022 has been paid, as has that for January 2023.
8. Salaries and wages earned but unpaid December 31, 2022, R\$2,510.

Instructions

- a. From the trial balance and other information given, prepare annual adjusting entries as of December 31, 2022. (Omit explanations.)
- b. Prepare an income statement for 2022, a statement of owner's equity, and a classified statement of financial position. Yorkis Perez withdrew R\$17,000 cash for personal use during the year.

P3.7 (LO 3, 4) (Adjusting Entries and Financial Statements) Sorenstam Advertising AG was founded in January 2018. The following are the adjusted and unadjusted trial balances as of December 31, 2022.

Sorenstam Advertising AG Trial Balance December 31, 2022				
	Unadjusted		Adjusted	
	Dr.	Cr.	Dr.	Cr.
Cash	€ 7,000		€ 7,000	
Accounts Receivable	19,000		20,000	
Supplies	8,500		3,500	
Prepaid Insurance	3,250		2,500	
Equipment	60,000		60,000	
Accumulated Depreciation—Equipment		€ 27,000		€ 35,750
Accounts Payable		5,000		5,000
Interest Payable				150
Notes Payable		5,000		5,000
Unearned Service Revenue		7,000		5,600
Salaries and Wages Payable				1,500
Share Capital—Ordinary		10,000		10,000
Retained Earnings		4,500		4,500
Service Revenue		58,600		61,000
Salaries and Wages Expense	10,000		11,500	
Insurance Expense			750	
Interest Expense	350		500	

Depreciation Expense			8,750	
Supplies Expense	5,000		10,000	
Rent Expense	4,000		4,000	
	<u>€117,100</u>	<u>€117,100</u>	<u>€128,500</u>	<u>€128,500</u>

Instructions

- Journalize the annual adjusting entries that were made. (Omit explanations.)
- Prepare an income statement and a retained earnings statement for the year ending December 31, 2022, and an unclassified statement of financial position at December 31, 2022.
- Answer the following questions.
 - If the useful life of equipment is 6 years, what is the expected residual value?
 - If the note has been outstanding 3 months, what is the annual interest rate on that note?
 - If the company paid €12,500 in salaries and wages in 2022, what was the balance in Salaries and Wages Payable on December 31, 2021?

P3.8 (LO 3, 4) (Adjusting and Closing) Presented below is the trial balance of the Ko Golf Club, as of December 31. The books are closed annually on December 31.

Ko Golf Club Trial Balance December 31		
	Debit	Credit
Cash	£ 15,000	
Accounts Receivable	13,000	
Allowance for Doubtful Accounts		£ 1,100
Prepaid Insurance	9,000	
Land	350,000	
Buildings	120,000	
Accumulated Depreciation—Buildings		38,400
Equipment	150,000	
Accumulated Depreciation—Equipment		70,000
Share Capital—Ordinary		400,000
Retained Earnings		82,000
Dues Revenue		200,000
Green Fees Revenue		5,900
Rent Revenue		17,600
Utilities Expense	54,000	
Salaries and Wages Expense	80,000	
Maintenance and Repairs Expense	24,000	
	<u>£815,000</u>	<u>£815,000</u>

Instructions

- a. Enter the balances in ledger accounts. Allow five lines for each account.
- b. From the trial balance and the information given below, prepare annual adjusting entries and post to the ledger accounts. (Omit explanations.)
 1. The buildings have an estimated life of 30 years with no residual value (straight-line method).
 2. The equipment is depreciated at 10% per year.
 3. Insurance expired during the year £3,500.
 4. The rent revenue represents the amount received for 11 months for dining facilities. The December rent has not yet been received.
 5. It is estimated that 12% of the accounts receivable will be uncollectible.
 6. Salaries and wages earned but not paid by December 31, £3,600.
 7. Dues received in advance from members £8,900.
- c. Prepare an adjusted trial balance.
- d. Prepare closing entries and post.

P3.9 (LO 3, 4) (Adjusting and Closing) The following is the December 31 trial balance of New York Boutique.

New York Boutique Trial Balance December 31		
	Debit	Credit
Cash	€ 18,500	
Accounts Receivable	32,000	
Allowance for Doubtful Accounts		€ 700
Inventory, December 31	80,000	
Prepaid Insurance	5,100	
Equipment	84,000	
Accumulated Depreciation—Equipment		35,000
Notes Payable		28,000
Share Capital—Ordinary		80,600
Retained Earnings		10,000
Sales Revenue		600,000
Cost of Goods Sold	408,000	
Salaries and Wages Expense	115,000	
Advertising Expense	6,700	
Office Expense	5,000	
	<u>€754,300</u>	<u>€754,300</u>

Instructions

- a. Construct T-accounts and enter the balances shown.

b. Prepare adjusting journal entries for the following and post to the T-accounts. (Omit explanations.) Open additional T-accounts as necessary. (The books are closed yearly on December 31.)

1. Bad debt expense is estimated to be €1,400.
2. Equipment is depreciated based on a 7-year life (no residual value).
3. Insurance expired during the year, €2,550.
4. Interest accrued on notes payable, €3,360.
5. Salaries and wages earned but not paid, €2,400.
6. Advertising paid in advance, €700.
7. Office supplies on hand, €1,500, charged to Office Expense when purchased.

c. Prepare closing entries and post to the accounts.

***P3.10 (LO 6) (Cash and Accrual Basis)** On January 1, 2022, Norma Smith and Grant Wood formed a computer sales and service company in Manchester, U.K., by investing £90,000 cash. The new company, Lakeland Sales and Service, has the following transactions during January.

1. Pays £6,000 in advance for 3 months' rent of office, showroom, and repair space.
2. Purchases 40 personal computers at a cost of £1,500 each, 6 graphics computers at a cost of £2,500 each, and 25 printers at a cost of £300 each, paying cash upon delivery.
3. Sales, repair, and office employees earn £12,600 in salaries and wages during January, of which £3,000 was still payable at the end of January.
4. Sells 30 personal computers at £2,550 each, 4 graphics computers for £3,600 each, and 15 printers for £500 each; £75,000 is received in cash in January, and £23,400 is sold on a deferred payment basis.
5. Other operating expenses of £8,400 are incurred and paid for during January; £2,000 of incurred expenses are payable at January 31.

Instructions

- a. Using the transaction data above, prepare for the month of January (1) a cash-basis income statement, and (2) an accrual-basis income statement.
- b. Using the transaction data above, prepare as of January 31, 2022, (1) a cash-basis statement of financial position and (2) an accrual-basis statement of financial position.
- c. Identify the items in the cash-basis financial statements that make cash-basis accounting inconsistent with the theory underlying the elements of financial statements.

***P3.11 (LO 3, 4, 8) (Worksheet, Statement of Financial Position, Adjusting and Closing Entries)** Cooke NV has a fiscal year ending on September 30. Selected data from the September 30 worksheet are presented below.

Cooke NV

30	Depreciation Expense			5,800	
31	Property Taxes Payable				3,000
32	Totals			<u>506,500</u>	<u>506,500</u>

Instructions

- Prepare a complete worksheet.
- Prepare a classified statement of financial position. (*Note:* €10,000 of the mortgage payable is due for payment in the next fiscal year.)
- Journalize the adjusting entries using the worksheet as a basis.
- Journalize the closing entries using the worksheet as a basis.
- Prepare a post-closing trial balance.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

- a. What were M&S's total assets at March 30, 2019? At March 31, 2018?
- b. How much cash (and cash equivalents) did M&S have on March 30, 2019?
- c. What were M&S's selling and administrative expenses in 2019? In 2018?
- d. What were M&S's revenues in 2019? In 2018?
- e. Using M&S's financial statements and related notes, identify items that may result in adjusting entries for prepayments and accruals.
- f. What were the amounts of M&S's depreciation, amortisation, and underlying write-offs in 2018 and 2019?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. Which company had the greater percentage increase in total assets from 2017 to 2018?
- b. Did either company report the effect of a discontinued operation in its income statement? If so, briefly describe how the reporting of a discontinued operation can affect comparisons between the companies.

Financial Statement Analysis Case

Much information about specific companies is available on the Internet. Such information includes basic descriptions of the company's location, activities, industry, financial health, and financial performance.

Instructions

Go to the **Yahoo! Finance** website. Type in a company name and then answer the following questions.

- a. What is the company's industry?
- b. What was the company's total sales?
- c. What was the company's net income?
- d. What are the names of four of the company's competitors?
- e. Choose one of these competitors.
- f. What is this competitor's name? What were its sales? What was its net income?
- g. Which of these two companies is larger by size of sales? Which one reported higher net income?

Accounting, Analysis, and Principles

The Amato Theater is nearing the end of the year and is preparing for a meeting with its bankers to discuss the renewal of a loan. The following accounts appeared in the December 31, 2022, trial balance.

	Debit	Credit
Prepaid Advertising	£ 6,000	
Equipment	192,000	
Accumulated Depreciation—Equipment		£ 60,000
Notes Payable		90,000
Unearned Service Revenue		17,500
Service Revenue		360,000
Advertising Expense	18,680	
Salaries and Wages Expense	67,600	
Interest Expense	1,400	

Additional information is available as follows.

1. The equipment has an estimated useful life of 16 years and a residual value of £40,000 at the end of that time. Amato uses the straight-line method for depreciation.
2. The note payable is a 1-year note given to the bank January 31 and bearing interest at 10%. Interest is calculated on a monthly basis.
3. The theater sold 350 coupon ticket books at £50 each. Two hundred ticket books were used in 2022. One hundred fifty of these ticket books can be used only for admission any time after January 1, 2023. The cash received was recorded as Unearned Service Revenue.
4. Advertising paid in advance was £6,000 and was debited to Prepaid Advertising. The company has used £2,500 of the advertising as of December 31, 2022.
5. Salaries and wages accrued but unpaid at December 31, 2022, were £3,500.

Accounting

Prepare any adjusting journal entries necessary for the year ended December 31, 2022.

Analysis

Determine Amato's income before and after recording the adjusting entries. Use your analysis to explain why Amato's bankers should be willing to wait for Amato to complete its year-end adjustment process before making a decision on the loan renewal.

Principles

Although Amato's bankers are willing to wait for the adjustment process to be completed before they receive financial information, they would like to receive financial reports more frequently than annually or even quarterly. What trade-offs, in terms of relevance and faithful representation, are inherent in preparing financial statements for shorter accounting time periods?

Bridge to the Profession

Research Case

Recording transactions in the accounting system requires knowledge of the important characteristics of the elements of financial statements, such as assets and liabilities. In addition, accountants must understand the inherent uncertainty in accounting measures and distinctions between related accounting concepts that are important in evaluating the effects of transactions on the financial statements.

Instructions

Access the Conceptual Framework at the IFRS website (you may register for free IFRS access at this site). When you have accessed the document, you can use the search tool in your Internet browser to respond to the following items. (Provide paragraph citations.)

- a. Provide the definition of an asset and discuss how the economic benefits embodied in an asset might flow to a company.
- b. Provide the definition of a liability and discuss how a company might satisfy a liability.
- c. What is “accrual basis”? How do adjusting entries illustrate application of the accrual basis?

Global Accounting Insights

LEARNING OBJECTIVE 9

Compare the accounting information systems under IFRS and U.S. GAAP.

As indicated in this chapter, companies must have an effective accounting system. In the wake of accounting scandals at such U.S. companies as **Sunbeam**, **Rite-Aid**, **Xerox**, and **WorldCom**, U.S. lawmakers demanded higher assurance on the quality of accounting reports. Since the passage of the Sarbanes-Oxley Act (SOX), companies that trade on U.S. exchanges are required to place renewed focus on their accounting systems to ensure accurate reporting.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to accounting information systems.

Similarities

- International companies use the same set of procedures and records to keep track of transaction data. Thus, the material in Chapter 3 dealing with the account, general rules of debit and credit, and steps in the recording process—the journal, ledger, and chart of accounts—is the same under both U.S. GAAP and IFRS.
- Transaction analysis is the same under U.S. GAAP and IFRS but, as you will see in later chapters, different standards sometimes impact how transactions are recorded.
- Both the FASB and IASB go beyond the basic definitions provided in this textbook for the key elements of financial statements, that is, assets, liabilities, equity, revenues, and expenses.
- A trial balance under U.S. GAAP follows the same format as shown in the textbook. As shown in the textbook, currency signs are typically used only in the trial balance and the financial statements. The same practice is followed under U.S. GAAP.

Differences

- Rules for accounting for specific events sometimes differ across countries. For example, European companies rely less on historical cost and more on fair value than U.S. companies.

Despite the differences, the double-entry accounting system is the basis of accounting systems worldwide.

- Internal controls are a system of checks and balances designed to prevent and detect fraud and errors. While most public U.S. companies have these systems in place, many non-U.S. companies have never completely documented them nor had an independent auditor attest to their effectiveness. Both of these actions are required under SOX. Enhanced internal control standards apply only to large public companies listed on U.S. exchanges.

About the Numbers

As discussed, IFRS has been adopted in some form by over 120 countries around the world. One of the most important world markets (U.S.) is not yet on board. Whether to adopt IFRS in the United States has been debated over the past several years. In deciding whether the United States should adopt IFRS, some of the issues the U.S. Securities and Exchange Commission (SEC) said should be considered are:

- Whether IFRS is sufficiently developed and consistent in application.
- Whether the IASB is sufficiently independent.
- Whether IFRS is established for the benefit of investors.
- The issues involved in educating investors about IFRS.
- The impact of a switch to IFRS on U.S. laws and regulations.
- The impact on companies, including changes to their accounting systems, contractual arrangements, company governance, and litigation.
- The issues involved in educating accountants, so they can prepare statements under IFRS.

To evaluate these issues, the U.S. SEC asked its staff to study IFRS adoption and identify possible consequences for adoption in the United States. The U.S. SEC Staff Report on IFRS Work Plan (available at the SEC website) reported the following key findings:

- There is uneven application of IFRS around the world, which results in comparability concerns.
- There is uneven auditing and enforcement of IFRS around the world.
- Funding and independence of the IASB as the international standard-setter continues to be a challenge.
- Cost of adopting IFRS for regulation (IRS, banking, and insurance regulators) will be significant.
- There is uncertainty whether investors and others who use financial statements are ready to use IFRS statements.

Based on these findings, it appears that required adoption of IFRS in the United States is off the table. Furthermore, the U.S. SEC Chief Accountant has rejected optional adoption of IFRS but has floated the idea of optional IFRS proforma disclosures. The U.S. SEC staff has sketched out a path from convergence to a collaboration model. That is, the U.S. SEC has encouraged the IASB and FASB to work to converge to high-quality standards in other areas (now that major projects have been completed). Under this collaboration model, the FASB and other national standard-setters are collaborating to find a multilateral approach to providing input to the IASB (Accounting Standards Advisory Forum (ASAF), and other forums)—still with the goal of limiting differences in IFRS and U.S. GAAP.

On the Horizon

High-quality international accounting requires both high-quality accounting standards and high-quality auditing. Similar to the convergence of U.S. GAAP and IFRS, there is a movement to improve international auditing standards. The International Auditing and Assurance Standards Board (IAASB) functions as an independent standard-setting body. It works to establish high-quality auditing and assurance and quality-control standards throughout the world. Whether the IAASB adopts internal control provisions similar to those in SOX remains to be seen. You can follow developments in the international audit arena at the International Federation of Accountants website.

GAAP Self-Test Questions

1. Which statement is **correct** regarding U.S. GAAP?
 - a. U.S. GAAP reverses the rules of debits and credits, that is, debits are on the right and credits are on the left.
 - b. U.S. GAAP uses the same process for recording transactions as IFRS.
 - c. The chart of accounts under U.S. GAAP is different because revenues follow assets.
 - d. None of the above statements are correct.
2. The expanded accounting equation under U.S. GAAP is as follows:
 - a. $\text{Assets} = \text{Liabilities} + \text{Common Stock} - \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - b. $\text{Assets} + \text{Liabilities} = \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - c. $\text{Assets} = \text{Liabilities} + \text{Common Stock} + \text{Retained Earnings} - \text{Dividends} + \text{Revenues} - \text{Expenses}$.
 - d. $\text{Assets} = \text{Liabilities} + \text{Common Stock} - \text{Retained Earnings} - \text{Dividends} - \text{Revenues} - \text{Expenses}$.
3. A trial balance:
 - a. is the same under U.S. GAAP and IFRS.
 - b. proves that transactions are recorded correctly.
 - c. proves that all transactions have been recorded.
 - d. will not balance if a correct journal entry is posted twice.
4. One difference between U.S. GAAP and IFRS is that:
 - a. IFRS uses accrual-accounting concepts, and U.S. GAAP uses primarily the cash basis of accounting.
 - b. U.S. GAAP uses a different posting process than IFRS.
 - c. IFRS uses more fair value measurements than U.S. GAAP.
 - d. the limitations of a trial balance are different between U.S. GAAP and IFRS.
5. The general policy for using proper currency signs (dollar, yen, pound, etc.) is the same for both U.S. GAAP and this textbook. This policy is as follows:

- a. Currency signs only appear in ledgers and journal entries.
- b. Currency signs are only shown in the trial balance.
- c. Currency signs are shown for all compound journal entries.
- d. Currency signs are shown in trial balances and financial statements.

GAAP Concepts and Application

GAAP3.1 Are all international companies subject to the same internal control standards? Explain.

GAAP3.2 What are some of the consequences of international differences in internal control standards?

GAAP3.3 Briefly describe the key elements of international auditing convergence.

Answers to GAAP Self-Test Questions

1. b 2. c 3. a 4. c 5. d

Note

1 Companies in the following situations might use a cash or modified cash basis.

(1) A company that is primarily interested in cash flows (for example, a group of physicians that distributes cash-basis earnings for salaries and bonuses).

(2) A company that has a limited number of financial statement users (small, closely held company with little or no debt).

(3) A company that has operations that are relatively straightforward (small amounts of inventory, long-term assets, or long-term debt).

CHAPTER 4

Income Statement and Related Information

LEARNING OBJECTIVES

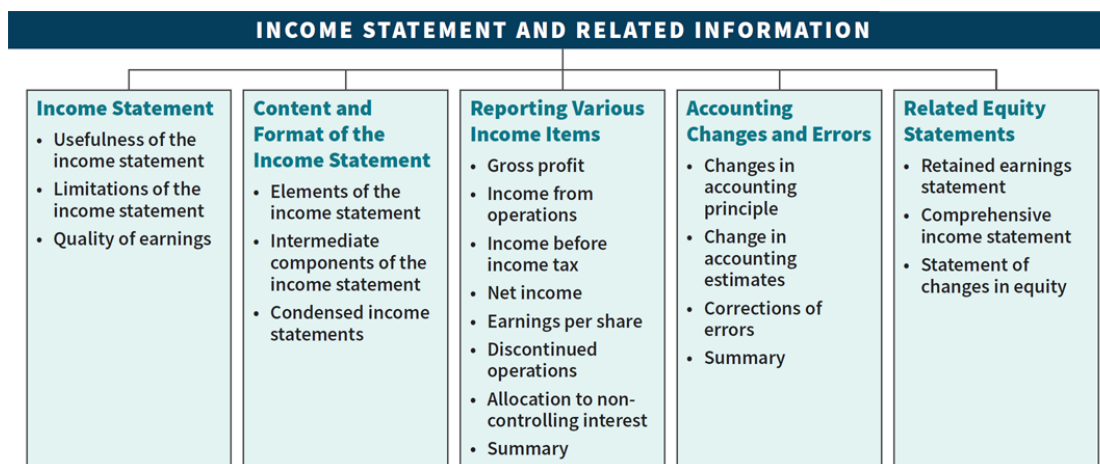

After studying this chapter, you should be able to:

1. Identify the uses and limitations of an income statement.
2. Describe the content and format of the income statement.
3. Discuss how to report various income items.
4. Explain the reporting of accounting changes and errors.
5. Describe related equity statements.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 4

As the following opening story indicates, companies are attempting to provide income statement information they believe is useful for decision-making. Investors need complete and comparable information on income and its components to assess company profitability correctly. In this chapter, we examine the many different types of revenues, expenses, gains, and losses that affect the income statement and related information, as follows.

Financial Statements Are Changing

RPC Group plc (GBR) reported the following additional information in its most recent annual report (in £ millions).

Operating profit based on GAAP	£355.7
--------------------------------	--------

Acquisition costs	3.9
Impairment losses	23.8
Restructuring costs	11.2
Net post-acquisition consideration and remuneration	(11.5)
Amortization of purchased intangible assets	50.7
Insurance proceeds and other	(8.8)
Adjusted operation profit	£425.0

The company indicated that it presents the adjusted operating profit, which is called an alternative performance measure, because it believes that this additional information, which is beyond the scope of IFRS-mandated data to be reported, helps users to better understand the company. For example, RPC Group management uses this measure in analyzing performance, allocating resources, budgeting, and paying employee incentives. It further notes that this measure, although defined by IFRS, may not be directly comparable with other companies' profit measures. Finally, the company states that it is not intended to be a substitute for, or superior to, IFRS measurements of profit.

Why do companies make these additional adjustments? One major reason is that companies believe the items on the income statement are not representative of operating results. Here is another example using **Marks and Spencer plc (M&S)** (GBR). At one time, M&S reported in a separate schedule adjustments to net income for items such as strategic programme costs, restructuring costs, and impairment charges. All these adjustments made the adjusted income measure higher than reported income.

Skeptics of these practices note that these adjustments generally lead to higher adjusted net income. In addition, they note that it is difficult to compare these adjusted or pro forma numbers because one company may have a different view of what it believes to be fundamental to the business. In many ways, the pro forma reporting practices by companies such as RPC and M&S represent implied criticisms of certain financial reporting standards, including how the information is presented on the income statement.

The IASB has initiated a project on financial statement presentation to address users' concerns about these practices. Users believe there are too many alternatives for classifying and reporting income statement information. For example, some companies disaggregate product costs (such as materials and labor), as well as general and administrative costs (such as rent and utilities) in their income statements. Other companies simply report product costs and general and administrative costs in the aggregate, which makes it difficult to understand the nature of these costs (recurring or non-recurring, fixed or variable). The result is that two different companies can comply with existing standards for income statement presentation but vary considerably in the detail provided.

What is needed is a common set of principles to be followed when income statement information is presented. The IASB's continuing work on financial statement presentation is progressing, with an exposure draft expected soon. See the IFRS website for more information on the status of the project. It is hoped that this project on financial statement presentation will provide those necessary principles.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Income Statement

LEARNING OBJECTIVE 1

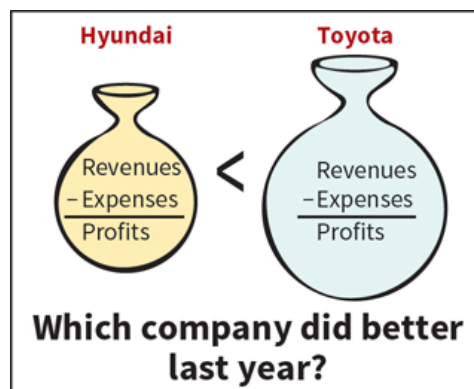

Identify the uses and limitations of an income statement.

The **income statement** is the report that measures the success of company operations for a given period of time. (It is also often called the statement of income or statement of earnings.¹) The business and investment community uses the income statement to determine profitability, investment value, and creditworthiness. It provides investors and creditors with information that helps to predict the **amounts, timing, and uncertainty of future cash flows**.

Usefulness of the Income Statement

The income statement helps users of financial statements predict future cash flows in a number of ways. For example, investors and creditors use the income statement information to:

1. **Evaluate the past performance of the company.** Examining revenues and expenses indicates how the company performed and allows comparison to its competitors. For example, analysts use the income data provided by **Hyundai** (KOR) to compare its performance to that of **Toyota** (JPN).

2. **Provide a basis for predicting future performance.** Information about past performance helps to determine important trends which, if they continue, provide information about future performance. For example, **General Electric (GE)** (USA) at one time reported consistent increases in revenues. Obviously, past success does not necessarily translate into future success. However, analysts can better predict future

revenues, earnings, and cash flows if a reasonable correlation exists between past and future performance.

3. **Help assess the risk or uncertainty of achieving future cash flows.** Information on the various components of income—revenues, expenses, gains, and losses—highlights the relationships among them. It also helps to assess the risk of not achieving a particular level of cash flows in the future. For example, investors and creditors often segregate **Siemens AG**'s (DEU) operating performance from discontinued operations because Siemens primarily generates revenues and cash through its operations. Thus, results from continuing operations have greater significance for predicting future performance than do results from discontinued operations.

Siemens	<u>Recurring?</u>
Income for Year Ended 12/31/22	
Revenues	
– Operating expenses	
Operating income	Yes
± Unusual items	No
\$ Net Income	?

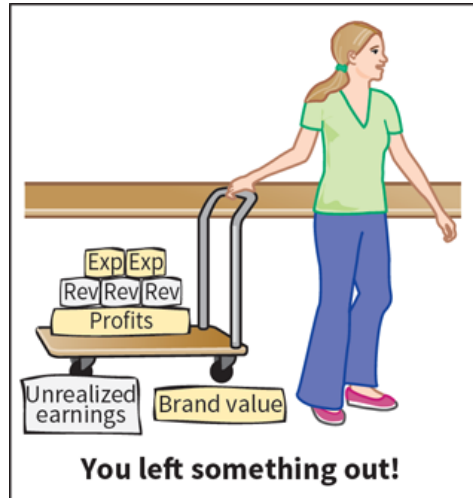

Recurring items are more certain in the future.

In summary, information in the income statement—revenues, expenses, gains, and losses—helps users evaluate past performance. It also provides insights into the likelihood of achieving a particular level of cash flows in the future.

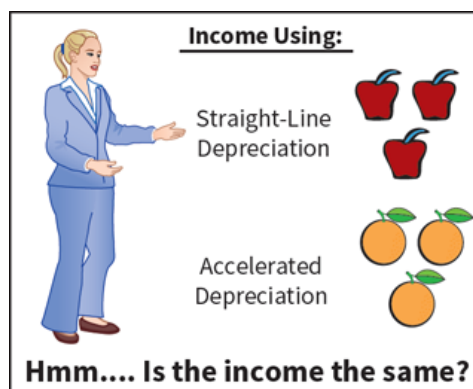

Limitations of the Income Statement

Because net income is an estimate and reflects a number of assumptions, income statement users need to be aware of certain limitations associated with its information. Some of these limitations include:

1. **Companies omit items from the income statement that they cannot measure reliably.** Current practice prohibits recognition of certain items from the determination of income even though the effects of these items can arguably affect the company's performance. For example, a company may not record in income unrealized gains and losses on certain investment securities when there is uncertainty that it will ever realize the changes in value. In addition, an increasing number of companies, such as **L'Oréal** (FRA) and **Daimler AG** (DEU), experience increases in value due to brand recognition, customer service, and product quality. A common framework for identifying and reporting these types of values is still lacking.

2. **Income numbers are affected by the accounting methods employed.** One company may depreciate its plant assets on an accelerated basis; another chooses straight-line depreciation. Assuming all other factors are equal, the first company will report lower income. In effect, we are comparing apples to oranges.

3. **Income measurement involves judgment.** For example, one company in good faith may estimate the useful life of an asset to be 20 years while another company uses a 15-year estimate for the same type of asset. Similarly, some companies may make optimistic estimates of future warranty costs and bad debt expenses, which result in lower expense and higher income.

In summary, several limitations of the income statement reduce the usefulness of its information for predicting the amounts, timing, and uncertainty of future cash flows.

Quality of Earnings

Our discussion so far has highlighted the importance of information in the income statement for investment and credit decisions, including the evaluation of the company and its managers.² Companies try to meet or beat market expectations so that the market price of their shares and the value of management's compensation increase. As a result, companies have incentives to manage income to meet earnings targets or to make earnings look less risky.

Regulators have expressed concern that the motivations to meet earnings targets may override good business practices. This erodes the quality of earnings and the quality of financial reporting. As a former regulator noted, "Managing may be giving way to manipulation; integrity may be losing out to illusion."³

What is **earnings management**? It is often defined as the planned timing of revenues, expenses, gains, and losses to smooth out bumps in earnings. In most cases, companies use earnings management to increase income in the current year at the expense of income in future years. For example, they prematurely recognize sales in order to boost earnings. As one commentator noted, "... it's like popping a cork in [opening] a bottle of wine before it is ready."

Companies also use earnings management to decrease current earnings in order to increase income in the future. The classic case is the use of "cookie jar" reserves. Companies establish these reserves by using unrealistic assumptions to estimate liabilities for such items as environmental liabilities, restructuring charges, and warranty returns. The companies then reduce these reserves to increase reported income in the future.

Such earnings management negatively affects the **quality of earnings** if it distorts the information in a way that is less useful for predicting future earnings and cash flows. Markets rely on trust. The bond between shareholders and the company must remain strong. Investors or others losing faith in the numbers reported in the financial statements will damage capital markets.

What Do the Numbers Mean?

Four: The Loneliest Number

Managing earnings up or down adversely affects the quality of earnings. Why do companies engage in such practices? Research concludes that many companies tweak quarterly earnings to meet investor expectations. How do they do it? Research findings indicate that companies tend to nudge their earnings numbers up by a 10th of a cent or two. That lets them round results up to the highest cent, as illustrated in the following chart.

What the research shows is that the number “4” appeared less often in the 10th’s place than any other digit and significantly less often than would be expected by chance. This effect is called “quadrophobia.” For the typical company in the study, an increase of \$31,000 in quarterly net income would boost earnings per share by a 10th of a cent. A more recent analysis of quarterly results for more than 2,600 companies found that rounding up remains more common than rounding down.

Another recent study reinforces the concerns about earnings management. Based on a survey of 169 public-company chief financial officers (and with in-depth interviews of 12), the study concludes that high-quality earnings are sustainable when backed by actual cash flows and when they avoid “unreliable long-term estimates.” However, about 20 percent of firms manage earnings to misrepresent their economic performance. And when they do manage earnings, it could move EPS by an average of 10 percent.

Is such earnings management a problem for investors? It is if they cannot determine the impact on earnings quality. Indeed, the surveyed CFOs “believe that it is difficult for outside observers to unravel earnings management, especially when such earnings are managed using subtle unobservable choices or real actions.” What’s an investor to do? The survey authors say the CFOs “advocate paying close attention to the key managers

running the firm, the lack of correlation between earnings and cash flows, significant deviations between firm and peer experience, and unusual behavior in accruals.”

The study referred to is by I. Dichev, J. Graham, C. Harvey, and S. Rajgopal, “Earnings Quality: Evidence from the Field,” *Journal of Accounting and Economics* (2013), pp. 1–33.

Content and Format of the Income Statement

LEARNING OBJECTIVE 2

Describe the content and format of the income statement.

Elements of the Income Statement

Net income results from revenue, expense, gain, and loss transactions. The income statement summarizes these transactions. This method of income measurement, the **transaction approach**, focuses on the income-related activities that have occurred during the period.⁴ The statement can further classify income by customer, product line, or function; by operating and non-operating; and by continuing and discontinued. The two major elements of the income statement are as follows.

Elements of Financial Statements

Income. Income is increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims.

Expenses. Expenses are decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to holders of equity claims. [1] (See the [Authoritative Literature References](#) Section near the end of the chapter.)

The definition of income includes both revenues and gains. Revenues arise from the ordinary activities of a company and take many forms, such as sales, fees, interest, dividends, and rents. Gains represent other items that meet the definition of income and may or may not arise in the ordinary activities of a company. Gains include, for example, gains on the sale of long-term assets or unrealized gains on trading securities.

The definition of expenses includes both expenses and losses. Expenses generally arise from the ordinary activities of a company and take many forms, such as cost of goods sold, depreciation, rent, salaries and wages, and taxes. Losses represent other items that meet the definition of expenses and may or may not arise in the ordinary activities of a company. Losses include losses on restructuring charges, losses related to sale of long-term assets, or unrealized losses on trading securities.⁵

When gains and losses are reported on an income statement, they are generally separately disclosed because knowledge of them is useful for assessing future cash flows. For example,

when **Goody's Burger House** (GRC) sells a hamburger, it records the selling price as revenue. However, when Goody's Burger House sells land, it records any excess of the selling price over the book value as a gain. This difference in treatment results because the sale of the hamburger is part of Goody's Burger House's regular operations. The sale of land is not.

We cannot overemphasize the importance of reporting these elements. Most decision-makers find the *parts* of a financial statement to be more useful than the whole. As we indicated earlier, investors and creditors are interested in predicting the amounts, timing, and uncertainty of future income and cash flows. Having income statement elements shown in some detail and in comparison with prior years' data allows decision-makers to better assess future income and cash flows.⁶

Intermediate Components of the Income Statement

Companies generally present some or all of the following sections and totals within the income statement, as shown in [Illustration 4.1](#). [2]

1.	Sales or Revenue Section. Presents sales, discounts, allowances, returns, and other related information. Its purpose is to arrive at the net amount of sales revenue.
2.	Cost of Goods Sold Section. Shows the cost of goods sold to produce the sales.
	Gross Profit. Revenue less cost of goods sold.
3.	Selling Expenses. Reports expenses resulting from the company's efforts to make sales.
4.	Administrative or General Expenses. Reports expenses of general administration.
5.	Other Income and Expense. Includes most other transactions that do not fit into the revenues and expenses categories provided above. Items such as gains and losses on sales of long-lived assets, impairments of assets, and restructuring charges are reported in this section. In addition, revenues such as rent revenue, dividend revenue, and interest revenue are often reported.
	Income from Operations. Company's results from normal operations.
6.	Financing Costs. A separate item that identifies the financing cost of the company, hereafter referred to as <i>interest</i> expense.
	Income before Income Tax. The total income before income tax.
7.	Income Tax. A short section reporting taxes levied on income before income tax.
	Income from Continuing Operations. A company's results before any gain or loss on discontinued operations. If the company does not have any gain or loss on discontinued operations, this section is not reported and this amount is reported as net income.
8.	Discontinued Operations. Gains or losses resulting from the disposition of a component of a company.
	Net Income. The net results of the company's performance over a period of time.
9.	Non-Controlling Interest. Presents an allocation of net income to the controlling shareholders and to the non-controlling interest.
10.	Earnings per Share. Per share amounts that are reported.

ILLUSTRATION 4.1 Income Statement Format

Illustration 4.2 presents an income statement for Boc Hong Company. Boc Hong's income statement includes all of the major items in the list above, except for discontinued operations. In arriving at net income, the statement presents the following subtotals and totals: gross profit, income from operations, income before income tax, and net income.

Boc Hong Company
Income Statement
For the Year Ended December 31, 2022

Sales			
Sales revenue			\$3,053,081
Less: Sales discounts		\$ 24,241	
Sales returns and allowances		56,427	80,668
Net sales			2,972,413
Cost of goods sold			1,982,541
Gross profit			989,872
Selling expenses			
Sales salaries and commissions	\$202,644		
Sales office salaries	59,200		
Travel and entertainment	48,940		
Advertising expense	38,315		
Delivery expense	41,209		
Shipping supplies and expense	24,712		
Postage and stationery	16,788		
Telephone and Internet expense	12,215		
Depreciation of sales equipment	9,005	453,028	
Administrative expenses			
Officers' salaries	186,000		
Office salaries	61,200		
Legal and professional services	23,721		
Utilities expense	23,275		
Insurance expense	17,029		
Depreciation of building	18,059		
Depreciation of office equipment	16,000		
Stationery, supplies, and postage	2,875		
Miscellaneous office expenses	2,612	350,771	803,799
Other income and expense			
Dividend revenue		98,500	
Rent revenue		42,910	
Gain on sale of plant assets		30,000	171,410
Income from operations			357,483
Interest on bonds and notes			126,060
Income before income tax			231,423
Income tax			66,934

Net income for the year			\$ 164,489
Attributable to:			
Shareholders of Boc Hong			\$ 120,000
Non-controlling interest			44,489
Earnings per share			<u>\$1.74</u>

ILLUSTRATION 4.2 Income Statement

Condensed Income Statements

In some cases, an income statement cannot possibly present all the desired expense detail. To solve this problem, a company includes only the totals of components in the statement of income. It then also prepares supplementary schedules to support the totals. This format may reduce the income statement itself to a few lines on a single sheet. For this reason, readers who wish to study all the reported data on operations must give their attention to the supporting schedules.

For example, consider the income statement shown in [Illustration 4.3](#) for Boc Hong Company. This statement is a condensed version of the more detailed income statement presented in [Illustration 4.2](#). It is more representative of the type found in practice.

[Illustration 4.4](#) shows an example of a supporting schedule, cross-referenced as Note D and detailing the selling expenses.

Boc Hong Company Income Statement For the Year Ended December 31, 2022		
Net sales		\$2,972,413
Cost of goods sold		<u>1,982,541</u>
Gross profit		989,872
Selling expenses (see Note D)	\$453,028	
Administrative expenses	<u>350,771</u>	803,799
Other income and expense		<u>171,410</u>
Income from operations		357,483
Interest expense		<u>126,060</u>
Income before income tax		231,423
Income tax		<u>66,934</u>
Net income for the year		<u>\$ 164,489</u>

Telephone and Internet expense	12,215
Depreciation of sales equipment	9,005
Total selling expenses	<u>\$453,028</u>

ILLUSTRATION 4.4 Sample Supporting Schedule

How much detail should a company include in the income statement? On the one hand, a company wants to present a simple, summarized statement so that readers can readily discover important factors. On the other hand, it wants to disclose the results of all activities and to provide more than just a skeleton report. As a result, the income statement always includes certain basic elements, but companies can present them in various formats.

What Do the Numbers Mean?

You May Need a Map

Many companies (like **RPC Group** in the opening story) promote their performance through the reporting of various “alternative” performance measures. The basic approach is to adjust a number such as operating income by adding back both non-recurring expenses and losses, and also expenses that are recurring but are not viewed by management as useful in understanding the performance of the business. This commonly results in a performance measure that is substantially better than the traditional IFRS-based measures. This difference led one accounting regulator to quip that these alternative measures should be called EBS—“Everything but Bad Stuff.” According to the IASB, “there has been an increasing trend for companies to emphasise ‘adjusted’ earnings—known as non-IFRS earnings—which can paint a misleading picture of their true financial situations.” Indeed, U.S. public companies are required to reconcile non-U.S. GAAP financial measures to U.S. GAAP, thereby giving investors a roadmap to analyze the adjustments companies make to their U.S. GAAP numbers to arrive at pro forma results.

Recently, **WeWork** (USA) came under intense scrutiny as it prepared for its initial public offering. The shared work space provider has for a number of years reported significant losses using U.S. GAAP measures. But its own alternative performance measure, called “community adjusted EBITDA,” has shown a different outcome. For example in a recent year when the company reported a \$931 million operating loss, it also reported that community adjusted EBITDA for the same period showed a profit of \$231 million. Quite a difference!

In order to assist users of financial statements, companies that include these alternative performance measures have begun to publish notes and even full guides to explain the measures and how they are computed. For example, **Vodafone Group plc** (GBR) included a significant number of pages in its most recent annual report to provide an explanation for its alternative performance measures reported. Similarly, **Nestlé** (CHE) now publishes annually a separate alternative performance measures guide to explain the 14 different alternative performance measures the company uses.

Finding the right balance between allowing a company to tell its own story, including both IFRS-based performance measures and alternative measures that the company has created, has drawn significant attention from regulators around the world. The U.S. Securities and Exchange Commission (SEC) only allows companies to, in essence, report the alternative measures less prominently than the U.S. GAAP measures. Furthermore, the alternative measures must be reconciled to U.S. GAAP measures. The U.K. Financial Reporting Council has also examined alternative performance measures reported by companies under its authority. It reported 10 different concerns, including that many alternative performance measures were given greater prominence in the financial reports and that many lacked explanation about why items had been excluded from adjusted profit measures.

Reporting Various Income Items

LEARNING OBJECTIVE 3

Discuss how to report various income items.

Gross Profit

Boc Hong Company’s gross profit is computed by deducting cost of goods sold from net sales. The disclosure of net sales is useful because Boc Hong reports regular sales revenue as a separate item. It discloses unusual or incidental revenues in other income and expense. As a result, analysts can more easily understand and assess trends in revenue from continuing operations.

Similarly, the reporting of gross profit provides a useful number for evaluating performance and predicting future earnings. Statement readers may study the trend in gross profits to understand how competitive pressure affected profit margins.

Income from Operations

Boc Hong Company determines income from operations by deducting selling and administrative expense as well as other income and expense from gross profit. Income from operations highlights items that affect regular business activities. As such, it is a metric often used by analysts in helping to predict the amount, timing, and uncertainty of future cash flows.

Expense Classification

Companies are required to present an analysis of expenses classified either by their nature (such as cost of materials used, direct labor incurred, delivery expense, advertising expense, employee benefits, depreciation expense, and amortization expense) or their function (such as cost of goods sold, selling expenses, and administrative expenses).

An advantage of the **nature-of-expense method** is that it is simple to apply because allocations of expense to different functions are not necessary. For manufacturing companies that must allocate costs to the product produced, using a nature-of-expense approach permits companies to report expenses without making arbitrary allocations.

The **function-of-expense method**, however, is often viewed as more relevant because this method identifies the major cost drivers of the company and therefore helps users assess whether these amounts are appropriate for the revenue generated. As indicated, a disadvantage of this method is that the allocation of costs to the varying functions may be arbitrary and therefore the expense classification becomes misleading.

To illustrate these two methods, assume that the accounting firm of Telaris Group performs audit, tax, and consulting services. It has the following revenues and expenses.

Service revenues	€400,000
------------------	----------

Cost of services	
Staff salaries (related to various services performed)	145,000
Supplies expense (related to various services performed)	10,000
Selling expenses	
Advertising costs	20,000
Entertainment expense	3,000
Administrative expenses	
Utilities expense	5,000
Depreciation on building	12,000

If Telaris Group uses the nature-of-expense approach, its income statement presents each expense item but does not classify the expenses into various subtotals. This approach is shown in [Illustration 4.5](#).

Telaris Group Income Statement For the Month of January 2022	
Service revenues	€400,000
Staff salaries	145,000
Supplies expense	10,000
Advertising costs	20,000
Utilities expense	5,000
Depreciation on building	12,000
Entertainment expense	3,000
Net income	<u>€205,000</u>

ILLUSTRATION 4.5 Nature-of-Expense Approach

If Telaris uses the function-of-expense approach, its income statement is presented as shown in [Illustration 4.6](#).

Telaris Group Income Statement For the Month of January 2022	
Service revenues	€400,000
Cost of services	155,000
Selling expenses	23,000
Administrative expenses	17,000
Net income	<u>€205,000</u>

ILLUSTRATION 4.6 Function-of-Expense Approach

The function-of-expense method is generally used in practice, although many companies believe both approaches have merit. These companies use the function-of-expense approach

on the income statement but provide detail of the expenses (as in the nature-of-expense approach) in the notes to the financial statements. For example, Boc Hong's condensed income statement, shown in [Illustrations 4.3](#) and [4.4](#), indicates how this information might be reported.⁷ For homework purposes, use the function-of-expense approach shown in the Boc Hong example in [Illustration 4.3](#), unless directed otherwise.

Gains and Losses

What should be included in net income is controversial. For example, should companies report gains and losses, and corrections of revenues and expenses of prior years, as part of retained earnings? Or, should companies first present them in the income statement and then carry them to retained earnings?

This issue is extremely important because the number and magnitude of these items are substantial. For example, [Illustration 4.7](#) identifies the most common types and number of gains and losses reported in a survey of 500 large companies. Notice that more than 40 percent of the surveyed firms reported restructuring charges, which often contain write-offs and other one-time items. A survey of 200 IFRS adopters indicates that about 27 percent of the surveyed firms reported a discontinued operation charge.⁸

ILLUSTRATION 4.7 Number of Unusual Items Reported in a Recent Year by 500 Large Companies

As our opening story discusses, we need consistent and comparable income reporting practices to avoid “promotional” information reported by companies. Developing a framework for reporting these gains and losses is important to ensure reliable income information.⁹ Some users argue that the most useful income measure reflects only regular and recurring revenue and expense elements. Unusual, non-recurring items do not reflect a company's future earning power.

In contrast, others warn that a focus on income that excludes these items potentially misses important information about a company's performance. Any gain or loss experienced by the company, whether directly or indirectly related to operations, contributes to its long-run profitability. As one analyst notes, “write-offs matter.... They speak to the volatility of past earnings.”¹⁰

In general, the IASB takes the position that both revenues and expenses and other income and expense should be reported as part of income from

operations. For example, it would be inappropriate to exclude items clearly related to operations (such as inventory write-downs and restructuring and relocation expenses) because they occur irregularly or infrequently, or are unusual in amount. Similarly, it would be inappropriate to exclude items on the grounds that they do not involve cash flows, such as depreciation and amortization expenses. **However, companies can provide additional line items, headings, and subtotals when such presentation is relevant to an understanding of the entity's financial performance.**

IFRS indicates additional items that may need disclosure on the income statement to help users predict the amount, timing, and uncertainty of future cash flows. Examples of these unusual items are as follows.

- Losses on write-downs of inventories to net realizable value or of property, plant, and equipment to recoverable amount, as well as reversals of such write-downs.
- Losses on restructurings of the activities of a company and reversals of any provisions for the costs of restructuring.
- Gains or losses on the disposal of items of property, plant, and equipment, or investments.
- Litigation settlements.
- Other reversals of liabilities.

Most companies therefore report these items as part of operations and disclose them in great detail if material in amount. Some, for example, simply show each item as a separate item on the income statement before income from operations. Other companies use the caption **Other income and expense** and then itemize them in this section or in the notes to the financial statements. *For homework purposes, itemize gains, losses, revenues, and expenses that are not reported as part of the revenue and expense sections of the income statement in the "Other income and expense" section.*

Income Before Income Tax

Boc Hong computes income before income tax by deducting interest expense (often referred to as *financing costs*) from income from operations. Under IFRS, companies must report their financing costs on the income statement. The reason for this requirement is to differentiate between a company's business activities (how it uses capital to create value) and its financing activities (how it obtains capital).

In most cases, the financing costs involve interest expense. In other situations, companies offset items, such as interest expense, against interest revenue. [Illustration 4.8](#) indicates how **Network Rail** (GBR) presents its financing costs involving only interest expense.

As indicated, some companies offset interest revenue and interest expense, and identify it as either finance costs or interest expense and interest revenue, net. *For homework purposes, consider only interest expense as financing costs. Interest revenue (income) should be reported as part of "Other income and expense."*

Network Rail

On its income statement:
(in millions)

Finance costs	Note 9	£2,200
---------------	--------	--------

Note 9 Finance costs

Interest on bank loans and overdrafts	£	8
Interest on loan issued by Department of Transport		674
Interest on bonds issued under the Debt Issuance Programme		1,148
Interest on derivative instruments		232
Defined benefit pension interest cost		55
Debt Issuance Programme financial indemnity fee		266
Other interest		
Total borrowing costs		2,383
Less: capitalised interest		(183)
Total finance costs		£2,200

Borrowing costs are included in the costs of qualifying assets to the extent that the asset is financed by the group. The average rate used during the year was 3.7 per cent.

ILLUSTRATION 4.8 Presentation of Finance Costs

Net Income

Boc Hong deducts income tax from income before income tax to arrive at net income. Net income represents the income after all revenues and expenses for the period are considered. It is viewed by many as the most important measure of a company's success or failure for a given period of time.

Income tax is reported on the income statement right before net income because this expense cannot be computed until all revenues and expenses are determined. In practice, an understanding of how the company arrived at the income tax for the period is important. For example, some of the revenue items may have different tax rates associated with them. In other cases, expense items may not be deductible for income tax purposes. Understanding these situations enables users to better predict what the future holds for the company. As a result, there is often extensive disclosure related to how the number for income tax expense is determined. [Chapter 19](#) discusses this subject in detail.

Earnings per Share

A company customarily sums up the results of its operations in one important figure: net income. However, the financial world has widely accepted an even more distilled figure as the most significant business indicator—**earnings per share** (EPS).

The computation of earnings per share is usually straightforward. **Earnings per share is net income minus preference dividends (income available to ordinary shareholders), divided by the weighted average of ordinary shares outstanding.**¹¹

To illustrate, assume that Lancer, Inc. reports net income of \$350,000. It declares and pays preference dividends of \$50,000 for the year. The weighted-average number of ordinary shares outstanding during the year is 100,000 shares. Lancer computes earnings per share of \$3, as shown in [Illustration 4.9](#).

$\frac{\text{Net Income} - \text{Preference Dividends}}{\text{Weighted Average of Ordinary Shares Outstanding}} = \text{Earnings per Share}$
$\frac{\$350,000 - \$50,000}{100,000} = \$3$

ILLUSTRATION 4.9 Equation Illustrating Computation of Earnings per Share

Note that EPS measures the number of dollars earned by each ordinary share. It does not represent the dollar amount paid to shareholders in the form of dividends.

Prospectuses, proxy material, and annual reports to shareholders commonly use the “net income per share” or “earnings per share” ratio. The financial press and securities analysts also highlight EPS. Because of its importance, **companies must disclose earnings per share on the face of the income statement.**

Many companies have simple capital structures that include only ordinary shares. For these companies, a presentation such as “Earnings per share” is appropriate on the income statement. In many instances, however, companies’ earnings per share are subject to dilution (reduction) in the future because existing contingencies permit the issuance of additional shares.¹²[3]

In summary, the simplicity and availability of EPS figures lead to their widespread use. Because of the importance that the public, even the well-informed public, attaches to earnings per share, companies must make the EPS figure as meaningful as possible.

Discontinued Operations

As discussed previously, one of the most common types of unusual items is discontinued operations. The IASB defines a **discontinued operation** as a component of an entity that either has been disposed of, or is classified as held-for-sale, and:

1. Represents a major line of business or geographical area of operations, or
2. Is part of a single, coordinated plan to dispose of a major line of business or geographical area of operations, or
3. Is a subsidiary acquired exclusively with a view to resell. [4]

To illustrate a **component**, **Unilever plc** (GBR) manufactures and sells consumer products. It has several product groups, each with different product lines and brands. For Unilever, a product group is the lowest level at which it can clearly distinguish the operations and cash flows from the rest of the company’s operations. Therefore, each

product group is a component of the company. If a component were disposed of, Unilever would classify it as a discontinued operation.

Here is another example. Assume that Softso Inc. has experienced losses with certain brands in its beauty-care products group. As a result, Softso decides to sell that part of its business. It will discontinue any continuing involvement in the product group after the sale. In this case, Softso eliminates the operations and the cash flows of the product group from its ongoing operations, and reports it as a discontinued operation.

On the other hand, assume Softso decides to remain in the beauty-care business but will discontinue the brands that experienced losses. Because Softso cannot differentiate the cash flows from the brands from the cash flows of the product group as a whole, it cannot consider the brands a component. Softso does not classify any gain or loss on the sale of the brands as a discontinued operation.

Companies report as discontinued operations (in a separate income statement category) the gain or loss from **disposal of a component of a business**. In addition, companies report the **results of operations of a component that has been or will be disposed of** separately from continuing operations. Companies show the effects of discontinued operations net of tax as a separate category, after continuing operations.

To illustrate, Multiplex Products, a highly diversified company, decides to discontinue its electronics division. During the current year, the electronics division lost £300,000 (net of tax). Multiplex sold the division at the end of the year at a loss of £500,000 (net of tax).

[Illustration 4.10](#) shows the reporting of discontinued operations for Multiplex.

Income from continuing operations		£20,000,000
Discontinued operations		
Loss from operation of discontinued electronics division (net of tax)	£300,000	
Loss from disposal of electronics division (net of tax)	500,000	(800,000)
Net income		<u>£19,200,000</u>

ILLUSTRATION 4.10 Income Statement Presentation of Discontinued Operations

Companies use the phrase “**Income from continuing operations**” only when gains or losses on discontinued operations occur.¹³

A company that reports a discontinued operation must report per share amounts for the line item either on the face of the income statement or in the notes to the financial statements.

[5] To illustrate, consider the income statement for Poquito Industries SA, shown in [Illustration 4.11](#). Notice the order in which Poquito shows the data, with per share information at the bottom. Assume that the company had 100,000 shares outstanding for the entire year. The Poquito income statement, as [Illustration 4.11](#) shows, is highly condensed. Poquito would need to describe items such as “Other income and expense” and “Discontinued operations” fully and appropriately in the statement or related notes.

Poquito Industries SA		
Income Statement		
For the Year Ended December 31, 2022		
Sales revenue		R\$1,420,000
Cost of goods sold		600,000
Gross profit		820,000
Selling and administrative expenses		320,000
Other income and expense		
Interest revenue	R\$ 10,000	
Loss on disposal of part of Textile Division	5,000	
Loss on sale of investments	30,000	(25,000)
Income from operations		475,000
Interest expense		15,000
Income before income tax		460,000
Income tax		184,000
Income from continuing operations		276,000
Discontinued operations		
Income from operations of Pizza Division, less applicable income tax of R\$24,800	54,000	
Loss on disposal of Pizza Division, less applicable income tax savings of R\$41,000	90,000	(36,000)
Net income		R\$240,000
Per share		
Income from continuing operations		R\$2.76
Income from operations of discontinued division, net of tax		0.54
Loss on disposal of discontinued operation, net of tax		0.90
Net income		R\$2.40

ILLUSTRATION 4.11 Income Statement

Intraperiod Tax Allocation

Companies report discontinued operations on the income statement net of tax. The allocation of tax to this item is called **intraperiod tax allocation**, that is, allocation within a period. It relates the income tax expense (sometimes referred to as the income tax provision) of the fiscal period to the **specific items** that give rise to the amount of the income tax provision.

Intraperiod tax allocation helps financial statement users better understand the impact of income taxes on the various components of net income. For example, readers of financial statements will understand how much income tax expense relates to “income from continuing operations.” This approach should help users to better predict the amount, timing, and uncertainty of future cash flows. In addition, intraperiod tax allocation

discourages statement readers from using pretax measures of performance when evaluating financial results, and thereby recognizes that income tax expense is a real cost.

Companies use intraperiod tax allocation on the income statement for the following items: (1) income from continuing operations and (2) discontinued operations. The general concept is “**let the tax follow the income.**”

To compute the income tax expense attributable to “Income from continuing operations,” a company would find the income tax expense related to both the revenue and expense transactions as well as other income and expense used in determining this income subtotal. (In this computation, the company does not consider the tax consequences of items excluded from the determination of “Income from continuing operations.”) Companies then associate a separate tax effect (e.g., for discontinued operations). Here, we look in more detail at calculation of intraperiod tax allocation for discontinued gain or discontinued loss.

Discontinued Operations (Gain)

In applying the concept of intraperiod tax allocation, assume that Schindler AG has income before income tax of €250,000. It has a gain of €100,000 from a discontinued operation. Assuming a 30 percent income tax rate, Schindler presents the information on the income statement, as shown in [Illustration 4.12](#).

Income before income tax		€250,000
Income tax		75,000
Income from continuing operations		175,000
Gain on discontinued operations	€100,000	
Less: Applicable income tax	30,000	70,000
Net income		<u>€245,000</u>

ILLUSTRATION 4.12 Intraperiod Tax Allocation, Discontinued Operations Gain

Schindler determines the income tax of €75,000 ($€250,000 \times 30\%$) attributable to “Income before income tax” from revenue and expense transactions related to this income. Schindler omits the tax consequences of items excluded from the determination of “Income before income tax.” The company shows a separate tax effect of €30,000 related to the “Gain on discontinued operations.”

Discontinued Operations (Loss)

To illustrate the reporting of a loss from discontinued operations, assume that Schindler AG has income before income tax of €250,000. It suffers a loss from discontinued operations of €100,000. Assuming a 30 percent tax rate, Schindler presents the income tax on the income statement as shown in [Illustration 4.13](#). In this case, the loss provides a positive tax benefit of €30,000. Schindler, therefore, subtracts it from the €100,000 loss.

Income before income tax		€250,000
Income tax		75,000
Income from continuing operations		175,000
Loss from discontinued operations	€100,000	
Less: Applicable income tax reduction	30,000	70,000
Net income		€105,000

ILLUSTRATION 4.13 Intraproduct Tax Allocation, Discontinued Operations Loss

Companies may also report the tax effect of a discontinued item by means of a note disclosure, as [Illustration 4.14](#) shows.

Income before income tax	€250,000
Income tax	75,000
Income from continuing operations	175,000
Loss on discontinued operations, less applicable income tax reduction (Note 1)	70,000
Net income	€105,000

Note 1: During the year the Company suffered a loss on discontinuing operations of €70,000, net of applicable income tax reduction of €30,000.

ILLUSTRATION 4.14 Note Disclosure of Intraproduct Tax Allocation

Allocation to Non-Controlling Interest

A company like **Siemens** (DEU) owns substantial interests in other companies. Siemens generally consolidates the financial results of these companies into its own financial statements. In these cases, Siemens is referred to as the parent, and the other companies are referred to as subsidiaries. **Non-controlling interest** is then the portion of equity (net assets) interest in a subsidiary not attributable to the parent company.

To illustrate, assume that Boc Hong acquires 70 percent of the outstanding shares of LTM Group. Because Boc Hong owns more than 50 percent of LTM, it consolidates LTM's financial results with its own. Consolidated net income is then allocated to the controlling (Boc Hong) and non-controlling shareholders' percentage of ownership in LTM. In other words, under this arrangement, the ownership of LTM is divided into two classes: (1) the controlling interest represented by shareholders who own the majority of the shares, and (2) the non-controlling interest represented by shareholders who are not part of the controlling group. When Boc Hong prepares a consolidated income statement, IFRS requires that net income be allocated to both the controlling and non-controlling interests. This allocation is reported at the bottom of the income statement, after net income. An example of how Boc Hong reports its non-controlling interest is shown in [Illustration 4.15](#).

Net income	\$164,489
Attributable to:	
Shareholders of Boc Hong	\$120,000
Non-controlling interest	44,489

ILLUSTRATION 4.15 Presentation of Non-Controlling Interest

These amounts are to be presented as allocations of net income or net loss, not as an item of income or expense.

Summary

Illustration 4.16 provides a summary of the primary income items.

As indicated, companies report all revenues, gains, expenses, and losses on the income statement and, at the end of the period, close them to Income Summary. They provide useful subtotals on the income statement, such as gross profit, income from operations, income before income tax, and net income. Companies classify discontinued operations of a component of a business as a separate item in the income statement, after “Income from continuing operations.” Companies present other income and expense in a separate section, before income from operations. Providing intermediate income figures helps readers evaluate earnings information in assessing the amounts, timing, and uncertainty of future cash flows.

What Do the Numbers Mean?

Different Income Concepts

The IASB is working on a project related to the presentation of financial statements. As part of this project, it conducted field tests on two groups: preparers and users. Preparers were asked to recast their financial statements and then comment on the results. Users examined the recast statements and commented on their usefulness.

One part of the field test asked analysts to indicate which primary performance metric they use or create from a company's income statement. They were provided with the following options: (a) Net income; (b) Pretax income; (c) Earnings before interest and taxes (EBIT); (d) Income before interest, taxes, depreciation, and amortization (EBITDA); (e) Operating income; (f) Comprehensive income; and (g) Other. The chart highlights their responses.

As indicated, Operating income (31%) and EBITDA (27%) were identified as the two primary performance metrics that respondents use or create from a company's income statement. A majority of the respondents identified a primary performance metric that uses net income as its foundation (pretax income would be in this group). Clearly, users and preparers look at more than just the bottom line income number, which supports the IFRS requirement to provide subtotals within the income statement.

In response, the IASB has been moving forward with the project and is now proposing that additional subtotals be added to the income statement. Specifically, the current proposal has a new subtotal called "business profit" and EBIT that would be added to the required information in the income statement.

Type of Situation	Criteria	Examples	Placement on Income Statement
Sales or service revenues	Revenues arising from the ordinary activities of the company.	Sales revenue, service revenue.	Sales or revenue section.
Cost of goods sold	Expense arising from the cost of inventory sold or services provided.	In a merchandising company, Cost of goods sold; in a service company, Cost of services.	Deduct from sales (to arrive at gross profit) or service revenue.
Selling and administrative expenses	Expenses arising from the ordinary activities of the company.	Sales salaries, Freight-out, Rent, Depreciation, Utilities.	Deduct from gross profit; if the function-of-expense approach is used, depreciation and amortization expense and labor costs must be disclosed.
Other income and expense	Gains and losses and other ancillary revenues and expenses.	Gain on sale of long-lived assets, Impairment loss on intangible assets, Investment revenue, Dividend and Interest revenue, Casualty losses.	Report as part of income from operations.
Financing costs	Separates cost of financing from operating costs.	Interest expense.	Report in a separate section between income from operations and income before income tax.
Income tax	Levies imposed by governmental bodies on the basis of income.	Taxes computed on income before income tax.	Report in separate section between income before income tax and net income.
Earnings per share	Must be reported on the face of the income statement.	Net income minus preference dividends divided by weighted average of ordinary shares outstanding.	Report separate EPS for income from continuing operations (if applicable) and net income.
Discontinued operations	A component of a company that has either been disposed of or is classified as held-for-sale.	A sale by a diversified company of a major division representing its only activities in the electronics	Report gains or losses on discontinued operations net of tax in a separate section between income from

		industry. Food distributor that sells wholesale to supermarkets decides to discontinue the division in a major geographic area.	continuing operations and net income.
Non-controlling interest	Allocation of net income or loss divided between two classes: (1) the majority interest represented by the shareholders who own the controlling interest, and (2) the non-controlling interest.	Net income (loss) attributable to non-controlling shareholders.	Report as a separate item below net income or loss as an allocation of the net income or loss (not as an item of income or expense).

ILLUSTRATION 4.16 Summary of Various Income Items

Accounting Changes and Errors

LEARNING OBJECTIVE 4

Explain the reporting of accounting changes and errors.

Changes in Accounting Principle

Changes in accounting occur frequently in practice because important events or conditions may be in dispute or uncertain at the statement date. One type of accounting change results when a company adopts a different accounting principle. **Changes in accounting principle** include a change in the method of inventory pricing from FIFO to average-cost, or the change from an existing accounting principle to a new accounting principle (see **Underlying Concepts**).¹⁴[6]

Underlying Concepts

Companies can change principles, but they must demonstrate that the newly adopted principle is preferable to the old one. Such changes result in lost consistency from period to period.

A company recognizes a change in accounting principle by making a **retrospective adjustment** to the financial statements. Such an adjustment recasts the prior years' statements so that they are consistent with the newly adopted principle. The company records the cumulative effect of the change for prior periods as an adjustment to beginning retained earnings of the earliest year presented.

To illustrate, Gaubert Inc. (which began operations in 2020) decided in March 2022 to change from FIFO to weighted-average inventory pricing. Gaubert's income before income tax, using the new weighted-average method in 2022, is \$30,000. **Illustration 4.17** presents the pretax income data for 2020 and 2021 for this example.

Year	FIFO	Weighted-Average Method	Excess of FIFO over Weighted-Average Method
2020	\$40,000	\$35,000	\$5,000
2021	30,000	27,000	3,000
Total			<u>\$8,000</u>

ILLUSTRATION 4.17 Calculation of a Change in Accounting Principle

Illustration 4.18 shows the information Gaubert presented in its comparative income statements, based on a 30 percent tax rate.

	2022	2021	2020
Income before income tax	\$30,000	\$27,000	\$35,000
Income tax	9,000	8,100	10,500
Net income	<u>\$21,000</u>	<u>\$18,900</u>	<u>\$24,500</u>

ILLUSTRATION 4.18 Income Statement Presentation of a Change in Accounting Principle

Thus, under the retrospective approach, the company recasts the prior years' income numbers under the newly adopted method. This approach therefore preserves comparability across years.

Changes in Accounting Estimates

Changes in accounting estimates are inherent in the accounting process. For example, companies estimate useful lives and residual values of depreciable assets, uncollectible receivables, inventory obsolescence, and the number of periods expected to benefit from a particular expenditure. Not infrequently, due to the passage of time, circumstances, or new information, even estimates originally made in good faith must be changed. A company accounts for such changes **prospectively**, which means in the period of change if they affect only that period, or in the period of change and future periods if the change affects both.

To illustrate a change in estimate that affects only the period of change, assume that DuPage Materials AG consistently estimated its bad debt expense at 1 percent of accounts receivable. In 2022, however, DuPage determines that it must revise upward the estimate of bad debts for the current year's credit sales to 2 percent, or double the prior years' percentage. The 2 percent rate is necessary to reduce accounts receivable to net realizable value. Using 2 percent results in a bad debt charge of CHF240,000, or double the amount using the 1 percent estimate for prior years. DuPage records the bad debt expense and related allowance at December 31, 2022, as follows.

Bad Debt Expense	240,000	
Allowance for Doubtful Accounts		240,000

DuPage includes the entire change in estimate in 2022 income because the effect of the change does not affect future periods. **Companies do not handle changes in estimate retrospectively.** That is, such changes are not carried back to adjust prior years. (We examine changes in estimate that affect both the current and future periods in greater detail in [Chapter 22](#).) **Changes in estimate are not considered errors.**

Corrections of Errors

Errors occur as a result of mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time financial statements were prepared. In recent years, many companies have corrected for errors in their financial statements. The errors involved such items as improper reporting of revenue, accounting for share options, allowances for receivables, inventories, and other provisions.

Companies correct errors by making proper entries in the accounts and reporting the corrections in the financial statements. Corrections of errors are treated as **prior period adjustments**, similar to changes in accounting principles. Companies record a correction of an error in the year in which it is discovered. They report the error in the financial statements as an adjustment to the beginning balance of retained earnings. If a company prepares comparative financial statements, it should restate the prior statements for the effects of the error.

To illustrate, in 2022, Tsang Ltd. determined that it incorrectly overstated its accounts receivable and sales revenue by NT\$100,000 in 2021. In 2022, Tsang makes the following entry to correct for this error (ignore income taxes).

Retained Earnings	100,000	
Accounts Receivable		100,000

Retained Earnings is debited because sales revenue, and therefore net income, was overstated in a prior period. Accounts Receivable is credited to reduce this overstated balance to the correct amount.

Summary

The impact of changes in accounting principle and error corrections are debited or credited directly to retained earnings, if related to a prior period. [Illustration 4.19](#) summarizes the basic concepts related to these two items, as well as the accounting and reporting for changes in estimates. Although simplified, the chart provides a useful framework for determining the treatment of special items affecting the income statement.

Type of Situation	Criteria	Examples	Placement on Income Statement
Changes in accounting principle	Change from one generally accepted accounting principle to another.	Change in the basis of inventory pricing from FIFO to average-cost.	Recast prior years' income statements on the same basis as the newly adopted principle.
Changes in accounting estimates	Normal, recurring corrections and adjustments.	Changes in the realizability of receivables and inventories; changes in estimated lives of equipment, intangible assets; changes in estimated liability for warranty costs, income taxes, and salary payments.	Show change only in the affected accounts (not shown net of tax) and disclose the nature of the change.
Corrections of errors	Mistake, misuse of facts.	Error in reporting income and expense.	Restate prior years' income statements to correct for error.

ILLUSTRATION 4.19 Summary of Accounting Changes and Errors

Related Equity Statements

LEARNING OBJECTIVE 5

Describe related equity statements.

Retained Earnings Statement

Net income increases retained earnings. A net loss decreases retained earnings. Both cash and share dividends decrease retained earnings. Changes in accounting principle (generally) and prior period adjustments may increase or decrease retained earnings. Companies charge or credit these adjustments (net of tax) to the opening balance of retained earnings.

Companies may show retained earnings information in different ways. For example, some companies prepare a separate retained earnings statement, as [Illustration 4.20](#) shows.

Choi Ltd.		
Retained Earnings Statement		
For the Year Ended December 31, 2022		
Retained earnings, January 1, as reported		₩1,050,000
Correction for understatement of net income in prior period (inventory error)		50,000
Retained earnings, January 1, as adjusted		1,100,000
Add: Net income		360,000
		1,460,000
Less: Cash dividends	₩100,000	
Share dividends	200,000	300,000
Retained earnings, December 31		<u>₩1,160,000</u>

ILLUSTRATION 4.20 Retained Earnings Statement

The reconciliation of the beginning to the ending balance in retained earnings provides information about why net assets increased or decreased during the year. The association of dividend distributions with net income for the period indicates what management is doing with earnings: It may be “plowing back” into the business part or all of the earnings, distributing all current income, or distributing current income plus the accumulated earnings of prior years.

Restrictions of Retained Earnings

Companies often restrict retained earnings to comply with contractual requirements, board of directors’ policy, or current necessity. Generally, companies disclose in the notes to the financial statements the amounts of restricted retained earnings. In some cases, companies transfer the amount of retained earnings restricted to an account titled **Appropriated Retained Earnings**. The retained earnings section may therefore report two separate amounts: (1) retained earnings free (unrestricted) and (2) retained earnings appropriated (restricted). The total of these two amounts equals the total retained earnings.

Comprehensive Income Statement

Companies generally include in income all revenues, expenses, and gains and losses recognized during the period. These items are classified within the income statement so that financial statement readers can better understand the significance of various components of net income. Changes in accounting principle and corrections of errors are excluded from the calculation of net income because their effects relate to prior periods.

In recent years, use of fair values for measuring assets and liabilities has increased. Furthermore, possible reporting of gains and losses related to changes in fair value has placed a strain on income reporting. Because fair values are continually changing, some argue that recognizing these gains and losses in net income is misleading. The IASB agrees and has identified a limited number of transactions that should be recorded directly to equity. One example is unrealized gains and losses on non-trading equity securities.¹⁵ These gains and losses are excluded from net income, thereby reducing volatility in net income due

to fluctuations in fair value. At the same time, disclosure of the potential gain or loss is provided.

Companies include these items that bypass the income statement in a measure called comprehensive income. **Comprehensive income** includes all changes in equity during a period *except* those resulting from investments by owners and distributions to owners. Comprehensive income, therefore, includes the following: all revenues and gains, expenses and losses reported in net income, and all gains and losses that bypass net income but affect equity. These items—non-owner changes in equity that bypass the income statement—are referred to as **other comprehensive income**.

Companies must display the components of other comprehensive income in one of two ways: (1) a single continuous statement (**one statement approach**) or (2) two separate but consecutive statements of net income and other comprehensive income (**two statement approach**). The one statement approach is often referred to as the statement of comprehensive income. The two statement approach uses the traditional term income statement for the first statement and the comprehensive income statement for the second statement.

Under either approach, companies display each component of net income and each component of other comprehensive income. In addition, net income and comprehensive income are reported. Companies are not required to report earnings per share information related to comprehensive income.¹⁶

We illustrate these two alternatives in the next two sections. In each case, assume that Gill SpA reports the following information for 2022: sales revenue €800,000, cost of goods sold €600,000, operating expenses €90,000, and an unrealized holding gain on non-trading equity securities of €30,000, net of tax.

One Statement Approach

In this approach, the traditional net income is a subtotal, with total comprehensive income shown as a final total. The combined statement has the advantage of not requiring the creation of a new financial statement. However, burying net income as a subtotal on the statement is a disadvantage. **Illustration 4.21** shows the one statement format for Gill SpA.

Gill SpA Statement of Comprehensive Income For the Year Ended December 31, 2022	
Sales revenue	€800,000
Cost of goods sold	600,000
Gross profit	200,000
Operating expenses	90,000
Net income	110,000
Other comprehensive income	
Unrealized holding gain on nontrading equity securities, net of tax	30,000
Comprehensive income	<u>€140,000</u>

ILLUSTRATION 4.21 One Statement Format: Comprehensive Income

Two Statement Approach

Illustration 4.22 shows the two statement format for Gill. Reporting comprehensive income in a separate statement indicates that the gains and losses identified as other comprehensive income have the same status as traditional gains and losses.

Gill SpA Income Statement For the Year Ended December 31, 2022	
Sales revenue	€800,000
Cost of goods sold	600,000
Gross profit	200,000
Operating expenses	90,000
Net income	<u>€110,000</u>
Gill SpA Comprehensive Income Statement For the Year Ended December 31, 2022	
Net income	€110,000
Other comprehensive income	
Unrealized holding gain, net of tax	30,000
Comprehensive income	<u>€140,000</u>

ILLUSTRATION 4.22 Two Statement Format: Comprehensive Income

Statement of Changes in Equity

In addition to a statement of comprehensive income, companies are also required to present a **statement of changes in equity**. Equity is generally comprised of share capital—ordinary, share premium—ordinary, retained earnings, and the accumulated balances in other comprehensive income. The statement reports the change in each equity account and in total equity for the period. The following items are disclosed in this statement.

1. Accumulated other comprehensive income for the period.
2. Contributions (issuances of shares) and distributions (dividends) to owners.
3. Reconciliation of the carrying amount of each component of equity from the beginning to the end of the period.

Companies often prepare the statement of changes in equity in column form. In this format, they use columns for each account and for total equity.

To illustrate, assume the same information for Gill SpA as shown in [Illustration 4.22](#). The company had the following equity account balances at the beginning of 2022: Share Capital—Ordinary €300,000, Retained Earnings €50,000, and Accumulated Other Comprehensive Income €60,000, related to unrealized gains on non-trading equity securities. No changes in the Share Capital—Ordinary account occurred during the year. Cash dividends during the period were €10,000. [Illustration 4.23](#) shows a statement of changes in equity for Gill.

Total comprehensive income is comprised of net income of €110,000 added to retained earnings and €30,000 related to the unrealized gain. Separate columns are used to report each additional item of other comprehensive income.¹⁷ Thus, this statement is useful for understanding how equity changed during the period.

Gill SpA				
Statement of Changes in Equity				
For the Year Ended December 31, 2022				
	Total	Retained Earnings	Accumulated Other Comprehensive Income	Share Capital—Ordinary
Beginning balance	€410,000	€ 50,000	€60,000	€300,000
Net income	110,000	110,000		
Dividends	(10,000)	(10,000)		
Other comprehensive income				
Unrealized holding gain on non-trading equity securities, net of tax	30,000		30,000	
Ending balance	<u>€540,000</u>	<u>€150,000</u>	<u>€90,000</u>	<u>€300,000</u>

[ILLUSTRATION 4.23](#) Statement of Changes in Equity

Regardless of the display format used, Gill reports the **accumulated other comprehensive income** of €90,000 in the equity section of the statement of financial position as shown in [Illustration 4.24](#).¹⁸

Gill SpA Statement of Financial Position As of December 31, 2022 (Equity Section)	
Equity	
Share capital—ordinary	€300,000
Retained earnings	150,000
Accumulated other comprehensive income	<u>90,000</u>
Total equity	<u>€540,000</u>

ILLUSTRATION 4.24 Presentation of Accumulated Other Comprehensive Income in the Statement of Financial Position

By providing information on the components of comprehensive income, as well as accumulated other comprehensive income, the company communicates information about all changes in net assets.¹⁹ With this information, users will better understand the quality of the company's earnings.

Learning Objectives Review

1 Identify the uses and limitations of an income statement.

The income statement provides investors and creditors with information that helps them predict the amounts, timing, and uncertainty of future cash flows. Also, the income statement helps users determine the risk (level of uncertainty) of not achieving particular cash flows. The limitations of an income statement are as follows. (1) The statement does not include many items that contribute to general growth and well-being of a company. (2) Income numbers are often affected by the accounting methods used. (3) Income measures are subject to estimates.

2 Describe the content and format of the income statement.

Net income results from revenue, expense, gain, and loss transactions. This method of income measurement, the transaction approach, focuses on the income-related activities that have occurred during a given period. Instead of presenting only a net change in net assets, it discloses the components of the change.

The following sections are generally shown on an income statement: sales or revenue, cost of goods sold, selling expense, administrative or general expense, financing costs, and income tax. If present, a company also reports discontinued operations (net of tax). Earnings per share is reported, and an allocation of net income or loss to the non-controlling interest is also presented, where applicable. Companies determine net income by deducting expenses from revenues but also classify various revenues and expenses in order to report useful subtotals within the income statement. These subtotals are gross profit, income from operations, income before income tax, and a final total, net income.

3 Discuss how to report various income items.

Companies generally provide some detail on revenues and expenses on the face of the income statement but may prepare a condensed income statement with details on various components presented in the notes to the financial statements. Companies are required to classify expense either by nature or by function. Unusual and non-recurring items should be reported in income from operations, but financing costs are reported separate from operating revenues and expenses. Companies report the effects of discontinued operations of a component of a business as a separate item, after income from continuing operations.

Companies should relate the tax expense for the year to specific items on the income statement to provide a more informative disclosure to statement users. This procedure, intraperiod tax allocation, relates the income tax expense for the fiscal period to the following items that affect the amount of the tax provisions: (1) income from continuing operations and (2) discontinued operations.

Companies must disclose earnings per share on the face of the income statement. A company that reports a discontinued operation must report per share amounts for these line items either on the face of the income statement or in the notes to the financial statements.

4 Explain the reporting of accounting changes and errors.

Changes in accounting principle and corrections of errors are adjusted through retained earnings following a retrospective approach. Changes in accounting estimates are a normal part of the accounting process. The effects of these changes are handled prospectively, with the effects recorded in income in the period of change and in future periods without adjustment to retained earnings.

5 Describe related equity statements.

The retained earnings statement should disclose net income (loss), dividends, adjustments due to changes in accounting principles, error corrections, and restrictions of retained earnings.

Companies report the components of other comprehensive income in one of two ways: (1) a combined statement of comprehensive income (one statement format) or (2) in a second statement (two statement format).

Companies also present a statement of changes in equity. This statement reports the change in each equity account and in total equity for the period.

Practice Problem

Presented below are income statement items from Braun Company for the year ended December 31, 2022.

Sales revenue	\$2,700,000
Cost of goods sold	1,150,000
Interest revenue	15,000
Loss from abandonment of plant assets	45,000
Gain from extinguishment of debt	28,000
Selling and administrative expenses	480,000
Effect of change in estimated useful lives of fixed assets	35,000
Loss from earthquake	30,000
Gain on disposal of discontinued operation	50,000

Instructions

- a. Using the information above, prepare an income statement. Assume a tax rate of 30% and 100,000 ordinary shares outstanding during 2022.
- b. Compute comprehensive income for Braun in 2022, assuming Braun had an unrealized holding loss on non-trading equity securities of \$12,000, net of tax.

Solution

a.

Braun Company		
Income Statement		
For the Year Ended December 31, 2022		
Sales revenue		\$ 2,700,000
Cost of goods sold		1,150,000
Gross profit		1,550,000
Selling and administrative expenses		480,000
		1,070,000
Other income and expense		
Interest revenue	\$ 15,000	
Gain on debt extinguishment	28,000	
Loss from plant abandonment	(45,000)	
Loss from earthquake	(30,000)	(32,000)
Income from operations		1,038,000
Income tax (30%)		311,400
Income from continuing operations		726,600
Discontinued operations		
Gain on disposal of discontinued operation	50,000	
Less: Applicable income tax (30%)	15,000	35,000
Net income		<u>\$ 761,600</u>
Per ordinary share		
Income from continuing operations		\$ 7.27
Discontinued operations		0.35
Net income		<u>\$ 7.62</u>

b.

Net income	\$761,600	
Unrealized holding loss on non-trading equity securities, net of tax	12,000	
Comprehensive income	<u>\$749,600</u>

Questions

1. What kinds of questions about future cash flows do investors and creditors attempt to answer with information in the income statement?
2. How can information based on past transactions be used to predict future cash flows?
3. Identify at least two situations in which important changes in value are not reported in the income statement.
4. Identify at least two situations in which application of different accounting methods or accounting estimates results in difficulties in comparing companies.
5. Explain the transaction approach to measuring income. Why is the transaction approach to income measurement preferable to other ways of measuring income?
6. What is earnings management?
7. How can earnings management affect the quality of earnings?
8. Why should caution be exercised in the use of the net income figure derived in an income statement? What are the objectives of IFRS in its application to the income statement?
9. An article in the financial press noted that **MicroStrategy** (USA) reported higher income than its competitors by using a more aggressive policy for recognizing revenue on future upgrades to its products. Some contend that MicroStrategy's quality of earnings is low. What does the term "quality of earnings" mean?
10. What is the major distinction between income and expenses under IFRS?
11. Do the elements of financial statements, income and expense, include gains and losses? Explain.
12. What are the sections of the income statement that comprise (1) gross profit and (2) income from operations?
13. **Ahold Delhaize** (NLD/BEL), in its consolidated income statement, reported a "settlement of securities class action" €803 million loss. In what section of the income statement is this amount reported?
14. Explain where the following items are reported on the income statement: (1) interest expense and (2) income tax.
15. Explain the difference between the "nature-of-expense" and "function-of-expense" classifications.
16. Discuss the appropriate treatment in the income statement for the following items:
 - a. Loss on discontinued operations.
 - b. Non-controlling interest allocation.
 - c. Earnings per share.

d. Gain on sale of equipment.

17. Discuss the appropriate treatment in the financial statements of each of the following.

a. Write-down of plant assets due to impairment.

b. A delivery expense on goods sold.

c. Additional depreciation on factory machinery because of an error in computing depreciation for the previous year.

d. Rent received from subletting a portion of the office space.

e. A patent infringement suit, brought 2 years ago against the company, was settled this year by a cash payment of NT\$725,000.

f. A reduction in the Allowance for Doubtful Accounts balance, because the account appears to be considerably in excess of the probable loss from uncollectible receivables.

18. Indicate where the following items would ordinarily appear on the financial statements of Boleyn, plc for the year 2022.

a. The service life of certain equipment was changed from 8 to 5 years. If a 5-year life had been used previously, additional depreciation of £425,000 would have been charged.

b. In 2022, a flood destroyed a warehouse that had a book value of £1,600,000.

c. In 2022, the company wrote off £1,000,000 of inventory that was considered obsolete.

d. Interest expense for the year was £45,000.

e. In 2019, a supply warehouse with an expected useful life of 7 years was erroneously expensed.

f. Boleyn, plc changed from weighted-average to FIFO inventory pricing.

19. Indicate the section of an income statement in which each of the following is shown.

a. Loss on inventory write-down.

b. Loss from strike.

c. Bad debt expense.

d. Loss on disposal of a discontinued business.

e. Gain on sale of machinery.

f. Interest expense.

g. Depreciation expense.

h. Interest revenue.

20. Santo SA has eight expense accounts in its general ledger which could be classified as selling expenses. Should Santo report these eight expenses separately in its income statement or simply report one total amount for selling expenses? Explain.

21. Cooper Investments reported an unusual gain from the sale of certain assets in its 2022 income statement. How does intraperiod tax allocation affect the reporting of this unusual

gain?

- 22.** What effect does intraperiod tax allocation have on reported net income?
- 23.** Neumann Company computed earnings per share as follows.

$$\frac{\text{Net income}}{\text{Shares outstanding at year-end}}$$

Neumann has a simple capital structure. What possible errors might the company have made in the computation? Explain.

- 24.** How should a loss on the disposal of a discontinued business be disclosed in the income statement?
- 25.** Qualls SE reported 2021 earnings per share of €7.21. In 2022, Qualls reported earnings per share as follows.

On income from continuing operations	€8.00
On loss on discontinued operations	<u>.88</u>
On net income	<u>€7.12</u>

Is the decrease in earnings per share from €7.21 to €7.12 a negative trend? Explain.

- 26.** What is meant by “tax allocation within a period”? What is the justification for such a practice?
- 27.** When does tax allocation within a period become necessary? How should this allocation be handled?
- 28.** Linus Paper Company decided to close two small pulp mills in Conway, New Hampshire, and Corvallis, Oregon. Would these closings be reported in a separate section entitled “Discontinued operations after income from continuing operations”? Discuss.
- 29.** How should corrections of errors be reported in the financial statements?
- 30.** Explain how a change in accounting principle affects the current year’s net income.
- 31.** What major types of items are reported in the retained earnings statement?
- 32.** IFRS usually requires the use of accrual accounting to “fairly present” income. If the cash receipts and disbursements method of accounting will “clearly reflect” taxable income, why does this method also not usually “fairly present” income?
- 33.** What are two ways that other comprehensive income may be displayed (reported)?
- 34.** Gribble AG reported the following amounts in 2022: Net income, €150,000; Unrealized gain related to revaluation of buildings, €10,000, net of tax; Unrealized loss related to non-trading equity securities, €(35,000), net of tax. Determine Gribble’s total comprehensive income for 2022.

Brief Exercises

BE4.1 (LO 2) Starr Ltd. had sales revenue of £540,000 in 2022. Other items recorded during the year were:

Cost of goods sold	£330,000
--------------------	----------

Selling expenses	120,000
Income tax	25,000
Increase in value of employees	15,000
Administrative expenses	10,000

Prepare an income statement for Starr for 2022. Starr has 100,000 shares outstanding.

BE4.2 (LO 2) Brisky Corporation had net sales of \$2,400,000 and interest revenue of \$31,000 during 2022. Expenses for 2022 were cost of goods sold \$1,450,000, administrative expenses \$212,000, selling expenses \$280,000, and interest expense \$45,000. Brisky's tax rate is 30%. The company had 100,000 shares authorized and 70,000 shares issued and outstanding during 2022. Prepare an income statement for the year ended December 31, 2022.

BE4.3 (LO 2, 3) The following financial information is related to Volaire Group, a service company.

Revenues	€800,000
Income from continuing operations	100,000
Comprehensive income	120,000
Net income	90,000
Income from operations	220,000
Selling and administrative expenses	500,000
Income before income tax	200,000

Compute the following: (a) other income and expense, (b) financing costs, (c) income tax, (d) discontinued operations, and (e) other comprehensive income.

BE4.4 (LO 2, 3) The following information is provided.

Sales revenue	HK\$100,000
Gain on sale of plant assets	30,000
Selling and administrative expenses	10,000
Cost of goods sold	55,000
Interest expense	5,000
Income tax rate	20%

Determine (a) income from operations, (b) income before income tax, and (c) net income.

BE4.5 (LO 2, 3) The following information is provided about Caltex Company: income from operations \$430,000, loss on inventory write-downs \$12,000, selling expenses \$62,000, and interest expense \$20,000. The tax rate is 30%. Determine net income.

BE4.6 (LO 2, 3) Indicate in which section (gross profit, income from operations, or income before income tax) the following items are reported: (a) interest revenue, (b) interest expense, (c) loss on impairment of goodwill, (d) sales revenue, and (e) administrative expenses.

BE4.7 (LO 2, 3) Finley plc had income from continuing operations of £10,600,000 in 2022. During 2022, it disposed of its restaurant division at an after-tax loss of £189,000. Prior to disposal, the division operated at a loss of £315,000 (net of tax) in 2022. Finley had 10,000,000 shares outstanding during 2022. Prepare a partial income statement for Finley beginning with income from continuing operations.

BE4.8 (LO 3, 4) During 2022, Williamson Company changed from FIFO to weighted-average inventory pricing. Pretax income in 2021 and 2020 (Williamson’s first year of operations) under FIFO was \$160,000 and \$180,000, respectively. Pretax income using weighted-average pricing in the prior years would have been \$145,000 in 2021 and \$170,000 in 2020. In 2022, Williamson Company reported pretax income (using weighted-average pricing) of \$180,000. Show comparative income statements for Williamson Company, beginning with “Income before income tax,” as presented on the 2022 income statement. (The tax rate in all years is 30%.)

BE4.9 (LO 3, 4) Vandross NV has recorded bad debt expense in the past at a rate of 1½% of receivables. In 2022, Vandross decides to increase its estimate to 2%. If the new rate had been used in prior years, cumulative bad debt expense would have been €380,000 instead of €285,000. In 2022, bad debt expense will be €120,000 instead of €90,000. If Vandross’s tax rate is 30%, what amount should it report as the cumulative effect of changing the estimated bad debt rate?

BE4.10 (LO 3) In 2022, Hollis Corporation reported net income of \$1,000,000. It declared and paid preference dividends of \$250,000. During 2022, Hollis had a weighted average of 190,000 ordinary shares outstanding. Compute Hollis’s 2022 earnings per share.

BE4.11 (LO 5) Tsui Ltd. has retained earnings of NT\$675,000 at January 1, 2022. Net income during 2022 was NT\$1,400,000, and cash dividends declared and paid during 2022 totaled NT\$75,000. Prepare a retained earnings statement for the year ended December 31, 2022.

BE4.12 (LO 4, 5) Using the information from BE4.11, prepare a retained earnings statement for the year ended December 31, 2022. Assume an error was discovered: Land costing NT\$80,000 (net of tax) was charged to repairs expense in 2021.

BE4.13 (LO 5) On January 1, 2022, Otano Ltd. had cash and share capital of ¥60,000,000. At that date, the company had no other asset, liability, or equity balances. On January 2, 2022, it purchased for cash ¥20,000,000 of non-trading equity securities. It received cash dividends of ¥3,000,000 during the year on these securities. In addition, it has an unrealized holding gain on these securities of ¥4,000,000 (net of tax). Determine the following amounts for 2022: (a) net income, (b) comprehensive income, (c) other comprehensive income, and (d) accumulated other comprehensive income (end of 2022).

Exercises

E4.1 (LO 2, 5) (Compute Income Measures) Presented below is information related to Viel AG at December 31, 2022, the end of its first year of operations.

Sales revenue	€310,000
Cost of goods sold	140,000
Selling and administrative expenses	50,000

Gain on sale of plant assets	30,000
Unrealized gain on non-trading equity securities	10,000
Interest expense	6,000
Loss on discontinued operations	12,000
Allocation to non-controlling interest	40,000
Dividends declared and paid	5,000

Instructions

Compute the following: (a) income from operations, (b) net income, (c) net income attributable to Viel AG controlling shareholders, (d) comprehensive income, and (e) retained earnings balance at December 31, 2022. Ignore taxes.

E4.2 (LO 2) (Computation of Net Income) The following are changes in all account balances of Jackson Furniture during the current year, except for retained earnings.

	Increase (Decrease)		Increase (Decrease)
Cash	£ 69,000	Accounts Payable	£ (51,000)
Accounts Receivable (net)	45,000	Bonds Payable	82,000
Inventory	127,000	Share Capital— Ordinary	138,000
Investments	(47,000)		

Instructions

Compute the net income for the current year, assuming that there were no entries in the Retained Earnings account except for net income and a dividend declaration of £24,000 which was paid in the current year.

E4.3 (LO 2) (Income Statement Items) Presented below are certain account balances of Wade Products Co.

Rent revenue	\$ 6,500	Sales discounts	\$ 7,800
Interest expense	12,700	Selling expenses	99,400
Beginning retained earnings	114,400	Sales revenue	400,000
Ending retained earnings	134,000	Income tax expense	26,600
Dividend revenue	71,000	Cost of goods sold	184,400
Sales returns and allowances	12,400	Administrative expenses	82,500

Instructions

Using the information above, compute the following: (a) total net revenue, (b) net income, and (c) dividends declared during the current year.

E4.4 (LO 2) (Income Statement Presentation) The financial records of Dunbar Inc. were destroyed by fire at the end of 2022. Fortunately, the controller had kept the following statistical data related to the income statement.

1. The beginning merchandise inventory was \$92,000, and it decreased 20% during the current year.
2. Sales discounts amount to \$17,000.
3. 30,000 ordinary shares were outstanding for the entire year.
4. Interest expense was \$20,000.
5. The income tax rate is 30%.
6. Cost of goods sold amounts to \$500,000.
7. Administrative expenses are 18% of cost of goods sold but only 8% of gross sales.
8. Four-fifths of the operating expenses relate to sales activities.

Instructions

Using the information above, prepare an income statement for the year 2022.

E4.5 (LO 2, 3) (Income Statement) Presented below is information related to Webster plc (amounts in thousands).

Administrative expenses	
Officers' salaries	£ 4,900
Depreciation of office furniture and equipment	3,960
Cost of goods sold	63,570
Rent revenue	17,230
Selling expenses	
Delivery expense	2,690
Sales commissions	7,980
Depreciation of sales equipment	6,480
Sales revenue	96,500
Income tax	7,580
Interest expense	1,860

Instructions

Prepare an income statement for the year 2022. Ordinary shares outstanding for 2022 total 40,550 (in thousands).

E4.6 (LO 2, 3) (Income Statement Items) The following balances were taken from the books of Parnevik ASA on December 31, 2022.

Interest revenue	€ 86,000	Accumulated depreciation— buildings	€ 28,000
Cash	51,000	Notes receivable	155,000
Sales revenue	1,280,000	Selling expenses	194,000
Accounts receivable	150,000	Accounts payable	170,000
Prepaid insurance	20,000	Bonds payable	100,000

Sales returns and allowances	150,000	Administrative and general expenses	97,000
Allowance for doubtful accounts	7,000	Accrued liabilities	32,000
Sales discounts	45,000	Interest expense	60,000
Land	100,000	Notes payable	100,000
Equipment	200,000	Loss on impairment of plant assets	120,000
Buildings	140,000	Share capital—ordinary	500,000
Cost of goods sold	621,000	Retained earnings	21,000
Accumulated depreciation—equipment	40,000		

Assume the total effective tax rate on all items is 34%.

Instructions

Prepare an income statement; 100,000 ordinary shares were outstanding during the year.

E4.7 (LO 2, 3, 5) (Income Statement) The accountant for Weatherspoon Shoe has compiled the following information from the company's records as a basis for an income statement for the year ended December 31, 2022.

Rent revenue	£ 29,000
Interest expense	18,000
Unrealized gain on non-trading equity securities, net of tax	31,000
Selling expenses	140,000
Income tax	30,600
Administrative expenses	181,000
Cost of goods sold	516,000
Net sales	980,000
Cash dividends declared	16,000
Loss on sale of plant assets	15,000

There were 20,000 ordinary shares outstanding during the year.

Instructions

- Prepare a comprehensive income statement using the combined statement approach.
- Prepare a comprehensive income statement using the two statement approach.
- Which format do you prefer? Discuss.

E4.8 (LO 2, 3, 4) (Income Statement, EPS) Presented below are selected ledger accounts of McGraw SA as of December 31, 2022.

Cash	€ 50,000
Administrative expenses	100,000

Selling expenses	80,000
Net sales	540,000
Cost of goods sold	260,000
Cash dividends declared (2022)	20,000
Cash dividends paid (2022)	15,000
Discontinued operations (loss before income tax)	40,000
Depreciation expense, not recorded in 2021	30,000
Retained earnings, December 31, 2021	90,000
Effective tax rate 30%	

Instructions

- Compute net income for 2022.
- Prepare a partial income statement beginning with income before income tax, and include appropriate earnings per share information. Assume 20,000 ordinary shares were outstanding during 2022.

E4.9 (LO 2, 3, 4, 5) (Income Statement with Retained Earnings) Presented below is information related to Tao Ltd. for the year 2022 (amounts in thousands).

Net sales	HK\$1,200,000	Write-off of inventory due to obsolescence	HK\$ 80,000
Cost of goods sold	780,000	Depreciation expense omitted by accident in 2021	40,000
Selling expenses	65,000	Interest expense	50,000
Administrative expenses	48,000	Cash dividends declared	45,000
Dividend revenue	20,000	Retained earnings at December 31, 2021	980,000
Interest revenue	7,000	Effective tax rate of 34% on all items	

Instructions

- Prepare an income statement for 2022. Assume that 60,000 ordinary shares are outstanding.
- Prepare a retained earnings statement for 2022.

E4.10 (LO 3) (Earnings per Share) The equity section of Sosa SA appears below as of December 31, 2022.

Share capital—preference (6% preference shares, R\$50 par value, authorized 100,000 shares, outstanding 90,000 shares)		R\$ 4,500,000
Share capital—ordinary (R\$1 par, authorized and issued 10 million shares)		10,000,000
Share premium—ordinary		20,500,000

Retained earnings	R\$134,000,000	
Net income	33,000,000	167,000,000
		<u>R\$202,000,000</u>

Net income for 2022 reflects a total effective tax rate of 20%. Included in the net income figure is a loss of R\$12,000,000 (before tax) as a result of discontinued operations. Preference dividends of R\$270,000 were declared and paid in 2022. Dividends of R\$1,000,000 were declared and paid to ordinary shareholders in 2022.

Instructions

Compute earnings per share data as it should appear on the income statement of Sosa SA.

E4.11 (LO 2, 3) (Condensed Income Statement—Periodic Inventory Method)

Presented below are selected ledger accounts of Woods Corporation at December 31, 2022.

Cash	\$ 185,000	Salaries and wages expense (sales)	\$284,000
Inventory (beginning)	535,000	Salaries and wages expense (office)	346,000
Sales revenue	4,175,000	Purchase returns	15,000
Unearned sales revenue	117,000	Sales returns and allowances	79,000
Purchases	2,786,000	Freight-in	72,000
Sales discounts	34,000	Accounts receivable	142,500
Purchase discounts	27,000	Sales commissions	83,000
Selling expenses	69,000	Telephone and Internet expense (sales)	17,000
Accounting and legal services	33,000	Utilities expense (office)	32,000
Insurance expense (office)	24,000	Miscellaneous office expenses	8,000
Advertising expense	54,000	Rent revenue	240,000
Delivery expense	93,000	Loss on sale of division	60,000
Depreciation expense (office equipment)	48,000	Interest expense	176,000
Depreciation expense (sales equipment)	36,000	Share capital—ordinary (\$10 par)	900,000

Woods's effective tax rate on all items is 30%. A physical inventory indicates that the ending inventory is \$686,000.

Instructions

Prepare a 2022 income statement for Woods Corporation.

E4.12 (LO 4, 5) (Retained Earnings Statement) McEntire Corporation began operations on January 1, 2019. During its first 3 years of operations, McEntire reported net income and declared dividends as follows.

	Net income	Dividends declared
2019	\$ 40,000	\$ -0-

2020	125,000	50,000
2021	160,000	50,000

The following information relates to 2022.

Income before income tax	\$220,000
Prior period adjustment: understatement of 2020 depreciation expense (before taxes)	\$ 25,000
Cumulative decrease in income from change in inventory methods (before taxes)	\$ 45,000
Dividends declared (of this amount, \$25,000 will be paid on Jan. 15, 2023)	\$100,000
Effective tax rate	20%

Instructions

- Prepare a 2022 retained earnings statement for McEntire Corporation.
- Assume McEntire Corporation restricted retained earnings in the amount of \$70,000 on December 31, 2022. After this action, what would McEntire report as total retained earnings in its December 31, 2022, statement of financial position?

E4.13 (LO 3) (Earnings per Share) At December 31, 2021, Schroeder SE had the following shares outstanding.

8% cumulative preference shares, €100 par, 107,500 shares	€10,750,000
Ordinary shares, €5 par, 4,000,000 shares	20,000,000

During 2022, Schroeder did not issue any additional shares. The following also occurred during 2022.

Income before income tax	€21,650,000
Discontinued operations (loss before taxes)	3,225,000
Preference dividends declared	860,000
Ordinary dividends declared	2,200,000
Effective tax rate	35%

Instructions

Compute earnings per share data as it should appear in the 2022 income statement of Schroeder SE. (Round to two decimal places.)

E4.14 (LO 3, 4) (Change in Accounting Principle) Zehms Company began operations in 2020 and adopted weighted-average pricing for inventory. In 2022, in accordance with other companies in its industry, Zehms changed its inventory pricing to FIFO. The pretax income data is reported below.

Year	Weighted-Average	FIFO
2020	\$370,000	\$395,000
2021	390,000	420,000
2022	410,000	460,000

Instructions

- a. What is Zehms’s net income in 2022? Assume a 35% tax rate in all years.
- b. Compute the cumulative effect of the change in accounting principle from weighted-average to FIFO inventory pricing.
- c. Show comparative income statements for Zehms Company, beginning with income before income tax, as presented on the 2022 income statement.

E4.15 (LO 3, 5) (Comprehensive Income) Gaertner AG reported the following for 2022: net sales €1,200,000, cost of goods sold €720,000, selling and administrative expenses €320,000, and an unrealized holding gain on non-trading equity securities.

Instructions

Prepare a statement of comprehensive income, using the two statement format. Ignore income taxes and earnings per share.

E4.16 (LO 3, 5) (Comprehensive Income) Bryant plc reports the following information for 2022: sales revenue £750,000, cost of goods sold £500,000, operating expenses £80,000, and an unrealized holding loss on non-trading equity securities for 2022 of £50,000. It declared and paid a cash dividend of £10,000 in 2022.

Bryant plc has January 1, 2022, balances in share capital—ordinary £350,000, accumulated other comprehensive income related to the unrealized holding gain of £80,000, and retained earnings £90,000. It issued no ordinary shares during 2022. Ignore income taxes.

Instructions

Prepare a statement of changes in equity.

E4.17 (LO 3, 5) (Various Reporting Formats) The following information was taken from the records of Vega SA for the year 2022: income tax applicable to income from continuing operations R\$119,000, income tax savings applicable to loss on discontinued operations R\$25,500, and unrealized holding gain on non-trading equity securities R\$15,000, net of tax.

Gain on sale of plant assets	R\$ 95,000	Cash dividends declared	R\$ 150,000
Loss on discontinued operations	75,000	Retained earnings, January 1, 2022	600,000
Administrative expenses	240,000	Cost of goods sold	850,000
Rent revenue	40,000	Selling expenses	300,000
Loss on impairment of land	60,000	Sales revenue	1,700,000

Ordinary shares outstanding during 2022 were 100,000.

Instructions

- a. Prepare a comprehensive income statement for 2022 using the one statement approach.
- b. Prepare a retained earnings statement for 2022.

E4.18 (LO 5) (Changes in Equity) The equity section of Hasbro Inc. at January 1, 2022, was as follows.

Share capital—ordinary	\$300,000
Accumulated other comprehensive income	
Unrealized holding gain on non-trading equity securities	50,000
Retained earnings	20,000

During the year, the company had the following transactions.

1. Issued 10,000 shares at \$3 per share.
2. Dividends of \$9,000 were declared and paid.
3. Net income for the year was \$100,000.
4. Unrealized holding loss of \$5,000 occurred on its non-trading equity securities.

Instructions

Prepare a statement of changes in equity for Hasbro Inc.

Problems

P4.1 (LO 2, 3, 5) (Income Components) Presented below are financial statement classifications for the statement of comprehensive income and the retained earnings statement. For each transaction or account title, enter in the space provided a letter (or letters) to indicate the usual classification.

	Statement of Comprehensive Income		Retained Earnings Statement
A	Revenue	F	An addition or deduction from beginning balance
B	Operating expense	G	Additions to retained earnings
C	Other income or expense	H	Deduction from retained earnings
D	Discontinued operations	I	Note classification
E	Other comprehensive income		

Transactions	
1.	_____ Unrealized holding loss on non-trading equity securities.
2.	_____ Gain on sale of non-trading equity securities.
3.	_____ Sales revenue.
4.	_____ Loss on impairment of goodwill.
5.	_____ Sales salaries accrued.
6.	_____ Net income for the period.
7.	_____ Loss on sale of investments.
8.	_____ Depreciation on equipment used in operations.
9.	_____ Cash dividends declared and paid.
10.	_____ Correction of an error due to expensing the cost of equipment in a previous year.

11. _____ Insurance gain on flood loss—insurance proceeds exceed the carrying amount of assets destroyed.

12. _____ The company has decided to stop production of its candy division and suffered a loss on the sale of this division.

P4.2 (LO 2, 5) (Income Statement, Retained Earnings) Presented below is information related to Dickinson AG for 2022.

Retained earnings balance, January 1, 2022	€ 980,000
Sales revenue	25,000,000
Cost of goods sold	16,000,000
Interest expense	70,000
Selling and administrative expenses	4,700,000
Write-off of goodwill	820,000
Income taxes	1,244,000
Gain on the sale of investments	110,000
Loss due to flood damage	390,000
Loss on the disposition of the wholesale division (net of tax)	440,000
Loss on operations of the wholesale division (net of tax)	90,000
Dividends declared on ordinary shares	250,000
Dividends declared on preference shares	80,000

Instructions

Prepare an income statement and a retained earnings statement. Dickinson decided to discontinue its entire wholesale operations and to retain its manufacturing operations. On September 15, Dickinson sold the wholesale operations to Rogers Company. During 2022, there were 500,000 ordinary shares outstanding all year.

P4.3 (LO 2, 3, 5) (Income Statement, Retained Earnings, Periodic Inventory) Presented below is the trial balance of Thompson Ltd. at December 31, 2022.

Thompson Ltd.		
Trial Balance		
December 31, 2022		
	Debit	Credit
Purchase Discounts		£ 10,000
Cash	£ 189,700	
Accounts Receivable	105,000	
Rent Revenue		18,000
Retained Earnings		160,000
Salaries and Wages Payable		18,000
Sales Revenue		1,100,000
Notes Receivable	110,000	

Accounts Payable		49,000
Accumulated Depreciation—Equipment		28,000
Sales Discounts	14,500	
Sales Returns and Allowances	17,500	
Notes Payable		70,000
Selling Expenses	232,000	
Administrative Expenses	99,000	
Share Capital—Ordinary		300,000
Income Tax Expense	53,900	
Cash Dividends	45,000	
Allowance for Doubtful Accounts		5,000
Supplies	14,000	
Freight-In	20,000	
Land	70,000	
Equipment	140,000	
Bonds Payable		100,000
Gain on Sale of Land		30,000
Accumulated Depreciation—Buildings		19,600
Inventory	89,000	
Buildings	98,000	
Purchases	610,000	
Totals	<u>£1,907,600</u>	<u>£1,907,600</u>

A physical count of inventory on December 31 resulted in an inventory amount of £64,000; thus, cost of goods sold for 2022 is £645,000.

Instructions

Prepare an income statement and a retained earnings statement. Assume that the only changes in retained earnings during the current year were from net income and dividends. Thirty-thousand ordinary shares were outstanding the entire year.

P4.4 (LO 2, 3, 4) Groupwork (Income Statement Items) Maher AG reported income before income tax during 2022 of €790,000. Additional transactions occurring in 2022 but not considered in the €790,000 are as follows.

1. The company experienced an uninsured flood loss in the amount of €90,000 during the year.
2. At the beginning of 2020, the company purchased a machine for €54,000 (residual value of €9,000) that had a useful life of 6 years. The bookkeeper used straight-line depreciation for 2020, 2021, and 2022 but failed to deduct the residual value in computing the depreciation base.
3. Sale of securities held as a part of its portfolio resulted in a gain of €47,000.

4. The company disposed of its recreational division at a loss of €115,000 before taxes. Assume that this transaction meets the criteria for discontinued operations.
5. The company decided to change its method of inventory pricing from average-cost to the FIFO method. The effect of this change on prior years is to increase 2020 income by €60,000 and decrease 2021 income by €20,000 before taxes. The FIFO method has been used for 2022.

Instructions

Prepare an income statement for the year 2022, starting with income before income tax. Compute earnings per share as it should be shown on the face of the income statement. Ordinary shares outstanding for the year are 120,000 shares. (Assume a tax rate of 30% on all items.)

P4.5 (LO 2, 3, 4, 5) (Income Statement, Retained Earnings) The following account balances were included in the trial balance of Twain Corporation at June 30, 2022.

Sales Revenue	\$1,578,500	Depreciation Expense (sales equipment)	\$ 4,980
Sales Discounts	31,150	Maintenance and Repairs Expense (sales)	6,200
Cost of Goods Sold	896,770	Miscellaneous Selling Expenses	4,715
Salaries and Wages Expense (sales)	56,260	Supplies Expense	3,450
Sales Commissions	97,600	Telephone and Internet Expense (administration)	2,820
Travel Expense (salespersons)	28,930	Depreciation Expense (office furniture and equipment)	7,250
Delivery Expense	21,400	Income Tax Expense	\$102,000
Entertainment Expense	14,820	Depreciation Understatement Due to Error—2020 (net of tax)	17,700
Telephone and Internet Expense (sales)	9,030	Dividends (declared on preference shares)	9,000
Property Tax Expense	\$ 7,320	Dividends (declared on ordinary shares)	37,000
Bad Debt Expense (selling)	4,850		
Maintenance and Repairs Expense (administration)	9,130		
Office Expenses	6,000		
Sales Returns and Allowances	62,300		
Dividend Revenue	38,000		
Interest Expense	18,000		

The Retained Earnings account had a balance of \$337,000 at July 1, 2021. There are 80,000 ordinary shares outstanding.

Instructions

Prepare an income statement and a retained earnings statement for the year ended June 30, 2022.

P4.6 (LO 2, 3, 4, 5) (Statement Presentation) Presented below is a combined income and retained earnings statement for Sapporo Ltd. for 2022 (amounts in thousands).

Net sales		¥640,000
Costs and expenses		
Cost of goods sold	¥500,000	
Selling, general, and administrative expenses	66,000	
Other, net	17,000	583,000
Income before income tax		57,000
Income tax		19,400
Net income		37,600
Retained earnings at beginning of period, as previously reported	141,000	
Adjustment required for correction of error	(7,000)	
Retained earnings at beginning of period, as restated		134,000
Dividends on ordinary shares		(12,200)
Retained earnings at end of period		¥159,400

Additional facts are as follows.

1. “Selling, general, and administrative expenses” for 2022 included a charge of ¥8,500,000 for impairment of intangibles.
2. “Other, net” for 2022 was a loss on sale of equipment of ¥17,000,000.
3. “Adjustment required for correction of an error” was a result of a change in estimate (useful life of certain assets reduced to 8 years and a catch-up adjustment made).
4. Sapporo Company disclosed earnings per share for net income in the notes to the financial statements.

Instructions

Determine from these additional facts whether the presentation of the facts in the Sapporo Ltd. income and retained earnings statement is appropriate. If the presentation is not appropriate, describe the appropriate presentation and discuss its theoretical rationale. (Do not prepare a revised statement.)

P4.7 (LO 4, 5) (Retained Earnings Statement, Prior Period Adjustment) The following is the retained earnings account for the year 2022 for Acadian Corp.

Retained earnings, January 1, 2022		\$257,600
Add:		
Gain on sale of investments	\$41,200	
Net income	84,500	

Refund on litigation with government	21,600	
Recognition of income in 2021, but omitted from income statement in that year	25,400	172,700
		430,300
Deduct:		
Loss on discontinued operations	35,000	
Write-off of goodwill	60,000	
Cumulative effect on income of prior years in changing from average-cost to FIFO inventory valuation in 2022	23,200	
Cash dividends declared	32,000	150,200
Retained earnings, December 31, 2022		<u>\$280,100</u>

Instructions

- Prepare a corrected retained earnings statement. (Ignore income tax effects.) FIFO inventory was used in 2022 to compute net income.
- State where the items that do not appear in the corrected retained earnings statement should be shown.

P4.8 (LO 2, 3, 4) Groupwork (Income Statement) Wade NV has 150,000 ordinary shares outstanding. In 2022, the company reports income before income tax of €1,210,000. Additional transactions not considered in the €1,210,000 are as follows.

- In 2022, Wade NV sold equipment for €40,000. The machine had originally cost €80,000 and had accumulated depreciation of €30,000.
- The company discontinued operations of one of its subsidiaries during the current year at a loss of €190,000 before taxes. Assume that this transaction meets the criteria for discontinued operations. The loss from operations of the discontinued subsidiary was €90,000 before taxes; the loss from disposal of the subsidiary was €100,000 before taxes.
- An internal audit discovered that amortization of intangible assets was understated by €35,000 (net of tax) in a prior period. The amount was charged against retained earnings.
- The company had a gain of €125,000 on the condemnation of much of its property.

Instructions

Analyze the above information and prepare an income statement for the year 2022, starting with income before income tax. Compute earnings per share as it should be shown on the face of the income statement. (Assume a total effective tax rate of 20% on all items.)

Concepts for Analysis

CA4.1 (LO 1, 2, 3) (Identification of Income Statement Deficiencies) O'Malley plc requires a bank loan for additional working capital to finance expansion. The bank has requested an audited income statement for the year 2022. The accountant for O'Malley plc

provides you with the following income statement, which O'Malley plans to submit to the bank.

O'Malley plc Income Statement		
Sales revenue		£850,000
Dividends		32,300
Gain on recovery of insurance proceeds from earthquake loss		38,500
		920,800
Less:		
Selling expenses	£101,100	
Cost of goods sold	510,000	
Interest expense	13,700	
Loss on obsolescence of inventories	34,000	
Loss on discontinued operations	48,600	
Administrative expenses	73,400	780,800
Income before income tax		140,000
Income tax		56,000
Net income		£ 84,000

Instructions

Indicate the deficiencies in the income statement presented.

CA4.2 (LO 1) Groupwork (Earnings Management) Bobek Industries has recently reported steadily increasing income. The company reported income of €20,000 in 2019, €25,000 in 2020, and €30,000 in 2021. A number of market analysts have recommended that investors buy Bobek shares because the analysts expect the steady growth in income to continue. Bobek is approaching the end of its fiscal year in 2022, and it again appears to be a good year. However, it has not yet recorded warranty expense.

Based on prior experience, this year's warranty expense should be around €5,000, but some managers have approached the controller to suggest a larger, more conservative warranty expense should be recorded this year. Income before warranty expense is €43,000. Specifically, by recording a €7,000 warranty accrual this year, Bobek could report an increase in income for this year and still be in a position to cover its warranty costs in future years.

Instructions

- a. What is earnings management?
- b. Assume income before warranty expense is €43,000 for both 2022 and 2023 and that total warranty expense over the 2-year period is €10,000. What is the effect of the proposed accounting in 2022? In 2023?
- c. What is the appropriate accounting in this situation?

CA4.3 (LO 1) Ethics (Earnings Management) Charlie Brown, controller for Kelly Corporation, is preparing the company's income statement at year-end. He notes that the company lost a considerable sum on the sale of some equipment it had decided to replace. Brown does not want to highlight it as a material loss since he feels that will reflect poorly on him and the company. He reasons that if the company had recorded more depreciation during the assets' lives, the losses would not be so great. Since depreciation is included among the company's operating expenses, he wants to report the losses along with the company's expenses, where he hopes it will not be noticed.

Instructions

- a. What are the ethical issues involved?
- b. What should Brown do?

CA4.4 (LO 1) (Income Reporting Items) Simpson Group is an entertainment firm that derives approximately 30% of its income from the Casino Knights Division, which manages gambling facilities. As auditor for Simpson, you have recently overheard the following discussion between the controller and financial vice president.

VICE PRESIDENT:	If we sell the Casino Knights Division, it seems ridiculous to segregate the results of the sale in the income statement. Separate categories tend to be absurd and confusing to the shareholders. I believe that we should simply report the gain on the sale as other income or expense without detail.
CONTROLLER:	IFRS would require that we disclose this information more fully in the income statement as a gain on discontinued operations.
VICE PRESIDENT:	What about the walkout we had last month when employees were upset about their commission income? We had a loss as a result of this walkout.
CONTROLLER:	I am not sure where this loss would be reported.
VICE PRESIDENT:	Oh well, it doesn't make any difference because the net effect of all these items is immaterial, so no disclosure is necessary.

Instructions

- a. Using the information above, answer the following questions: Who is correct about handling the sale? What would be the correct income statement presentation for the sale of the Casino Knights Division?
- b. How should the walkout by the employees be reported?
- c. What do you think about the vice president's observation on materiality?
- d. What are the earnings per share implications of these topics?

CA4.5 (LO 2, 3) (Identification of Income Statement Weaknesses) The following financial statement was prepared by employees of Walters plc.

Walters plc Income Statement Year Ended December 31, 2022	
Revenues	

Gross sales, including sales taxes	£1,044,300
Less: Returns, allowances, and cash discounts	56,200
Net sales	988,100
Dividends, interest, and purchase discounts	30,250
Recoveries of accounts written off in prior years	13,850
Total revenues	<u>1,032,200</u>
Costs and expenses	
Cost of goods sold, including sales taxes	465,900
Salaries and related payroll expenses	60,500
Rent	19,100
Delivery expense and freight-in	3,400
Bad debt expense	27,800
Total costs and expenses	<u>576,700</u>
Income before unusual items	455,500
Unusual items	
Loss on discontinued styles (Note 1)	71,500
Loss on sale of marketable securities (Note 2)	39,050
Loss on sale of warehouse (Note 3)	86,350
Total unusual items	<u>196,900</u>
Net income	<u>£ 258,600</u>
Net income per ordinary share	<u>£2.30</u>
Note 1: New styles and rapidly changing consumer preferences resulted in a £71,500 loss on the disposal of discontinued styles and related accessories.	
Note 2: The company sold an investment in marketable securities at a loss of £39,050. The company normally sells securities of this nature.	
Note 3: The company sold one of its warehouses at an £86,350 loss.	

Instructions

Identify and discuss the weaknesses in classification and disclosure in the income statement above. You should explain why these treatments are weaknesses and what the proper presentation of the items would be in accordance with IFRS.

CA4.6 (LO 3, 4, 5) Ethics (Classification of Income Statement Items) As audit manager for Grupo and Rijo, you are in charge of reviewing the classification of unusual items that have occurred during the current year. The following material items have come to your attention.

1. A merchandising company incorrectly overstated its ending inventory 2 years ago. Inventory for all other periods is correctly computed.
2. An automobile dealer sells for \$137,000 an extremely rare 1930 S type Invicta which it purchased for \$21,000 10 years ago. The Invicta is the only such display item the dealer owns.

3. A drilling company during the current year extended the estimated useful life of certain drilling equipment from 9 to 15 years. As a result, depreciation for the current year was materially lowered.
4. A retail outlet changed its computation for bad debt expense from 1% to 1/2 of 1% of gross accounts receivable because of changes in its customer clientele.
5. A mining concern sells a foreign subsidiary engaged in uranium mining. It is the only uranium mine the company has.
6. A steel company changes from the average-cost method to the FIFO method for inventory costing purposes.
7. A construction company, at great expense, prepared a major proposal for a government loan. The loan is not approved.
8. A water pump manufacturer has had large losses resulting from a strike by its employees early in the year.
9. Depreciation for a prior period was incorrectly understated by \$950,000. The error was discovered in the current year.
10. A large sheep rancher suffered a major loss because the state required that all sheep in the state be killed to halt the spread of a rare disease. Such a situation has not occurred in the state for 20 years.
11. A food distributor that sells wholesale to supermarket chains and to fast-food restaurants (two distinguishable classes of customers) decides to discontinue the division that sells to one of the two classes of customers.

Instructions

Using the information above, indicate in what section of the income statement or retained earnings statement these items should be classified. Provide a brief rationale for your position.

CA4.7 (LO 5) (Comprehensive Income) Willie Nelson, Jr., controller for Jenkins Corporation, is preparing the company's financial statements at year-end. Currently, he is focusing on the income statement and determining the format for reporting comprehensive income. During the year, the company earned net income of \$400,000 and had unrealized gains on non-trading equity securities of \$15,000. In the previous year, net income was \$410,000, and the company had no unrealized gains or losses.

Instructions

- a. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the separate income statement format.
- b. Show how income and comprehensive income will be reported on a comparative basis for the current and prior years, using the combined comprehensive income statement format.
- c. Which format should Nelson recommend?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

- What type of income statement format does M&S use? Indicate why this format might be used to present income statement information.
- What are M&S's primary revenue sources?
- Compute M&S's gross profit for each of the years 2018 and 2019. Explain why gross profit increased in 2019.
- Why does M&S make a distinction between operating and non-operating profit?
- Does M&S report any non-IFRS measures? Explain.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- Which company had the greater percentage increase in revenues from 2017 to 2018?
- Did either company report the effect of a discontinued operation in its income statement? Briefly describe how the reporting of a discontinued operation can affect comparisons between two companies.
- Which company had more depreciation and amortization expense as a percentage of operating cash flow for 2018?
- Did either company report profit attributed to non-controlling interests? If so, what are the amounts of the non-controlling interest for each company?

Financial Statement Analysis Cases

Case 1: Bankruptcy Prediction

The Z-score bankruptcy prediction model uses statement of financial position and income information to arrive at a Z-Score, which can be used to predict financial distress:

$$Z = \frac{\text{Working capital}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}} \times .99 + \frac{\text{MV equity}}{\text{Total liabilities}} \times 0.6$$

EBIT is earnings before interest and taxes. MV equity is the market value of equity, which can be determined by multiplying share price by shares outstanding.

Following extensive testing, it has been shown that companies with Z-scores above 3.0 are unlikely to fail; those with Z-scores below 1.81 are very likely to fail. While the original model was developed for publicly held manufacturing companies, the model has been modified to apply to companies in various industries, emerging companies, and companies not traded in public markets.

Instructions

- a. Use information in the financial statements of a company like **Vodafone Group** (GBR) or **Nokia** (FIN) to compute the Z-score for the past 2 years.
- b. Interpret your result. Where does the company fall in the financial distress range?
- c. The Z-score uses EBIT as one of its elements. Why do you think this income measure is used?

Case 2: P/E Ratios

One of the more closely watched ratios by investors is the price/earnings or P/E ratio. By dividing price per share by earnings per share, analysts get insight into the value the market attaches to a company's earnings. More specifically, a high P/E ratio (in comparison to companies in the same industry) may suggest the shares are overpriced. Also, there is some evidence that companies with low P/E ratios are underpriced and tend to outperform the market. However, the ratio can be misleading.

P/E ratios are sometimes misleading because the E (earnings) is subject to a number of assumptions and estimates that could result in overstated earnings and a lower P/E. Some analysts conduct "revenue analysis" to evaluate the quality of an earnings number. Revenues are less subject to management estimates, and all earnings must begin with revenues. These analysts also compute the price-to-sales ratio (PSR = price per share ÷ sales per share) to assess whether a company is performing well compared to similar companies. If a company has a price-to-sales ratio significantly higher than its competitors, investors may be betting on a company that has yet to prove itself. [Source: Janice Revell, "Beyond P/E," *Fortune* (May 28, 2001), p. 174.]

Instructions

- a. Identify some of the estimates or assumptions that could result in overstated earnings.
- b. Compute the P/E ratio and the PSR for **Puma** (DEU) and **adidas** (DEU) for 2018.
- c. Use these data to compare the quality of each company's earnings.

Accounting, Analysis, and Principles

Counting Crows Ltd. provided the following information for the year 2022.

Retained earnings, January 1, 2022	£ 600,000
Administrative expenses	240,000
Selling expenses	300,000

Sales revenue	1,900,000
Cash dividends declared	80,000
Cost of goods sold	850,000
Gain on sale of investments	62,700
Loss on discontinued operations	75,000
Rent revenue	40,000
Unrealized holding gain on non-trading equity securities	17,000
Income tax applicable to continuing operations	187,000
Income tax benefit applicable to loss on discontinued operations	25,500
Income tax applicable to unrealized holding gain	2,000
Weighted-average shares outstanding	100,000

Accounting

Prepare (a) an income statement for 2022, (b) a retained earnings statement for 2022, and (c) a statement of comprehensive income using the two statement format.

Analysis

Explain how income statement subheads can provide useful information to financial statement readers.

Principles

In a recent meeting with its auditor, Counting Crows' management argued that the company should be able to prepare a pro forma income statement, with some one-time administrative expenses reported similarly to the reporting of discontinued operations. Is such reporting consistent with the qualitative characteristics of accounting information as discussed in the Conceptual Framework? Explain.

Research Case

Your client took accounting a number of years ago and was unaware of comprehensive income reporting. He is not convinced that any accounting standards exist for comprehensive income.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Which IFRS addresses reporting in the statement of comprehensive income? When was it issued?
- b. Provide the definition of total comprehensive income.
- c. Explain the rationale for presenting additional line items, headings, and subtotals in the statement of comprehensive income.
- d. What items of income or expense may be presented either in the statement of comprehensive income or in the notes?

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the income statement under IFRS and U.S. GAAP.

Standards issued by the FASB (U.S. GAAP) are the primary global alternative to IFRS. As in IFRS, the income statement is a required statement for U.S. GAAP. In addition, the content and presentation of the U.S. GAAP income statement are similar to those used for IFRS. A number of U.S. GAAP standards have been issued that provide guidance on issues related to income statement presentation.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the income statement.

Similarities

- Both U.S. GAAP and IFRS require companies to indicate the amount of net income attributable to non-controlling interest.
- Both U.S. GAAP and IFRS follow the same presentation guidelines for discontinued operations, but IFRS defines a discontinued operation more narrowly. Both standard-

setters have indicated a willingness to develop a similar definition to be used in the joint project on financial statement presentation.

- Both U.S. GAAP and IFRS have items that are recognized in equity as part of other comprehensive income but do not affect net income. Both U.S. GAAP and IFRS allow a one statement or two statement approach to preparing the statement of comprehensive income.

Differences

- Presentation of the income statement under U.S. GAAP follows either a single-step or multiple-step format. IFRS does not mention a single-step or multiple-step approach.
- The U.S. SEC requires companies to have a functional presentation of expenses. Under IFRS, companies must classify expenses by either nature *or* function. U.S. GAAP does not have that requirement.
- U.S. GAAP has no minimum information requirements for the income statement. However, the U.S. SEC rules have more rigorous presentation requirements. IFRS identifies certain minimum items that *should* be presented on the income statement.
- U.S. SEC regulations define many key measures and provide requirements and limitations on companies reporting non-U.S. GAAP information. IFRS does not define key measures like income from operations.
- U.S. GAAP does not permit revaluation accounting. Under IFRS, revaluation of property, plant, and equipment, and intangible assets is permitted and is reported as other comprehensive income. The effect of this difference is that application of IFRS results in more transactions affecting equity but not net income.

About the Numbers

The terminology used in the IFRS literature is sometimes different than what is used in U.S. GAAP. For example, here are some of the differences related to this chapter.

IFRS	U.S. GAAP
Equity or shareholders' equity	Shareholders' equity or stockholders' equity
Share capital—ordinary	Common stock
Share capital—preference	Preferred stock
Ordinary shares	Common shares
Preference shares	Preferred shares
Share premium—ordinary	Premium on common stock or Paid-in capital in excess of par—common
Share premium—preference	Premium on preferred stock or Paid-in capital in excess of par—preferred
Reserves	Retained earnings and accumulated other comprehensive income
Statement of financial position	Balance sheet or Statement of financial position

Profit or loss

Net income or Net loss

On the Horizon

At one time, the IASB and the FASB worked on a project to converge their standards related to financial statement presentation, including the income statement. A key feature of that project was that each of the statements would be organized in the same format, to separate an entity's financing activities from its operating and investing activities, and to separate financing activities into transactions with owners and creditors. Thus, the same classifications used in the income statement could be used in the statement of cash flows and the statement of financial position. That original convergence project has been on hold, and both Boards are now focusing on performance reporting (the income statement). The Boards expect to issue similar new guidelines for reporting in the income statement, involving additional income subtotals and increased disaggregation—referred to as additional “rows and columns”—to provide more useful information in the income statement. Go to the IASB and FASB websites and search performance reporting for more information.

GAAP Self-Test Questions

1. Which of the following is required to be reported in an income statement under U.S. GAAP but not under IFRS?
 - a. Discontinued operations.
 - b. Income from operations.
 - c. Cost of goods sold.
 - d. Income tax.
2. Which of the following statements is **correct** regarding income reporting under IFRS compared to U.S. GAAP?
 - a. IFRS does not permit revaluation of property, plant, and equipment, and intangible assets.
 - b. IFRS provides the same options for reporting comprehensive income as U.S. GAAP.
 - c. Companies must classify expenses by nature.
 - d. IFRS provides a definition for all items presented in the income statement.
3. Under U.S. GAAP:
 - a. companies must report comprehensive income in a single statement.
 - b. companies must report comprehensive income using a two statement approach.
 - c. companies must report income using a multiple step format.
 - d. companies can report comprehensive income using either a one statement or two statement approach.
4. The non-controlling interest section of the income statement is:

- a. required under U.S. GAAP but not under IFRS.
- b. required under IFRS but not under U.S. GAAP.
- c. required under IFRS and U.S. GAAP.
- d. not reported under U.S. GAAP or IFRS.

5. Common terminology under U.S. GAAP includes all of the following **except**:

- a. common stock.
- b. retained earnings.
- c. net income/loss.
- d. reserves.

GAAP Concepts and Application

GAAP 4.1 What are U.S. GAAP's requirements with respect to expense classification?

GAAP 4.2 Bradshaw Company experienced a loss that was deemed to be both unusual in nature and infrequent in occurrence. How should Bradshaw report this item in accordance with U.S. GAAP?

GAAP 4.3 Explain the U.S. GAAP reporting guidelines for items recognized in comprehensive income that do not affect net income.

GAAP 4.4 Presented below is the income statement for **Campbell Soup Company** (USA). Campbell prepares its financial statements in accordance with U.S. GAAP.

	2019	2018	2017
Net sales	\$8,107	\$6,615	\$5,837
Costs and expenses			
Cost of products sold	5,414	4,241	3,395
Marketing and selling expenses	842	728	675
Administrative expenses	610	563	448
Research and development expenses	91	91	93
Other expenses (income)	140	(73)	(216)
Restructuring charges	31	55	11
Total costs and expenses	7,128	5,605	4,406
Earnings before interest and taxes	979	1,010	1,431
Interest expense	356	183	115
Interest income	2	3	—
Earnings before taxes	625	830	1,316
Taxes on earnings	151	106	392
Earnings from continuing operations	474	724	924
Loss from discontinued operations	(263)	(463)	(37)
Net earnings	211	261	887

Less: Net earnings (loss) attributable to noncontrolling interests	—	—	—
Net earnings attributable to Campbell Soup Company	\$ 211	\$ 261	\$ 887
Per Share—Basic			
Earnings from continuing operations attributable to Campbell Soup Company	\$ 1.57	\$ 2.41	\$ 3.03
Loss from discontinued operations	(0.87)	(1.54)	(0.12)
Net earnings attributable to Campbell Soup Company	\$ 0.70	\$ 0.87	\$ 2.91
Weighted average shares outstanding—basic	301	301	305
Per Share—Assuming Dilution			
Earnings from continuing operations attributable to Campbell Soup Company	\$ 1.57	\$ 2.40	\$ 3.01
Loss from discontinued operations	(0.87)	(1.53)	(0.12)
Net earnings attributable to Campbell Soup Company	\$ 0.70	\$ 0.86	\$ 2.89
Weighted average shares outstanding—assuming dilution	302	302	307

Instructions

- a. Review the Campbell income statement and identify similarities and differences between the U.S. GAAP income statement and an income statement of an IFRS company as presented in the chapter.
- b. Identify non-recurring items reported by Campbell, if any. Is the reporting of these non-recurring items in the income statement under U.S. GAAP similar to reporting of these items in IFRS companies' income statements? Explain.

Answers to GAAP Self-Test Questions

1. b 2. b 3. d 4. c 5. d

Notes

- 1 We will use the term *income statement* except in situations where a company reports other comprehensive income (discussed later in the chapter). In that case, we will use the term **statement of comprehensive income** or **comprehensive income statement**. Also, note that IFRS uses other names to refer to the income statement, including the statement of profit or loss, and the statement of financial performance.
- 2 In support of the usefulness of income information, accounting researchers have documented an association between the market prices of companies and reported income. See W. H. Beaver, "Perspectives on Recent Capital Markets Research," *The Accounting Review* (April 2002), pp. 453–474.
- 3 A. Levitt, "The Numbers Game." Remarks to NYU Center for Law and Business, September 28, 1998 (Securities and Exchange Commission, 1998). A recent study indicates that earnings management is pervasive across U.S., European, and Asian companies, whether they use U.S. GAAP or IFRS. See M. Evans, R. Houston, M. Peters, and J. Pratt, "Reporting Regulatory Environments and Earnings Management: U.S. and Non-U.S."

Firms Using U.S. GAAP or IFRS,” *The Accounting Review* (September 2015), pp. 1969–1994.

4. The most common alternative to the transaction approach is the **capital maintenance approach** to income measurement. Under this approach, a company determines income for the period based on the change in equity, after adjusting for capital contributions (e.g., investments by owners) or distributions (e.g., dividends). The main drawback associated with the capital maintenance approach is that the components of income are not evident in its measurement. Various tax authorities use the capital maintenance approach to identify unreported income and refer to this approach as the “net worth check.”
5. The IASB takes the position that income includes both revenues and gains because they both reflect increases in economic benefits. Similarly, expenses include both expenses and losses because they both reflect decreases in economic benefits.
6. If a company prepares a statement of comprehensive income, then disclosure is required for (1) other comprehensive income classified by nature, (2) comprehensive income of associates and joint ventures, and (3) total comprehensive income. The statement of comprehensive income is discussed in more detail later in the chapter.
7. Manufacturing companies that follow the nature-of-expense method generally report direct labor, raw materials used, and changes in inventory related to work-in-process and finished goods. The overhead items are listed as basic expenses. If the function-of-expense method is used, depreciation expense, amortization expense, and labor costs must also be disclosed because this information is considered useful for predicting future cash flows.
8. *Accounting Trends and Techniques* (New York: AICPA) and *IFRS Accounting Trends and Techniques* (New York: AICPA).
9. As indicated in the opening story, the IASB is working on a project on financial statement presentation, on how to best report income as well as information presented in the statement of financial position and the statement of cash flows.
10. D. McDermott, “Latest Profit Data Stir Old Debate Between Net and Operating Income,” *Wall Street Journal* (May 3, 1999); and T. Shumsky, “IASB Chair Rings Alarm Over Use of Non-GAAP Measures,” *Wall Street Journal* (May 11, 2016).
11. In calculating earnings per share, companies deduct preference dividends from net income if the dividends are declared or if they are cumulative, though not declared. In addition, any amount allocated to the non-controlling interest should be deducted from net income in determining earnings per share.
12. We discuss the computational problems involved in accounting for these dilutive securities in earnings per share computations in [Chapter 16](#).
13. In practice, companies are required to report only one line on the income statement, such as “Loss on discontinued operations,” and then in the notes explain the two loss components that total £800,000. *For homework purposes, report both amounts on the face of the income statement, net of tax, if both amounts are provided.*

- [14](#) Formally, an entity changes an accounting principle when the change is required by IFRS or the change results in the financial statements providing a more reliable and faithfully representative depiction of the effect of transactions or events. *IAS 8* refers to this as a change in accounting **policy**. In [Chapter 22](#), we examine in greater detail the problems related to accounting changes, and changes in estimates (discussed in the next section).
- [15](#) We further discuss non-trading equity securities in [Chapter 17](#). Additional examples of other comprehensive items are translation gains and losses on foreign currency, unrealized gains and losses on certain hedging transactions ([Chapter 17 Appendix](#)), actuarial gains and losses in certain situations ([Chapter 20](#)), and changes in revaluation surplus (Chapters 11 and 12).
- [16](#) A company must display the components of other comprehensive income either (1) net of related tax effects, or (2) before related tax effects, with one amount shown for the aggregate amount of tax related to the total amount of other comprehensive income. Both alternatives must show each component of other comprehensive income, net of related taxes, either on the face of the statement or in the notes. [\[7\]](#)
- [17](#) The other comprehensive income section shall present line items for amounts of other comprehensive income, grouped into those that, in accordance with other IFRSs, (a) will not be reclassified subsequently to profit or loss, and (b) will be reclassified subsequently to profit or loss when specific conditions are met. If a company has non-controlling interest, an additional column would be added to report changes in non-controlling interest amounts. [\[8\]](#)
- [18](#) Many companies use the term Reserve to include all items in equity except for contributed capital. Contributed capital is comprised of Share Capital (ordinary and preference) and Share Premium (ordinary and preference). Rather than the term Reserve, we use Retained Earnings and Accumulated Other Comprehensive Income because these concepts are more descriptive of the items in the equity section.
- [19](#) Corrections of errors and changes in accounting principle are not considered other comprehensive income items.

Trentmann, “IASB Plans Overhaul of Financial Definitions,” *Wall Street Journal* (November 2, 2016); and “Primary Financial Statements: Project Overview” (IASB: September 2018).

CHAPTER 5

Statement of Financial Position and Statement of Cash Flows

LEARNING OBJECTIVES

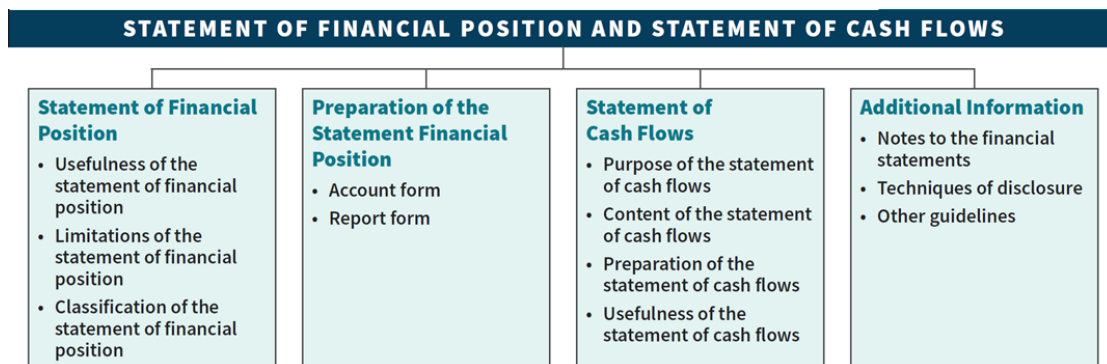

After studying this chapter, you should be able to:

1. Explain the uses, limitations, and content of the statement of financial position.
2. Prepare a classified statement of financial position.
3. Explain the purpose, content, and preparation of the statement of cash flows.
4. Describe additional types of information provided.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 5

As the following opening story indicates, the IASB is currently working to improve the presentation of financial information on the statement of financial position, as well as other financial statements. In this chapter, we examine the many different types of assets, liabilities, and equity items that affect the statement of financial position and the statement of cash flows. The content and organization of the chapter are as follows.

Hey, It Doesn't Balance!

A good accounting student knows by now that $\text{Total Assets} = \text{Total Liabilities} + \text{Total Equity}$. From this equation, we can also determine net assets, which are determined as follows: $\text{Total Assets} - \text{Total Liabilities} = \text{Net Assets}$. O.K., this is simple so far. But let's look at the discussion paper by the IASB on how the statement of financial position (often referred to as the balance sheet) should be structured.

The statement of financial position is divided into five major parts, with many assets and liabilities netted against one another. Here is the general framework for the new statement of financial position:

Business
Operating assets and liabilities
Investing assets and liabilities
Financing
Financing assets

Financing liabilities
Income Taxes
Discontinued Operations
Equity

The new statement looks a bit different than the traditional one. And although it does balance—in that net assets equal equity (as shown in the following example)—isn't it important to know total assets and total liabilities?

Statement of Financial Position		
Business		
Operating		
Inventories	€ 400,000	
Receivables	200,000	
<i>Total short-term assets</i>		€ 600,000
Property (net)	500,000	
Intangible assets	50,000	
<i>Total long-term assets</i>		550,000
Accounts payable	30,000	
Wages payable	40,000	
<i>Total short-term liabilities</i>		(70,000)
Lease liability	10,000	
Other long-term debt	35,000	
<i>Total long-term liabilities</i>		(45,000)
Net operating assets		1,035,000
Investing		
Trading securities	45,000	
Other securities	5,000	
<i>Total investing assets</i>		50,000
Total net business assets		1,085,000
Financing		
Financing assets		
Cash	30,000	
<i>Total financing assets</i>		30,000
Financing liabilities		
Short- and long-term borrowing	130,000	
<i>Total financing liabilities</i>		130,000
Net financing liabilities		100,000
Income Taxes		
Deferred income taxes		70,000
Discontinued Operations		
Assets held for sale		420,000
Net assets		€1,475,000

Equity		
Share capital—ordinary	€1,000,000	
Retained earnings	475,000	
Total equity		€1,475,000

As some have observed, the statement of financial position will not balance the way we expect it to. That is, assets won't equal liabilities and equity. This is because the assets and liabilities are grouped into the business, financing, discontinued operations, and income taxes categories. This new model raises a number of questions, such as:

- Does separating “business activities” from “financing activities” provide information that is more decision-useful?
- Does information on income taxes and discontinued operations merit separate categories?

As discussed in [Chapter 4](#), although the original comprehensive financial statement presentation project has been on hold, the IASB may at some time restart this project to get answers to the questions above. Indeed, as part of its research on the statement of financial position, the IASB found good comparability in the structure and the content of the statement of financial position but noted that companies are not presenting sufficient detail or note disclosure, to the extent that there may be merit in tweaking current reporting requirements to meet the IFRS objective for the statement of financial position. And while the IASB has an active project on performance reporting (see the IFRS website for more information), market analysts are keenly aware of the content in the statement of financial position—in whatever form—as an important input for assessing overall accounting quality.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Statement of Financial Position

LEARNING OBJECTIVE 1

Explain the uses, limitations, and content of the statement of financial position.

The **statement of financial position**, also referred to as the **balance sheet**, reports the assets, liabilities, and equity of a business enterprise at a specific date.¹ This financial statement provides information about the nature and amounts of investments in enterprise resources, obligations to creditors, and the equity in net resources. It therefore helps in predicting the amounts, timing, and uncertainty of future cash flows.

Usefulness of the Statement of Financial Position

By providing information on assets, liabilities, and equity, the statement of financial position provides a basis for computing rates of return and evaluating the capital structure of the enterprise. Analysts also use information in the statement of financial position to assess a company's risk² and future cash flows. In this regard, analysts use the statement of financial position to assess a company's liquidity, solvency, and financial flexibility.

Liquidity describes “the amount of time that is expected to elapse until an asset is realized or otherwise converted into cash or until a liability has to be paid.” Creditors are interested in short-term liquidity ratios, such as the ratio of cash (or near cash) to short-term liabilities. These ratios indicate

whether a company, like **adidas** (DEU), will have the resources to pay its current and maturing obligations. Similarly, shareholders assess liquidity to evaluate the possibility of future cash dividends or the buyback of shares. In general, the greater adidas's liquidity, the lower its risk of failure.

Solvency refers to the ability of a company to pay its debts as they mature. For example, when a company carries a high level of long-term debt relative to assets, it has lower solvency than a similar company with a low level of long-term debt. Companies with higher debt are relatively more risky because they will need more of their assets to meet their fixed obligations (interest and principal payments).

Liquidity and solvency affect a company's **financial flexibility**, which measures the ability of a company to take effective actions to alter the amounts and timing of cash flows so it can respond to unexpected needs and opportunities. For example, a company may become so loaded with debt—so financially inflexible—that it has little or no sources of cash to finance expansion or to pay off maturing debt. A company with a high degree of financial flexibility is better able to survive bad times, to recover from unexpected setbacks, and to take advantage of profitable and unexpected investment opportunities. Generally, the greater an enterprise's financial flexibility, the lower its risk of failure.

Limitations of the Statement of Financial Position

Some of the major limitations of the statement of financial position are:

1. Most assets and liabilities are reported at **historical cost**. As a result, the information provided in the statement of financial position is often criticized for not reporting a more relevant fair value. For example, **Pemex** (MEX) owns crude oil and natural gas that may appreciate in value. Yet, it reports any increase only if and when it sells the assets.
2. Companies use **judgments and estimates** to determine many of the items reported in the statement of financial position. For example, in its statement of financial position, **Lenovo** (CHN) estimates the amount of receivables that it will collect, the useful life of its warehouses, and the number of computers that will be returned under warranty.
3. The statement of financial position necessarily **omits many items that are of financial value** but that a company cannot record objectively. For example, the knowledge and skill of **Intel** (USA) employees in developing new computer chips are arguably the company's most significant asset. However, because Intel cannot reliably measure the value of its employees and other intangible assets (such as customer base, research superiority, and reputation), it does not recognize these items in the statement of financial position. Similarly, many liabilities are reported in an "off-balance-sheet" manner, if at all.

The bankruptcy of **Enron** (USA), the seventh-largest U.S. company at the time, highlights the omission of important items in the statement of financial position. In Enron's case, it failed to disclose certain off-balance-sheet financing obligations in its main financial statements.

Classification in the Statement of Financial Position

Statement of financial position accounts are **classified**. That is, a statement of financial position groups together similar items to arrive at significant subtotals. Furthermore, the material is arranged so that important relationships are shown.

The IASB indicates that the parts and subsections of financial statements are more informative than the whole. Therefore, the IASB discourages the reporting of summary accounts alone (total assets, net assets, total liabilities, etc.). Instead, companies should report and classify individual items in sufficient detail to permit users to assess the amounts, timing, and uncertainty of future cash flows. Such classification also makes it easier for users to evaluate the company's liquidity and financial flexibility, profitability, and risk.

To classify items in financial statements, companies group those items with similar characteristics and separate items with different characteristics. For example, companies should report separately:

1. Assets and liabilities with **different general liquidity characteristics**. For example, **Nokia** (FIN) reports cash separately from inventories.
2. Assets that differ in their **expected function** in the company's central operations or other activities. For example, **Puma** (DEU) reports merchandise inventories separately from property, plant, and equipment. Similarly, a company like **Marks and Spencer plc** (GBR) that uses assets

in its operations should report these assets differently from assets held for investments and assets subject to restrictions, such as leased facilities.

3. Liabilities that differ in their **amounts, nature, and timing**. For example, **Ahold Delhaize** (NLD/BEL) should report accounts payable separately from its pension liability.

The three general classes of items included in the statement of financial position are assets, liabilities, and equity. We defined them in [Chapter 2](#) as follows.³

Elements of the Statement of Financial Position

1. **Asset**. A present economic resource controlled by the entity as a result of past events (an economic resource is a right that has the potential to produce economic benefits).
2. **Liability**. A present obligation of the entity to transfer an economic resource as a result of past events.
3. **Equity**. The residual interest in the assets of the entity after deducting all its liabilities.

Companies then further divide these items into several subclassifications. [Illustration 5.1](#) indicates the general format of statement of financial position presentation.

Assets	Equity and Liabilities
Non-current assets	Equity
<i>Investments</i>	<i>Share capital</i>
<i>Property, plant, and equipment</i>	<i>Share premium</i>
<i>Intangible assets</i>	<i>Retained earnings</i>
<i>Other assets</i>	<i>Accumulated other comprehensive income</i>
Current assets	<i>Non-controlling interest</i>
	Non-current liabilities
	Current liabilities

[ILLUSTRATION 5.1](#) Statement of Financial Position Classification

What Do the Numbers Mean?

What Comes First?

There is much discussion involving the format of the financial statements. An interesting question is whether current assets or non-current assets should be shown first on the statement of financial position. One survey of 175 international companies shows the following order in which assets are presented.

Format of Statement of Financial Position	
Classified	Number of Companies*
Current assets, non-current assets, current liabilities, non-current liabilities, equity	84
Non-current assets, current assets, equity, non-current liabilities, current liabilities	54
Non-current assets, current assets, current liabilities, non-current liabilities, equity	16
Non-current assets, current assets, non-current liabilities, current liabilities, equity	0

*Of the 175 companies surveyed.

This survey shows that companies appear to favor reporting current assets first on the statement of financial position. Recognize that companies are required to present a classified statement of financial position except when one based on liquidity provides more relevant information. Therefore, either current assets or non-current assets can be shown first. The important point is that financial statement users have a good understanding of what is going to be realized in cash in the short-term versus the long-term.

Source: Adapted from P. Walters, "IFRS Financial Statements," *Accounting Trends and Techniques* (New York: AICPA), p. 117.

Non-Current Assets

Current assets are cash and other assets a company expects to convert to cash, sell, or consume either in one year or the operating cycle, whichever is longer. **Non-current assets** are those not meeting the definition of current assets. They include a variety of items, as we discuss in the following sections.

Long-Term Investments

Long-term investments, often referred to simply as investments, normally consist of one of four types:

1. Investments in securities, such as bonds, ordinary shares, or long-term notes.
2. Investments in tangible assets not currently used in operations, such as land held for speculation.
3. Investments set aside in special funds, such as a sinking fund, pension fund, or plant expansion fund.
4. Investments in non-consolidated subsidiaries or associated companies.

Companies group investments in debt and equity securities into three separate portfolios for valuation and reporting purposes:

- **Held-for-collection:** Debt securities that a company manages to collect contractual principal and interest payments.
- **Trading:** Debt and equity securities bought and held primarily for sale in the near term to generate income on short-term price changes.
- **Non-trading equity:** Certain equity securities held for purposes other than trading (e.g., to meet a legal or contractual requirement).

We further discuss the held-for-collection and non-trading equity investments in [Chapter 17](#).⁴

A company should report trading securities (whether debt or equity) as current assets. It classifies individual held-for-collection and non-trading equity securities as current or non-current, depending on the circumstances. It should report held-for-collection securities at amortized cost. All trading and non-trading equity securities are reported at fair value. [3]

Christian Dior (FRA) reported its investments as shown in [Illustration 5.2](#).

(in millions)

Investments in joint ventures and associates	€ 638
Non-current financial assets	3,481

ILLUSTRATION 5.2 Statement of Financial Position Presentation of Long-Term Investments

Property, Plant, and Equipment

Property, plant, and equipment are tangible, long-lived assets used in the regular operations of the business. These assets consist of physical property such as land, buildings, machinery, furniture, tools, and wasting resources (minerals). With the exception of land, a company either depreciates (e.g., buildings) or depletes (e.g., oil reserves) these assets.

ÆON Co. Ltd. (JPN) presented its property, plant, and equipment in its statement of financial position as shown in [Illustration 5.3](#).

Vehicles	459
Lease Assets	75,653
Construction in Progress	93,251
	¥2,755,110

Summary of Significant Accounting Policy

Property, buildings, and equipment—Property, buildings, and equipment are stated at cost. Depreciation of property, buildings, and equipment is computed under the straight-line method based on the estimated useful lives of the assets. The range of useful lives is principally from 20 to 39 years for store buildings, from 38 to 50 years for office buildings, from 3 to 20 years for structures, from 2 to 20 years for furniture and fixtures, and from 4 to 6 years for vehicles. Accumulated depreciation of property, buildings, and equipment at year-end was ¥2,282,350 million.

ILLUSTRATION 5.3 Statement of Financial Position Presentation of Property, Plant, and Equipment

A company discloses the basis it uses to value property, plant, and equipment; any liens against the properties; and accumulated depreciation—usually in the notes to the statements.

Intangible Assets

Intangible assets lack physical substance and are not financial instruments.⁵ These identifiable assets include patents, copyrights, franchises, trademarks, trade names, and customer lists. A company writes off (amortizes) limited-life intangible assets over the lesser of legal life or their useful lives. It periodically assesses indefinite-life intangibles (such as certain trade names) for impairment. Intangibles can represent significant economic resources, yet financial analysts often ignore them, because valuation is difficult. Research and development costs are expensed as incurred except for certain development costs, which are capitalized when it is probable that a development project will generate future economic benefits.

Nokia (FIN) reported intangible assets in its statement of financial position as shown in [Illustration 5.4](#).

 Nokia Corporation (in millions)	
Goodwill	€5,452
Other intangible assets	3,353
Total intangibles	€8,805

ILLUSTRATION 5.4 Statement of Financial Position Presentation of Intangible Assets

Other Assets

The items included in the section “Other assets” vary widely in practice. Some include items such as long-term prepaid expenses and non-current receivables. Other items that might be included are assets in special funds, property held for sale, and restricted cash or securities. A company should limit this section to include only unusual items sufficiently different from assets included in specific categories.

Current Assets

As indicated earlier, **current assets are cash and other assets a company expects to convert into cash, sell, or consume either in one year or in the operating cycle, whichever is longer.**⁶ The operating cycle is the average time between when a company acquires materials and supplies and when it receives cash for sales of the product (for which it acquired the materials and supplies). The cycle operates from cash through inventory, production, receivables, and back to cash. When several operating cycles occur within one year (which is generally the case for service companies), a company uses the one-year period. If the operating cycle is more than one year, a company uses the longer period.

The five major items found in the current assets section, and their bases of valuation, are shown in **Illustration 5.5**. These assets are generally presented in the following order.

Item	Basis of Valuation
Inventories	Lower-of-cost-or-net realizable value
Prepaid expenses	Cost
Receivables	Estimated amount collectible
Short-term investments	Generally, fair value
Cash and cash equivalents	Fair value

ILLUSTRATION 5.5 Current Assets and Basis of Valuation

A company does not report these five items as current assets if it does not expect to realize them in one year or in the operating cycle, whichever is longer. For example, a company excludes from the current assets section cash restricted for purposes other than payment of current obligations or for use in current operations. **Generally, if a company expects to convert an asset into cash or to use it to pay a current liability within a year or the operating cycle, whichever is longer, it classifies the asset as current.**

This rule, however, is subject to interpretation. A company classifies an investment in non-trading equity securities as either a current asset or a non-current asset, depending on management’s intent. When it has holdings of ordinary or preference shares that it will hold long-term, it should not classify them as current.

Although a current asset is well defined, certain theoretical problems also develop. For example, how is inclusion of prepaid expenses in the current assets section justified? The rationale is that if a company did not pay these items in advance, it would instead need to use other current assets during the operating cycle. If we follow this logic to its ultimate conclusion, however, any asset previously purchased saves the use of current assets during the operating cycle and would be considered current.

Another problem occurs in the current-asset definition when a company consumes plant assets during the operating cycle. Conceptually, it seems that a company should place in the current assets section an amount equal to the current depreciation charge on the plant assets, because it will consume them in the next operating cycle. However, this conceptual problem is ignored. This example illustrates that the formal distinction made between some current and non-current assets is somewhat arbitrary.

Inventories

To present inventories properly, a company discloses the basis of valuation (e.g., lower-of-cost-or-net realizable value) and the cost flow assumption used (e.g., FIFO or average-cost). [Illustration 5.6](#) shows how **Ahold Delhaize** (NLD/BEL) reports its inventories.

Ahold Delhaize

(in millions)

Current assets	
Inventories (Note 16)	€3,196

Note 16

Inventories are stated at cost or net realizable value, whichever is lower. Cost consists of all costs of purchase, cost of conversion and other costs incurred in bringing the inventories to their present location and condition, net of vendor allowances attributable to inventories. The cost of inventories is determined using either the first-in, first-out (“FIFO”) method or the weighted average cost method, depending on their nature or use. For certain inventories, cost is measured using the retail method, whereby the sales value of the inventories is reduced by the appropriate percentage gross margin. Net realizable value is the estimated selling price in the ordinary course of business, less the estimated marketing, distribution, and selling expenses.

ILLUSTRATION 5.6 Statement of Financial Position Presentation of Inventories

A manufacturing company, like **Acer Incorporated** (TWN), also indicates the stage of completion for inventory, as shown in [Illustration 5.7](#). Note that Acer shows amounts both in New Taiwan dollars (NT\$) and U.S. dollars (\$).

Acer Incorporated

(in millions)

Current assets

Spare parts	4,544,547	138,477
Inventories in transit	9,233,802	281,364
Less: provision for inventory obsolescence and net realizable value	(5,236,224)	(159,553)
	40,028,195	1,219,702

ILLUSTRATION 5.7 Statement of Financial Position Presentation of Inventories

Receivables

A company should clearly identify any anticipated loss due to uncollectible accounts, the amount and nature of any non-trade receivables, and any receivables used as collateral. Major categories of receivables should be shown in the statement of financial position or the related notes. For receivables arising from unusual transactions (such as sale of property, or a loan to associates or employees), companies should separately classify these as long-term, unless collection is expected within one year.

RELX Group (GBR) reported its receivables as shown in [Illustration 5.8](#).

RELX Group

(in millions)

Current assets		
Trade and other receivables	Note 20	€2,015
Note 20 Trade and other receivables		
Trade receivables		€ 1,829
Allowance for doubtful debts		(87)
		1,742
Prepayments and accrued income		224
Net finance lease receivable		49
Total		€2,015

Trade receivables are predominantly non-interest bearing and their carrying amounts approximate their fair value.

ILLUSTRATION 5.8 Statement of Financial Position Presentation of Receivables

Prepaid Expenses

A company includes prepaid expenses in current assets if it will receive benefits (usually services) within one year or the operating cycle, whichever is longer. As we discussed earlier, these items are current assets because if they had not already been paid, they would require the use of cash during the next year or the operating cycle. A company reports prepaid expenses at the amount of the unexpired or unconsumed cost.

A common example is the prepayment for an insurance policy. A company classifies it as a prepaid expense because the payment precedes the receipt of the benefit of coverage. Other common prepaid expenses include prepaid rent, advertising, taxes, and office or operating supplies. **adidas** (DEU) reports prepaid expenses in other current assets, along with tax receivables other than income taxes and derivative financial assets, as shown in Illustration 5.9.

adidas
(in millions)

Other current assets	Note 11	€725
Note 11 Other current assets		
Other current assets consist of the following:		
Prepaid expenses		€242
Tax receivables other than income taxes		124
Return assets		258
Sundry		107
Other current assets, gross		731
Less: accumulated allowances		(6)
Other current assets, net		€725

ILLUSTRATION 5.9. Statement of Financial Position Presentation of Prepaid Expenses

Short-Term Investments

As indicated earlier, a company should report trading securities (whether debt or equity) as current assets. It classifies individual non-trading investments as current or non-current, depending on the circumstances. It should report held-for-collection securities at amortized cost. All trading securities are reported at fair value.⁷

Illustration 5.10 provides an excerpt from the annual report of **AB InBev** (BEL) with respect to its short-term financial assets.

AB InBev

Investment securities (Note 17)	€87
Note 17	
Current investments	
Financial assets at fair value through profit or loss	€87

ILLUSTRATION 5.10 Statement of Financial Position Presentation of Short-Term Investments

Cash

Cash is generally considered to consist of currency and demand deposits (monies available on demand at a financial institution). **Cash equivalents** are short-term, highly liquid investments that will mature within three months or less. Most companies use the caption “Cash and cash equivalents,” and

they indicate that this amount approximates fair value. As an example, see the excerpt from **adidas** (DEU) in [Illustration 5.11](#).

 adidas (in millions)	
Cash (Note 6)	€2,629
Note 6 Cash and cash equivalents	
Cash and cash equivalents consist of cash at banks and on hand as well as short-term bank deposits.	

ILLUSTRATION 5.11 Statement of Financial Position Presentation of Cash and Cash Equivalents

A company must disclose any restrictions or commitments related to the availability of cash. If a company restricts cash for purposes other than current obligations, it excludes the cash from current assets. [Illustration 5.12](#) shows an example of this, from the annual report of **Vodafone plc** (GBR).

 Vodafone plc (in millions)	
Non-current assets	
Other investments (Note 15)	£7,060

Other investments comprise the following, all of which are classified as listed and unlisted, with the exception of other debt and bonds, which are classified as loans and receivables, and cash held as restricted deposits.	
Listed securities	
Equity securities	£3,931
Unlisted securities	
Equity securities	833
Public debt and bonds	20
Other debt and bonds	2,094
Cash held as restricted deposits	182
	£7,060

ILLUSTRATION 5.12 Statement of Financial Position Presentation of Restricted Cash

Equity

The **equity** (also referred to as **shareholders' equity**) section is one of the most difficult sections to prepare and understand. This is due to the complexity of ordinary and preference share agreements and the various restrictions on equity imposed by company laws, liability agreements, and boards of directors. Companies usually divide the section into six parts:

Equity Section

1. **Share Capital.** The par or stated value of shares issued. It includes ordinary shares (sometimes referred to as *common shares*) and preference shares (sometimes referred to as *preferred shares*).
2. **Share Premium.** The excess of amounts paid-in over the par or stated value.
3. **Retained Earnings.** The company's undistributed earnings.
4. **Accumulated Other Comprehensive Income.** The aggregate amount of the other comprehensive income items.
5. **Treasury Shares.** Generally, the amount of ordinary shares repurchased.
6. **Non-Controlling Interest.** A portion of the equity of subsidiaries not owned by the reporting company.

For ordinary shares, companies must disclose the par value and the authorized, issued, and outstanding share amounts. The same holds true for preference shares. A company usually presents the share premium (for both ordinary and preference shares) in one amount, although subtotals are informative if the sources of additional capital are varied and material. The retained earnings amount may be divided between the **unappropriated** (the amount that is usually available for dividend distribution) and **restricted** (e.g., by bond indentures or other loan agreements) amounts. In addition, companies show any shares reacquired (treasury shares) as a reduction of equity.

Accumulated other comprehensive income includes such items as unrealized gains and losses on non-trading equity securities and unrealized gains and losses on certain derivative transactions. Non-controlling interest is also shown as a separate item (where applicable) as a part of equity.

Illustration 5.13 presents an example of the equity section for **Ahold Delhaize** (NLD/BEL).

Ahold Delhaize
(in millions)

Share capital	€ 13
Additional paid-in capital	13,999
Currency translation reserve	(60)
Cash flow hedging reserve	(2)
Reserve participations	407
Other reserves including retained earnings	460
Equity attributable to common shareholders	€ 14,817

ILLUSTRATION 5.13 Statement of Financial Position Presentation of Equity

Many companies reporting under IFRS often use the term “reserve” as an all-inclusive catch-all for items such as retained earnings, share premium, and accumulated other comprehensive income. An example of such a presentation is shown in **Illustration 5.14** for **Lenovo Group Limited** (CHN).

Lenovo Group Limited
(in millions)

Share capital	\$3,185,923
Reserves	210,530
Equity attributed to owners of the Company	3,396,453
Perpetual securities	993,670
Other non-controlling interests	473,178
Put option written on non-controlling interest	(766,238)
Total equity	\$4,097,063

ILLUSTRATION 5.14. Statement of Financial Position Presentation of Reserves

The equity accounts in a corporation differ considerably from those in a partnership or proprietorship. Partners show separately their permanent capital accounts and the balance in their temporary accounts (drawing accounts). Proprietorships ordinarily use a single capital account that handles all of the owner's equity transactions.

Non-Current Liabilities

Non-current liabilities are obligations that a company does not reasonably expect to liquidate within the longer of one year or the normal operating cycle. Instead, it expects to pay them at some date beyond that time. That is, non-current liabilities are those that do not meet the definition of current liabilities (see [footnote 6](#)). The most common examples are bonds payable, notes payable, deferred income taxes, lease obligations, and pension obligations. **Companies classify non-current liabilities that mature within the current operating cycle or one year as current liabilities if payment of the obligation requires the use of current assets.**

Generally, non-current liabilities are of three types:

1. Obligations arising from specific financing situations, such as the issuance of bonds, long-term lease obligations, and long-term notes payable.
2. Obligations arising from the ordinary operations of the company, such as pension obligations and deferred income tax liabilities.
3. Obligations that depend on the occurrence or non-occurrence of one or more future events to confirm the amount payable, or the payee, or the date payable, such as service or product warranties, environmental liabilities, and restructurings, often referred to as *provisions*.

Companies generally provide a great deal of supplementary disclosure for non-current liabilities because most long-term debt is subject to various covenants and restrictions for the protection of lenders.

Companies frequently describe the terms of all non-current liability agreements (including maturity date or dates, rates of interest, nature of obligation, and any security pledged to support the debt) in notes to the financial statements. [Illustration 5.15](#) provides an example of this, taken from an excerpt from **Silver Fern Farms Limited's** (NZL) financials.

Silver Fern Farms Limited

(in thousands)

Non-current liabilities

Finance leases	55
Provisions	9,547
	<hr/>
	NZD 10,205

ILLUSTRATION 5.15 Statement of Financial Position Presentation of Non-Current Liabilities

Current Liabilities

Current liabilities are the obligations that a company generally expects to settle in its normal operating cycle or one year, whichever is longer. This concept includes:

1. Payables resulting from the acquisition of goods and services: accounts payable, salaries and wages payable, income taxes payable, and so on.
2. Collections received in advance for the delivery of goods or performance of services, such as unearned rent revenue or unearned subscriptions revenue.
3. Other liabilities whose liquidation will take place within the operating cycle or one year, such as the portion of long-term bonds to be paid in the current period, short-term obligations arising from purchase of equipment, or estimated liabilities, such as a warranty liability. As indicated earlier, estimated liabilities are often referred to as provisions.

At times, a liability that is payable within the next year is not included in the current liabilities section. This occurs when the company refinances the debt on a long-term basis before the end of the reporting period. [7] This approach is used because liquidation does not result from the use of current assets or the creation of other current liabilities.

Companies do not report current liabilities in any consistent order. In general, though, companies most commonly list notes payable, accounts payable, or short-term debt as the first item. Income tax payables or other current liabilities are commonly listed last. For example, see **Siemens AG's** (DEU) current liabilities section in [Illustration 5.16](#).

Siemens AG

(in millions)

Current liabilities	
Short-term debt and current maturities of long-term debt	€ 5,057
Trade payables	10,716
Other current financial liabilities	1,485
Current liabilities	14,464
Current provisions	3,931
Current income tax liabilities	3,102
Other current liabilities	9,118
Liabilities associated with assets classified as held for disposal	1
Total current liabilities	€47,874

ILLUSTRATION 5.16 Statement of Financial Position Presentation of Current Liabilities

Current liabilities include such items as trade and non-trade notes and accounts payable, advances received from customers, and current maturities of long-term debt. If the amounts are material, companies classify income taxes and other accrued items separately. A company should fully describe in the notes any information about a secured liability—for example, shares held as collateral on notes payable—to identify the assets providing the security.

The excess of total current assets over total current liabilities is referred to as **working capital** (or sometimes **net working capital**). Working capital represents the net amount of a company's relatively liquid resources. That is, it is the liquidity buffer available to meet the financial demands of the operating cycle.

Companies seldom disclose on the statement of financial position an amount for working capital. But bankers and other creditors compute it as an indicator of the short-run liquidity of a company. To determine the actual liquidity and availability of working capital to meet current obligations, however, requires analysis of the composition of the current assets and their nearness to cash.

What Do the Numbers Mean?

Warning Signals

Analysts use statement of financial position information in models designed to predict financial distress. Researcher E. I. Altman pioneered a bankruptcy-prediction model that derives a “Z-score” by combining statement of financial position and income measures in the following equation.

$$Z = \frac{\text{Working Text}}{\text{Total assets}} \times 1.2 + \frac{\text{Retained earnings}}{\text{Total assets}} \times 1.4 + \frac{\text{EBIT}}{\text{Total assets}} \times 3.3 + \frac{\text{Sales}}{\text{Total assets}}$$

Following extensive testing, Altman found that companies with Z-scores above 3.0 are unlikely to fail. Those with Z-scores below 1.81 are very likely to fail.

Altman developed the original model for publicly held manufacturing companies. He and others have modified the model to apply to companies in various industries, emerging companies, and companies not traded in public markets.

At one time, the use of Z-scores was virtually unheard of among practicing accountants. Today, auditors, management consultants, and courts of law use this measure to help evaluate the overall financial position and trends of a firm. In addition, banks use Z-scores for loan evaluation. While a low score does not guarantee bankruptcy, the model has been proven accurate in many situations.

Source: Adapted from E. I. Altman and E. Hotchkiss, *Corporate Financial Distress and Bankruptcy*, Third Edition (Hoboken, NJ: John Wiley and Sons, 2006).

Preparation of the Statement of Financial Position

LEARNING OBJECTIVE 2

Prepare a classified statement of financial position.

As indicated earlier, IFRS does not specify the order or format in which a company presents items in the statement of financial position (see the [“What Do the Numbers Mean?”](#) box entitled “What Comes First?”). Thus, some companies present assets first, followed by equity, and then liabilities. Other companies report current assets first in the assets section, and current liabilities first in the liabilities section. Many companies report items such as receivables and property, plant, and equipment net and then disclose the additional information related to the contra accounts in the notes.

Account Form

In general, companies use either the account form or the report form to present the statement of financial position information. The **account form** lists assets, by sections, on the left side, and equity and liabilities, by sections, on the right side. The main disadvantage is the need for a sufficiently wide space in which to present the items side by side. Often, the account form requires two facing pages.

Report Form

The **report form** lists the sections one above the other, on the same page. See, for example, [Illustration 5.17](#), which lists assets, followed by equity and liabilities directly below, on the same page.

Scientific Products, Inc.

Total equity and liabilities			\$1,720,554

ILLUSTRATION 5.17 Classified Report-Form Statement of Financial Position

Infrequently, companies use other statement of financial position formats. For example, companies sometimes deduct current liabilities from current assets to arrive at working capital. Or, they deduct all liabilities from all assets.

Statement of Cash Flows

LEARNING OBJECTIVE 3

Explain the purpose, content, and preparation of the statement of cash flows.

[Chapter 2](#) indicated that an important element of the objective of financial reporting is “assessing the amounts, timing, and uncertainty of cash flows.” The three financial statements we have looked at so far—the income statement (or statement of comprehensive income), the statement of changes in equity, and the statement of financial position—all present some information about the cash flows of an enterprise during a period. But they do so to a limited extent. For instance, the income statement provides information about resources provided by operations but not exactly cash. The statement of changes in equity shows the amount of cash used to pay dividends or purchase treasury shares. Comparative statements of financial position might show what assets the company has acquired or disposed of and what liabilities it has incurred or liquidated.

Useful as they are, none of these statements presents a detailed summary of all the cash inflows and outflows, or the sources and uses of cash during the period. To fill this need, the IASB requires the **statement of cash flows** (also called the **cash flow statement**). [\[8\]](#)

Purpose of the Statement of Cash Flows

The primary purpose of the statement of cash flows is to provide relevant information about the cash receipts and cash payments of an enterprise during a period. To achieve this purpose, the statement of cash flows reports the following: (1) the cash effects of operations during a period, (2) investing transactions, (3) financing transactions, and (4) the net increase or decrease in cash during the period.⁸

Reporting the sources, uses, and net increase or decrease in cash helps investors, creditors, and others know what is happening to a company’s most liquid resource (see [Underlying Concepts](#)). Because most individuals maintain a checkbook and prepare a tax return on a cash basis, they can comprehend the information reported in the statement of cash flows.

Underlying Concepts

The statement of cash flows meets the objective of financial reporting—to help assess the amounts, timing, and uncertainty of future cash flows.

The statement of cash flows provides answers to the following simple but important questions:

1. Where did the cash come from during the period?
2. What was the cash used for during the period?
3. What was the change in the cash balance during the period?

Content of the Statement of Cash Flows

Companies classify cash receipts and cash payments during a period into three different activities in the statement of cash flows—operating, investing, and financing activities, defined as follows.

1. **Operating activities** involve the cash effects of transactions that enter into the determination of net income.
2. **Investing activities** include making and collecting loans and acquiring and disposing of investments (both debt and equity) and property, plant, and equipment.
3. **Financing activities** involve liability and equity items. They include (a) obtaining resources from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

Illustration 5.18 shows the basic format of the statement of cash flows.

Statement of Cash Flows	
Cash flows from operating activities	\$XXX
Cash flows from investing activities	XXX
Cash flows from financing activities	XXX
Net increase (decrease) in cash	XXX
Cash at beginning of year	XXX
Cash at end of year	\$XXX

ILLUSTRATION 5.18 Basic Format of Cash Flow Statement

Illustration 5.19 graphs the inflows and outflows of cash classified by activity.

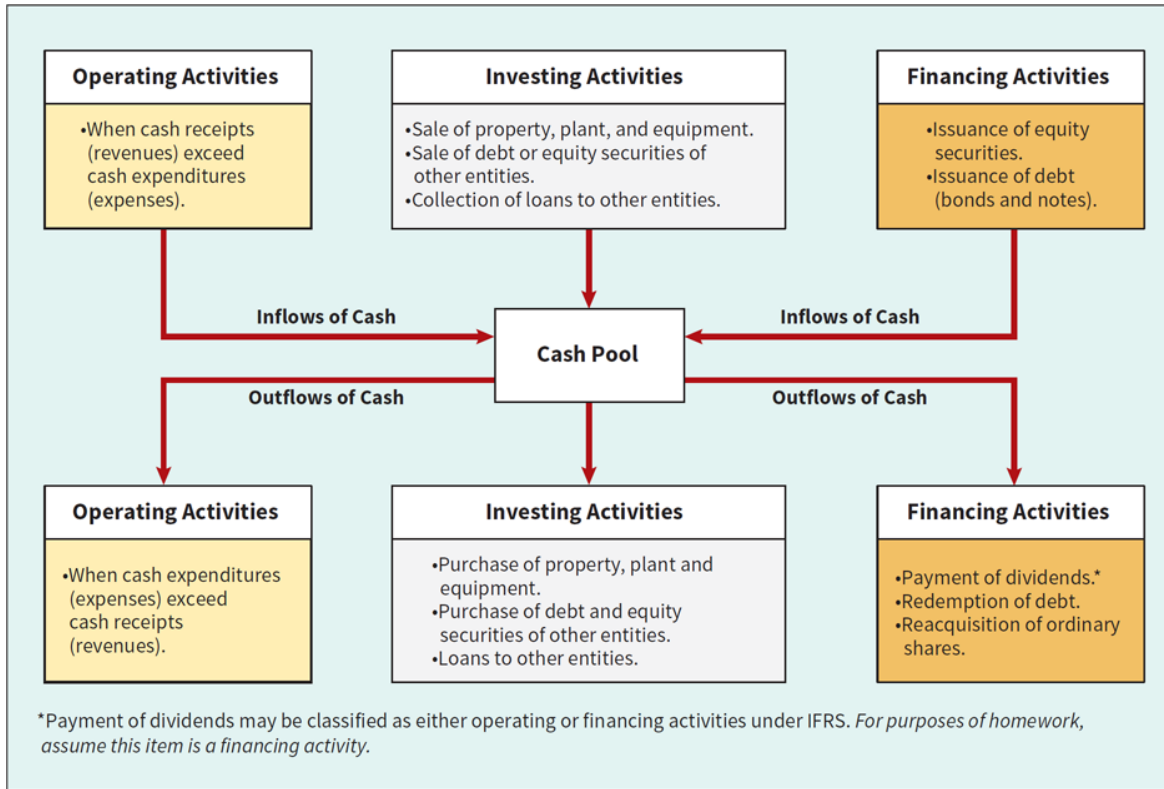

ILLUSTRATION 5.19 Cash Inflows and Outflows

The statement’s value is that it helps users evaluate liquidity, solvency, and financial flexibility. As stated earlier, **liquidity** refers to the “nearness to cash” of assets and liabilities. **Solvency** is the firm’s ability to pay its debts as they mature. **Financial flexibility** is a company’s ability to respond and adapt to financial adversity and unexpected needs and opportunities.

We have devoted [Chapter 23](#) entirely to the detailed preparation and content of the statement of cash flows. The intervening chapters will cover several elements and complex topics that affect the content of a typical statement of cash flows. The presentation in this chapter is introductory—a reminder of the existence of the statement of cash flows and its usefulness.

What Do the Numbers Mean?

Watch That Cash Flow

Investors usually focus on net income measured on an accrual basis. However, information on cash flows can be important for assessing a company's liquidity, financial flexibility, and overall financial performance. The graph shows **W. T. Grant's** (USA) financial performance over seven years.

Although W. T. Grant showed consistent profits and even some periods of earnings growth, its cash flow began to “go south” starting in about year three. The company filed for bankruptcy shortly after year seven. Financial statement readers who studied the company's cash flows would have found early warnings of its problems. The Grant experience is a classic case, illustrating the importance of cash flows as an early-warning signal of financial problems.

The recent picture at **IBM** (USA) is similar and raises some red flags as to the company's financial flexibility. As shown in the chart, IBM's earnings per share (EPS) growth has held fairly steady, but free cash flow is on the decline.

A look under the hood indicates that while debt levels are increasing, IBM has been using free cash flow for increased dividends and share buybacks. Recall that buybacks increase EPS by reducing shares outstanding. Free cash flow going toward dividends and share repurchases indicates IBM's "low quality of earnings." As one market commentator noted, "negative free cash flow leads to increased borrowing." These are metrics that investors ignore at their peril.

Source: A. Shields, "Why IBM Has Generated Higher Earnings Despite Falling Revenue," *Market Realist*, marketrealist.com/2014/07/why-ibm-has-generated-higher-earnings-despite-falling-revenues/ (July 11, 2014).

Preparation of the Statement of Cash Flows

Sources of Information

Companies obtain the information to prepare the statement of cash flows from several sources: (1) comparative statements of financial position, (2) the current income statement, and (3) selected transaction data.

The following simple example demonstrates how companies use these sources in preparing a statement of cash flows.

On January 1, 2022, in its first year of operations, Telemarketing Inc. issued 50,000 ordinary shares of \$1 par value for \$50,000 cash. The company rented its office space, furniture, and telecommunications equipment and performed marketing services throughout the first year. In June 2022, the company purchased land for \$15,000. [Illustration 5.20](#) shows the company's comparative statements of financial position at the beginning and end of 2022.

Telemarketing Inc.			
Statements of Financial Position			
Assets	Dec. 31, 2022	Jan. 1, 2022	Increase/Decrease
Land	\$15,000	\$-0-	\$15,000 Increase
Accounts receivable	41,000	-0-	41,000 Increase
Cash	31,000	-0-	31,000 Increase
Total	<u>\$87,000</u>	<u>\$-0-</u>	
Equity and Liabilities			
Share capital	\$50,000	\$-0-	50,000 Increase
Retained earnings	25,000	-0-	25,000 Increase
Accounts payable	12,000	-0-	12,000 Increase
Total	<u>\$87,000</u>	<u>\$-0-</u>	

ILLUSTRATION 5.20 Comparative Statements of Financial Position

Illustration 5.21 presents the income statement and additional information.

For the Year Ended December 31, 2022	
Revenues	\$172,000
Operating expenses	<u>120,000</u>
Income before income tax	52,000
Income tax	<u>13,000</u>
Net income	<u>\$ 39,000</u>
Additional information:	
Dividends of \$14,000 were paid during the year.	

ILLUSTRATION 5.21 Income Statement Data

Preparing the Statement of Cash Flows

Preparing the statement of cash flows from these sources involves four steps:

1. Determine the net cash provided by (or used by) operating activities.
2. Determine the net cash provided by (or used by) investing and financing activities.
3. Determine the change (increase or decrease) in cash during the period.
4. Reconcile the change in cash with the beginning and the ending cash balances.

Net cash provided by operating activities is the excess of cash receipts over cash payments from operating activities. Companies determine this amount by converting net income on an accrual basis to a cash basis. To do so, they add to or deduct from net income those items in the income statement that do not affect cash. This procedure requires that a company analyze not only the current year's income statement but also the comparative statements of financial position and selected transaction data.

Analysis of Telemarketing's comparative statements of financial position reveals two items that will affect the computation of net cash provided by operating activities:

1. The increase in accounts receivable reflects a non-cash increase of \$41,000 in revenues.
2. The increase in accounts payable reflects a non-cash increase of \$12,000 in expenses.

Therefore, to arrive at net cash provided by operating activities, Telemarketing Inc. deducts from net income the increase in accounts receivable (\$41,000), and it adds back to net income the increase in accounts payable (\$12,000). As a result of these adjustments, the company determines net cash provided by operating activities to be \$10,000, computed as shown in [Illustration 5.22](#).

Net income		\$39,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(41,000)	
Increase in accounts payable	12,000	(29,000)
Net cash provided by operating activities		\$10,000

ILLUSTRATION 5.22 Computation of Net Cash Provided by Operating Activities

Next, the company determines its investing and financing activities. Telemarketing Inc.'s only **investing activity** was the land purchase. It had two **financing activities**. (1) Share capital—ordinary increased \$50,000 from the issuance of 50,000 ordinary shares for cash. (2) The company paid \$14,000 cash in dividends. Knowing the amounts provided or used by operating, investing, and financing activities, the company determines the **net increase in cash**. [Illustration 5.23](#) presents Telemarketing Inc.'s statement of cash flows for 2022.

Telemarketing Inc. Statement of Cash Flows For the Year Ended December 31, 2022		
Cash flows from operating activities		
Net income		\$39,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in accounts receivable	\$(41,000)	
Increase in accounts payable	12,000	(29,000)
Net cash provided by operating activities		10,000
Cash flows from investing activities		
Purchase of land	(15,000)	
Net cash used by investing activities		(15,000)
Cash flows from financing activities		
Issuance of ordinary shares	50,000	
Payment of cash dividends	(14,000)	
Net cash provided by financing activities		36,000
Net increase in cash		31,000
Cash at beginning of year		—0—
Cash at end of year		\$31,000

ILLUSTRATION 5.23 Statement of Cash Flows

The increase in cash of \$31,000 reported in the statement of cash flows is equal to \$31,000 in cash calculated from the comparative statements of financial position.⁹

Significant Non-Cash Activities

Not all of a company's significant activities involve cash. Examples of significant non-cash activities are:

1. Issuance of ordinary shares to purchase assets.
2. Conversion of bonds into ordinary shares.
3. Issuance of debt to purchase assets.
4. Exchanges of long-lived assets.

Significant financing and investing activities that do not affect cash are not reported in the body of the statement of cash flows. Rather, these activities are reported in a separate note to the financial statements. Such reporting of these non-cash activities satisfies the full disclosure principle.

Illustration 5.24 shows an example of a comprehensive statement of cash flows. Note that the company purchased equipment through the issuance of €50,000 of bonds, which is a significant non-cash transaction. *For homework purposes, you should present significant non-cash activities in a separate note entitled “Cash Flow Note.”*

Nestor SA		
Statement of Cash Flows		
For the Year Ended December 31, 2022		
Cash flows from operating activities		
Net income		€320,750
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	€88,400	
Amortization of intangibles	16,300	
Gain on sale of plant assets	(8,700)	
Increase in accounts receivable (net)	(11,000)	
Decrease in inventory	15,500	
Decrease in accounts payable	(9,500)	91,000
Net cash provided by operating activities		411,750
Cash flows from investing activities		
Sale of plant assets	90,500	
Purchase of equipment	(182,500)	
Purchase of land	(70,000)	
Net cash used by investing activities		(162,000)
Cash flows from financing activities		
Payment of cash dividend	(19,800)	
Issuance of ordinary shares	100,000	
Redemption of bonds	(50,000)	
Net cash provided by financing activities		30,200
Net increase in cash		279,950
Cash at beginning of year		135,000
Cash at end of year		€414,950¹
¹Cash Flow Note		
A non-cash investing and financing activity was the purchase of equipment through issuance of €50,000 of bonds.		

ILLUSTRATION 5.24 Comprehensive Statement of Cash Flows

Usefulness of the Statement of Cash Flows

“Happiness is a positive cash flow” is certainly true. Although net income provides a long-term measure of a company’s success or failure, cash is its lifeblood. Without cash, a company will not survive. For small and newly developing companies, cash flow is the single most important element for survival. Even medium and large companies must control cash flow.

Creditors examine the cash flow statement carefully because they are concerned about being paid. They begin their examination by finding net cash provided by operating activities. A high amount indicates that a company is able to generate sufficient cash from operations to pay its bills without further borrowing. Conversely, a low or negative amount of net cash provided by operating activities indicates that a company may have to borrow or issue equity securities to acquire sufficient cash to pay its bills. Consequently, creditors look for answers to the following questions in the company’s cash flow statements.

1. How successful is the company in generating net cash provided by operating activities?
2. What are the trends in net cash flow provided by operating activities over time?
3. What are the major reasons for the positive or negative net cash provided by operating activities?

You should recognize that companies can fail even though they report net income. The difference between net income and net cash provided by operating activities can be substantial. Companies sometimes report high net income numbers but negative net cash provided by operating activities. This type of situation can eventually lead to bankruptcy.

In addition, substantial increases in receivables and/or inventory can explain the difference between positive net income and negative net cash provided by operating activities. For example, in its first year of operations Hu Ltd. reported a net income of HK\$80,000. Its net cash provided by operating activities, however, was a negative HK\$95,000, as shown in [Illustration 5.25](#).

Hu.Ltd		
Net Cash Flow from Operating Activities		
Cash flows from operating activities		
Net income		HK\$ 80,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Increase in receivables	HK\$ (75,000)	
Increase in inventory	(100,000)	(175,000)
Net cash provided by operating activities		<u>HK\$ (95,000)</u>

ILLUSTRATION 5.25 Negative Net Cash Provided by Operating Activities

Hu could easily experience a “cash crunch” because it has its cash tied up in receivables and inventory. If Hu encounters problems in collecting receivables, or if inventory moves slowly or becomes obsolete, its creditors may have difficulty collecting on their loans.

Financial Liquidity

Readers of financial statements often assess liquidity by using the **current cash debt coverage**. It indicates whether the company can pay off its current liabilities from its operations in a given year. [Illustration 5.26](#) shows the formula for this ratio.

$$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Current Liabilities}} = \text{Current Cash Debt Coverage}$$

ILLUSTRATION 5.26 Formula for Current Cash Debt Coverage

The higher the current cash debt coverage, the less likely a company will have liquidity problems. For example, a ratio near 1:1 is good. It indicates that the company can meet all of its current obligations from internally generated cash flow.

Financial Flexibility

The **cash debt coverage** provides information on financial flexibility. It indicates a company's ability to repay its liabilities from net cash provided by operating activities, without having to liquidate the assets employed in its operations. [Illustration 5.27](#) shows the formula for this ratio. Notice its similarity to the current cash debt coverage. However, because it uses average total liabilities in place of average current liabilities, it takes a somewhat longer-range view.

$\frac{\text{Net Cash Provided by Operating Activities}}{\text{Average Total Liabilities}} = \text{Cash Debt Coverage}$

ILLUSTRATION 5.27 Formula for Cash Debt Coverage

The higher this ratio, the less likely the company will experience difficulty in meeting its obligations as they come due. It signals whether the company can pay its debts and survive if external sources of funds become limited or too expensive.

Free Cash Flow

A more sophisticated way to examine a company's financial flexibility is to develop a free cash flow analysis. **Free cash flow** is the amount of discretionary cash flow a company has. It can use this cash flow to purchase additional investments, retire its debt, purchase treasury shares, or simply add to its liquidity. Financial statement users calculate free cash flow as shown in [Illustration 5.28](#).

$\text{Net Cash Provided by Operating Activities by Operating Activities} - \text{Capital Expenditures} - \text{Cash Dividends} = \text{Free Cash Flow}$
--

ILLUSTRATION 5.28 Formula for Free Cash Flow

In a free cash flow analysis, we first deduct capital spending to indicate it is the least discretionary expenditure a company generally makes. (Without continued efforts to maintain and expand facilities, it is unlikely that a company can continue to maintain its competitive position.) We then deduct dividends. Although a company *can* cut its dividend, it usually will do so only in a **financial emergency**. The amount resulting after these deductions is the company's free cash flow. Obviously, the greater the amount of free cash flow, the greater the company's amount of financial flexibility.

Questions that a free cash flow analysis answers are:

1. Is the company able to pay its dividends without resorting to external financing?
2. If business operations decline, will the company be able to maintain its needed capital investment?
3. What is the amount of discretionary cash flow that can be used for additional investment, retirement of debt, purchase of treasury shares, or addition to liquidity?

[Illustration 5.29](#) is a free cash flow analysis using the cash flow statement for Nestor SA (shown in [Illustration 5.24](#)).

Nestor SA Free Cash Flow Analysis	
Net cash provided by operating activities	€411,750
Capital expenditures	(252,500)
Dividends	(19,800)
Free cash flow	€139,450

ILLUSTRATION 5.29 Free Cash Flow Computation

This computation shows that Nestor has a positive, and substantial, net cash provided by operating activities of €411,750. Nestor's statement of cash flows reports that the company purchased equipment of €182,500 and land of €70,000 for total capital spending of €252,500. Nestor has more than sufficient cash flow to meet its dividend payment and therefore has satisfactory financial flexibility.

As you can see from looking back at [Illustration 5.24](#), Nestor used its free cash flow to redeem bonds and add to its liquidity. If it finds additional investments that are profitable, it can increase its spending without putting its dividend or basic capital spending in jeopardy. Companies that have strong financial flexibility can take advantage of profitable investments even in tough times. In addition, strong financial flexibility frees companies from worry about survival in poor economic times. In fact, those with strong financial flexibility often fare better in a poor economy because they can take advantage of opportunities that other companies cannot.

Additional Information

LEARNING OBJECTIVE 4

Describe additional types of information provided.

IFRS requires that a complete set of financial statements be presented annually. Along with the current year's financial statements, companies must also provide **comparative information** from the previous period. In other words, a complete set of financial statements and related notes for two years must be reported.

A complete set of financial statements comprise the following.

1. A statement of financial position at the end of the period.
2. A statement of comprehensive income for the period to be presented either as:
 - a. One single statement of comprehensive income.
 - b. A separate income statement and statement of comprehensive income. In this situation, the income statement is presented first.
3. A statement of changes in equity.
4. A statement of cash flows.
5. Notes, comprising a summary of significant accounting policies and other explanatory information. [9]

[Chapters 4](#) and [5](#) discussed the first four items. However, the primary financial statements cannot provide the complete picture related to the financial position and financial performance of the company. Descriptive information is also required by IFRS in the notes to the financial statements to amplify or explain the items presented in the main body of the statements.

Notes to the Financial Statements

As indicated earlier, notes are an integral part of reporting financial statement information. Notes can explain in qualitative terms information related to specific financial statement items. In addition, they can provide supplemental data of a quantitative nature to expand the information in financial statements. Notes also can explain restrictions imposed by financial arrangements or basic contractual agreements. Although notes may be technical and difficult to understand in some cases, they provide meaningful information for the user of the financial statements.

Accounting Policies

Accounting policies are the specific principles, bases, conventions, rules, and practices applied by a company in preparing and presenting financial information. The IASB recommends disclosure of all significant accounting principles and methods that involve selection from among alternatives or those that are peculiar to a given industry. For instance, companies can compute inventories under several cost flow assumptions (e.g., average-cost and FIFO), depreciate plant and equipment under several accepted methods (e.g., double-declining balance and straight-line), and carry investments at different valuations (e.g., cost, equity, and fair value). Sophisticated users of financial statements know of these possibilities and examine the statements closely to determine the methods used.

Companies therefore present a “Summary of Significant Accounting Policies” generally as the first note to the financial statements. This disclosure is important because, under IFRS, alternative treatments of a transaction are sometimes permitted. If these policies are not understood, users of the financial statements are not able to use the financial statements to make comparisons between companies.

[Illustrations 5.30](#) to [5.33](#) present some examples of various accounting policy disclosures adapted from companies’ annual reports.

LG
(KOR)

Inventories

Inventories are stated at the lower of cost and net realizable value. Cost is determined using the weighted-average method, except for inventories in-transit, which is determined using the specific identification method. The cost of finished goods and work-in-process comprises raw materials, direct labour, other direct costs and related production overheads (based on normal operating capacity). The Group periodically reviews a possibility of significant changes in net realizable value of inventories not in use, decrease in market value and obsolescence, and recognizes as Allowances for Valuation of Inventories. Net realizable value is the estimated selling price in the ordinary course of business, less applicable selling expenses.

ILLUSTRATION 5.30 Accounting Policies—Inventory

Stora Enso
(FIN)

Intangible assets are stated at historical cost and are amortized on a straight-line basis over their expected useful lives, which usually vary from 3 to 10 years and up to 20 years for patents.

ILLUSTRATION 5.31 Accounting Policies—Intangible Asset

Sports Direct

(GBR)

Property, plant and equipment

Property, plant and equipment are stated at historical cost less depreciation less any recognised impairment losses. Cost includes expenditure that is directly attributable to the acquisition or construction of these items. Subsequent costs are included in the asset's carrying amount only when it is probable that future economic benefits associated with the item will flow to the Group and the costs can be measured reliably.

All other costs, including repairs and maintenance costs, are charged to the income statement in the period in which they are incurred.

Depreciation is provided on all property, plant and equipment other than freehold land and is calculated on a reducing balance basis or straight-line basis, whichever is deemed by the directors to be more appropriate, to allocate cost less assessed residual value, other than assets in the course of construction, over the estimated useful lives, as follows:

- Freehold buildings—between 4% and 10% per annum—straight line
- Leasehold improvements—20% or over the term of the lease, whichever is shortest—straight line
- Plant and equipment—between 20% and 33% per annum—straight line

The assets' useful lives and residual values are reviewed and, if appropriate, adjusted at each balance sheet date. The gain or loss arising on disposal or scrapping of an asset is determined as the difference between the sales proceeds, net of selling costs, and the carrying amount of the asset and is recognised in the income statement.

Property, plant and equipment where the carrying amount is recovered principally through a sales transaction and where a sale is considered to be highly probable is stated at the lower of carrying value and fair value less costs to sell.

ILLUSTRATION 5.32 Accounting Policies—Property, Plant, and Equipment

Ahold Delhaize

(NLD/BEL)

Non-derivative Financial Liabilities

IFRS 9 *Financial Instruments: Recognition and Measurement* contains two categories for non-derivative financial liabilities (hereafter “financial liabilities”): financial liabilities at fair value through profit or loss and financial liabilities measured at amortized cost. Ahold Delhaize holds only financial liabilities measured at amortized cost, which are included in “Debts,” “Borrowings,” “Accounts payable” and “Other liabilities.”

ILLUSTRATION 5.33 Accounting Policies—Financial Liabilities

Additional Notes to the Financial Statements

In addition to a note related to explanation of the companies' accounting policies, companies use specific notes to discuss items in the financial statements. Judgment must be exercised to identify the important aspects of financial information that need amplification in the notes. In many cases, IFRS requires specific disclosures. For example, using the statement of financial position as an example, note disclosures include:

1. Items of property, plant, and equipment are disaggregated into classes such as land, buildings, etc., in the notes, with related accumulated depreciation reported where applicable.
2. Receivables are disaggregated into amounts receivable from trade customers, receivables from related parties, prepayments, and other amounts.
3. Inventories are disaggregated into classifications such as merchandise, production supplies, work in process, and finished goods.
4. Provisions are disaggregated into provisions for employee benefits and other items.

In addition, there are often schedules and computations required by a specific standard. For example, for receivables, IFRS requires a maturity analysis for receivables. [Illustration 5.34](#) shows a maturity analysis for **Lenovo Group** (CHN).

 Lenovo Group (in thousands)	
	Current
Trade receivables	\$6,761,826
Less: allowance	(100,342)
	<u>\$6,661,484</u>
22. Trade and other receivables	
Customers are generally granted credit term ranging from 0 to 120 days. Ageing analysis of trade receivables of the Group at the balance sheet date, based on invoice date, is as follows:	
	2019
0–30 days	4,560,771
31–60 days	1,332,471
61–90 days	430,207
Over 90 days	<u>438,377</u>
	6,761,826
Less: loss allowance	(100,342)
Trade receivables—net	<u>6,661,484</u>

ILLUSTRATION 5.34 Maturity Analysis for Receivables

Another maturity analysis is required for financial liabilities. [Illustration 5.35](#) shows such an adapted analysis for **Christian Dior** (FRA).

Christian Dior

(in euro millions)

Note 18.2

Analysis of gross borrowings by payment date before derivatives

		Gross borrowings		
		Fixed rate	Floating rate	Total
Maturity	December 31, 2019	4,940	610	5,550
	December 31, 2020	1,900	13	1,913
	December 31, 2021	1,735	5	1,740
	December 31, 2022	1,262	3	1,265
	December 31, 2023	22	4	26
	December 31, 2024	1,217	1	1,218
	Thereafter	184	7	191
Total		11,260	643	11,903

ILLUSTRATION 5.35 Maturity Analysis for Financial Liabilities

Also, companies are required to reconcile the balances for many of the assets and liabilities reported in the financial statements from the beginning to the end of the year (sometimes referred to as a roll-forward of financial information). For example, a reconciliation of the balances in property, plant, and equipment; intangible assets; and provisions are generally provided. An example for property, plant, and equipment for **Nestlé** (CHE) is shown in [Illustration 5.36](#).

Nestlé

(in millions)

	Land and buildings	Machinery and equipment	Tools, furniture and other equipment	Vehicles	Total

At 31 December	17,747	31,293	8,069	560	57,669

ILLUSTRATION 5.36 Reconciliation Schedule for Property, Plant, and Equipment

Note disclosure is extensive using IFRS. Many companies' annual reports are substantial in nature, and it is not unusual for a large company to have over 20 pages of notes to the financial statements.

Techniques of Disclosure

Companies should disclose as completely as possible the effect of various uncertainties on financial condition, the methods of valuing assets and liabilities, and the company's contracts and agreements. To disclose this pertinent information, companies may use parenthetical explanations and cross-reference and contra items.

Parenthetical Explanations

Companies often provide additional information by parenthetical explanations following the item. For example, [Illustration 5.37](#) shows a parenthetical explanation of the number of shares issued by **Hitachi** (JPN) on the statement of financial position under "Equity."

 Hitachi	
Equity	
Common stock	(4,637,785,317 outstanding) ¥427,776

ILLUSTRATION 5.37 Parenthetical Disclosure of Shares Issued

This additional pertinent statement of financial position information adds clarity and completeness. It has an advantage over a note because it brings the additional information into the **body of the statement** where readers will less likely overlook it. Companies, however, should avoid lengthy parenthetical explanations, which might be distracting.

Cross-Reference and Contra Items

Companies "cross-reference" a direct relationship between an asset and a liability on the statement of financial position. For example, as shown in [Illustration 5.38](#), on December 31, 2022, a company might show the following entries—one listed among the current assets, and the other listed among the current liabilities.

Current Assets (in part)	
Cash on deposit with sinking fund trustee for redemption of bonds payable—see Current liabilities	\$800,000
Current Liabilities (in part)	
Bonds payable to be redeemed in 2022—see Current assets	\$2,300,000

ILLUSTRATION 5.38 Cross-Referencing and Contra Items

This cross-reference points out that the company will redeem \$2,300,000 of bonds payable currently, for which it has only set aside \$800,000. Therefore, it needs additional cash from unrestricted cash, from sales of investments, from profits, or from some other source. Alternatively, the company can show the same information parenthetically.

Another common procedure is to establish contra or adjunct accounts. A **contra account** on a statement of financial position reduces either an asset, liability, or equity account. Examples include Accumulated Depreciation and Allowance for Doubtful Accounts. Contra accounts provide some

flexibility in presenting the financial information. With the use of the Accumulated Depreciation account, for example, a reader of the statement can see the original cost of the asset as well as the depreciation to date.

An **adjunct account**, on the other hand, increases either an asset, liability, or equity account. An example is Fair Value Adjustment, which, when added to the Non-Trading Equity Investment account, describes the total investment asset of the company.

Other Guidelines

In addition to the specifics related to individual financial statements and notes to these statements, *IAS No. 1* also addresses important issues related to presentation. [10]

Offsetting

IAS No. 1 indicates that it is important that assets and liabilities, and income and expense, be reported separately. Otherwise, it may be difficult for users to understand the transactions or events that occurred at the company. Therefore, it is improper for a company like **Sinopec** (CHN) to offset accounts payable against cash. Similarly, it is improper for Sinopec to offset debt used to purchase buildings against the buildings on the statement of financial position. However, it is proper for Sinopec to measure assets net of valuation allowances, such as allowance for doubtful accounts or inventory net of impairment. In these cases, the company is simply reporting the appropriate value on the financial statement and, therefore, it is not considered offsetting. In general, unless a specific IFRS permits offsetting, it is not permitted.

Consistency

The Conceptual Framework discussed in [Chapter 2](#) notes that one of the enhancing qualitative characteristics is comparability. As part of comparability, the Conceptual Framework indicates that companies should follow consistent principles and methods from one period to the next. [11] As a result, accounting policies must be consistently applied for similar transactions and events unless an IFRS requires a different policy. Thus, **Woolworths** (AUS), which uses the straight-line method for depreciating property, plant, and equipment, reports on the straight-line method for all periods presented.

Fair Presentation

Companies must present fairly the financial position, financial performance, and cash flows of the company. Fair presentation means the faithful representation of transactions and events using the definitions and recognition criteria in the Conceptual Framework. It is presumed that the use of IFRS with appropriate disclosure results in financial statements that are fairly presented. In other words, inappropriate use of accounting policies cannot be overcome by explanatory notes to the financial statements.

In some rare cases, as indicated in [Chapter 2](#), companies can use a “true and fair” override. This situation develops, for example, when the IFRS for a given company appears to conflict with the objective of financial reporting. This situation might occur when a regulatory body indicates that a specific IFRS may be misleading. As indicated earlier, a true and fair override is highly unlikely in today’s reporting environment.¹⁰

Evolving Issue

Statement of Financial Position Reporting: Gross or Net?

In addition to the issue of financial statement presentation discussed in the opening story, a second area of controversy for statement of financial position reporting is the issue of offsetting (or netting) of assets and liabilities. It is generally accepted that offsetting of recognized assets and recognized liabilities detracts from the ability of users both to understand the transactions and conditions that have occurred and to assess the company's future cash flows. In other words, providing information on assets, liabilities, and equity helps users to compute rates of return and evaluate capital structure. However, netting assets and liabilities limits a user's ability to assess the future economic benefits and obligations.

That is, offsetting hides the existence of assets and liabilities, making it difficult to evaluate liquidity, solvency, and financial flexibility. As a result, U.S. GAAP does not permit the reporting of summary accounts alone (e.g., total assets, net assets, and total liabilities). The IASB and FASB have worked to develop common criteria for offsetting on the statement of financial position. Current offsetting rules under IFRS are more restrictive than under U.S. GAAP. The rules proposed would allow offsetting only in rare circumstances (e.g., when right of offset is legally enforceable).

Implementation of these rules in the United States would result in a dramatic "grossing up" of statements of financial position (particularly for financial institutions). For example, one study estimated that the new rules would gross up U.S. banks' statements of financial position by \$900 billion (or an average of 68%, ranging from a 31.4% increase for **Citigroup** to 104.7% for **Morgan Stanley**).* Not surprisingly, the FASB received significant push-back from some of its constituents (particularly financial institutions) to the proposed rules. The U.S. banks feared the new rules could place them in a less favorable light when compared to their international counterparts, such as **Deutsche Bank** (DEU) and **BNP Paribas** (FRA). As a result, there is not a converged standard in this area.

However, the Boards have issued converged disclosure requirements. The disclosure rules require companies to disclose both gross information and net information about instruments and transactions that are eligible for offset in the statement of financial position. While the Boards have not been able to develop a converged set of criteria for offsetting, the information provided under the new converged disclosure rules should enable users of a company's financial statements to evaluate the effects of netting arrangements on its financial position. In doing so, the rules support the full disclosure principle. As discussed earlier, the IASB is not actively pursuing a project on the statement of financial position. Its project on improvements to the structure and content of the primary financial statements is focused on the statement(s) of financial performance (see the IFRS website for more information).

APPENDIX 5A

Ratio Analysis—A Reference

Using Ratios to Analyze Performance

LEARNING OBJECTIVE *5

Identify the major types of financial ratios and what they measure.

Analysts and other interested parties can gather qualitative information from financial statements by examining relationships between items on the statements and identifying trends in these relationships. A useful starting point in developing this information is ratio analysis.

A **ratio** expresses the mathematical relationship between one quantity and another. **Ratio analysis** expresses the relationship among pieces of selected financial statement data, in a **percentage**, a **rate**, or a simple **proportion**.

To illustrate, **Acer Group** (TWN) recently had current assets of NT\$186,391 million and current liabilities of NT\$149,315 million. We find the ratio between these two amounts by dividing current assets by current liabilities. The alternative means of expression are:

Percentage:	Current assets are 125% of current liabilities.
Rate:	Current assets are 1.25 times as great as current liabilities.
Proportion:	The relationship of current assets to current liabilities is 1.25:1.

To analyze financial statements, we classify ratios into four types, as follows.

Major Types of Ratios

Liquidity Ratios. Measures of the company's short-term ability to pay its maturing obligations.

Activity Ratios. Measures of how effectively the company uses its assets.

Profitability Ratios. Measures of the degree of success or failure of a given company or division for a given period of time.

Coverage Ratios. Measures of the degree of protection for long-term creditors and investors.

In [Chapter 5](#), we discussed three measures related to the statement of cash flows (current cash debt coverage, cash debt coverage, and free cash flow). Throughout the remainder of the text, we provide ratios to help you understand and interpret the information presented in financial statements.

[Illustration 5A.1](#) presents the ratios that we will use throughout the text. You should find this chart helpful as you examine these ratios in more detail in the following chapters. An appendix to [Chapter 24](#) further discusses financial statement analysis.

Ratio	Formula	Purpose or Use
I. Liquidity		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Measures short-term debt-paying ability
2. Quick or acid-test ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Measures immediate short-term liquidity
3. Current cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average current liabilities}}$	Measures a company's ability to pay off its current liabilities in a given year from its operations
II. Activity		
4. Accounts receivable turnover	$\frac{\text{Net sales}}{\text{Average net accounts receivable}}$	Measures liquidity of receivables
5. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Measures liquidity of inventory
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Measures how efficiently assets are used to generate sales
III. Profitability		
7. Profit margin on sales	$\frac{\text{Net income}}{\text{Net sales}}$	Measures net income generated by each dollar of sales
8. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Measures overall profitability of assets
9. Return		Measures profitability of

on share capital—ordinary	$\frac{\text{Net income - Preference dividends}}{\text{Average shareholders' equity—ordinary}}$	owners' investment
10. Earnings per share	$\frac{\text{Net income - Preference dividends}}{\text{Weighted-average ordinary shares outstanding}}$	Measures net income earned on each ordinary share
11. Price-earnings ratio	$\frac{\text{Market price of share}}{\text{Earnings per share}}$	Measures the ratio of the market price per share to earnings per share
12. Payout ratio	$\frac{\text{Cash dividends}}{\text{Net income}}$	Measures percentage of earnings distributed in the form of cash dividends
IV. Coverage		
13. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Measures the percentage of total assets provided by creditors
14. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Measures ability to meet interest payments as they come due
15. Cash debt coverage	$\frac{\text{Net cash provided by operating activities}}{\text{Average total liabilities}}$	Measures a company's ability to repay its total liabilities in a given year from its operations
16. Book value per share	$\frac{\text{Shareholders' equity—ordinary}}{\text{Outstanding shares}}$	Measures the amount each ordinary share would receive if the company were liquidated at the amounts reported on the statement of financial position

17. Free cash flow	Net cash provided by operating activities – Capital expenditures – Cash dividends	Measures the amount of discretionary cash flow
--------------------	---	--

Learning Objectives Review

1 Explain the uses, limitations, and content of the statement of financial position.

The statement of financial position provides information about the nature and amounts of investments in a company's resources, obligations to creditors, and equity. The statement of financial position contributes to financial reporting by providing a basis for (1) computing rates of return, (2) evaluating the capital structure of the enterprise, and (3) assessing the liquidity, solvency, and financial flexibility of the enterprise.

Three limitations of a statement of financial position are as follows. (1) The statement of financial position generally does not reflect fair value because accountants use a historical cost basis in valuing and reporting most assets and liabilities. (2) Companies must use judgments and estimates to determine certain amounts, such as the collectibility of receivables and the useful life of long-term tangible and intangible assets. (3) The statement of financial position omits many items that are of financial value to the business but cannot be recorded objectively, such as human resources, customer base, and reputation.

The general elements of the statement of financial position are assets, equity, and liabilities. The major classifications of assets are non-current assets; long-term investments; property, plant, and equipment; intangible assets; other assets; and current assets. The major classifications of liabilities are non-current and current liabilities. The statement of financial position of a company generally classifies equity as share capital, share premium, and retained earnings.

2 Prepare a classified statement of financial position.

The report form lists equity and liabilities directly below assets on the same page. The account form lists assets, by sections, on the left side, and equity and liabilities, by sections, on the right side.

3 Explain the purpose, content, and preparation of the statement of cash flows.

The **primary purpose** of a statement of cash flows is to provide relevant information about a company's cash receipts and cash payments during a period. Reporting the sources, uses, and net change in cash enables financial statement readers to know what is happening to a company's most liquid resource.

In the statement of cash flows, companies **classify** the period's cash receipts and cash payments into three different activities. (1) *Operating activities*: Involve the cash effects of transactions that enter into the determination of net income. (2) *Investing activities*: Include making and collecting loans, and acquiring and disposing of investments (both debt and equity) and of property, plant, and equipment. (3) *Financing activities*: Involve liability and equity items. Financing activities include (a) obtaining capital from owners and providing them with a return on their investment, and (b) borrowing money from creditors and repaying the amounts borrowed.

The information to **prepare** the statement of cash flows usually comes from comparative statements of financial position, the current income statement, and selected transaction data. Companies follow four steps to prepare the statement of cash flows from these sources. (1) Determine the net cash provided by (or used in) operating activities. (2) Determine the net cash provided by (or used in) investing and financing activities. (3) Determine the change (increase or decrease) in cash during the period. (4) Reconcile the change in cash with the beginning and ending cash balances.

Creditors **examine** the cash flow statement carefully because they are concerned about being paid. The net cash flow provided by operating activities in relation to the company's liabilities is helpful in making this assessment. Two ratios used in this regard are the current cash debt coverage and the cash debt coverage. In addition, the amount of free cash flow provides creditors and shareholders with a picture of the company's financial flexibility.

4 Describe additional types of information provided.

In addition to a complete set of financial statements, IFRS also requires **additional reporting in the notes** to the financial statements. Disclosure in the notes includes (1) accounting policies and (2) expanded disclosures and detailed schedules related to such items as property, plant, and equipment; receivables; liabilities and provisions; and equity.

Companies use **two methods to disclose** pertinent information in the statement of financial position. (1) *Parenthetical explanations*: Parenthetical explanations provide additional information or description following the item. (2) *Cross-reference and contra items*: Companies "cross-reference" a direct relationship between an asset and a liability on the statement of financial position. IFRS also provides guidelines related to offsetting amounts (generally not permitted), consistency in application of accounting policies, and "true and fair" presentation.

* 5 Identify the major types of financial ratios and what they measure.

Ratios express the mathematical relationship between one quantity and another, expressed as a percentage, a rate, or a proportion. *Liquidity* ratios measure the short-term ability to pay maturing obligations. *Activity* ratios measure the effectiveness of asset usage. *Profitability* ratios measure the success or failure of an enterprise. *Coverage* ratios measure the degree of protection for long-term creditors and investors.

Enhanced Review and Practice

Practice Problem

Cassy Corporation's statement of financial position at the end of 2021 included the following items.

Land	\$ 36,000
Buildings	144,000

Equipment	108,000
Accumulated depreciation—buildings	(36,000)
Accumulated depreciation—equipment	(13,200)
Patents	48,000
Current assets	282,000
Total	\$568,800
Share capital—ordinary	\$216,000
Retained earnings	52,800
Bonds payable	120,000
Current liabilities	180,000
Total	\$568,800

The following information is available for 2022.

- Treasury shares were purchased at a cost of \$13,200.
- Cash dividends of \$36,000 were declared and paid.
- A long-term investment in shares was purchased for \$19,200.
- Current assets other than cash increased by \$34,800. Current liabilities increased by \$15,600.
- Depreciation expense was \$4,800 on the building and \$10,800 on equipment.
- Net income was \$66,000.
- Bonds payable of \$60,000 were issued.
- An addition to the building was completed at a cost of \$32,400.
- Patent amortization was \$3,000.
- Equipment (cost \$24,000 and accumulated depreciation \$9,600) was sold for \$12,000.

Instructions

- Prepare a statement of financial position at December 31, 2022.
- Prepare a statement of cash flows for 2022.

Solution

a.

Cassy Corporation			
Statement of Financial Position			
December 31, 2022			
<u>Assets</u>			
Long-term investments			\$ 19,200
Property, plant, and equipment			
Land		\$ 36,000	
Buildings (\$144,000 + \$32,400)	\$176,400		
Less: Accumulated depreciation—buildings (\$36,000 + \$4,800)	40,800	135,600	
Equipment (\$108,000 – \$24,000)	84,000		
Less: Accumulated depreciation—equipment (\$13,200 – \$9,600)	14,400	69,600	

+ \$10,800)			
Total property, plant, and equipment			241,200
Intangible assets—patents (\$48,000 - \$3,000)			45,000
Current assets (\$282,000 + \$34,800 + \$39,000)			355,800
Total assets			<u>\$661,200</u>
Equity and Liabilities			
Equity			
Share capital—ordinary		\$216,000	
Retained earnings (\$52,800 + \$66,000 - \$36,000)		82,800	
Total		<u>298,800</u>	
Less: Cost of treasury shares		13,200	
Total equity			\$285,600
Non-current liabilities			
Bonds payable (\$120,000 + \$60,000)		180,000	
Current liabilities (\$180,000 + \$15,600)		195,600	
Total liabilities			<u>375,600</u>
Total equity and liabilities			<u>\$661,200</u>
<p>Notes: The amount determined for current assets is computed last and is a “plug” figure. That is, total equity and liabilities is computed because information is available to determine this amount. Because the total assets amount is the same as the total equity and liabilities amount, the amount of total assets can be determined. Information is available to compute all the asset amounts except current assets. Therefore, current assets can be determined by deducting the total of all the other asset balances from the total asset balance (i.e., \$661,200 - \$45,000 - \$241,200 - \$19,200).</p>			

b.

Cassy Corporation Statement of Cash Flows For the Year Ended December 31, 2022		
Cash flows from operating activities		
Net income		\$66,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Loss on sale of equipment	\$ 2,400	
Depreciation expense	15,600	
Patent amortization	3,000	
Increase in current liabilities	15,600	
Increase in current assets (other than cash)	(34,800)	1,800
Net cash provided by operating activities		<u>67,800</u>
Cash flows from investing activities		
Sale of equipment	12,000	
Addition to building	(32,400)	
Investment in shares	(19,200)	
Net cash used by investing activities		<u>(39,600)</u>

Cash flows from financing activities		
Issuance of bonds	60,000	
Payment of dividends	(36,000)	
Purchase of treasury shares	(13,200)	
Net cash provided by financing activities		10,800
Net increase in cash		<u>\$39,000</u>

Questions

- How does information from the statement of financial position help users of the financial statements?
- What is meant by solvency? What information in the statement of financial position can be used to assess a company's solvency?
- A financial magazine indicated that the airline industry has poor financial flexibility. What is meant by financial flexibility, and why is it important?
- Discuss at least two situations in which estimates could affect the usefulness of information in the statement of financial position.
- Perez SA reported an increase in inventories in the past year. Discuss the effect of this change on the current ratio (current assets ÷ current liabilities). What does this tell a statement user about Perez's liquidity?
- What is meant by liquidity? Rank the following assets from one to five in order of liquidity.
 - Goodwill.
 - Inventory.
 - Buildings.
 - Short-term investments.
 - Accounts receivable.
- What are the major limitations of the statement of financial position as a source of information?
- Discuss at least two items that are important to the value of companies such as **Louis Vuitton (LVMH Group)** (FRA) or **adidas** (DEU) but that are not recorded in their statements of financial position. What are some reasons why these items are not recorded in the statement of financial position?
- How does separating current assets from property, plant, and equipment in the statement of financial position help analysts?
- In its December 31, 2022, statement of financial position, Oakley Corporation reported as an asset, "Net notes and accounts receivable, €7,100,000." What other disclosures are necessary?
- Should non-trading equity securities always be reported as a current asset? Explain.
- What is the relationship between current assets and current liabilities?
- Manchester United sold 10,000 season tickets at £2,000 each. By December 31, 2022, 8 of the 20 home games had been played. What amount should be reported as a current liability at December 31, 2022?

- 14.** What is working capital? How does working capital relate to the operating cycle?
- 15.** In what section of the statement of financial position should the following items appear, and what statement of financial position terminology would you use?
- a. Treasury shares (recorded at cost).
 - b. Checking account at bank.
 - c. Land (held as an investment).
 - d. Sinking fund.
 - e. Provision for warranties (short-term).
 - f. Copyrights.
 - g. Pension fund assets.
 - h. Share capital—ordinary.
 - i. Long-term investments (pledged against bank loans payable).
 - j. Non-controlling interest.
- 16.** Where should the following items be shown on the statement of financial position, if shown at all?
- a. Allowance for doubtful accounts.
 - b. Merchandise held on consignment.
 - c. Advances received on sales contract.
 - d. Accumulated other comprehensive income.
 - e. Land.
 - f. Merchandise out on consignment.
 - g. Franchises.
 - h. Accumulated depreciation of plant and equipment.
 - i. Materials in transit—purchased f.o.b. destination.
- 17.** State the usual basis of valuation of each of the following assets.
- a. Trade accounts receivable.
 - b. Land.
 - c. Inventory.
 - d. Trading securities (ordinary shares of other companies).
 - e. Prepaid expenses.
- 18.** Refer to the definition of assets in this chapter. Discuss how a leased building might qualify as an asset of the lessee (tenant) under this definition.
- 19.** Kathleen Battle says, “Retained earnings should be reported as an asset, since it is earnings which are reinvested in the business.” How would you respond to Battle?
- 20.** The creditors of Chan Ho Ltd. agree to accept promissory notes for the amount of its indebtedness with a condition that two-thirds of the annual profits must be applied to their liquidation. How should these notes be reported on the statement of financial position of the issuing company? Give a reason for your answer.

- 21.** What is the purpose of a statement of cash flows? How does it differ from a statement of financial position and a statement of comprehensive income?
- 22.** The net income for the year for Genesis plc is £750,000, but the statement of cash flows reports that net cash provided by operating activities is £640,000. What might account for the difference?
- 23.** Net income for the year for Carrie, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. What might account for the difference?
- 24.** Differentiate between operating activities, investing activities, and financing activities.
- 25.** Each of the following items must be considered in preparing a statement of cash flows. Indicate where each item is to be reported in the statement, if at all. Assume that net income is reported as ¥90,000 (amounts in thousands).
- Accounts receivable increased from ¥34,000 to ¥39,000 from the beginning to the end of the year.
 - During the year, 10,000 ordinary shares with a par value of ¥100 per share were issued at ¥115 per share.
 - Depreciation expense amounted to ¥14,000, and intangible asset amortization amounted to ¥5,000.
 - Land increased from ¥10,000 to ¥30,000 due to purchase through issuance of long-term debt.
- 26.** Sergey SpA has net cash provided by operating activities of €1,200,000. Its average current liabilities for the period are €1,000,000, and its average total liabilities are €1,500,000. Comment on the company's liquidity and financial flexibility given this information.
- 27.** Net income for the year for Tanizaki, Inc. was \$750,000, but the statement of cash flows reports that net cash provided by operating activities was \$860,000. Tanizaki also reported capital expenditures of \$75,000 and paid dividends in the amount of \$30,000. Compute Tanizaki's free cash flow.
- 28.** What is the purpose of a free cash flow analysis?
- 29.** What is a "Summary of Significant Accounting Policies"?
- 30.** What are some of the techniques of disclosure for financial statement information?

Brief Exercises

BE5.1 (LO 1, 2) Harding NV has the following accounts included in its December 31, 2022, trial balance: Accounts Receivable €110,000, Inventory €290,000, Allowance for Doubtful Accounts €8,000, Patents €72,000, Prepaid Insurance €9,500, Accounts Payable €77,000, and Cash €30,000. Prepare the current assets section of the statement of financial position, listing the accounts in the sequence shown in the chapter.

BE5.2 (LO 1, 2) Koch AG's adjusted trial balance contained the following asset accounts at December 31, 2022: Cash €7,000, Land €40,000, Patents €12,500, Accounts Receivable €90,000, Prepaid Insurance €5,200, Inventory €30,000, Allowance for Doubtful Accounts €4,000, and Trading Securities €11,000. Prepare the current assets section of the statement of financial position, listing the accounts in the sequence shown in the chapter.

BE5.3 (LO 1, 2) Included in Outkast Company's December 31, 2022, trial balance are the following accounts: Prepaid Rent \$5,200, Held-for-Collection Securities \$56,000, Unearned Service Revenue \$17,000, Land Held for Investment \$39,000, and Notes Receivable (long-term) \$42,000. Prepare the long-term investments section of the statement of financial position.

BE5.4 (LO 1, 2) Lowell Company's December 31, 2022, trial balance includes the following accounts: Inventory \$120,000, Buildings \$207,000, Accumulated Depreciation—Equipment \$19,000, Equipment \$190,000, Land Held for Investment \$46,000, Accumulated Depreciation—Buildings \$45,000, and

Land \$71,000. Prepare the property, plant, and equipment section of the statement of financial position.

BE5.5 (LO 1, 2) Crane Ltd. has the following accounts included in its December 31, 2022, trial balance: Trading Securities £21,000, Goodwill £150,000, Prepaid Insurance £12,000, Patents £220,000, and Franchises £130,000. Prepare the intangible assets section of the statement of financial position.

BE5.6 (LO 1, 2) Patrick Corporation's adjusted trial balance contained the following asset accounts at December 31, 2022: Capitalized Development Costs \$18,000, Prepaid Rent \$12,000, Goodwill \$50,000, Franchise Fees Receivable \$2,000, Franchises \$47,000, Patents \$33,000, and Trademarks \$10,000. Prepare the intangible assets section of the statement of financial position.

BE5.7 (LO 1, 2) Thomas Corporation's adjusted trial balance contained the following liability accounts at December 31, 2022. Bonds Payable (due in 3 years) \$100,000, Accounts Payable \$72,000, Notes Payable (due in 90 days) \$22,500, Salaries and Wages Payable \$4,000, and Income Taxes Payable \$7,000. Prepare the current liabilities section of the statement of financial position.

BE5.8 (LO 1, 2) Included in Arco A., S.'s December 31, 2022, trial balance are the following accounts: Accounts Payable ₺220,000, Pension Liability ₺375,000, Advances from Customers ₺41,000, Bonds Payable ₺371,000, Salaries and Wages Payable ₺27,000, Interest Payable ₺12,000, Income Taxes Payable ₺29,000, and Provision for Warranties (current ₺3,000, non-current ₺6,000). Prepare the current liabilities section of the statement of financial position.

BE5.9 (LO 1, 2) Use the information presented in BE5.8 for Arco A., S. to prepare the non-current liabilities section of the statement of financial position.

BE5.10 (LO 1, 2) Hawthorn AG's adjusted trial balance contained the following accounts at December 31, 2022: Retained Earnings €120,000, Share Capital—Ordinary €750,000, Bonds Payable €100,000, Share Premium—Ordinary €200,000, Goodwill €55,000, Accumulated Other Comprehensive Income (Loss) €(150,000), and Non-Controlling Interest €80,000. Prepare the equity section of the statement of financial position.

BE5.11 (LO 1, 2) Stowe SE's December 31, 2022, trial balance includes the following accounts: Share Capital—Ordinary €70,000, Retained Earnings €114,000, Trademarks €31,000, Share Capital—Preference €152,000, Trading Securities €55,000, Deferred Income Taxes €88,000, Share Premium—Ordinary €174,000, and Non-Controlling Interest €18,000. Prepare the equity section of the statement of financial position.

BE5.12 (LO 3) Keyser Beverage reported the following items in the most recent year.

Net income	\$40,000
Dividends paid	5,000
Increase in accounts receivable	10,000
Increase in accounts payable	7,000
Purchase of equipment (capital expenditure)	8,000
Depreciation expense	4,000
Issue of notes payable	20,000

Compute net cash provided by operating activities, the net change in cash during the year, and free cash flow.

BE5.13 (LO 3) Ames Ltd. reported 2022 net income of HK\$151,000. During 2022, accounts receivable increased by HK\$13,000 and accounts payable increased by HK\$9,500. Depreciation expense was HK\$44,000. Prepare the cash flows from operating activities section of the statement of cash flows (amounts in thousands).

BE5.14 (LO 3) Martinez SA engaged in the following cash transactions during 2022.

Sale of land and building	R\$191,000
Purchase of treasury shares	40,000
Purchase of land	37,000
Payment of cash dividend	95,000
Purchase of equipment	53,000
Issuance of ordinary shares	147,000
Retirement of bonds	100,000

Compute the net cash provided (used) by investing activities.

BE5.15 (LO 3) Use the information presented in BE5.14 for Martinez SA to compute the net cash provided (used) by financing activities.

BE5.16 (LO 3) Using the information in BE5.14, determine Martinez SA's free cash flow, assuming that it reported net cash provided by operating activities of R\$400,000.

Exercises

E5.1 (LO 1, 2) (Statement of Financial Position Classifications) Presented below are a number of statement of financial position accounts of Cunningham plc.

- a. Investment in Preference Shares.
- b. Treasury Shares.
- c. Share Capital—Ordinary.
- d. Dividends Payable.
- e. Accumulated Depreciation—Equipment.
- f. Finished Goods.
- g. Petty Cash.
- h. Interest Payable.
- i. Deficit.
- j. Trading Securities.
- k. Income Taxes Payable.
- l. Unearned Service Revenue.
- m. Work in Process.
- n. Salaries and Wages Payable.

Instructions

For each of the accounts above, indicate the proper statement of financial position classification. In the case of borderline items, indicate the additional information that would be required to determine the proper classification.

E5.2 (LO 1, 2) (Classification of Statement of Financial Position Accounts) Presented below are the captions of Nikos SpA's statement of financial position.

- a. Non-current assets.
 1. Investments.
 2. Property, plant, and equipment.
 3. Intangible assets.

- 4. Other assets.
- b. Current assets.
- c. Equity.
- d. Non-current liabilities.
- e. Current liabilities.

Instructions

Indicate by letter where each of the following items would be classified.

- 1. Share capital—preference.
- 2. Goodwill.
- 3. Salaries and wages payable.
- 4. Accounts payable.
- 5. Buildings.
- 6. Trading securities.
- 7. Current portion of long-term debt.
- 8. Patents.
- 9. Allowance for doubtful accounts.
- 10. Accounts receivable.
- 11. Accumulated other comprehensive income.
- 12. Notes payable (due next year).
- 13. Supplies.
- 14. Share capital—ordinary.
- 15. Land.
- 16. Bond sinking fund.
- 17. Inventory.
- 18. Prepaid insurance.
- 19. Bonds payable.
- 20. Income taxes payable.

E5.3 (LO 1, 2) (Classification of Statement of Financial Position Accounts) Assume that Masters Enterprises uses the following headings on its statement of financial position.

- a. Investments.
- b. Property, plant, and equipment.
- c. Intangible assets.
- d. Other assets.
- e. Current assets.
- f. Non-current liabilities.
- g. Current liabilities.
- h. Share capital.

- i. Share premium.
- j. Retained earnings.
- k. Accumulated other comprehensive income.

Instructions

Indicate by letter how each of the following usually should be classified. If an item should be reported in a note to the financial statements, use the letter “N” to indicate this fact. If an item need not be reported at all on the statement of financial position, use the letter “X.”

1. Prepaid insurance.
2. Shares owned in associated companies.
3. Unearned service revenue.
4. Advances to suppliers.
5. Unearned rent revenue.
6. Share capital—preference.
7. Share premium—preference.
8. Copyrights.
9. Petty cash fund.
10. Sales taxes payable.
11. Interest on notes receivable.
12. Twenty-year bonds payable that will mature within the next year. (No sinking fund exists, and refunding is not planned.)
13. Accounts receivable.
14. Unrealized gain on non-trading equity securities.
15. Interest on bonds payable.
16. Salaries that company budget shows will be paid to employees within the next year.
17. Accumulated depreciation—equipment.

E5.4 (LO 1, 2) (Preparation of a Classified Statement of Financial Position) Assume that Gulistan AG has the following accounts at the end of the current year.

1. Share Capital—Ordinary.
2. Notes Payable (long-term).
3. Treasury Shares (at cost).
4. Note Payable (short-term).
5. Raw Materials.
6. Long-Term Investment in Preference Shares.
7. Unearned Rent Revenue.
8. Work in Process.
9. Copyrights.
10. Buildings.
11. Notes Receivable (short-term).

12. Cash.
13. Salaries and Wages Payable.
14. Accumulated Depreciation—Buildings.
15. Cash Restricted for Plant Expansion.
16. Land Held for Future Plant Site.
17. Allowance for Doubtful Accounts (Accounts Receivable).
18. Retained Earnings.
19. Share Premium—Ordinary.
20. Unearned Service Revenue.
21. Receivables—Officers (due in 1 year).
22. Finished Goods.
23. Accounts Receivable.
24. Bonds Payable (due in 4 years).

Instructions

Prepare a classified statement of financial position in good form. (No monetary amounts are necessary.)

E5.5 (LO 1, 2) (Preparation of a Corrected Statement of Financial Position) Bruno SpA has decided to expand its operations. The bookkeeper recently completed the following statement of financial position in order to obtain additional funds for expansion.

Bruno SpA Statement of Financial Position December 31, 2022	
Current assets	
Cash	€260,000
Accounts receivable (net)	340,000
Inventory (at lower-of-average-cost-or-net realizable value)	401,000
Trading securities—at cost (fair value €120,000)	140,000
Property, plant, and equipment	
Buildings (net)	570,000
Equipment (net)	160,000
Land held for future use	175,000
Other assets	
Goodwill	80,000
Intangible assets	90,000
Prepaid expenses	12,000
Current liabilities	
Accounts payable	135,000
Notes payable (due next year)	125,000
Pension liability	82,000
Rent payable	49,000
Premium on bonds payable	53,000

Non-current liabilities	
Bonds payable	500,000
Equity	
Share capital—ordinary, €1.00 par, authorized 400,000 shares, issued 290,000	290,000
Share premium—ordinary	180,000
Retained earnings	?

Instructions

Prepare a revised statement of financial position given the available information. Assume that the accumulated depreciation balance for the buildings is €160,000 and for the equipment, €105,000. The allowance for doubtful accounts has a balance of €17,000. The pension liability is considered a non-current liability.

E5.6 (LO 1, 2) (Corrections of a Statement of Financial Position) The bookkeeper for Liba Ltd. has prepared the following statement of financial position as of July 31, 2022 (amounts in thousands).

Liba Ltd.			
Statement of Financial Position			
As of July 31, 2022			
Equipment (net)	¥ 84,000	Equity	¥155,500
Patents	21,000	Non-current liabilities	75,000
Inventory	60,000	Notes and accounts payable	44,000
Accounts receivable (net)	40,500		<u>¥274,500</u>
Cash	69,000		
	<u>¥274,500</u>		

The following additional information is provided.

- Cash includes ¥1,200 in a petty cash fund and ¥12,000 in a bond sinking fund.
- The net accounts receivable balance is comprised of the following three items: (a) accounts receivable—debit balances ¥52,000, (b) accounts receivable—credit balances ¥8,000 (customer prepayments), and (c) allowance for doubtful accounts ¥3,500.
- Inventory costing ¥5,300 was shipped out on consignment on July 31, 2022. The ending inventory balance does not include the consigned goods. Receivables in the amount of ¥5,300 were recognized on these consigned goods.
- Equipment had a cost of ¥112,000 and an accumulated depreciation balance of ¥28,000.
- Income taxes payable of ¥9,000 were accrued on July 31. Liba Ltd., however, had set up a cash fund to meet this obligation. This cash fund was not included in the cash balance but was offset against the income taxes payable amount.

Instructions

Prepare a corrected classified statement of financial position as of July 31, 2022, from the available information, adjusting the account balances using the additional information.

E5.7 (LO 1, 2) (Current Assets Section of the Statement of Financial Position) Presented below are selected accounts of Aramis SE at December 31, 2022.

Inventory (finished goods)	€ 52,000	Cost of Goods Sold	€2,100,000
Unearned Service Revenue	90,000	Notes Receivable	40,000
Equipment	253,000	Accounts Receivable	161,000

Inventory (work in process)	34,000	Inventory (raw materials)	187,000
Cash	42,000	Supplies Expense	60,000
Trading Securities	31,000	Allowance for Doubtful Accounts	12,000
Customer Advances	36,000	Licenses	18,000
Cash Restricted for Plant Expansion	50,000	Share Premium—Ordinary	88,000
		Treasury Shares	22,000

The following additional information is available.

1. Inventory is valued at lower-of-cost-or-net realizable value using FIFO.
2. Equipment is recorded at cost. Accumulated depreciation, computed on a straight-line basis, is €50,600.
3. The trading securities have a fair value of €29,000.
4. The notes receivable are due April 30, 2024, with interest receivable every April 30. The notes bear interest at 6%. (*Hint: Accrue interest due on December 31, 2022.*)
5. The allowance for doubtful accounts applies to the accounts receivable. Accounts receivable of €50,000 are pledged as collateral on a bank loan.
6. Licenses are recorded net of accumulated amortization of €14,000.
7. Treasury shares are recorded at cost.

Instructions

Prepare the current assets section of Aramis SE's December 31, 2022, statement of financial position, with appropriate disclosures.

E5.8 (LO 1, 2) (Current vs. Non-Current Liabilities) Pascal Corporation is preparing its December 31, 2022, statement of financial position. The following items may be reported as either a current or non-current liability.

1. On December 15, 2022, Pascal declared a cash dividend of \$2 per share to shareholders of record on December 31. The dividend is payable on January 15, 2023. Pascal has issued 1,000,000 ordinary shares of which 50,000 shares are held in treasury.
2. At December 31, bonds payable of \$100,000,000 are outstanding. The bonds pay 8% interest every September 30 and mature in installments of \$25,000,000 every September 30, beginning September 30, 2023.
3. At December 31, 2021, customer advances were \$12,000,000. During 2022, Pascal collected \$30,000,000 of customer advances; advances of \$25,000,000 represent performance obligations, which have been satisfied.

Instructions

For each item above, indicate the dollar amounts to be reported as a current liability and as a non-current liability, if any.

E5.9 (LO 1, 2) (Current Assets and Current Liabilities) The current assets and current liabilities sections of the statement of financial position of Jin Liu Ltd. appear as follows (amounts in thousands).

Jin Liu Ltd.			
Statement of Financial Position (partial)			
December 31, 2022			
Inventory		¥171,000	Notes payable ¥ 67,000

Accounts receivable	¥89,000		Accounts payable	61,000
Less: Allowance for doubtful accounts	7,000	82,000		<u>¥ 128,000</u>
Prepaid expenses		9,000		
Cash		40,000		
		<u>¥302,000</u>		

The following errors in the company's accounting have been discovered:

1. January 2023 cash disbursements entered as of December 2022 included payments of accounts payable in the amount of ¥35,000, on which a cash discount of 2% was taken.
2. The inventory included ¥27,000 of merchandise that had been received at December 31 but for which no purchase invoices had been received or entered. Of this amount, ¥10,000 had been received on consignment; the remainder was purchased f.o.b. destination, terms 2/10, n/30.
3. Sales for the first four days in January 2023 in the amount of ¥30,000 were entered in the sales book as of December 31, 2022. Of these, ¥21,500 were sales on account and the remainder were cash sales.
4. Cash, not including cash sales, collected in January 2023 and entered as of December 31, 2022, totaled ¥35,324. Of this amount, ¥23,324 was received on account after cash discounts of 2% had been deducted; the remainder represented the proceeds of a bank loan.

Instructions

- a. Restate the current assets and current liabilities sections of the statement of financial position in accordance with good accounting practice. (Assume that both accounts receivable and accounts payable are recorded gross.)
- b. State the net effect of your adjustments on Jin Liu Ltd.'s retained earnings balance.

E5.10 (LO 1, 2) (Current Liabilities) Mary Pierce is the controller of Arnold Corporation and is responsible for the preparation of the year-end financial statements. The following transactions occurred during the year.

- a. Bonuses to key employees based on net income for 2022 are estimated to be \$150,000.
- b. On December 1, 2022, the company borrowed \$900,000 at 8% per year. Interest is paid quarterly.
- c. Credit sales for the year amounted to \$10,000,000. Arnold's expense provision for doubtful accounts is estimated to be 2% of credit sales.
- d. On December 15, 2022, the company declared a \$2 per share dividend on the 40,000 ordinary shares outstanding, to be paid on January 5, 2023.
- e. During the year, customer advances of \$160,000 were received; \$50,000 of this amount was earned by December 31, 2022.

Instructions

For each item above, indicate the dollar amount to be reported as a current liability. If a liability is not reported, explain why.

E5.11 (LO 1, 2) (Statement of Financial Position Preparation) Presented below is the adjusted trial balance of Abbey plc at December 31, 2022.

	Debit	Credit
Cash	£ ?	
Supplies	1,200	

Prepaid Insurance	1,000	
Equipment	48,000

Franchises	160,000	
Share Capital—Ordinary (€5 par)		1,000,000
Treasury Shares	191,000	
Patents	195,000	
Retained Earnings		78,000
Accumulated Other Comprehensive Income		80,000
Total	€12,315,000	€12,315,000

Instructions

Prepare a statement of financial position at December 31, 2022, for Vivaldi SpA. (Ignore income taxes.)

E5.13 (LO 3) (Statement of Cash Flows—Classifications) The major classifications of activities reported in the statement of cash flows are operating, investing, and financing. Classify each of the transactions listed below as:

1. Operating activity—add to net income.
2. Operating activity—deduct from net income.
3. Investing activity.
4. Financing activity.
5. Reported as significant non-cash activity in the notes to the financial statements.

The transactions are as follows.

- a. Issuance of ordinary shares.
- b. Purchase of land and building.
- c. Redemption of bonds.
- d. Sale of equipment.
- e. Depreciation of machinery.
- f. Amortization of patent.
- g. Issuance of bonds for plant assets.
- h. Payment of cash dividends.
- i. Exchange of furniture for office equipment.
- j. Purchase of treasury shares.
- k. Loss on sale of equipment.
- l. Increase in accounts receivable during the year.

m. Decrease in accounts payable during the year.

E5.14 (LO 3) (Preparation of a Statement of Cash Flows) The comparative statements of financial position of Lopez Inc. at the beginning and the end of the year 2022 appear as follows.

Lopez Inc.			
Statements of Financial Position			
Assets	Dec. 31, 2022	Jan. 1, 2022	Inc./Dec.
Equipment	\$ 39,000	\$ 22,000	\$17,000 Inc.
Less: Accumulated depreciation—equipment	(17,000)	(11,000)	6,000 Inc.
Accounts receivable	91,000	88,000	3,000 Inc.
Cash	45,000	13,000	32,000 Inc.
Total	<u>\$158,000</u>	<u>\$112,000</u>	
Equity and Liabilities			
Share capital—ordinary	\$100,000	\$ 80,000	20,000 Inc.
Retained earnings	38,000	17,000	21,000 Inc.
Accounts payable	20,000	15,000	5,000 Inc.
Total	<u>\$158,000</u>	<u>\$112,000</u>	

Net income of \$34,000 was reported, and dividends of \$13,000 were paid in 2022. New equipment was purchased and none was sold.

Instructions

Prepare a statement of cash flows for the year 2022.

E5.15 (LO 3) (Preparation of a Statement of Cash Flows) Presented below is a condensed version of the comparative statements of financial position for Yoon Ltd. for the last 2 years at December 31 (amounts in millions).

	2022	2021
Investments	₩ 52,000	₩ 74,000
Equipment	298,000	240,000
Less: Accumulated depreciation—equipment	(106,000)	(89,000)
Accounts receivable	180,000	185,000
Cash	157,000	78,000
Share capital—ordinary	160,000	160,000
Retained earnings	287,000	177,000
Current liabilities	134,000	151,000

Additional information:

Investments were sold at a loss of ₩ 7,000; no equipment was sold; cash dividends paid were ₩ 50,000; and net income was ₩ 160,000.

Instructions

- Prepare a statement of cash flows for 2022 for Yoon Ltd.
- Determine Yoon's free cash flow.

E5.16 (LO 3) (Preparation of a Statement of Cash Flows) A comparative statement of financial position for Orozco AG is presented below.

--	--

	December 31	
	2022	2021
Assets		
Land	€ 71,000	€110,000
Equipment	270,000	200,000
Accumulated depreciation—equipment	(69,000)	(42,000)
Inventory	180,000	189,000
Accounts receivable	82,000	66,000
Cash	63,000	22,000
Total	€597,000	€545,000
Equity and Liabilities		
Share capital—ordinary (€1 par)	€214,000	€164,000
Retained earnings	199,000	134,000
Bonds payable	150,000	200,000
Accounts payable	34,000	47,000
Total	€597,000	€545,000

Additional information:

1. Net income for 2022 was €105,000.
2. Cash dividends of €40,000 were declared and paid.
3. Bonds payable amounting to €50,000 were retired through issuance of ordinary shares.

Instructions

- a. Prepare a statement of cash flows for 2022 for Orozco AG.
- b. Determine Orozco's current cash debt coverage, cash debt coverage, and free cash flow. Comment on its liquidity and financial flexibility.

E5.17 (LO 1, 2, 3) (Preparation of a Statement of Cash Flows and a Statement of Financial Position) Chekov Corporation's statement of financial position at the end of 2021 included the following items.

Land	\$ 30,000	Bonds payable	\$100,000
Buildings	120,000	Current liabilities	150,000
Equipment	90,000	Share capital—ordinary	180,000
Accum. depr.—buildings	(30,000)	Retained earnings	44,000
Accum. depr.—equipment	(11,000)	Total	\$474,000
Patents	40,000		
Current assets	235,000		
Total	\$474,000		

The following information is available for 2022.

1. Net income was \$55,000.
2. Equipment (cost \$20,000 and accumulated depreciation \$8,000) was sold for \$9,000.
3. Depreciation expense was \$4,000 on the building and \$9,000 on equipment.
4. Patent amortization was \$2,500.

5. Current assets other than cash increased by \$25,000. Current liabilities increased by \$13,000.
6. An addition to the building was completed at a cost of \$27,000.
7. A long-term investment in debt securities was purchased for \$16,000.
8. Bonds payable of \$50,000 were issued.
9. Cash dividends of \$25,000 were declared and paid.
10. Treasury shares were purchased at a cost of \$11,000.

Instructions

(Show only totals for current assets and current liabilities.)

- a. Prepare a statement of cash flows for 2022.
- b. Prepare a statement of financial position at December 31, 2022.

E5.18 (LO 3, 4) (Preparation of a Statement of Cash Flows, Analysis) The comparative statements of financial position of Menachem NV at the beginning and end of the year 2022 appear below.

Menachem NV			
Statements of Financial Position			
Assets	Dec. 31, 2022	Jan. 1, 2022	Inc./Dec.
Equipment	€ 37,000	€ 22,000	€15,000 Inc.
Less: Accumulated depreciation—equipment	(17,000)	(11,000)	6,000 Inc.
Accounts receivable	106,000	88,000	18,000 Inc.
Cash	22,000	13,000	9,000 Inc.
Total	<u>€148,000</u>	<u>€112,000</u>	
Equity and Liabilities			
Share capital—ordinary	€100,000	€ 80,000	20,000 Inc.
Retained earnings	28,000	17,000	11,000 Inc.
Accounts payable	20,000	15,000	5,000 Inc.
Total	<u>€148,000</u>	<u>€112,000</u>	

Net income of €34,000 was reported, and dividends of €23,000 were paid in 2022. New equipment was purchased and none was sold.

Instructions

- a. Prepare a statement of cash flows for the year 2022.
- b. Compute the current ratio (current assets ÷ current liabilities) as of January 1, 2022, and December 31, 2022, and compute free cash flow for the year 2022.
- c. In light of the analysis in (b), comment on Menachem's liquidity and financial flexibility.

Instructions

Prepare a classified statement of financial position in good form. (No monetary amounts are to be shown.)

P5.2 (LO1, 2) (Statement of Financial Position Preparation) Presented below are a number of statement of financial position items for Montoya SA, for the current year, 2022.

Goodwill	€ 125,000	Inventory	€ 239,800
Payroll taxes payable	177,591	Rent payable (short-term)	45,000
Bonds payable	285,000	Income taxes payable	98,362
Cash	360,000	Long-term rental obligations	480,000
Land	480,000	Share capital—ordinary, €1 par value	200,000
Notes receivable	445,700	Share capital—preference, €10 par value	150,000
Notes payable (to banks)	265,000	Prepaid expenses	87,920
Accounts payable	490,000	Equipment	1,470,000
Retained earnings	?	Trading securities	121,000
Income taxes receivable	97,630	Accumulated depreciation— buildings	270,200
Unsecured notes payable (long-term)	1,600,000	Buildings	1,640,000
Accumulated depreciation— equipment	292,000		

Instructions

Prepare a classified statement of financial position in good form. Share capital—ordinary shares authorized was 400,000 shares, and share capital—preference shares authorized was 20,000 shares. Assume that notes receivable and notes payable are short-term, unless stated otherwise. Cost and fair value of trading securities are the same.

P5.3 (LO1, 2) (Statement of Financial Position Adjustment and Preparation) The adjusted trial balance of Asian-Pacific Ltd. and other related information for the year 2022 are presented below (amounts in thousands).

Asian-Pacific Ltd. Adjusted Trial Balance December 31, 2022		
	Debit	Credit
Cash	¥ 41,000	
Accounts Receivable	163,500	
Allowance for Doubtful Accounts		¥ 8,700
Prepaid Insurance	5,900	
Inventory	208,500	
Long-term Investments	339,000	
Land	85,000	
Construction in Process	124,000	

Patents	36,000	
Equipment	400,000	
Accumulated Depreciation—Equipment		240,000
Accounts Payable		148,000
Accrued Expenses		49,200
Notes Payable		94,000
Bonds Payable		180,000
Share Capital—Ordinary		500,000
Share Premium—Ordinary		45,000
Retained Earnings		138,000
	<u>¥1,402,900</u>	<u>¥1,402,900</u>

Additional information:

1. The average-cost method of inventory value is used.
2. The cost and fair value of the long-term investments that consist of ordinary shares and bonds are the same.
3. The amount of the Construction in Process account represents the costs expended to date on a building in the process of construction. (The company rents factory space at the present time.) The land on which the building is being constructed cost ¥85,000, as shown in the trial balance.
4. The patents were purchased by the company at a cost of ¥40,000 and are being amortized on a straight-line basis.
5. The notes payable represent bank loans that are secured by long-term investments carried at ¥120,000. These bank loans are due in 2023.
6. The bonds payable bear interest at 8% payable every December 31, and are due January 1, 2033.
7. 600,000 ordinary shares with a par value of ¥1 were authorized, of which 500,000 shares were issued and outstanding.

Instructions

Prepare a statement of financial position as of December 31, 2022, so that all important information is fully disclosed.

P5.4 (LO 1, 2) Groupwork (Preparation of a Corrected Statement of Financial Position) The statement of financial position of Kishwaukee Ltd. as of December 31, 2022, is as follows.

Kishwaukee Ltd.	
Statement of Financial Position	
December 31, 2022	
<u>Assets</u>	
Goodwill (Note 1)	£ 120,000
Buildings	1,640,000

Share capital—ordinary, authorized and issued, 1,000,000 shares, no par	1,150,000
Retained earnings	858,000
Non-controlling interest	570,000
Income taxes payable	75,000
Accumulated depreciation—buildings	410,000
	<u>£3,663,000</u>

Note 1: Goodwill in the amount of £120,000 was recognized because the company believed that book value was not an accurate representation of the fair value of the company. The gain of £120,000 was credited to Retained Earnings.

Note 2: Notes payable are non-current except for the current installment due of £100,000.

Instructions

Prepare a corrected classified statement of financial position in good form. The notes above are for information only.

P5.5 (LO 1, 2) Groupwork (Statement of Financial Position Adjustment and Preparation)

Presented below is the statement of financial position of Sargent Corporation for the current year, 2022.

Sargent Corporation			
Statement of Financial Position			
December 31, 2022			
Investments	\$ 640,000	Equity	\$1,770,000
Property, plant, and equipment	1,720,000	Non-current liabilities	960,000
Intangible assets	265,000	Current liabilities	<u>380,000</u>
Current assets	<u>485,000</u>		<u>\$3,110,000</u>
	<u>\$3,110,000</u>		

The following information is presented.

- The current assets section includes cash \$150,000, accounts receivable \$170,000 less \$10,000 for allowance for doubtful accounts, inventory \$180,000, and unearned service revenue \$5,000. Inventory is stated at the lower-of-FIFO-cost-or-net-realizable value.
- The investments section includes land held for speculation \$40,000; investments in ordinary shares, short-term (trading) \$80,000 and long-term (non-trading) \$270,000; and bond sinking fund \$250,000. The cost and fair value of investments in ordinary shares are the same.
- Property, plant, and equipment includes buildings \$1,040,000 less accumulated depreciation \$360,000, equipment \$450,000 less accumulated depreciation \$180,000, land \$500,000, and land held for future use \$270,000.
- Intangible assets include a franchise \$165,000 and goodwill \$100,000.

5. Current liabilities include accounts payable \$140,000; notes payable—short-term \$80,000 and long-term \$120,000; and income taxes payable \$40,000.
6. Non-current liabilities are composed solely of 7% bonds payable due 2030.
7. Equity as shown includes share capital—preference, \$5 par value, authorized 200,000 shares, issued 90,000 shares for \$450,000; and share capital—ordinary, \$1 par value, authorized 400,000 shares, issued 100,000 shares at an average price of \$10. In addition, the company has retained earnings of \$320,000.

Instructions

Prepare a statement of financial position in good form, adjusting the amounts in each statement of financial position classification as affected by the information given above.

P5.6 (LO 1, 2, 3) (Preparation of a Statement of Cash Flows and a Statement of Financial Position) Lansbury Inc. had the statement of financial position shown below at December 31, 2021.

Lansbury Inc.			
Statement of Financial Position			
December 31, 2021			
Investments	\$ 32,000	Share capital—ordinary	\$100,000
Plant assets (net)	81,000	Retained earnings	23,200
Land	40,000	Long-term notes payable	41,000
Accounts receivable	21,200	Accounts payable	<u>30,000</u>
Cash	<u>20,000</u>		<u>\$194,200</u>
	<u>\$194,200</u>		

During 2022, the following occurred.

1. Lansbury Inc. sold part of its investment portfolio for \$15,000. This transaction resulted in a gain of \$3,400 for the firm. The company classifies its investments as non-trading equity.
2. A tract of land was purchased for \$18,000 cash.
3. Long-term notes payable in the amount of \$16,000 were retired before maturity by paying \$16,000 cash.
4. An additional \$20,000 in ordinary shares were issued at par.
5. Dividends totalling \$8,200 were declared and paid to shareholders.
6. Net income for 2022 was \$32,000 after allowing for depreciation of \$11,000.
7. Land was purchased through the issuance of \$30,000 in bonds.
8. At December 31, 2022, Cash was \$32,000, Accounts Receivable was \$41,600, and Accounts Payable remained at \$30,000.

Instructions

- a. Prepare a statement of cash flows for 2022.
- b. Prepare a statement of financial position as it would appear at December 31, 2022.
- c. How might the statement of cash flows help the user of the financial statements? Compute free cash flow and two cash flow ratios.

P5.7 (LO 1, 2, 3) Groupwork (Preparation of a Statement of Cash Flows and Statement of Financial Position) Luo Ltd. had the following statement of financial position at December 31, 2021 (amounts in thousands).

Luo Ltd.			
Statement of Financial Position			
December 31, 2021			
Investments	¥ 32,000	Share capital—ordinary	¥100,000
Plant assets (net)	81,000	Retained earnings	23,200
Land	40,000	Bonds payable	41,000
Accounts receivable	21,200	Accounts payable	30,000
Cash	20,000		¥194,200
	<u>¥194,200</u>		<u> </u>

During 2022, the following occurred.

1. Luo liquidated its non-trading equity investment portfolio at a loss of ¥5,000.
2. A tract of land was purchased for ¥38,000.
3. An additional ¥30,000 in ordinary shares were issued at par.
4. Dividends totaling ¥10,000 were declared and paid to shareholders.
5. Net income for 2022 was ¥35,000, including ¥12,000 in depreciation expense.
6. Land was purchased through the issuance of ¥30,000 in additional bonds.
7. At December 31, 2022, Cash was ¥70,200, Accounts Receivable was ¥42,000, and Accounts Payable was ¥40,000.

Instructions

- a. Prepare a statement of cash flows for the year 2022 for Luo.
- b. Prepare the statement of financial position as it would appear at December 31, 2022.
- c. Compute Luo's free cash flow and the current cash debt coverage for 2022.
- d. Use the analysis of Luo to illustrate how information in the statement of financial position and statement of cash flows helps the user of the financial statements.

Concepts for Analysis

CA5.1 (LO 2) (Reporting the Financial Effects of Varied Transactions) In an examination of Arenes Corporation as of December 31, 2022, you have learned that the following situations exist. No entries have been made in the accounting records for these items.

1. The company erected its present factory building in 2007. Depreciation was calculated by the straight-line method, using an estimated life of 35 years. Early in 2022, the board of directors conducted a careful survey and estimated that the factory building had a remaining useful life of 25 years as of January 1, 2022.
2. When calculating the accrual for officers' salaries at December 31, 2022, it was discovered that the accrual for officers' salaries for December 31, 2021, had been overstated.
3. On December 15, 2022, Arenes Corporation declared a cash dividend on its ordinary shares outstanding, payable February 1, 2023, to the shareholders of record December 31, 2022.

Instructions

Describe fully how each of the items above should be reported in the financial statements of Arenes Corporation for the year 2022.

CA5.2 (LO 1, 2) (Current Asset and Liability Classification) Below are the titles of a number of debit and credit accounts as they might appear on the statement of financial position of Hayduke ASA as of October 31, 2022.

Debit	Credit
Interest Accrued on Government Securities	Share Capital—Preference
Notes Receivable	6% First Mortgage Bonds, due in 2029
Petty Cash Fund	Preference Dividend, payable Nov. 1, 2022
Government Securities	Allowance for Doubtful Accounts
Treasury Shares	Income Taxes Payable
Cash in Bank	Customers' Advances (on contracts to be completed next year)
Land	Provision for Warranties
Inventory of Operating Parts and Supplies	Officers' 2022 Bonus Accrued
Inventory of Raw Materials	Accrued Payroll
Patents	Notes Payable
Cash and Government Bonds Set Aside for Property Additions	Accrued Interest on Bonds
Investment in Subsidiary	Accumulated Depreciation
Accounts Receivable:	Accounts Payable
Government Contracts	Share Premium—Preference
Regular	Accrued Interest on Notes Payable
Goodwill	6½% First Mortgage Bonds, due in 2022 out of current assets
Inventory of Finished Goods	Non-Controlling Interest
Inventory of Work in Process	Accumulated Other Comprehensive Income (loss)
Deficit	

Instructions

Select the current asset and current liability items from among these debit and credit accounts. If there appear to be certain borderline cases that you are unable to classify without further information, mention them and explain your difficulty, or give your reasons for making questionable classifications, if any.

CA5.3 (LO 2) (Identifying Statement of Financial Position Deficiencies) The assets of Fonzarelli SpA are presented as follows (amounts in thousands).

Fonzarelli SpA		
Statement of Financial Position		
(Partial) December 31, 2022		
<u>Assets</u>		
Current assets		
Cash		€ 100,000
Non-controlling interest		27,500
Trading securities (fair value €30,000) at cost		37,000
Accounts receivable (less bad debt reserve)		75,000

Inventory—at lower-of-cost (determined by the first-in, first-out method)-or-net realizable value		240,000
Total current assets		479,500
Tangible assets		
Land (less accumulated depreciation)		80,000
Buildings and equipment	€800,000	
Less: Accumulated depreciation	250,000	550,000
Net tangible assets		630,000
Investments		
Bonds		100,000
Treasury shares		70,000
Total investments		170,000
Other assets		
Land held for future factory site		19,400
Sinking fund		975,000
Total other assets		994,400
Total assets		€2,273,900

Instructions

Indicate the deficiencies, if any, in the foregoing presentation of Fonzarelli's assets.

CA5.4 (LO1, 2, 3) Writing (Critique of Statement of Financial Position Format and Content) The following is the statement of financial position of Rasheed Brothers Corporation (amounts in thousands).

Rasheed Brothers Corporation		
Statement of Financial Position		
December 31, 2022		
<u>Assets</u>		
Current assets		
Cash	\$26,000	
Short-term investments	18,000	
Accounts receivable	25,000	
Inventory	20,000	
Supplies	4,000	
Investment in associated company	20,000	\$113,000
Investments		
Treasury shares		25,000
Property, plant, and equipment		
Buildings and land	91,000	
Less: Accumulated depreciation	31,000	60,000
Other assets		
Cash restricted for plant expansion		19,000
Total assets		\$217,000

Liabilities and Equity		
Current liabilities		
Accounts payable	\$22,000	
Income taxes payable	15,000	\$ 37,000
Deferred credits		
Unrealized gains on non-trading equity investments		2,000
Non-current liabilities		
Bonds payable		60,000
Total liabilities		99,000
Equity		
Share capital—ordinary, par \$5	85,000	
Retained earnings	25,000	
Cash dividends declared	8,000	118,000
Total liabilities and equity		<u>\$217,000</u>

Instructions

Evaluate the statement of financial position presented. State briefly the proper treatment of any item criticized.

CA5.5 (LO 1, 2, 4) Ethics (Presentation of Property, Plant, and Equipment) Carol Keene, comptroller for Dumaine Industries, is trying to decide how to present “Property, plant, and equipment” in the statement of financial position. She realizes that the statement of cash flows will show that the company made a significant investment in purchasing new equipment this year, but overall she knows the company’s plant assets are rather old. She feels that she can disclose one figure titled “Property, plant, and equipment, net of depreciation,” and the result will be a low figure. However, it will not disclose the age of the assets. If she chooses to show the cost less accumulated depreciation, the age of the assets will be apparent. She proposes the following.

Property, plant, and equipment, net of depreciation	£ 10,000,000
<i>rather than</i>	
Property, plant, and equipment	£ 50,000,000
Less: Accumulated depreciation	(40,000,000)
Net book value	<u>£ 10,000,000</u>

Instructions

Answer the following questions.

- What are the ethical issues involved?
- What should Keene do?

CA5.6 (LO 3) Writing (Cash Flow Analysis) The partner in charge of the Kappeler Corporation audit comes by your desk and leaves a letter he has started to the CEO and a copy of the cash flow statement for the year ended December 31, 2022. Because he must leave on an emergency, he asks you to finish the letter by explaining (1) the disparity between net income and cash flow, (2) the importance of operating cash flow, (3) the renewable source(s) of cash flow, and (4) possible suggestions to improve the cash position.

Kappeler Corporation Statement of Cash Flows

For the Year Ended December 31, 2022		
Cash flows from operating activities		
Net income		\$100,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 10,000	
Amortization expense	1,000	
Loss on sale of fixed assets	5,000	
Increase in accounts receivable (net)	(40,000)	
Increase in inventory	(35,000)	
Decrease in accounts payable	(41,000)	(100,000)
Net cash provided by operating activities		-0-
Cash flows from investing activities		
Sale of plant assets	25,000	
Purchase of equipment	(100,000)	
Purchase of land	(200,000)	
Net cash used by investing activities		(275,000)
Cash flows from financing activities		
Payment of dividends	(10,000)	
Redemption of bonds	(100,000)	
Net cash used by financing activities		(110,000)
Net decrease in cash		(385,000)
Cash balance, January 1, 2022		400,000
Cash balance, December 31, 2022		<u>\$ 15,000</u>

Date

President Kappeler, CEO

Kappeler Corporation

125 Wall Street

Middleton, Kansas 67458

Dear Mr. Kappeler:

I have good news and bad news about the financial statements for the year ended December 31, 2022. The good news is that net income of \$100,000 is close to what you predicted in the strategic plan last year, indicating strong performance this year. The bad news is that the cash balance is seriously low. Enclosed is the Statement of Cash Flows, which best illustrates how both of these situations occurred simultaneously ...

Instructions

Complete the letter to the CEO, including the four components requested by your boss.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- What alternative formats could M&S have adopted for its statement of financial position? Which format did it adopt?
- How much working capital did M&S have on March 30, 2019? On March 31, 2018?
- What were M&S's cash flows from its operating, investing, and financing activities for 2019? What were its trends in net cash provided by operating activities over the period 2018 to 2019? Explain why the increase in accounts payable and in accrued and other liabilities is added to net income to arrive at net cash provided by operating activities.
- Compute M&S's: (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow for 2019. What do these ratios indicate about M&S's financial conditions?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- What format(s) did these companies use to present their statements of financial position?
- How much working capital did each of these companies have at the end of 2018? Speculate as to their rationale for the amount of working capital they maintain.
- What are some of the significant differences in the asset structure of the two companies? What causes these differences?
- What were these two companies' trends in net cash provided by operating activities over the period 2017 to 2018?
- Compute both companies': (1) current cash debt coverage, (2) cash debt coverage, and (3) free cash flow. What do these ratios indicate about the financial condition of the two companies?

Financial Statement Analysis Cases

Case 1 Cathay Pacific Airlines

Cathay Pacific Airways (HKG) is an international airline offering scheduled passenger and cargo services to 116 destinations in 35 countries and territories. The company was founded in Hong Kong in 1946 and remains deeply committed to its home base, making substantial investments to develop Hong Kong as one of the world's leading global transportation hubs. In addition to the fleet of 123 wide-bodied aircraft, these investments include catering, aircraft maintenance, and ground-handling companies. The following titles were shown on Cathay's statement of financial position in a recent year.

Current portion of long-term liabilities	Net non-current assets
Deferred taxation	Non-controlling interest
Fixed assets	Other long-term receivables and investments

Funds attributable to owners of Cathay Pacific	Reserves Retirement benefit obligations
Intangible assets	Share capital—ordinary
Investments in associates	Taxation
Liquid funds	Trade and other payables
Long-term liabilities	Trade and other receivables
	Unearned transportation revenue

Instructions

- Organize the accounts in the general order in which they would be presented in a classified statement of financial position.
- When Cathay passengers purchase tickets for travel on future flights, what statement of financial position accounts are most likely affected? Do the balances in these accounts decrease or increase?

Case 2 Christian Dior

Presented below is information reported by **Christian Dior** (FRA) related to its off-balance-sheet commitments in its 2018 annual report. Christian Dior reported current assets of €29,585 and total current liabilities of €17,363 at December 31, 2018. (All amounts are in millions of euros.)

Christian Dior

Note 30 (partial): Off-balance-sheet commitments

As of December 31, 2018, the maturity dates of these commitments break down as follows (euros in millions):

	Less than 1 Year	One to 5 Years	More than 5 Years	Total
Grapes, wines and eaux-de-vie	659	1,346	35	2,040
Other purchase commitments for raw materials	123	91	1	215
Industrial and commercial fixed assets	601	121	(1)	721
Investments in joint venture shares and noncurrent financial assets	2,049	102	—	2,151
Total	<u>3,432</u>	<u>1,660</u>	<u>35</u>	<u>5,127</u>

Lease and similar commitments

In connection with its business activities, the Group enters into agreements for the rental of premises or airport concession contracts. The Group also finances a portion of its equipment through long-term operating leases.

The fixed or minimum portion of commitments in respect of the irrevocable period of operating lease or concession contracts were as follows as of December 31, 2018 (euros in millions):

	December 31, 2018
Less than 1 year	2,334
One to 5 years	6,098
More than 5 years	<u>4,141</u>
Commitments given for operating leases and concession fees	<u>12,573</u>

Instructions

- Compute Christian Dior's working capital and current ratio (current assets ÷ current liabilities) with and without the off-balance-sheet items reported in Note 30.
- Briefly discuss how the information provided in the off-balance-sheet note would be useful in evaluating Christian Dior for loans (1) due in 1 year, and (2) due in 5 years.

Case 3 LG

The incredible growth of **LG** (KOR) has put fear into the hearts of competing appliance makers. The following financial information is taken from LG's financial statements.

(Korean won in billions)	Current Year	Prior Year
Current assets	₩30,517	₩24,297
Total assets	64,782	54,080
Current liabilities	28,110	21,136
Total liabilities	39,048	32,152
Cash provided by operations	10,217	8,807
Capital expenditures	8,190	5,071
Dividends paid	659	423
Net income (loss)	2,967	3,632
Sales	90,222	76,228

Instructions

- Calculate free cash flow for LG for the current and prior years, and discuss its ability to finance expansion from internally generated cash. Assume that LG's major capital expenditures are related to building manufacturing plants and that, to date, it has avoided purchasing large warehouses. Instead, it has used those of others. It is possible, however, that in order to continue its growth in international sales, the company may have to build its own warehouses. If this happens, how might your impression of its ability to finance expansion change?
- Discuss any potential implications of the change in LG's cash provided by operations from the prior year to the current year.

Accounting, Analysis, and Principles

Early in January 2023, Hopkins plc is preparing for a meeting with its bankers to discuss a loan request. Its bookkeeper provided the following accounts and balances at December 31, 2022.

	Debit	Credit
Inventory	£ 65,300	
Accounts Receivable (net)	38,500	
Cash	75,000	
Equipment (net)	84,000	
Patents	15,000	
Notes and Accounts Payable		£ 52,000
Notes Payable (due 2024)		75,000
Share Capital—Ordinary		100,000
Retained Earnings		50,800
	<u>£277,800</u>	<u>£277,800</u>

Except for the following items, Hopkins has recorded all adjustments in its accounts.

1. Net accounts receivable is comprised of £52,000 in accounts receivable and £13,500 in allowance for doubtful accounts.
2. Cash includes £500 petty cash and £15,000 in a bond sinking fund.
3. Equipment had a cost of £112,000 and accumulated depreciation of £28,000.
4. On January 8, 2023, one of Hopkins' customers declared bankruptcy. At December 31, 2022, this customer owed Hopkins £9,000.

Accounting

Prepare a corrected December 31, 2022, statement of financial position for Hopkins plc.

Analysis

Hopkins' bank is considering granting an additional loan in the amount of £45,000, which will be due December 31, 2023. How can the information in the statement of financial position provide useful information to the bank about Hopkins' ability to repay the loan?

Principles

In the upcoming meeting with the bank, Hopkins plans to provide additional information about the fair value of its equipment and some internally generated intangible assets related to its customer lists. This information indicates that Hopkins has significant unrealized gains on these assets, which are not reflected on the statement of financial position. What objections is the bank likely to raise about the usefulness of this information in evaluating Hopkins for the loan renewal?

Research Case

In light of the full disclosure principle, investors and creditors need to know the balances for assets, liabilities, and equity, as well as the accounting policies adopted by management to measure the items reported in the statement of financial position.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at the site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the literature that addresses the disclosure of accounting policies.
- b. How are accounting policies defined in the literature?
- c. What are the guidelines concerning consistency in applying accounting policies?
- d. What are some examples of common disclosures that are required under this statement?

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the statement of financial position and statement of cash flows under IFRS and U.S. GAAP.

As in IFRS, the statement of financial position and the statement of cash flows are required statements for U.S. GAAP. In addition, the content and presentation of a U.S. GAAP statement of financial position and cash flow statement are similar to those used for IFRS.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to the statement of financial position.

Similarities

- Both U.S. GAAP and IFRS allow the use of the title “balance sheet” or “statement of financial position.” IFRS recommends but does not require the use of the title “statement of financial position” rather than balance sheet.
- Both U.S. GAAP and IFRS require disclosures about (1) accounting policies followed, (2) judgments that management has made in the process of applying the entity’s accounting policies, and (3) the key assumptions and estimation uncertainty that could result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year. Comparative prior period information must be presented and financial statements must be prepared annually.
- U.S. GAAP and IFRS require presentation of non-controlling interests in the equity section of the statement of financial position.

Differences

- U.S. GAAP follows the same guidelines as presented in the chapter for distinguishing between current and non-current assets and liabilities. However, under U.S. GAAP, public companies must follow U.S. SEC regulations, which require specific line items. In addition, specific U.S. GAAP mandates certain forms of reporting for this information. IFRS requires a classified statement of financial position except in very limited situations.

- Under U.S. GAAP cash is listed first, but under IFRS it is many times listed last. That is, under IFRS, current assets are usually listed in the reverse order of liquidity than they are under U.S. GAAP.
- U.S. GAAP has many differences in terminology that you will notice in this text. One example is the use of common stock under U.S. GAAP, which is referred to as share capital—ordinary under IFRS.
- Use of the term “reserve” is discouraged in U.S. GAAP, but there is no such prohibition in IFRS.

About the Numbers

The order of presentation in the statement of financial position differs between U.S. GAAP and IFRS. As indicated in **Illustration GAAP5.1**, U.S. companies generally present current assets, non-current assets, current and non-current liabilities, and shareholders’ equity.

Assets	Liabilities and Owners’ Equity
Current assets	Current liabilities
Long-term investments	Long-term debt
Property, plant, and equipment	Shareholders’ equity
Intangible assets	Common stock
Other assets	Additional paid-in capital
	Retained earnings

ILLUSTRATION GAAP5.1 Statement of Financial Position for U.S. Companies

In addition, within the current asset and liability classifications, items are presented in order of liquidity, as indicated in the following excerpt from **Hasbro, Inc.** (USA).

Hasbro, Inc. (in thousands)	
Current assets	
Cash and cash equivalents	\$ 715,400
Accounts receivable, less allowances of \$27,700	556,287
Inventories	203,337
Prepaid expenses and other current assets	243,291
Total current assets	\$1,718,315

On the Horizon

At one time, the IASB and the FASB worked on a project to converge their standards related to financial statement presentation, including the statement of financial position (balance sheet). A key feature of the revised framework is that each of the statements will be organized, in the same format, to separate an entity’s financing activities from its operating and investing activities, and, further, to separate financing activities into transactions with owners and creditors. Thus, the same classifications used in the statement of financial position could be used in the statement of comprehensive income and the statement of cash flows.

That original convergence project is on hold, but both Boards have pivoted to focus on performance reporting (the income statement). Why abandon a project on the statement of financial position? Well, both Boards learned in their research that there is good comparability in the structure and content of the statement of financial position. While companies may not be presenting sufficient detail in the statement or note disclosures, current reporting requirements could be “tweaked” to meet IFRS or

FASB objectives for the statement of financial position (balance sheet) instead of undergoing a major overhaul.

GAAP Self-Test Questions

1. Which of the following statements about IFRS and U.S. GAAP accounting and reporting requirements for the balance sheet is **not** correct?
 - a. Both IFRS and U.S. GAAP distinguish between current and non-current assets and liabilities.
 - b. The presentation formats required by IFRS and U.S. GAAP for the balance sheet are similar.
 - c. Both IFRS and U.S. GAAP require that comparative information be reported.
 - d. One difference between the reporting requirements under IFRS and those of the U.S. GAAP balance sheet is that an IFRS balance sheet may list non-current assets first.
2. Current assets under IFRS are listed generally:
 - a. by importance.
 - b. in the reverse order of their expected conversion to cash.
 - c. by longevity.
 - d. alphabetically.
3. Companies that use IFRS:
 - a. may report all their assets on the statement of financial position at fair value.
 - b. are not allowed to net assets (assets – liabilities) on their statement of financial positions.
 - c. may report non-current assets before current assets on the statement of financial position.
 - d. do not have any guidelines as to what should be reported on the statement of financial position.
4. Franco Company uses IFRS and reports a “reserve” in its statement of financial position. If Franco were reporting under U.S. GAAP, it would:
 - a. be required to report a reserve in its balance sheet.
 - b. be discouraged from using the term “reserve” in its financial statements.
 - c. have the option to use the term “reserves.”
 - d. report the reserve in the liability section of its balance sheet.
5. Which of the following is **not** a required disclosure under IFRS and U.S. GAAP?
 - a. Accounting policies followed.
 - b. Judgments that management has made in the process of applying the entity’s accounting policies.
 - c. Key assumptions and estimation uncertainty that could result in a material adjustment to the carrying amounts of assets and liabilities within the next financial year.
 - d. Number of employees.

GAAP Concepts and Application

GAAP5.1 Briefly describe some of the similarities and differences between IFRS and U.S. GAAP with respect to statement of financial position reporting.

GAAP5.2 Briefly describe the convergence efforts related to financial statement presentation.

GAAP5.3 Rainmaker Company prepares its financial statements in accordance with U.S. GAAP. Briefly discuss the differences in order of presentation in its statement of financial position compared to IFRS.

GAAP5.4 The following is the balance sheet (statement of financial position) for **Nordstrom, Inc.** (USA).

Nordstrom, Inc.		
Consolidated Balance Sheets		
In millions		
	<u>Current</u> <u>Year</u>	<u>Prior</u> <u>Year</u>
Assets		
Current assets:		
Cash and cash equivalents	\$ 595	\$ 827
Accounts receivable, net	196	2,306
Merchandise inventories	1,945	1,733
Current deferred tax assets, net	—	256
Prepaid expenses and other	278	102
Total current assets	3,014	5,224
Land, property and equipment, net	3,735	3,340
Goodwill	435	435
Other assets	514	246
Total Assets	\$7,698	\$9,245
Liabilities and Shareholder's Equity		
Current liabilities:		
Accounts payable	\$1,324	\$1,328
Accrued salaries, wages and related benefits	416	416
Other current liabilities	1,161	1,048
Current portion of long-term debt	10	8
Total current liabilities	2,911	2,800
Long-term debt, net	2,795	3,123
Deferred property incentives, net	540	510
Other liabilities	581	372
Commitments and contingencies (Note 12)		
Shareholders' equity:		
Common stock, no par value: 1,000 shares authorized; 173.5 and 190.1 shares issued and outstanding	2,539	2,338
(Accumulated deficit) Retained earnings	(1,610)	166
Accumulated other comprehensive loss	(58)	(64)
Total shareholders' equity	871	2,440
Total liabilities and shareholders' equity	\$7,698	\$9,245

Instructions

- Identify at least three differences in statement of financial position reporting between IFRS and U.S. GAAP, as shown in Nordstrom's balance sheet.

- b. Review Nordstrom's balance sheet and identify how the format of this financial statement provides useful information, as illustrated in the chapter.

Answers to GAAP Self-Test Questions

1. b 2. b 3. c 4. b 5. d

Notes

- 1 The IASB indicates that the title "statement of financial position" better reflects the function of the statement and is consistent with the Conceptual Framework discussed in [Chapter 2](#). The title "balance sheet" simply reflects the condition that double-entry bookkeeping requires all debits to equal all credits and does not identify the content or purpose of the statement. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.)
- 2 Risk conveys the unpredictability of future events, transactions, circumstances, and results of the company.
- 3 A company may classify the statement of financial position in some other manner, but in practice you see little departure from these major subdivisions. In some countries, such as Germany, companies often list current assets first. *IAS No. 1* requires companies to distinguish current assets and liabilities from non-current ones, except in limited situations. [2]
- 4 Note that the IASB issued *IFRS 9, Financial Instruments*, which eliminated the available-for-sale and held-to-maturity classifications.
- 5 A **financial instrument** is any contract that gives rise to a financial asset for one company and a financial liability or equity instrument for another company. [4]
- 6 More specifically, IFRS indicates that "an entity shall classify an asset as current when: (a) it expects to realise the asset, or intends to sell or consume it, in its normal operating cycle; (b) it holds the asset primarily for the purpose of trading; (c) it expects to realise the asset within twelve months after the reporting period; or (d) the asset is cash or a cash equivalent (as defined in *IAS 7*) unless the asset is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period. An entity shall classify all other assets as non-current." [5]
- 7 Under the fair value option, companies may elect to use fair value as the measurement basis for selected financial assets and liabilities. For these companies, some of their financial assets (and liabilities) may be recorded at historical cost, while others are recorded at fair value. [6]
- 8 Cash is generally meant to be "cash and cash equivalents." **Cash equivalents** are liquid investments that mature within three months or less.
- 9 Companies are required either in the statement of cash flows or in the related notes to report the amounts paid for interest and income taxes. We assume here that the company is presenting this information in the notes to the financial statements. *Therefore, for homework purposes, you need not present this information in the statement.* In [Chapter 23](#), we will explore this issue in more detail.
- 10 One highly publicized exception is the case of **Société Générale (SocGen)** (FRA). The bank used the true and fair rule to justify reporting losses that occurred in 2008 in the prior year. Although allowed under the true and fair rule, such reporting was questioned because it permitted the bank to "take a bath," that is, record as many losses as possible in 2007, which was already a bad year for the bank. As a result, SocGen's 2008 reports looked better. See F. Norris, "SocGen Changes Its Numbers," *The New York Times* (May 13, 2008).

Sheet," www.investopedia.com (Dec 12, 2017); and Q. Chen, K. Schipper, and N. Zhang, "A Balance-Sheet-Based Measure of Accounting Quality," Duke Working Paper (September 30, 2019).

CHAPTER 6

Accounting and the Time Value of Money

LEARNING OBJECTIVES

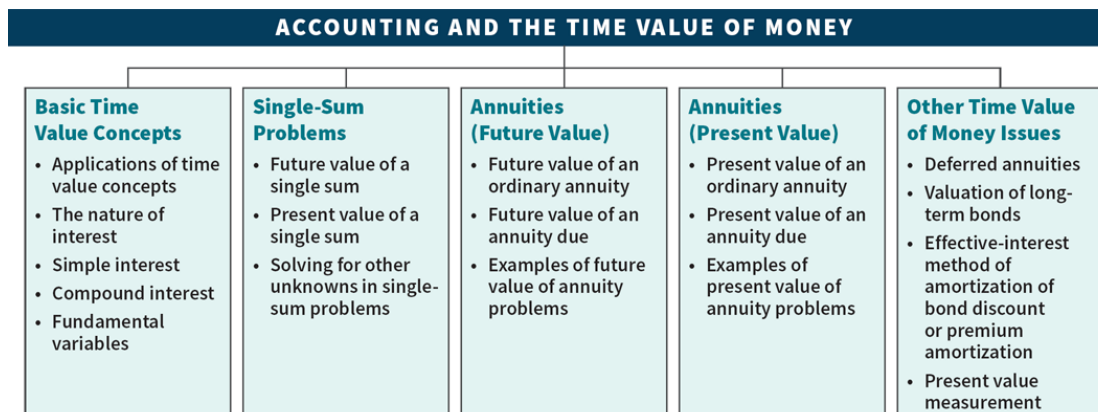

After studying this chapter, you should be able to:

1. Describe the fundamental concepts related to the time value of money.
2. Solve future and present value of 1 problems.
3. Solve future value of ordinary and annuity due problems.
4. Solve present value of ordinary and annuity due problems.
5. Solve present value problems related to deferred annuities, bonds, and expected cash flows.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 6

As indicated in the following opening story, as a financial expert in today's accounting environment, you will be expected to make present and future value measurements and to understand their implications. The purpose of this chapter is to present the tools and techniques that will help you measure the present value of future cash inflows and outflows. The content and organization of the chapter are as follows. (Note that this chapter does not include a *Global Accounting Insights* section as the time value of money concept is universal.)

How Do I Measure That?

A significant part of accounting is measurement. And as we discussed in [Chapter 2](#), we have a mixed-attribute measurement model. That is, many items are measured based on historical cost (e.g., property, plant, and equipment, inventory), but increasingly accounting measurements are based on fair value (e.g., financial instruments, impairments). Determining fair value of an item is fairly straightforward when market prices are available (Level 1 in the fair value hierarchy). However, when a market price is not available, accountants must rely on valuation models to develop a fair value estimate (Level 3 of the fair value hierarchy).

Developing fair value estimates based on a valuation model generally involves discounted cash flow techniques, which have three primary elements: (1) estimating the amounts and timing of future cash flows, (2) developing probability estimates for those cash flows, and (3) determining the appropriate discount rate to apply to the expected cash flows to arrive at a fair value estimate. Seems pretty straightforward, right? Actually, this can be a challenging process when applied to the variety of complex assets and liabilities for which IFRS requires a fair value estimate.

For example, many European financial institutions faced this challenge when they had to deal with losses on Greek bond holdings. Major banks, such as **Crédit Agricole** (FRA), **Royal Bank of Scotland** (GBR), and **Dexia** (FRA–BEL), and many others incurred substantial losses after securities markets seized up to the point where valid market prices for investment and loans were not readily available. A similar valuation challenge arose for companies with investments in auction rate securities (ARS). The fair value of ARS is generally determined at quarterly auctions. However, these auctions failed during the financial crisis, and ARS investors were forced to use valuation models rather than market prices to determine fair value.

The IASB provides fair value estimation guidance (*IFRS 13*). Most recently, as part of the updated Conceptual Framework, the IASB explicitly addressed measurement based on current values, which could be fair value, value in use, or current cost. The Board also performs ongoing assessment of whether and to what extent additional valuation guidance is needed in determining when to apply current cost concepts. In this regard, standard-setters have established advisory groups comprised of accounting and valuation professionals, preparers and users of financial statements, regulators, and other industry representatives. An example is the **Valuation Resource Group (VRG)**, which provides multiple viewpoints on application issues relating to current value (including fair value) for financial reporting purposes. A sampling of the issues discussed by the VRG follows.

- Measurement of contingent consideration in a business combination.
- Determining the carrying amount of a reporting unit when performing the goodwill impairment test.
- Measurement of uncertainty analysis disclosures.

The list of topics illustrates the variety and complexity of the issues that must be addressed in implementing the current value measurement principle. The VRG discussion of these items helps develop appropriate approaches for applying valuation guidance to specific examples. For example, with respect to the contingent consideration topic, the VRG noted that taxes must be considered when developing future cash flow estimates and that, in some cases, these tax effects are different for assets and liabilities.

The VRG provides good counsel to the standard-setters with respect to applying the fair value measurement principle. After studying this chapter, you should have a better understanding of time value of money principles and discounted cash flow techniques as they are applied in accounting measurements.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Basic Time Value Concepts

LEARNING OBJECTIVE 1

Describe the fundamental concepts related to the time value of money.

In accounting (and finance), the phrase **time value of money** indicates a relationship between time and money—that a dollar received today is worth more than a dollar promised at some time in the future. Why? Because of the opportunity to invest today’s dollar and receive interest on the investment. Yet, when deciding among investment or borrowing alternatives, it is essential to be able to compare today’s dollar and tomorrow’s dollar on the same footing—to compare “apples to apples.” Investors do that by using the concept of **present value**, which has many applications in accounting.

Applications of Time Value Concepts

Financial reporting uses different measurements in different situations—historical cost for equipment, net realizable value for inventories, fair value for investments. As we discussed in [Chapters 2](#) and [5](#), the IASB increasingly is requiring the use of fair values in the measurement of assets and liabilities. According to the IASB’s recent guidance on fair value measurements, the most useful fair value measures are based on market prices in active markets. Within the fair value hierarchy, these are referred to as Level 1. Recall that Level 1 fair value measures are the least subjective because they are based on quoted prices, such as a closing share price in an active market.

However, for many assets and liabilities, market-based fair value information is not readily available. In these cases, fair value can be estimated based on the expected future cash flows related to the asset or liability. Such fair value estimates are generally considered Level 3 (most subjective) in the fair value hierarchy because they are based on unobservable inputs, such as a company’s own data or assumptions related to the expected future cash flows associated with the asset or liability. As discussed in the fair value guidance, present value techniques are used to convert expected cash flows into present values, which represent an estimate of fair value. [\[1\]](#) (See the [Authoritative Literature References](#) section near the end of the chapter.)

Because of the increased use of present values in this and other contexts, it is important to understand present value techniques.¹ We list some of the applications of present value–based measurements to accounting topics below; we discuss many of these in the following chapters.

Present Value–Based Accounting Measurements

1. **Notes.** Valuing non-current receivables and payables that carry no stated interest rate or a lower than market interest rate.
2. **Leases.** Valuing assets and obligations to be capitalized under long-term leases and measuring the amount of the lease payments and annual leasehold amortization.
3. **Pensions and Other Postretirement Benefits.** Measuring service cost components of employers’ postretirement benefits expense and postretirement benefits obligation.
4. **Non-Current Assets.** Evaluating alternative long-term investments by discounting future cash flows. Determining the value of assets acquired under deferred payment contracts. Measuring impairments of assets.
5. **Share-Based Compensation.** Determining the fair value of employee services in compensatory share-option plans.
6. **Business Combinations.** Determining the value of receivables, payables, liabilities, accruals, and commitments acquired or assumed in a “purchase.”
7. **Disclosures.** Measuring the value of future cash flows from oil and gas reserves for disclosure in supplementary information.
8. **Environmental Liabilities.** Determining the fair value of future obligations for asset retirements.

In addition to accounting and business applications, compound interest, annuity, and present value concepts apply to personal finance and investment decisions. In purchasing a home or car, planning for retirement, and evaluating alternative investments, you will need to understand time value of money concepts.

The Nature of Interest

Interest is payment for the use of money. It is the excess cash received or repaid over and above the amount lent or borrowed (**principal**). For example, Corner Bank lends Hillfarm Properties \$10,000 with the understanding that it will repay \$11,500. The excess over \$10,000, or \$1,500, represents interest expense for Hillfarm and interest revenue for Corner Bank.

The lender generally states the amount of interest as a rate over a specific period of time. For example, if Hillfarm borrowed \$10,000 for one year before repaying \$10,600, the rate of interest is 6 percent per year ($\$600 \div \$10,000$). The custom of expressing interest as a percentage rate is an established business practice.² In fact, business managers make investing and borrowing decisions on the basis of the rate of interest involved, rather than on the actual dollar amount of interest to be received or paid.

How is the interest rate determined? One important factor is the level of credit risk (risk of non-payment) involved. Other factors being equal, the higher the credit risk, the higher the interest rate. Low-risk borrowers like **Nokia** (FIN) or **adidas** (DEU) can probably obtain a loan at or slightly below the going market rate of interest. However, a bank would probably charge the neighborhood grocer several percentage points above the market rate, if granting the loan at all.

The amount of interest involved in any financing transaction is a function of the following three variables.

Variables in Interest Computation

1. **Principal.** The amount borrowed or invested.
2. **Interest Rate.** A percentage of the outstanding principal.
3. **Time.** The number of years or fractional portion of a year that the principal is outstanding.

Thus, the following three relationships apply:

- The larger the principal amount, the larger the dollar amount of interest.
- The higher the interest rate, the larger the dollar amount of interest.
- The longer the time period, the larger the dollar amount of interest.

Simple Interest

Companies compute **simple interest** on the amount of the principal only. It is the return on (or growth of) the principal for one time period. The following equation expresses simple interest.³

$$\text{Interest} = p \times i \times n$$

where

p = principal
i = rate of interest for a single period
n = number of periods

To illustrate, Barstow Electric Inc. borrows \$10,000 for three years with a simple interest rate of 8% per year. It computes the total interest it will pay as follows.

$$\text{Interest} = p \times i \times n$$

	$= \$10,000 \times .08 \times 3$
	$= \$2,400$

If Barstow borrows \$10,000 for three months at 8%, the interest is \$200, computed as follows.

Interest	$= \$10,000 \times .08 \times 3/12$
	$= \$200$

Compound Interest

John Maynard Keynes, the legendary English economist, supposedly called it magic. Mayer Rothschild, the founder of the famous European banking firm, proclaimed it the eighth wonder of the world. Today, people continue to extol its wonder and its power. The object of their affection? Compound interest.

We compute **compound interest** on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on (or growth of) the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that Vasquez Company deposits \$10,000 in the Last National Bank, where it will earn simple interest of 9% per year. It deposits another \$10,000 in the First State Bank, where it will earn compound interest of 9% per year compounded annually. In both cases, Vasquez will not withdraw any interest until three years from the date of deposit. [Illustration 6.1](#) shows the computation of interest Vasquez will receive, as well as its accumulated year-end balance.

Last National Bank			First State Bank		
Simple Interest Calculation	Simple Interest	Accumulated Year-End Balance	Compound Interest Calculation	Compound Interest	Accumulated Year-End Balance
Year 1 $\$10,000.00 \times .09$	\$ 900.00	\$10,900.00	Year 1 $\$10,000.00 \times .09$	\$ 900.00	\$10,900.00
Year 2 $\$10,000.00 \times .09$	900.00	\$11,800.00	Year 2 $\$10,900.00 \times .09$	981.00	\$11,881.00
Year 3 $\$10,000.00 \times .09$	900.00	\$12,700.00	Year 3 $\$11,881.00 \times .09$	1,069.29	\$12,950.29
	<u>\$2,700.00</u>			<u>1,069.29</u>	
				<u>\$2,950.29</u>	

\$250.29
Difference

ILLUSTRATION 6.1 Simple vs. Compound Interest

Note in [Illustration 6.1](#) that simple interest uses the initial principal of \$10,000 to compute the interest in all three years. **Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year.** This explains the larger balance in the compound interest account.

Obviously, any rational investor would choose compound interest, if available, over simple interest. In the example above, compounding provides \$250.29 of additional interest revenue. For practical purposes, compounding assumes that unpaid interest earned becomes a part of the principal. Furthermore, the accumulated balance at the end of each year becomes the new principal sum on which interest is earned during the next year.

Compound interest is the typical interest computation applied in business situations. This occurs particularly in our global economy, where companies use and finance large amounts of long-lived assets over long periods of time. Financial managers view and evaluate their investment opportunities in terms of a series of periodic returns, each of which they can reinvest to yield additional returns.

Simple interest usually applies only to short-term investments and debts that involve a time span of one year or less.

What Do the Numbers Mean?

A Pretty Good Start

The continuing debate by governments as to how to provide retirement benefits to their citizens serves as a great context to illustrate the power of compounding. One proposed idea is for the government to give \$1,000 to every citizen at birth. This gift would be deposited in an account that would earn interest tax-free until the citizen retires. Assuming the account earns a modest 5% annual return until retirement at age 65, the \$1,000 would grow to \$23,839. With monthly compounding, the \$1,000 deposited at birth would grow to \$25,617.

Why start so early? If the government waited until age 18 to deposit the money, it would grow to only \$9,906 with annual compounding. That is, reducing the time invested by a third results in more than a 50% reduction in retirement money. This example illustrates the importance of starting early when the power of compounding is involved.

Compound Interest Tables

We present five different types of compound interest tables at the end of this chapter. These tables should help you study this chapter as well as solve other problems involving interest.

Interest Tables and Their Contents

1. **Future Value of 1 Table.** Contains the amounts to which 1 will accumulate if deposited now at a specified rate and left for a specified number of periods ([Table 6.1](#)).
2. **Present Value of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to equal 1 at the end of a specified number of periods ([Table 6.2](#)).
3. **Future Value of an Ordinary Annuity of 1 Table.** Contains the amounts to which periodic rents of 1 will accumulate if the payments (rents) are invested at the **end** of each period at a specified rate of interest for a specified number of periods ([Table 6.3](#)).
4. **Present Value of an Ordinary Annuity of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the **end** of regular periodic intervals for the specified number of periods ([Table 6.4](#)).
5. **Present Value of an Annuity Due of 1 Table.** Contains the amounts that must be deposited now at a specified rate of interest to permit withdrawals of 1 at the **beginning** of regular periodic intervals for the specified number of periods ([Table 6.5](#)).

[Illustration 6.2](#) shows the general format and content of these tables. It illustrates how much principal plus interest a dollar accumulates to at the end of each of five periods, at three different rates of compound interest.

Future Value of 1 at Compound Interest (Excerpt from Table 6.1)			
Period	4%	5%	6%
1	1.04000	1.05000	1.06000
2	1.08160	1.10250	1.12360
3	1.12486	1.15763	1.19102
4	1.16986	1.21551	1.26248
5	1.21665	1.27628	1.33823

ILLUSTRATION 6.2 Excerpt from [Table 6.1](#)

The compound tables rely on basic formulas. For example, the formula to determine the future value factor (*FVF*) for 1 is:

$$FVF_{n,i} = (1 + i)^n$$

where

$FVF_{n,i}$	= future value factor for n periods at i interest
n	= number of periods
i	= rate of interest for a single period

Financial calculators include preprogrammed $FVF_{n,i}$ and other time value of money formulas.

To illustrate the use of interest tables to calculate compound amounts, assume an interest rate of 5%. [Illustration 6.3](#) shows the future value to which 1 accumulates (the future value factor).

Period	Beginning-of-Period Amount	×	Multiplier (1 + i)	=	End-of-Period Amount*	Formula (1 + i) ^{n}
1	1.00000		1.05		1.05000	(1.05) ¹
2	1.05000		1.05		1.10250	(1.05) ²
3	1.10250		1.05		1.15763	(1.05) ³

*Note that these amounts appear in [Table 6.1](#) in the 5% column.

ILLUSTRATION 6.3 Accumulation of Compound Amounts

Throughout our discussion of compound interest tables, note the intentional use of the term **periods** instead of **years**. Interest is generally expressed in terms of an annual rate. However, many business circumstances dictate a compounding period of less than one year. In such circumstances, a company must convert the annual interest rate to correspond to the length of the period. To convert the “annual interest rate” into the “compounding period interest rate,” a company **divides the annual rate by the number of compounding periods per year**.

In addition, companies determine the number of periods by **multiplying the number of years involved by the number of compounding periods per year**. To illustrate, assume an investment of \$1 for 6 years at 8% annual interest compounded **quarterly**. Using [Table 6.1](#), read the factor that appears in the 2% (8% ÷ 4) column on the 24th row—6 years × 4 compounding periods per year, namely 1.60844, or approximately \$1.61. Thus, all compound interest tables use the term **periods**, not **years**, to express the quantity of n . [Illustration 6.4](#) shows how to determine (1) the interest rate per compounding period and (2) the number of compounding periods in four situations of differing compounding frequency.⁴

12% Annual Interest Rate over 5 Years Compounded	Interest Rate per Compounding Period	Number of Compounding Periods
Annually (1)	$.12 \div 1 = .12$	5 years \times 1 compounding per year = 5 periods
Semiannually (2)	$.12 \div 2 = .06$	5 years \times 2 compoundings per year = 10 periods
Quarterly (4)	$.12 \div 4 = .03$	5 years \times 4 compoundings per year = 20 periods
Monthly (12)	$.12 \div 12 = .01$	5 years \times 12 compoundings per year = 60 periods

ILLUSTRATION 6.4 Frequency of Compounding

How often interest is compounded can substantially affect the rate of return. For example, a 9% annual interest compounded **daily** provides a 9.42% yield, or a difference of 0.42%. The 9.42% is the **effective yield**.⁵ The annual interest rate (9%) is the **stated, nominal, or face rate**. When the compounding frequency is greater than once a year, the effective-interest rate will always exceed the stated rate.

Illustration 6.5 shows how compounding for five different time periods affects the effective yield and the amount earned by an investment of \$10,000 for one year.

Interest Rate	Compounding Periods				
	Annually	Semiannually	Quarterly	Monthly	Daily
8%	8.00%	8.16%	8.24%	8.30%	8.33%
	\$800	\$816	\$824	\$830	\$833
9%	9.00%	9.20%	9.31%	9.38%	9.42%
	\$900	\$920	\$931	\$938	\$942
10%	10.00%	10.25%	10.38%	10.47%	10.52%
	\$1,000	\$1,025	\$1,038	\$1,047	\$1,052

ILLUSTRATION 6.5 Comparison of Different Compounding Periods

Fundamental Variables

The following four variables are fundamental to all compound interest problems.

Fundamental Variables

1. **Rate of Interest.** Unless otherwise stated, an annual rate that must be adjusted to reflect the length of the compounding period if less than a year.
2. **Number of Time Periods.** The number of compounding periods. (A period may be equal to or less than a year.)
3. **Future Value.** The value at a future date of a given sum or sums invested assuming compound interest.
4. **Present Value.** The value now (present time) of a future sum or sums discounted assuming compound interest.

Illustration 6.6 depicts the relationship of these four fundamental variables in a **time diagram**.

ILLUSTRATION 6.6 Basic Time Diagram

In some cases, all four of these variables are known. However, at least one variable is unknown in many business situations. To better understand and solve the problems in this chapter, we encourage you to sketch compound interest problems in the form of the preceding time diagram.

Single-Sum Problems

LEARNING OBJECTIVE 2

Solve future and present value of 1 problems.

Many business and investment decisions involve a single amount of money that either exists now or will exist in the future. Single-sum problems are generally classified into one of the following two categories.

1. Computing the **unknown future value** of a known single sum of money that is invested now for a certain number of periods at a certain interest rate.
2. Computing the **unknown present value** of a known single sum of money in the future that is discounted for a certain number of periods at a certain interest rate.

When analyzing the information provided, determine first whether the problem involves a future value or a present value. Then apply the following general rules, depending on the situation:

- **If solving for a future value**, *accumulate* all cash flows to a future point. In this instance, interest increases the amounts or values over time so that the future value exceeds the present value.
- **If solving for a present value**, *discount* all cash flows from the future to the present. In this case, **discounting** reduces the amounts or values, so that the present value is less than the future amount.

Preparation of time diagrams aids in identifying the unknown as an item in the future or the present. Sometimes, the problem involves neither a future value nor a present value. Instead, the unknown is the interest or discount rate, or the number of compounding or discounting periods.

Future Value of a Single Sum

To determine the **future value** of a single sum, multiply the future value factor by its present value (principal), as follows.

$$FV = PV(FVF_{n,i})$$

where

FV	= future value
------	----------------

PV	= present value (principal or single sum)
$FVF_{n,i}$	= future value factor for n periods at i interest

As an example, [Illustration 6.7](#) presents a single-sum problem for an investment.

Single-Sum Problem

Facts: Bruegger AG wants to determine the future value of €50,000 invested for five years compounded annually at an interest rate of 6%.

Problem: Show this situation in time diagram form and determine the future value.

Solution:

Using the future value formula, Bruegger solves this investment problem as follows.

Future value	= $PV(FVF_{n,i})$
	= €50,000($FVF_{5,6\%}$)
	= €50,000(1 + .06) ⁵
	= €50,000(1.33823)
	= €66,912

To determine the future value factor of 1.33823 in the formula above, Bruegger uses a financial calculator or reads the appropriate table, in this case [Table 6.1](#) (6% column and the five-period row).

ILLUSTRATION 6.7 Future Value Problem ($n = 5, i = 6\%$)

Companies can apply this time diagram and formula approach to routine business situations.

[Illustration 6.8](#) presents a future value problem in a business context.

Future Value Problem

Facts: **Shanghai Electric Power** (CHN) deposited ¥250 million in an escrow account with **Industrial and Commercial Bank of China** (CHN) at the beginning of 2022 as a commitment toward a power plant to be completed December 31, 2025.

Problem: Show this situation in time diagram form and determine how much the company will have on deposit at the end of four years if interest is 10%, compounded semiannually.

Solution:

With a known present value of ¥250 million, a total of eight compounding periods (4×2), and an interest rate of 5% per compounding period ($10\% \div 2$), the company can time-diagram this problem and determine the future value.

Future value	= ¥250,000,000($FVF_{8,5\%}$)
	= ¥250,000,000(1 + .05) ⁸
	= ¥250,000,000(1.47746)
	= ¥369,365,000

Using a future value factor found in [Table 6.1](#) (5% column, eight-period row), we find that the deposit of ¥250 million will accumulate to ¥369,365,000 by December 31, 2025.

ILLUSTRATION 6.8 Future Value Problem ($n = 8, i = 5\%$)

Present Value of a Single Sum

The Bruegger example showed that €50,000 invested at an annually compounded interest rate of 6% will equal €66,912 at the end of five years. It follows, then, that €66,912, five years in the future, is worth €50,000 now. That is, €50,000 is the present value of €66,912. The **present value** is the amount needed to invest now, to produce a known future value.

The present value is always a smaller amount than the known future value, due to earned and accumulated interest. In determining the future value, a company moves forward in time using a process of **accumulation**. In determining present value, it moves backward in time using a process of **discounting**.

As indicated earlier, a “present value of 1 table” appears at the end of this chapter as [Table 6.2](#). [Illustration 6.9](#) demonstrates the nature of such a table. It shows the present value of 1 for five different periods at three different rates of interest.

Present Value of 1 at Compound Interest (Excerpt from Table 6.2)			
Period	4%	5%	6%
1	.96154	.95238	.94340
2	.92456	.90703	.89000
3	.88900	.86384	.83962
4	.85480	.82270	.79209
5	.82193	.78353	.74726

ILLUSTRATION 6.9 Excerpt from [Table 6.2](#)

The following formula is used to determine the present value of 1 (present value factor):

$$PVF_{n,i} = \frac{1}{(1 + i)^n}$$

where

$PVF_{n,i}$ = present value factor for n periods at i interest

To illustrate, assuming an interest rate of 5%, the present value of 1 discounted for three periods is as shown in [Illustration 6.10](#).

Discount Periods	1	÷	$(1 + i)^n$	=	Present Value*	Formula $1 ÷ (1 + i)^n$
1	1.00000		1.05		.95238	$1 ÷ (1.05)^1$
2	1.00000		$(1.05)^2$.90703	$1 ÷ (1.05)^2$
3	1.00000		$(1.05)^3$.86384	$1 ÷ (1.05)^3$

*Note that these amounts appear in [Table 6.2](#) in the 5% column.

ILLUSTRATION 6.10 Present Value of \$1 Discounted at 5% for Three Periods

The present value of any single sum (future value), then, is as follows.

$$PV = FV(PVF_{n,i})$$

where

PV	= present value
FV	= future value
$PVF_{n,i}$	= present value factor for n periods at i interest

As an example, [Illustration 6.11](#) presents a present value of a single-sum problem.

Present Value of a Single Sum

Facts: We know a future value of €73,466 is to be paid or received in five years, and want to know the present value.

Problem: Show this situation in time diagram form and determine the present value of €73,466 to be received or paid in five years discounted at 8% compounded annually.

Solution:

Using the formula, we solve this problem as follows.

Present value	= $FV(PVF_{n,i})$
	= €73,466($PVF_{5,8\%}$)
	= €73,466 $\left(\frac{1}{(1 + .08)^5} \right)$
	= €73,466(.68058)
	= €50,000 (rounded by €.51)

To determine the present value factor of 0.68058, use a financial calculator or read the present value of a single sum in [Table 6.2](#) (8% column, five-period row).

ILLUSTRATION 6.11 Present Value Problem ($n = 5$, $i = 8\%$)

The time diagram and formula approach can be applied in a variety of situations. [Illustration 6.12](#) presents another present value problem.

Present Value of a Single Sum

Facts: A rich relative decides to give you \$2,000 for a trip to Europe when you graduate from college three years from now. He proposes to finance the trip by investing a sum of money now at 8% compound interest that will provide you with \$2,000 upon your graduation. The only conditions are that you graduate and that you tell him how much to invest now.

Problem: Show this situation in time diagram form and determine the present value.

Solution:

Present value	= \$2,000(PVF _{3,8%})
	= \$2,000 $\left(\frac{1}{(1 + .08)^3} \right)$
	= \$2,000(.79383)
	= \$1,587.66

Advise your relative to invest \$1,587.66 now to provide you with \$2,000 upon graduation. To satisfy your relative's other condition, you must pass this course (and many more).

ILLUSTRATION 6.12 Present Value Problem ($n = 3$, $i = 8\%$)

Solving for Other Unknowns in Single-Sum Problems

In computing either the future value or the present value in the previous single-sum illustrations, both the number of periods and the interest rate were known. In many business situations, both the future value and the present value are known, but the number of periods or the interest rate is unknown. The following two examples are single-sum problems (future value and present value) with either an unknown number of periods (n) or an unknown interest rate (i). These examples, and the accompanying solutions, demonstrate that knowing any three of the four values (future value, FV ; present value, PV ; number of periods, n ; interest rate, i) allows you to derive the remaining unknown variable.

Example—Computation of the Number of Periods

The Village of Somonauk wants to accumulate \$70,000 for the construction of a veterans monument in the town square. At the beginning of the current year, the Village deposited \$47,811 in a memorial fund that earns 10% interest compounded annually. How many years will it take to accumulate \$70,000 in the memorial fund?

In this illustration, the Village knows both the present value (\$47,811) and the future value (\$70,000), along with the interest rate of 10%. **Illustration 6.13** depicts this investment problem as a time diagram.

ILLUSTRATION 6.13 Time Diagram to Solve for Unknown Number of Periods

Knowing both the present value and the future value allows the Village to solve for the unknown number of periods. It may use either the future value or the present value formulas, as shown in [Illustration 6.14](#).

Future Value Approach	Present Value Approach
$FV = PV(FVF_{n,10\%})$	$PV = FV(PVF_{n,10\%})$
$\$70,000 = \$47,811(FVF_{n,10\%})$	$\$47,811 = \$70,000(PVF_{n,10\%})$
$FVF_{n,10\%} = \frac{\$70,000}{\$47,811} = 1.46410$	$PVF_{n,10\%} = \frac{\$47,811}{\$70,000} = .68301$

ILLUSTRATION 6.14 Solving for Unknown Number of Periods

Using the future value factor of 1.46410, refer to [Table 6.1](#) and read down the 10% column to find that factor in the 4-period row. Thus, it will take four years for the \$47,811 to accumulate to \$70,000 if invested at 10% interest compounded annually. Or, using the present value factor of 0.68301, refer to [Table 6.2](#) and read down the 10% column to find that factor in the 4-period row.

Example—Computation of the Interest Rate

Advanced Design, SA needs €1,070,584 for basic research five years from now. The company currently has €800,000 to invest for that purpose. At what rate of interest must it invest the €800,000 to fund basic research projects of €1,070,584, five years from now?

The time diagram in [Illustration 6.15](#) depicts this investment situation.

ILLUSTRATION 6.15 Time Diagram to Solve for Unknown Interest Rate

Advanced Design may determine the unknown interest rate from either the future value approach or the present value approach, as [Illustration 6.16](#) shows.

Future Value Approach	Present Value Approach
$FV = PV(FVF_{5,i})$ $€1,070,584 = €800,000(FVF_{5,i})$ $FVF_{5,i} = \frac{€1,070,584}{€800,000} = 1.33823$	$PV = FV(PVF_{5,i})$ $€800,000 = €1,070,584(PVF_{5,i})$ $PVF_{5,i} = \frac{€800,000}{€1,070,584} = .74726$

ILLUSTRATION 6.16 Solving for Unknown Interest Rate

Using the future value factor of 1.33823, refer to [Table 6.1](#) and read across the 5-period row to find that factor in the 6% column. Thus, the company must invest the €800,000 at 6% to accumulate to €1,070,584 in five years. Or, using the present value factor of .74726 and [Table 6.2](#), again find that factor at the juncture of the 5-period row and the 6% column.

Annuities (Future Value)

LEARNING OBJECTIVE 3

Solve future value of ordinary and annuity due problems.

The preceding discussion involved only the accumulation or discounting of a single principal sum. However, many situations arise in which a series of dollar amounts are paid or received periodically, such as installment loans or sales; regular, partially recovered invested funds; or a series of realized cost savings.

For example, a life insurance contract involves a series of equal payments made at equal intervals of time. Such a process of periodic payment represents the accumulation of a sum of money through an annuity. An **annuity**, by definition, requires the following: (1) periodic payments or receipts (called rents) of the same amount, (2) the same length interval between such rents, and (3) compounding of interest once each interval. The **future value of an annuity** is the sum of all the rents plus the accumulated compound interest on them.

Note that the rents may occur at either the beginning or the end of the periods. If the rents occur at the end of each period, an annuity is classified as an **ordinary annuity**. If the rents occur at the beginning of each period, an annuity is classified as an **annuity due**.

Future Value of an Ordinary Annuity

One approach to determining the future value of an annuity computes the value to which **each** of the rents in the series will accumulate, and then totals their individual future values.

For example, assume that \$1 is deposited at the **end** of each of five years (an ordinary annuity) and earns 5% interest compounded annually. [Illustration 6.17](#) shows the computation of the future value, using the “future value of 1” table ([Table 6.1](#)) for each of the five \$1 rents.

End of Period in Which \$1.00 Is to Be Invested						Value at End of Year 5
Present	1	2	3	4	5	
	\$1.00					\$1.21551
		\$1.00				1.15762
			\$1.00			1.10250
				\$1.00		1.05000
					\$1.00	1.00000
Total (future value of an ordinary annuity of \$1.00 for 5 periods at 5%)						<u>\$5.52563</u>

ILLUSTRATION 6.17 Solving for the Future Value of an Ordinary Annuity

Because an ordinary annuity consists of rents deposited at the end of the period, those rents earn no interest during the period in which they are deposited. For example, the third rent earns interest for only two periods (periods 4 and 5). It earns no interest for the third period since it is not deposited until the end of the third period. When computing the future value of an ordinary annuity, the number of compounding periods will always be **one less than the number of rents**.

The foregoing procedure for computing the future value of an ordinary annuity always produces the correct answer. However, it can become cumbersome if the number of rents is large. A formula provides a more efficient way of expressing the future value of an ordinary annuity of 1. This formula sums the individual rents plus the compound interest, as follows.

$$FVF-OA_{n,i} = \frac{(1 + i)^n - 1}{i}$$

where

$FVF-OA_{n,i}$	= future value factor of an ordinary annuity
i	= rate of interest per period
n	= number of compounding periods

For example, $FVF-OA_{5,5\%}$ refers to the value to which an ordinary annuity of 1 will accumulate in 5 periods at 5% interest.

Using the formula above has resulted in the development of tables, similar to those used for the “future value of 1” and the “present value of 1” for both an ordinary annuity and an annuity due. [Illustration 6.18](#) provides an excerpt from the “future value of an ordinary annuity of 1” table.

Future Value of an Ordinary Annuity of 1 (Excerpt from Table 6.3)			
Period	4%	5%	6%
1	1.00000	1.00000	1.00000
2	2.04000	2.05000	2.06000
3	3.12160	3.15250	3.18360
4	4.24646	4.31013	4.37462
5	5.41632	<u>5.52563*</u>	5.63709

*Note that this annuity table factor is the same as the sum of the future values of 1 factors shown in [Illustration 6.17](#).

ILLUSTRATION 6.18 Excerpt from [Table 6.3](#)

Interpreting the table, if \$1 is invested at the end of each year for four years at 5% interest compounded annually, the value of the annuity at the end of the fourth year is \$4.31 ($4.31013 \times \1.00). Now, multiply the factor from the appropriate line and column of the table by the dollar amount of **one rent**

involved in an ordinary annuity. The result: the accumulated sum of the rents and the compound interest to the date of the last rent.

The following formula computes the future value of an ordinary annuity.

$$\text{Future value of an ordinary annuity} = R(FVF-OA_{n,i})$$

where

R	= periodic rent
$FVF-OA_{n,i}$	= future value of an ordinary annuity factor for n periods at i interest

As an example, [Illustration 6.19](#) presents a future value of an ordinary annuity problem.

Future Value of an Ordinary Annuity

Facts: Five \$5,000 deposits are made at the end of each of the next five years.

Problem: Show this situation in time diagram form and determine the future value.

Solution:

Use of the formula solves this investment problem as follows.

Future value of an ordinary annuity	= $R(FVF-OA_{n,i})$
	= $5,000(FVF-OA_{5,6\%})$
	= $5,000 \left(\frac{(1 + .06)^5 - 1}{.06} \right)$
	= $5,000(5.63709)$
	= $\$28,185.45$

To determine the future value of an ordinary annuity factor of 5.63709 in the formula use a financial calculator or read the appropriate table, in this case, [Table 6.3](#) (6% column and the 5-period row).

ILLUSTRATION 6.19 Future Value of Ordinary Annuity Problem ($n = 5, i = 6\%$)

As an example, [Illustration 6.20](#) shows a future value of an ordinary annuity problem in a business context.

Future Value of an Ordinary Annuity

Facts: Hightown Electronics deposits \$75,000 at the end of each six-month period for the next three years, to accumulate enough money to meet debts that mature in three years.

Problem: Show this situation in time diagram format and determine the future value that the company will have on deposit at the end of three years if the annual interest rate is 10%.

Solution:

The formula solution for the Hightown Electronics situation is as follows.

Future value of an ordinary annuity	= $R (FVF-OA_{n,i})$
	= \$75,000($FVF-OA_{6,5\%}$)
	= \$75,000 $\left(\frac{(1 + .05)^6 - 1}{.05} \right)$
	= \$75,000(6.80191)
	= \$510,143.25

Thus, six six-month deposits of \$75,000 earning 5% per period will grow to \$510,143.25.

ILLUSTRATION 6.20 Future Value of Ordinary Annuity Problem ($n = 6, i = 5\%$)

Future Value of an Annuity Due

The preceding analysis of an ordinary annuity assumed that the periodic rents occur at the **end** of each period. Recall that an **annuity due** assumes periodic rents occur at the **beginning** of each period. This means an annuity due will accumulate interest during the first period (in contrast to an ordinary annuity rent, which will not). In other words, the two types of annuities differ in the number of interest accumulation periods involved even though the same number of rents occur.

If rents occur at the end of a period (ordinary annuity), in determining the **future value of an annuity** there will be one less interest period than if the rents occur at the beginning of the period (annuity due). [Illustration 6.21](#) shows this distinction.

Referring to the “future value of an ordinary annuity of 1” table for eight periods at 6%, Erin finds a factor of 9.89747. She then multiplies this factor by $(1 + .06)$ to arrive at the future value of an annuity due factor. As a result, the accumulated value on Venden’s eighteenth birthday is £8,393.06, as calculated in [Illustration 6.23](#).

1. Future value of an ordinary annuity of 1 for 8 periods at 6% (Table 6.3)	9.89747
2. Factor $(1 + .06)$	× 1.06
3. Future value of an annuity due of 1 for 8 periods at 6%	10.49132
4. Periodic deposit (rent)	× £800
5. Accumulated value on son’s 18th birthday	£8,393.06

ILLUSTRATION 6.23 Computation of Accumulated Value of Annuity Due

Depending on the college he chooses, Venden may have enough to finance only part of his first year of school.

Examples of Future Value of Annuity Problems

The foregoing annuity examples relied on three known values—amount of each rent, interest rate, and number of periods. Using these values enables us to determine the unknown fourth value, future value.

The first two future value problems we present illustrate the computations of (1) the amount of the rents and (2) the number of rents. The third problem illustrates the computation of the future value of an annuity due.

Computation of Rent

Assume that you plan to accumulate CHF14,000 for a down payment on a condominium apartment five years from now. For the next five years, you earn an annual return of 8% compounded semiannually. How much should you deposit at the end of each six-month period?

The CHF14,000 is the future value of 10 (5×2) semiannual end-of-period payments of an unknown amount, at an interest rate of 4% ($8\% \div 2$). [Illustration 6.24](#) depicts this problem as a time diagram.

ILLUSTRATION 6.24 Future Value of Ordinary Annuity Time Diagram ($n = 10$, $i = 4\%$)

Using the formula for the future value of an ordinary annuity, you determine the amount of each rent as follows.

Future value of an ordinary annuity	$= R(FVF-OA_{n,i})$
CHF14,000	$= R(FVF-OA_{10,4\%})$
CHF14,000	$= R(12.00611)$
	$R = \text{CHF}1,166.07$

Thus, you must make 10 semiannual deposits of CHF1,166.07 each in order to accumulate CHF14,000 for your down payment.

Computation of the Number of Periodic Rents

Suppose that a company's goal is to accumulate \$117,332 by making periodic deposits of \$20,000 at the end of each year, which will earn 8% compounded annually while accumulating. How many deposits must it make?

The \$117,332 represents the future value of $n(?)$ \$20,000 deposits, at an 8% annual rate of interest.

Illustration 6.25 depicts this problem in a time diagram.

ILLUSTRATION 6.25 Future Value of Ordinary Annuity Time Diagram, to Solve for Unknown Number of Periods

Using the future value of an ordinary annuity formula, the company obtains the following factor.

Future value of an ordinary annuity	$= R(FVF-OA_{n,i})$
\$117,332	$= \$20,000(FVF-OA_{n,8\%})$
$FVF-OA_{n,8\%}$	$= \frac{\$117,332}{\$20,000} = 5.86660$

Use [Table 6.3](#) and read down the 8% column to find 5.86660 in the five-period row. Thus, the company must make five deposits of \$20,000 each.

Computation of the Future Value

To create his retirement fund, Walter Goodwrench, a mechanic, now works weekends. Mr. Goodwrench deposits \$2,500 today in a savings account that earns 9% interest. He plans to deposit \$2,500 every year for a total of 30 years. How much cash will Mr. Goodwrench accumulate in his retirement savings account, when he retires in 30 years? **Illustration 6.26** depicts this problem in a time diagram.

ILLUSTRATION 6.26 Future Value Annuity Due Time Diagram ($n = 30, i = 9\%$)

Using the “future value of an ordinary annuity of 1” table, Mr. Goodwrench computes the solution as shown in [Illustration 6.27](#).

1. Future value of an ordinary annuity of 1 for 30 periods at 9%	136.30754
2. Factor (1 + .09)	× 1.09
3. Future value of an annuity due of 1 for 30 periods at 9%	148.57522
4. Periodic rent	× \$2,500
5. Accumulated value at end of 30 years	\$371,438

ILLUSTRATION 6.27 Computation of Accumulated Value of an Annuity Due

Annuities (Present Value)

LEARNING OBJECTIVE 4

Solve present value of ordinary and annuity due problems.

The present value of an annuity is **the single sum** that, if invested at compound interest now, would provide for an annuity (a series of withdrawals) for a certain number of future periods at the end of the period.

Present Value of an Ordinary Annuity

The present value of an ordinary annuity is the present value of a series of equal rents to be withdrawn at equal intervals at the end of the period.

One approach to finding the present value of an annuity determines the present value of each of the rents in the series and then totals their individual present values. For example, we may view an annuity of \$1, to be received at the **end** of each of five periods, as separate amounts. We then compute each present value using the table of present values (see [Table 6.2](#)), assuming an interest rate of 5%.

[Illustration 6.28](#) shows this approach.

End of Period in Which \$1.00 Is to Be Received					
Present Value at Beg. of Year 1	1	2	3	4	5
\$0.95238	← \$1.00				
.90703	←	← \$1.00			
.86384	←	←	← \$1.00		
.82270	←	←	←	← \$1.00	
.78353	←	←	←	←	← \$1.00
<u>\$4.32948</u>	Total (present value of an ordinary annuity of \$1.00 for five periods at 5%)				

ILLUSTRATION 6.28 Solving for the Present Value of an Ordinary Annuity

This computation tells us that if we invest the single sum of \$4.33 today at 5% interest for five periods, we will be able to withdraw \$1 at the end of each period for five periods. We can summarize this cumbersome procedure by the following formula.

$$PVF-OA_{n,i} = \frac{1 - \frac{1}{(1+i)^n}}{i}$$

The expression $PVF-OA_{n,i}$ refers to the present value of an ordinary annuity of 1 factor for n periods at i interest. Ordinary annuity tables base present values on this formula. [Illustration 6.29](#) shows an excerpt from such a table.

Present Value of an Ordinary Annuity of 1 (Excerpt from Table 6.4)			
Period	4%	5%	6%
1	.96154	.95238	.94340
2	1.88609	1.85941	1.83339
3	2.77509	2.72325	2.67301
4	3.62990	3.54595	3.46511
5	4.45182	4.32948*	4.21236

*Note that this annuity table factor is equal to the sum of the present value of 1 factors shown in [Illustration 6.28](#).

ILLUSTRATION 6.29 Excerpt from [Table 6.4](#)

The general formula for the present value of any ordinary annuity is as follows.

$$\text{Present value of an ordinary annuity} = R(PVF-OA_{n,i})$$

where

R	= periodic rent (ordinary annuity)
$PVF-OA_{n,i}$	= present value of an ordinary annuity of 1 for n periods at i interest

As an example, [Illustration 6.30](#) presents a present value of an ordinary annuity problem.

Present Value of an Ordinary Annuity

Facts: Rental receipts of \$6,000 each will be received at the end of each of the next five years.

Problem: Show this situation in time diagram form and determine the present value of these payments when discounted at 6%.

Solution:

The formula for this calculation is as shown below.

Present value of an ordinary annuity	= $R(PVF-OA_{n,i})$
	= \$6,000($PVF-OA_{5,6\%}$)
	= \$6,000(4.21236)
	= \$25,274.16

The present value of the five ordinary annuity rental receipts of \$6,000 each is \$25,274.16. To determine the present value of the ordinary annuity factor 4.21236, use a financial calculator or read the appropriate table, in this case [Table 6.4](#) (6% column and five-period row).

ILLUSTRATION 6.30 Present Value of Ordinary Annuity Problem

What Do the Numbers Mean?

Up in Smoke

Time value of money concepts also can be relevant to public policy debates. For example, many governments must evaluate the financial cost-benefit of selling to a private operator the future cash flows associated with government-run services, such as toll roads and bridges. In these cases, the policymaker must estimate the present value of the future cash flows in determining the price for selling the rights. In another example, some governmental entities had to determine how to receive the payments from tobacco companies as settlement for a national lawsuit against the companies for the healthcare costs of smoking.

In one situation, a governmental entity was due to collect 25 years of payments totaling \$5.6 billion. The government could wait to collect the payments, or it could sell the payments to an investment bank (a process called *securitization*). If it were to sell the payments, it would receive a lump-sum payment today of \$1.26 billion. Is this a good deal for this governmental entity? Assuming a discount rate of 8% and that the payments will be received in equal amounts (e.g., an annuity), the present value of the tobacco payment is:

$\$5.6 \text{ billion} \div 25 = \224 million
$\$224 \text{ million} \times 10.67478^* = \2.39 billion
<small>*<i>PV-OA</i> ($i = 8\%$, $n = 25$)</small>

Why would the government be willing to take just \$1.26 billion today for an annuity whose present value is almost twice that amount? One reason is that the governmental entity was facing a hole in its budget that could be plugged in part by the lump-sum payment. Also, some believed that the risk of not getting paid by the tobacco companies in the future made it prudent to get the money earlier.

If this latter reason has merit, then the present value computation above should have been based on a higher interest rate. Assuming a discount rate of 15%, the present value of the annuity is \$1.448 billion ($\$5.6 \text{ billion} \div 25 = \224 million ; $\$224 \text{ million} \times 6.46415$), which is much closer to the lump-sum payment offered to the governmental entity.

Present Value of an Annuity Due

In our discussion of the present value of an ordinary annuity, we discounted the final rent based on the number of rent periods. In determining the present value of an annuity due, there is always one fewer discount period. [Illustration 6.31](#) shows this distinction.

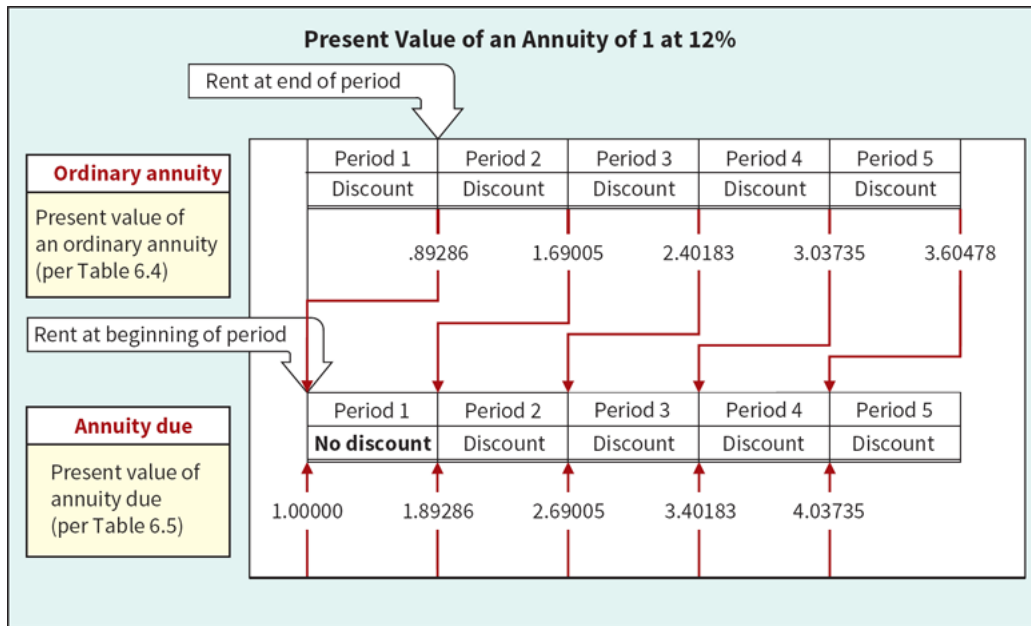

ILLUSTRATION 6.31 Comparison of Present Value of an Ordinary Annuity with an Annuity Due

Because each cash flow comes exactly one period sooner in the present value of the annuity due, the present value of the cash flows is exactly 12% higher than the present value of an ordinary annuity. Thus, **to find the present value of an annuity due factor, multiply the present value of an ordinary annuity factor by 1 plus the interest rate** (that is, $1 + i$).

To determine the present value of an annuity due interest factor for 5 periods at 12% interest, take the present value of an ordinary annuity for 5 periods at 12% interest (3.60478) and multiply it by 1.12 to arrive at the present value of an annuity due, 4.03735 (3.60478×1.12). We provide present value of annuity due factors in [Table 6.5](#).

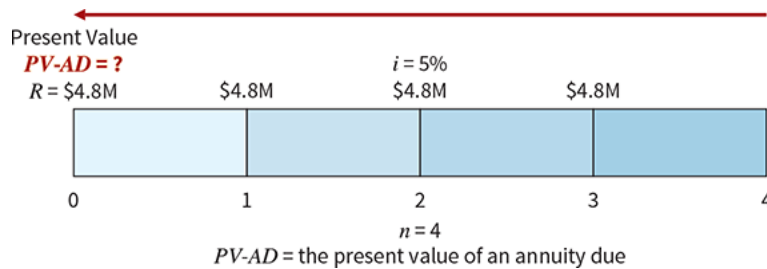

As an example, [Illustration 6.32](#) presents an annuity due problem.

Annuity Due

Facts: Space Odyssey, Inc., rents a communications satellite for four years with annual rental payments of \$4.8 million to be made at the beginning of each year.

Problem: Show this situation in time diagram form and determine the present value of the rental obligations, assuming an annual interest rate of 5%.

Solution:

The computations to solve this problem are as follows.

1. Present value of an ordinary annuity of 1 for 4 periods at 5% (Table 6.4)	3.54595
2. Factor $(1 + .05)$	× 1.05
3. Present value of an annuity due of 1 for 4 periods at 5%	3.72325
4. Periodic deposit (rent)	× \$4,800,000
5. Present value of payments	\$17,871,600

Using [Table 6.5](#) also locates the desired factor 3.72325 and computes the present value of the lease payments to be \$17,871,600.

ILLUSTRATION 6.32 Present Value of Annuity Due Problem ($n = 4, i = 5\%$)

Examples of Present Value of Annuity Problems

In the following three examples, we demonstrate the computation of (1) the present value, (2) the interest rate, and (3) the amount of each rent.

Computation of the Present Value of an Ordinary Annuity

You have just won a lottery totaling \$4,000,000. You learn that you will receive a check in the amount of \$200,000 at the end of each of the next 20 years. What amount have you really won? That is, what is the present value of the \$200,000 checks you will receive over the next 20 years? [Illustration 6.33](#) shows a time diagram of this enviable situation (assuming an appropriate interest rate of 10%).

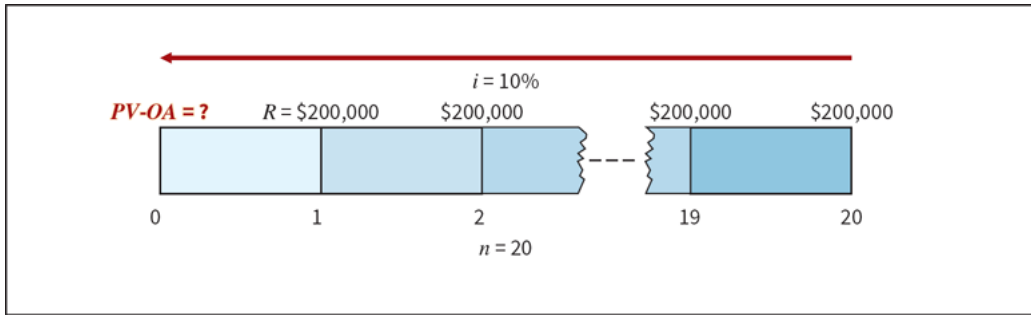

ILLUSTRATION 6.33 Time Diagram to Solve for Present Value of Lottery Payments

You calculate the present value as follows.

Present value of an ordinary annuity	$= R(PVF-OA_{n,i})$
	$= \$200,000(PVF-OA_{20,10\%})$
	$= \$200,000(8.51356)$
	$= \$1,702,712$

As a result, if the state deposits \$1,702,712 now and earns 10% interest, it can withdraw \$200,000 a year for 20 years to pay you the \$4,000,000.

Computation of the Interest Rate

Many shoppers use credit cards to make purchases. When you receive the statement for payment, you may pay the total amount due or you may pay the balance in a certain number of payments. For example, assume you receive a statement from **MasterCard** (USA) with a balance due of €528.77. You may pay it off in 12 equal monthly payments of €50 each, with the first payment due one month from now. What rate of interest would you be paying?

The €528.77 represents the present value of the 12 payments of €50 each at an unknown rate of interest. The time diagram in **Illustration 6.34** depicts this situation.

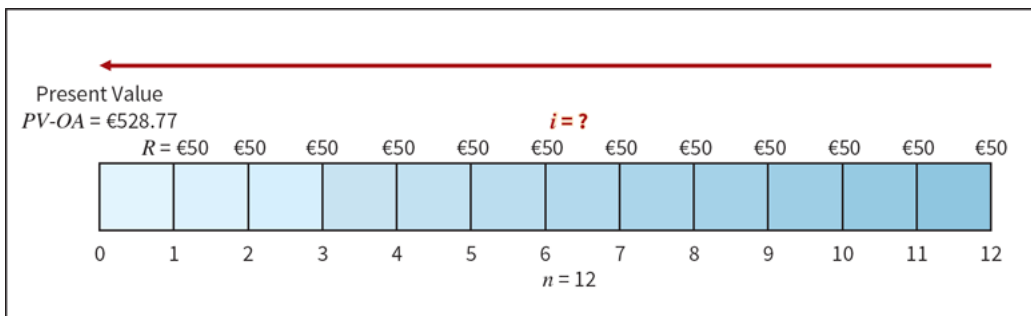

ILLUSTRATION 6.34 Time Diagram to Solve for Effective-Interest Rate on Loan

You calculate the rate as follows.

Present value of an ordinary annuity	$= R(PVF-OA_{n,i})$
	$€528.77 = €50(PVF-OA_{12,i})$
	$(PVFOA_{12,i}) = \frac{\$528.77}{\$50} = 10.57540$

Referring to [Table 6.4](#) and reading across the 12-period row, you find 10.57534 in the 2% column. Since 2% is a monthly rate, the nominal annual rate of interest is 24% (12 × 2%). The effective annual rate is 26.82423% [(1 + .02)¹² - 1]. Obviously, you are better off paying the entire bill now if possible.

Computation of a Periodic Rent

Juan and Marcia Perez have saved \$36,000 to finance their daughter Maria's college education. They deposited the money in the Santos Bank, where it earns 4% interest compounded semiannually. What equal amounts can their daughter withdraw at the end of every six months during her four college years, without exhausting the fund? [Illustration 6.35](#) shows a time diagram of this situation.

ILLUSTRATION 6.35 Time Diagram for Ordinary Annuity for a College Fund

Determining the answer by simply dividing \$36,000 by eight withdrawals is wrong. Why? Because that ignores the interest earned on the money remaining on deposit. Maria must consider that interest is compounded semiannually at 2% ($4\% \div 2$) for 8 periods ($4 \text{ years} \times 2$). Thus, using the same present value of an ordinary annuity formula, she determines the amount of each withdrawal that she can make as follows.

Present value of an ordinary annuity	$= R(PVF-OA_{n,i})$
\$36,000	$= R(PVF-OA_{8,2\%})$
\$36,000	$= R(7.32548)$
R	$= \$4,914.35$

Other Time Value of Money Issues

LEARNING OBJECTIVE 5

Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Solving time value problems often requires using more than one table. For example, a business problem may need computations of both present value of a single sum and present value of an annuity. In addition, IFRS may require the use of expected cash flows in determining present value. In this section, we examine:

1. Deferred annuities.
2. Bond problems.
3. Present value measurement.

Deferred Annuities

A **deferred annuity** is an annuity in which the rents begin after a specified number of periods. A deferred annuity does not begin to produce rents until two or more periods have expired. For example, “an **ordinary annuity** of six annual rents deferred four years” means that no rents will occur during the first four years and that the first of the six rents will occur at the end of the fifth year. “An **annuity due** of six annual rents deferred four years” means that no rents will occur during the first four years and that the first of six rents will occur at the beginning of the fifth year.

Future Value of a Deferred Annuity

Computing the future value of a deferred annuity is relatively straightforward. Because there is no accumulation or investment on which interest may accrue, the future value of a deferred annuity is the same as the future value of an annuity not deferred. That is, computing the future value simply ignores the deferred period. [Illustration 6.36](#) shows a future value of a deferred annuity problem.

Future Value of a Deferred Annuity

Facts: Sutton Corporation plans to purchase land in six years for the construction of its new company headquarters. Because of cash flow problems, Sutton budgets deposits of \$80,000 on which it expects to earn 5% annually, only at the end of the fourth, fifth, and sixth periods.

Problem: Show this situation in time diagram form and determine the future value Sutton will have accumulated at the end of the sixth year.

Solution:

Sutton determines the value accumulated by using the standard formula for the future value of an ordinary annuity:

Future value of an ordinary annuity	$= R(FVF-OA_{n,i})$
	$= \$80,000(FVF-OA_{3,5\%})$
	$= \$80,000(3.15250)$
	$= \$252,200$

ILLUSTRATION 6.36 Future Value of Deferred Annuity Problem

Present Value of a Deferred Annuity

Computing the present value of a deferred annuity requires recognizing the interest that accrues on the original investment during the deferral period.

To compute the present value of a deferred annuity, we compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period. We then subtract the present value of rents that were not received during the deferral period. We are left with the present value of the rents actually received subsequent to the deferral period.

To illustrate, Bob Boyd has developed and copyrighted tutorial software for students in advanced accounting. He agrees to sell the copyright to Campus Micro Systems for six annual payments of \$5,000 each. The payments will begin five years from today. Given an annual interest rate of 8%, what is the present value of the six payments?

This situation is an ordinary annuity of six payments deferred four periods. The time diagram in [Illustration 6.37](#) depicts this sales agreement.

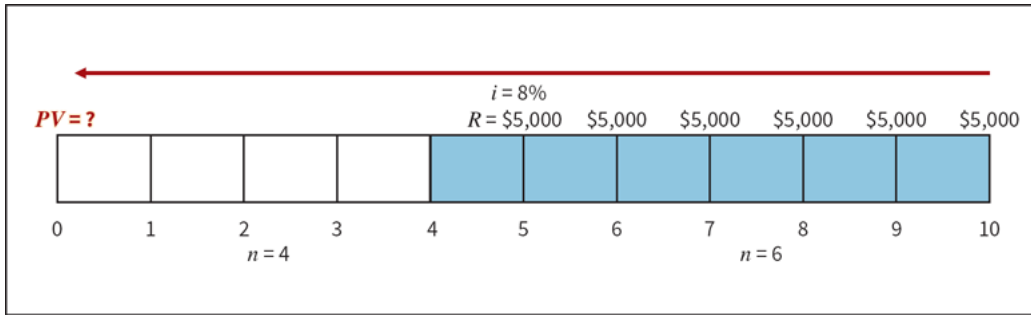

ILLUSTRATION 6.37 Time Diagram for Present Value of Deferred Annuity

Two options are available to solve this problem. The first is to use only [Table 6.4](#), as shown in [Illustration 6.38](#).

1. Each periodic rent		\$5,000
2. Present value of an ordinary annuity of 1 for total periods (10) [number of rents (6) plus number of deferred periods (4)] at 8%	6.71008	
3. Less: Present value of an ordinary annuity of 1 for the number of deferred periods (4) at 8%	<u>3.31213</u>	
4. Difference		× 3.39795
5. Present value of 6 rents of \$5,000 deferred 4 periods		<u>\$16,989.75</u>

ILLUSTRATION 6.38 Computation of the Present Value of a Deferred Annuity

The subtraction of the present value of an annuity of 1 for the deferred periods eliminates the non-existent rents during the deferral period. It converts the present value of an ordinary annuity of \$1.00 for 10 periods to the present value of six rents of \$1.00, deferred four periods.

Alternatively, Boyd can use both [Table 6.2](#) and [Table 6.4](#) to compute the present value of the six rents. He can first discount the annuity for six periods. However, because the annuity is deferred four periods, he must treat the present value of the annuity as a future amount to be discounted another four periods. The time diagram in [Illustration 6.39](#), depicts this two-step process.

ILLUSTRATION 6.39 Time Diagram for Present Value of Deferred Annuity (Two-Step Process)

Calculation using formulas would be done in two steps, as follows.

Step 1: Present value of an ordinary annuity	= $R(PVF-OA_{n,i})$
	= $\$5,000(PVF-OA_{6,8\%})$
	= $\$5,000(4.62288)$ (Table 6.4 , Present value of an ordinary annuity)

	= \$23,114.40
Step 2: Present value of a single sum	= $FV(PVF_{n,i})$
	= \$23,114.40($PVF_{4,8\%}$)
	= \$23,114.40(.73503) (Table 6.2, Present value of a single sum)
	= \$16,989.78

The present value of \$16,989.78 is the same as in [Illustration 6.38](#) although computed differently. (The \$0.03 difference is due to rounding.)

Valuation of Long-Term Bonds

A long-term bond produces two cash flows: (1) periodic interest payments during the life of the bond, and (2) the principal (face value) paid at maturity. At the date of issue, bond buyers determine the present value of these two cash flows using the market rate of interest.

The periodic interest payments represent an annuity. The principal represents a single-sum problem. The current market value of the bonds is the combined present values of the interest annuity and the principal amount. [Illustration 6.40](#) presents an example of the present value of an interest-bearing bond.

Bond Valuation

Facts: Alltech Corporation on January 1, 2022, issues \$100,000 of 5% bonds due in five years with interest payable annually at year-end. The current market rate of interest for bonds of similar risk is 6%.

Problem: Show this situation in time diagram form and determine the amount that buyers will pay for this bond issue.

Solution:

Alltech computes the present value of the two cash flows by discounting at 6%, as follows.

1. Present value of the principal: $FV(PVF_{5,6\%}) = \$100,000(.74726)$	\$74,726.00
2. Present value of the interest payments: $R(PVF-OA_{5,6\%}) = \$5,000(4.21236)$	21,061.80
3. Combined present value (market price)—carrying value of bonds	<u>\$95,787.80</u>

By paying \$95,787.80 at date of issue, the buyers of the bonds will realize an effective yield of 6% over the five-year term of the bonds. This is true because Alltech discounted the cash flows at 6%.

ILLUSTRATION 6.40 Bond Valuation Problem

Effective-Interest Method of Amortization of Bond Discount or Premium

In the previous example ([Illustration 6.40](#)), Alltech Corporation issued bonds at a discount, computed as shown in [Illustration 6.41](#).

Maturity value (face amount) of bonds		\$100,000.00
Present value of the principal	\$74,726.00	
Present value of the interest	21,061.80	
Proceeds (present value and cash received)		(95,787.80)
Discount on bonds issued		\$ 4,212.20

ILLUSTRATION 6.41 Computation of Bond Discount

Alltech amortizes (writes off to interest expense) the amount of this discount over the life of the bond issue.

The preferred procedure for amortization of a discount or premium is the **effective-interest method**. Under the effective-interest method:

1. The company issuing the bond first computes bond interest expense by multiplying the carrying value of the bonds at the beginning of the period by the effective-interest rate.
2. The company then determines the bond discount or premium amortization by comparing the bond interest expense with the interest to be paid.

[Illustration 6.42](#) depicts the computation of bond amortization.

$$\begin{array}{c}
 \text{Bond Interest Expense} \\
 \left(\begin{array}{ccc}
 \text{Carrying Value} & & \text{Effective-} \\
 \text{of Bonds at} & \times & \text{Interest} \\
 \text{Beginning of Period} & & \text{Rate}
 \end{array} \right) - \left(\begin{array}{ccc}
 \text{Face Amount} & \times & \text{Stated} \\
 \text{of Bonds} & & \text{Interest} \\
 & & \text{Rate}
 \end{array} \right) = \text{Amortiz} \\
 \text{Amou}
 \end{array}$$

ILLUSTRATION 6.42 Amortization Computation

The effective-interest method produces a periodic interest expense equal to a **constant percentage of the carrying value of the bonds**. Since the percentage used is the effective rate of interest incurred by the borrower at the time of issuance, the effective-interest method results in matching expenses with revenues.

We can use the data from the Alltech Corporation example to illustrate the effective-interest method of amortization. Alltech issued \$100,000 face value of bonds at a discount of \$4,212.20, resulting in a carrying value of \$95,787.80. [Illustration 6.43](#) shows the effective-interest amortization schedule for Alltech's bonds.

Schedule of Bond Discount Amortization 5-Year, 5% Bonds Sold to Yield 6%				
Date	Cash Interest Paid	Interest Expense	Bond Discount Amortization	Carrying Value of Bonds
1/1/22				\$ 95,787.80
12/31/22	\$ 5,000.00 ^a	\$ 5,747.27 ^b	\$ 747.27 ^c	96,535.07 ^d
12/31/23	5,000.00	5,792.10	792.10	97,327.17
12/31/24	5,000.00	5,839.63	839.63	98,166.80
12/31/25	5,000.00	5,890.01	890.01	99,056.81
12/31/26	5,000.00	5,943.19 ^e	943.19	100,000.00
	<u>\$25,000.00</u>	<u>\$29,212.20</u>	<u>\$4,212.20</u>	

^a\$100,000 × .05 = \$5,000
^b\$95,787.80 × .06 = \$5,747.27
^c\$5,747.27 - \$5,000 = \$747.27
^d\$95,787.80 + \$747.27 = \$96,535.07
^e\$0.22 difference due to rounding.

ILLUSTRATION 6.43 Effective-Interest Amortization Schedule

We use the amortization schedule illustrated above for note and bond transactions in [Chapters 7](#) and [14](#).

Present Value Measurement

In the past, most accounting calculations of present value relied on the most likely cash flow amount. *IFRS 13* explains in detail a different approach called the **expected cash flow approach**. [7] It uses a range of cash flows and incorporates the probabilities of those cash flows to provide a more relevant measurement of present value.

To illustrate the expected cash flow model, assume that there is a 30% probability that future cash flows will be \$100, a 50% probability that they will be \$200, and a 20% probability that they will be \$300. In this case, the expected cash flow would be \$190 [(\$100 × 0.3) + (\$200 × 0.5) + (\$300 × 0.2)]. Traditional present value approaches would use the most likely estimate (\$200). However, that estimate fails to consider the different probabilities of the possible cash flows.

Choosing an Appropriate Interest Rate

After determining expected cash flows, a company must then use the proper interest rate to discount the cash flows. The interest rate used for this purpose has the following three components.

Three Components of Interest

1. **Pure Rate of Interest (2%–4%)**. The amount a lender would charge if there were no possibilities of default and no expectation of inflation.
2. **Expected Inflation Rate of Interest (0%–?)**. Lenders recognize that in an inflationary economy, they are being paid back with less valuable dollars. As a result, they increase their interest rate to compensate for this loss in purchasing power. When inflationary expectations are high, interest rates are high.
3. **Credit Risk Rate of Interest (0%–5%)**. The government has little or no credit risk (i.e., risk of non-payment) when it issues bonds. A business enterprise, however, depending upon its financial stability, profitability, etc., may have a low or a high credit risk.

The IASB takes the position that after computing the expected cash flows, a company should discount those cash flows by the **risk-free rate of return**. That rate is defined as **the pure rate of return plus the expected inflation rate**. The Board notes that the expected cash flow framework adjusts for credit risk because it incorporates the probability of receipt or payment into the computation of expected cash flows. Therefore, the rate used to discount the expected cash flows should consider only the pure rate of interest and the inflation rate.⁶

Example of Expected Cash Flow

To illustrate, assume that Juno’s Appliance Outlet offers a two-year warranty on all products sold. In 2022, Juno’s Appliance sold \$250,000 of a particular type of clothes dryer. Juno’s Appliance entered into an agreement with Lorenzo’s Repair to provide all warranty service on the dryers sold in 2022. To determine the warranty expense to record in 2022 and the amount of warranty liability to record on the December 31, 2022, statement of financial position, Juno’s Appliance must measure the fair value of the agreement. Since there is not a ready market for these warranty contracts, Juno’s Appliance uses expected cash flow techniques to value the warranty obligation.

Based on prior warranty experience, Juno’s Appliance estimates the expected cash outflows associated with the dryers sold in 2022, as shown in **Illustration 6.44**.

	Cash Flow Estimate	×	Probability Assessment	=	Expected Cash Flow
2022	\$3,800		20%		\$ 760
	6,300		50%		3,150
	7,500		30%		2,250
			Total		<u>\$6,160</u>
2023	\$5,400		30%		\$1,620
	7,200		50%		3,600
	8,400		20%		1,680
			Total		<u>\$6,900</u>

ILLUSTRATION 6.44 Expected Cash Outflows—Warranties

Applying expected cash flow concepts to these data, Juno’s Appliance estimates warranty cash outflows of \$6,160 in 2022 and \$6,900 in 2023.

Illustration 6.45 shows the present value of these cash flows, assuming a risk-free rate of 5% and cash flows occurring at the end of the year.

Year	Expected Cash Flow	×	PV Factor, $i = 5\%$	=	Present Value
2022	\$6,160		0.95238		\$ 5,866.66
2023	6,900		0.90703		6,258.51
			Total		<u>\$12,125.17</u>

ILLUSTRATION 6.45 Present Value of Cash Flows

Learning Objectives Review

1 Describe the fundamental concepts related to the time value of money.

Some of the **applications of present value-based measurements** to accounting topics are (1) notes, (2) leases, (3) pensions and other postretirement benefits, (4) non-current term assets, (5) sinking funds, (6) business combinations, (7) disclosures, and (8) installment contracts. See [items 1](#) and [2](#) in the Fundamental Concepts on the following page for the distinctions between simple and compound interest.

In order to identify which of the **five compound interest tables** to use, determine whether you are solving for (1) the future value of a single sum, (2) the present value of a single sum, (3) the future value of a series of sums (an annuity), or (4) the present value of a series of sums (an annuity). In addition, when a series of sums (an annuity) is involved, identify whether these sums are received or paid (1) at the beginning of each period (annuity due) or (2) at the end of each period (ordinary annuity).

The following **four variables are fundamental to all compound interest problems**. (1) *Rate of interest*: unless otherwise stated, an annual rate, adjusted to reflect the length of the compounding period if less than a year. (2) *Number of time periods*: the number of compounding periods (a period may be equal to or less than a year). (3) *Future value*: the value at a future date of a given sum or sums invested assuming compound interest. (4) *Present value*: the value now (present time) of a future sum or sums discounted assuming compound interest.

2 Solve future and present value of 1 problems.

See [items 5\(a\)](#) and [6\(a\)](#) in the Fundamental Concepts.

3 Solve future value of ordinary and annuity due problems.

See [item 5\(b\)](#) in the Fundamental Concepts.

4 Solve present value of ordinary and annuity due problems.

See [item 6\(b\)](#) in the Fundamental Concepts.

5 Solve present value problems related to deferred annuities, bonds, and expected cash flows.

Deferred annuities are annuities in which rents begin after a specified number of periods. The future value of a deferred annuity is computed the same as the future value of an annuity not deferred. To find the present value of a deferred annuity, compute the present value of an ordinary annuity of 1 as if the rents had occurred for the entire period, and then subtract the present value of rents not received during the deferral period. The **current market price of bonds** combines the present values of the interest annuity and the principal amount. The **expected cash flow approach** uses a range of cash flows and the probabilities of those cash flows to provide the most likely estimate of expected cash flows. The proper interest rate used to discount the cash flows is the risk-free rate of return.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Fundamental Concepts

1. **Simple Interest.** Interest on principal only, regardless of interest that may have accrued in the past.
2. **Compound Interest.** Interest accrues on the unpaid interest of past periods as well as on the principal.
3. **Rate of Interest.** Interest is usually expressed as an annual rate, but when the compounding period is shorter than one year, the interest rate for the shorter period must be determined.
4. **Annuity.** A series of payments or receipts (called rents) that occur at equal intervals of time. Types of annuities:
 - a. **Ordinary Annuity.** Each rent is payable (receivable) at the end of the period.
 - b. **Annuity Due.** Each rent is payable (receivable) at the beginning of the period.
5. **Future Value.** Value at a later date of a single sum that is invested at compound interest.
 - a. **Future Value of 1** (or future value of a single sum). The future value of \$1 (or a single given sum), *FV*, at the end of *n* periods at *i* compound interest rate ([Table 6.1](#)).
 - b. **Future Value of an Annuity.** The future value of a series of rents invested at compound interest. In other words, the accumulated total that results from a series of equal deposits at regular intervals invested at compound interest. Both deposits and interest increase the accumulation.

1. **Future Value of an Ordinary Annuity.** The future value on the date of the last rent ([Table 6.3](#)).
2. **Future Value of an Annuity Due.** The future value one period after the date of the last rent. When an annuity due table is not available, use [Table 6.3](#) with the following formula.

Value of annuity due of 1 for <i>n</i> rents	= (Value of ordinary annuity for <i>n</i> rents) × (1 + interest rate)
--	--

6. **Present Value.** The value at an earlier date (usually now) of a given future sum discounted at compound interest.
 - a. **Present Value of 1** (or present value of a single sum). The present value (worth) of \$1 (or a given sum), due *n* periods hence, discounted at *i* compound interest ([Table 6.2](#)).
 - b. **Present Value of an Annuity.** The present value (worth) of a series of rents discounted at compound interest. In other words, it is the sum when invested at compound interest that will permit a series of equal withdrawals at regular intervals.

1. **Present Value of an Ordinary Annuity.** The value now of \$1 to be received or paid at the end of each period (rents) for *n* periods, discounted at *i* compound interest ([Table 6.4](#)).
2. **Present Value of an Annuity Due.** The value now of \$1 to be received or paid at the beginning of each period (rents) for *n* periods, discounted at *i* compound interest ([Table 6.5](#)). To use [Table 6.4](#) for an annuity due, apply this formula.

Present value of annuity due of 1 for <i>n</i> rents	= (Present value of an ordinary annuity of <i>n</i> rents) × (1 + interest rate)
--	--

Practice Problem

Vesper Inc. is a manufacturer of scooters. It is facing several decisions involving time value of money considerations.

Instructions

Provide the requested information for (a)-(d) below. (Round all answers to the nearest dollar.)

- a. Vesper recently signed a lease for a new office building for a lease period of 10 years. Under the lease agreement, a security deposit of \$12,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 10% per year. What amount will the company receive at the time the lease expires?
- b. Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company’s scooters. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing \$3,000,000 of 11% bonds on March 1, 2022, due on March 1, 2037, with interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%. Determine the selling price of the bonds.
- c. The company, having issued the bonds in part (b), is committed to make annual sinking fund deposits of \$90,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- d. Vesper has 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its employee compensation plan. The plan will start on January 1, 2022. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). The following estimates have been collected.

Average length of time to retirement	15 years
Expected life duration after retirement	10 years
Total pension payment expected each year after retirement for all employees	\$800,000 per year

On the basis of the information above, determine the present value of the pension liability. Assume that payments are made at the end of the year and that the interest rate is 8%.

Solution

- a. Future value of \$12,000 at 10% for 10 years

$$(\$12,000 \times 2.59374) = \$ \underline{31,125}$$

- b. Formula for the interest payments: Formula for the principal:

$PV-OA = R(PVF-OA_{n,i})$	$PV = FV(PVF_{n,i})$
$PV-OA = \$165,000(PVF-OA_{30,5\%})$	$PV = \$3,000,000(PVF_{30,5\%})$
$PV-OA = \$165,000(15.37245)$	$PV = \$3,000,000(0.23138)$
$PV-OA = \underline{\$2,536,454}$	$PV = \underline{\$694,140}$

The selling price of the bonds = \$2,536,454 + \$694,140 = \$3,230,594.

- c. Future value of an ordinary annuity of \$90,000

at 10% for 15 years ($\$90,000 \times 31.77248$)	<u>\$2,859,523</u>
Deficiency ($\$3,000,000 - \$2,859,523$)	<u>\$ 140,477</u>

d. Compute the value of the deferred annuity and then discount that amount to the present.

1. Present value of the expected annual pension payments at the end of the tenth year:

$PV-OA = R(PVF-OA_{n,i})$
$PV-OA = \$800,000(PVF-OA_{10,8\%})$
$PV-OA = \$800,000(6.71008)$
$PV-OA = \underline{\$5,368,064}$

2. Present value of the expected annual pension payments at the beginning of the current year:

$PV = FV(PVF_{n,i})$
$PV = \$5,368,064(PVF_{15,8\%})$
$PV = \$5,368,064(0.31524)$
$PV = \underline{\$1,692,228}$

The company's pension obligation (liability) is \$1,692,228.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. What is the time value of money? Why should accountants have an understanding of compound interest, annuities, and present value concepts?
2. Identify three situations in which accounting measures are based on present values. Do these present value applications involve single sums or annuities, or both single sums and annuities? Explain.
3. What is the nature of interest? Distinguish between "simple interest" and "compound interest."
4. What are the components of an interest rate? Why is it important for accountants to understand these components?
5. The following are a number of values taken from compound interest tables involving the same number of periods and the same rate of interest. Indicate what each of these four values represents.
 - a. 6.71008.
 - b. 2.15892.
 - c. 0.46319.
 - d. 14.48656.
6. Jose Oliva is considering two investment options for a R\$1,500 gift he received for graduation. Both investments have 8% annual interest rates. One offers quarterly compounding; the other compounds on a semiannual basis. Which investment should he choose? Why?
7. Regina Henry deposited \$20,000 in a money market certificate that provides interest of 10% compounded quarterly if the amount is maintained for 3 years. How much will Regina have at the end of 3 years?
8. Will Smith will receive \$80,000 5 years from now, from a trust fund established by his father. Assuming the appropriate interest rate for discounting is 12% (compounded semiannually), what is the present value of this amount today?
9. What are the primary characteristics of an annuity? Differentiate between an "ordinary annuity" and an "annuity due."

- 10.** Kehoe AG owes €40,000 to Ritter Company. How much would Kehoe have to pay each year if the debt is retired through four equal payments (made at the end of the year), given an interest rate on the debt of 12%? (Round to two decimal places.)
- 11.** Kenji is planning for a retirement home. He estimates he will need ¥20,000,000 4 years from now to purchase this home. Assuming an interest rate of 10%, what amount must be deposited at the end of each of the 4 years to fund the home price? (Round to two decimal places.)
- 12.** Assume the same situation as in Question 11, except that the four equal amounts are deposited at the beginning of the period rather than at the end. In this case, what amount must be deposited at the beginning of each period? (Round to two decimals.)
- 13.** Explain how the future value of an ordinary annuity interest table is converted to the future value of an annuity due interest table.
- 14.** Explain how the present value of an ordinary annuity interest table is converted to the present value of an annuity due interest table.
- 15.** In a book named *Treasure*, the reader has to figure out where a 2.2 pound, 24 kt gold horse has been buried. If the horse is found, a prize of \$25,000 a year for 20 years is provided. The actual cost to the publisher to purchase an annuity to pay for the prize is \$245,000. What interest rate (to the nearest percent) was used to determine the amount of the annuity? (Assume end-of-year payments.)
- 16.** Alexander Enterprises leases property to Hamilton Ltd. Because Hamilton is experiencing financial difficulty, Alexander agrees to receive five rents of £20,000 at the end of each year, with the rents deferred 3 years. What is the present value of the five rents discounted at 12%?
- 17.** Answer the following questions.
- On May 1, 2022, Goldberg Company sold some machinery to Newlin Company on an installment contract basis. The contract required five equal annual payments, with the first payment due on May 1, 2022. What present value concept is appropriate for this situation?
 - On June 1, 2022, Lin Inc. purchased a new machine that it does not have to pay for until June 1, 2024. The total payment on June 1, 2024, will include both principal and interest. Assuming interest at a 12% rate, the cost of the machine would be the total payment multiplied by what time value of money concept?
 - Gruhr Inc. wishes to know how much money it will have available in 5 years if five equal amounts of \$35,000 are invested, with the first amount invested immediately. What interest table is appropriate for this situation?
 - Megan Hoffman invests in a “jumbo” \$200,000, 3-year certificate of deposit at ING Bank. What table would be used to determine the amount accumulated at the end of 3 years?
- 18.** Recently, Glenda Estes was interested in purchasing a Honda Acura. The salesperson indicated that the price of the car was either R\$27,600 cash or R\$6,900 at the end of each of 5 years. Compute the effective-interest rate to the nearest percent that Glenda would pay if she chooses to make the five annual payments.
- 19.** Property and casualty insurance companies have been criticized because they reserve for a total loss as early as 5 years before an eventuality. Tax authorities have joined the debate because they say the full reserve is unfair from a taxation viewpoint. What do you believe is the tax authorities’ position?

Brief Exercises

(Unless instructed otherwise, round answers to the nearest currency unit.)

BE6.1 (LO 2) Victor Romano invested \$15,000 today in a fund that earns 8% compounded annually. To what amount will the investment grow in 3 years? To what amount would the investment grow in 3

years if the fund earns 8% annual interest compounded semiannually?

BE6.2 (LO 2) Tony Bautista needs R\$25,000 in 4 years. What amount must he invest today if his investment earns 12% compounded annually? What amount must he invest if his investment earns 12% annual interest compounded quarterly?

BE6.3 (LO 2) Candice Willis will invest €30,000 today. She needs €150,000 in 21 years. What annual interest rate must she earn?

BE6.4 (LO 2) Bo Newman will invest \$10,000 today in a fund that earns 5% annual interest. How many years will it take for the fund to grow to \$17,100?

BE6.5 (LO 3) Sally Medavoy will invest €8,000 a year for 20 years in a fund that will earn 6% annual interest. If the first payment occurs at year-end, what amount will be in the fund in 20 years? If the first payment into the fund occurs today, what amount will be in the fund in 20 years?

BE6.6 (LO 3) Steve Madison needs \$250,000 in 10 years. How much must he invest at the end of each year, at 5% interest, to meet his needs?

BE6.7 (LO 2) Jose Garcia's lifelong dream is to own his own fishing boat to use in his retirement. Jose has recently come into an inheritance of \$400,000. He estimates that the boat he wants will cost \$300,000 when he retires in 5 years. How much of his inheritance must he invest at an annual rate of 8% (compounded annually) to buy the boat at retirement?

BE6.8 (LO 2) Refer to the data in BE6.7. Assuming quarterly compounding of amounts invested at 8%, how much of Jose Garcia's inheritance must be invested to have enough at retirement to buy the boat?

BE6.9 (LO 3) Morgan Freeman is investing \$9,069 at the end of each year in a fund that earns 5% interest. In how many years will the fund be at \$100,000?

BE6.10 (LO 4) Henry Quincy wants to withdraw £30,000 each year for 10 years from a fund that earns 8% interest. How much must he invest today if the first withdrawal is at year-end? How much must he invest today if the first withdrawal takes place immediately?

BE6.11 (LO 4) Leon Tyler's VISA balance is \$793.15. He may pay it off in 12 equal end-of-month payments of \$75 each. What interest rate is Leon paying?

BE6.12 (LO 4) Maria Alvarez is investing \$300,000 in a fund that earns 4% interest compounded annually. What equal amounts can Maria withdraw at the end of each of the next 20 years?

BE6.13 (LO 3) Gomez Inc. will deposit \$30,000 in a 6% fund at the end of each year for 8 years beginning December 31, 2022. What amount will be in the fund immediately after the last deposit?

BE6.14 (LO 4) Liv Diaz wants to create a fund today that will enable her to withdraw R\$25,000 per year for 8 years, with the first withdrawal to take place 5 years from today. If the fund earns 8% interest, how much must Liv invest today?

BE6.15 (LO 5) Wong Ltd. issues HK\$2,000,000 of 7% bonds due in 10 years with interest payable at year-end. The current market rate of interest for bonds of similar risk is 8%. What amount will Wong receive when it issues the bonds?

BE6.16 (LO 4) Zach Taylor is settling a £20,000 loan due today by making 6 equal annual payments of £4,727.53. Determine the interest rate on this loan, if the payments begin one year after the loan is signed.

BE6.17 (LO 4) Consider the loan in BE6.16. What payments must Zach Taylor make to settle the loan at the same interest rate but with the 6 payments beginning on the day the loan is signed?

Exercises

(Unless instructed otherwise, round answers to the nearest currency unit. Interest rates are per annum unless otherwise indicated.)

E6.1 (LO 1) (Using Interest Tables) For each of the following cases, indicate (a) to what rate columns, and (b) to what number of periods you would refer in looking up the interest factor.

1. In a future value of 1 table

Annual Rate	Number of Years Invested	Compounded
a. 9%	9	Annually
b. 8%	5	Quarterly
c. 10%	15	Semiannually

2. In a present value of an annuity of 1 table

Annual Rate	Number of Years Involved	Number of Rents Involved	Frequency of Rents
a. 9%	25	25	Annually
b. 8%	15	30	Semiannually
c. 12%	7	28	Quarterly

E6.2 (LO 1, 2) (Simple and Compound Interest Computations) Sue Ang invests HK\$30,000 at 8% annual interest, leaving the money invested without withdrawing any of the interest for 8 years. At the end of the 8 years, Sue withdraws the accumulated amount of money.

Instructions

- Compute the amount Sue would withdraw assuming the investment earns simple interest.
- Compute the amount Sue would withdraw assuming the investment earns interest compounded annually.
- Compute the amount Sue would withdraw assuming the investment earns interest compounded semiannually.

E6.3 (LO 2, 3, 4) (Computation of Future Values and Present Values) Using the appropriate interest table, answer each of the following questions. (Each case is independent of the others.)

- What is the future value of €9,000 at the end of 5 periods at 8% compounded interest?
- What is the present value of €9,000 due 8 periods hence, discounted at 6%?
- What is the future value of 15 periodic payments of €9,000 each made at the end of each period and compounded at 10%?
- What is the present value of €9,000 to be received at the end of each of 20 periods, discounted at 5% compound interest?

E6.4 (LO 3, 4) (Computation of Future Values and Present Values) Using the appropriate interest table, answer the following questions. (Each case is independent of the others.)

- What is the future value of 20 periodic payments of \$5,000 each, made at the beginning of each period and compounded at 8%?
- What is the present value of \$2,500 to be received at the beginning of each of 30 periods, discounted at 10% compound interest?
- What is the future value of 15 deposits of \$2,000 each, made at the beginning of each period and compounded at 10%? (Future value as of the end of the fifteenth period.)
- What is the present value of six receipts of \$3,000 each, received at the beginning of each period, discounted at 9% compounded interest?

E6.5 (LO 4) (Computation of Present Value) Using the appropriate interest table, compute the present values of the following periodic amounts due at the end of the designated periods.

- a. £50,000 receivable at the end of each period for 8 periods compounded at 12%.
- b. £50,000 payments to be made at the end of each period for 16 periods at 9%.
- c. £50,000 payable at the end of the seventh, eighth, ninth, and tenth periods at 12%.

E6.6 (LO 2, 3, 4) (Future Value and Present Value Problems) Presented below are three unrelated situations (amounts in thousands).

- a. Li Chang Ltd., recently signed a lease for a new office building, for a lease period of 10 years. Under the lease agreement, a security deposit of ¥1,200,000 is made, with the deposit to be returned at the expiration of the lease, with interest compounded at 10% per year. What amount will the company receive at the time the lease expires?
- b. Having recently issued a ₩20 million, 15-year bond issue, Ron Wu Ltd. is committed to make annual sinking fund deposits of ₩620,000. The deposits are made on the last day of each year and yield a return of 10%. Will the fund at the end of 15 years be sufficient to retire the bonds? If not, what will the deficiency be?
- c. Under the terms of his salary agreement, president Juan Rivera has an option of receiving either an immediate bonus of R\$40,000, or a deferred bonus of R\$75,000 payable in 10 years. Ignoring tax considerations and assuming a relevant interest rate of 8%, which form of settlement should Rivera accept?

E6.7 (LO 5) (Computation of Bond Prices) What would you pay for a \$100,000 debenture bond that matures in 15 years and pays \$10,000 a year in interest if you wanted to earn a yield of:

- a. 8%?
- b. 10%?
- c. 12%?

E6.8 (LO 5) (Computations for a Retirement Fund) Stephen Bosworth, a super salesman contemplating retirement on his fifty-fifth birthday, decides to create a fund on an 8% basis that will enable him to withdraw \$25,000 per year on June 30, beginning in 2026 and continuing through 2029. To develop this fund, Stephen intends to make equal contributions on June 30 of each of the years 2022–2025.

Instructions

- a. How much must the balance of the fund equal on June 30, 2025, in order for Stephen Bosworth to satisfy his objective?
- b. What are each of Stephen's contributions to the fund?

E6.9 (LO 2) (Unknown Rate) Kross plc purchased a machine at a price of £100,000 by signing a note payable, which requires a single payment of £118,810 in 2 years. Assuming annual compounding of interest, what rate of interest is being paid on the loan?

E6.10 (LO 2) (Unknown Periods and Unknown Interest Rate) Consider the following independent situations.

- a. R. Chopra wishes to become a millionaire. His money market fund has a balance of \$148,644 and has a guaranteed interest rate of 10%. How many years must Chopra leave that balance in the fund in order to get his desired \$1 million?

- b. Assume that Elvira Lehman desires to accumulate \$1 million in 15 years using her money market fund balance of \$239,392. At what interest rate must Elvira's investment compound annually?

E6.11 (LO 4) (Evaluation of Purchase Options) Rossi Excavating is purchasing a bulldozer. The equipment has a price of €100,000. The manufacturer has offered a payment plan that would allow Rossi to make 10 equal annual payments of €15,582, with the first payment due 1 year after the purchase.

Instructions

- a. How much total interest will Rossi pay on this payment plan?
- b. Rossi could borrow €100,000 from its bank to finance the purchase at an annual rate of 8%. Should Rossi borrow from the bank or use the manufacturer's payment plan to pay for the equipment?

E6.12 (LO 4) (Analysis of Alternatives) Brubaker Inc., a manufacturer of high-sugar, low-sodium, low-cholesterol TV dinners, would like to increase its market share in the Sunbelt. In order to do so, Brubaker has decided to locate a new factory in Florida. Brubaker will either buy or lease a site, depending upon which is more advantageous. The site location committee has narrowed down the available sites to the following three buildings.

Building A: Purchase for a cash price of \$610,000, useful life 25 years.

Building B: Lease for 25 years with annual lease payments of \$70,000 being made at the beginning of the year.

Building C: Purchase for \$650,000 cash. This building is larger than needed; however, the excess space can be sublet for 25 years at a net annual rental of \$6,000. Rental payments will be received at the end of each year. Brubaker Inc. has no objection to being a landlord.

Instructions

In which building would you recommend that Brubaker Inc. locate, assuming a 12% cost of funds?

E6.13 (LO 5) (Computation of Bond Liability) Messier SA manufactures cycling equipment. Recently, the vice president of operations of the company has requested construction of a new plant to meet the increasing demand for the company's bikes. After a careful evaluation of the request, the board of directors has decided to raise funds for the new plant by issuing €3,000,000 of 11% term company bonds on March 1, 2022, due on March 1, 2037, with interest payable each March 1 and September 1. At the time of issuance, the market interest rate for similar financial instruments is 10%.

Instructions

As the controller of the company, determine the selling price of the bonds.

E6.14 (LO 5) (Computation of Pension Liability) Calder, Inc. is a furniture manufacturing company with 50 employees. Recently, after a long negotiation with the local labor union, the company decided to initiate a pension plan as a part of its compensation plan. The plan will start on January 1, 2022. Each employee covered by the plan is entitled to a pension payment each year after retirement. As required by accounting standards, the controller of the company needs to report the pension obligation (liability). On the basis of a discussion with the supervisor of Human Resources and an actuary from an insurance company, the controller develops the following information related to the pension plan.

Average length of time to retirement	15 years
Expected life duration after retirement	10 years
Total pension payment expected each year after retirement for all employees. Payment made at the end of the year.	\$200,000 per year

The interest rate to be used is 8%.

Instructions

On the basis of the information above, determine the present value of the pension liability.

E6.15 (LO 2, 3) (Investment Decision) Derek Lee just received a signing bonus of \$1,000,000. His plan is to invest this payment in a fund that will earn 6%, compounded annually.

Instructions

- If Lee plans to establish the DL Foundation once the fund grows to \$1,898,000, how many years until he can establish the foundation?
- Instead of investing the entire \$1,000,000, Lee invests \$300,000 today and plans to make 9 equal annual investments into the fund beginning 1 year from today. What amount should the payments be if Lee plans to establish the \$1,898,000 foundation at the end of 9 years?

E6.16 (LO 3) (Retirement of Debt) Rual Fernandez borrowed \$90,000 on March 1, 2020. This amount plus accrued interest at 12% compounded semiannually is to be repaid March 1, 2030. To retire this debt, Rual plans to contribute to a debt retirement fund five equal amounts starting on March 1, 2025, and for the next 4 years. The fund is expected to earn 10% per annum.

Instructions

How much must be contributed each year by Rual Fernandez to provide a fund sufficient to retire the debt on March 1, 2030?

E6.17 (LO 4) (Computation of Amount of Rentals) Your client, Wyeth Leasing Ltd., is preparing a contract to lease a machine to Souvenirs plc for a period of 25 years. Wyeth has an investment cost of £421,087 in the machine, which has a useful life of 25 years and no residual value at the end of that time. Your client is interested in earning an 11% return on its investment and has agreed to accept 25 equal rental payments at the end of each of the next 25 years.

Instructions

You are requested to provide Wyeth with the amount of each of the 25 rental payments that will yield an 11% return on investment.

E6.18 (LO 4) (Least Costly Payoff) Assume that Aoki Ltd. has a contractual debt outstanding. Aoki has available two means of settlement: It can either make immediate payment of ¥3,500,000, or it can make annual payments of ¥400,000 for 15 years, each payment due on the last day of the year (yen in thousands).

Instructions

Which method of payment do you recommend, assuming an expected effective-interest rate of 8% during the future period?

E6.19 (LO 4) (Least Costly Payoff) Assuming the same facts as those in E6.18 except that the payments must begin now and be made on the first day of each of the 15 years, what payment method would you recommend?

E6.20 (LO 5) (Expected Cash Flows) For each of the following, determine the expected cash flows.

	Cash Flow Estimate	Probability Assessment
a.	£ 4,800	20%
	6,300	50%
	7,500	30%
b.	£ 5,400	30%
	7,200	50%
	8,400	20%

c.	£(1,000)	10%
	3,000	80%
	5,000	10%

E6.21 (LO 5) (Expected Cash Flows and Present Value) Angela Contreras is trying to determine the amount to set aside so that she will have enough money on hand in 2 years to overhaul the engine on her vintage used car. While there is some uncertainty about the cost of engine overhauls in 2 years, by conducting some research online, Angela has developed the following estimates.

Engine Overhaul Estimated Cash Outflow	Probability Assessment
\$200	10%
450	30%
600	50%
750	10%

Instructions

How much should Angela Contreras deposit today in an account earning 6%, compounded annually, so that she will have enough money on hand in 2 years to pay for the overhaul?

E6.22 (LO 5) (Fair Value Estimate) Killroy Company owns a trade name that was purchased in an acquisition of McClellan Company. The trade name has a book value of \$3,500,000, but according to IFRS, it is assessed for impairment on an annual basis. To perform this impairment test, Killroy must estimate the fair value of the trade name. (You will learn more about intangible asset impairments in [Chapter 12](#).) It has developed the following cash flow estimates related to the trade name based on internal information. Each cash flow estimate reflects Killroy's estimate of annual cash flows over the next 8 years. The trade name is assumed to have no residual value after the 8 years. (Assume the cash flows occur at the end of each year.)

Cash Flow Estimate	Probability Assessment
\$380,000	20%
630,000	50%
750,000	30%

Instructions

- What is the estimated fair value of the trade name? Killroy determines that the appropriate discount rate for this estimation is 8%. (Round calculations to the nearest dollar.)
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

Problems

(Unless instructed otherwise, round answers to nearest currency unit. Interest rates are per annum unless otherwise indicated.)

P6.1 (LO 2, 4) Groupwork (Various Time Value Situations) Answer each of these unrelated questions.

- On January 1, 2022, Yang Ltd. sold a building that cost ¥25,000,000 and that had accumulated depreciation of ¥10,000,000 on the date of sale. Yang received as consideration a ¥24,000,000 non-interest-bearing note due on January 1, 2025. There was no established exchange price for the building, and the note had no ready market. The prevailing rate of interest for a note of this type on January 1, 2022, was 9%. At what amount should the gain from the sale of the building be reported?

- b. On January 1, 2022, Yang Ltd. purchased 300 of the ¥100,000 face value, 9%, 10-year bonds of Walters Inc. The bonds mature on January 1, 2032, and pay interest annually beginning January 1, 2023. Yang purchased the bonds to yield 11%. How much did Yang pay for the bonds?
- c. Yang Ltd. bought a new machine and agreed to pay for it in equal annual installments of ¥400,000 at the end of each of the next 10 years. Assuming that a prevailing interest rate of 8% applies to this contract, how much should Yang record as the cost of the machine?
- d. Yang Ltd. purchased a special tractor on December 31, 2022. The purchase agreement stipulated that Yang should pay ¥2,000,000 at the time of purchase and ¥500,000 at the end of each of the next 8 years. The tractor should be recorded on December 31, 2022, at what amount, assuming an appropriate interest rate of 12%?
- e. Yang Ltd. wants to withdraw ¥12,000,000 (including principal) from an investment fund at the end of each year for 9 years. What should be the required initial investment at the beginning of the first year if the fund earns 11%?

P6.2 (LO 2, 3, 4) Groupwork (Various Time Value Situations) Using the appropriate interest table, provide the solution to each of the following four questions by computing the unknowns.

- a. What is the amount of the payments that Ned Winslow must make at the end of each of 8 years to accumulate a fund of \$90,000 by the end of the eighth year, if the fund earns 8% interest, compounded annually?
- b. Robert Hitchcock is 40 years old today and he wishes to accumulate \$500,000 by his sixty-fifth birthday so he can retire to his summer place on Lake Hopatcong. He wishes to accumulate this amount by making equal deposits on his fortieth through his sixty-fourth birthdays. What annual deposit must Robert make if the fund will earn 12% interest compounded annually?
- c. Diane Ross has \$20,000 to invest today at 9% to pay a debt of \$47,347. How many years will it take her to accumulate enough to liquidate the debt?
- d. Cindy Houston has a \$27,600 debt that she wishes to repay 4 years from today; she has \$19,553 that she intends to invest for the 4 years. What rate of interest will she need to earn annually in order to accumulate enough to pay the debt?

P6.3 (LO 2, 4) (Analysis of Alternatives) Assume that Koh ShopMart has decided to surface and maintain for 10 years a vacant lot next to one of its stores to serve as a parking lot for customers. Management is considering the following bids involving two different qualities of surfacing for a parking area of 12,000 square yards (amounts in thousands).

Bid A: A surface that costs ₩5.75 per square yard to install. This surface will have to be replaced at the end of 5 years. The annual maintenance cost on this surface is estimated at 25 cents per square yard for each year except the last year of its service. The replacement surface will be similar to the initial surface.

Bid B: A surface that costs ₩10.50 per square yard to install. This surface has a probable useful life of 10 years and will require annual maintenance in each year except the last year, at an estimated cost of 9 cents per square yard.

Instructions

Prepare computations showing which bid should be accepted by Koh ShopMart. You may assume that the cost of capital is 9%, that the annual maintenance expenditures are incurred at the end of each year, and that prices are not expected to change during the next 10 years.

P6.4 (LO 4) (Evaluating Payment Alternatives) Ronald Long has just learned he has won a \$500,000 prize in the lottery. The lottery has given him two options for receiving the payments. (1) If Ronald takes all the money today, the government will deduct taxes at a rate of 46% immediately. (2) The lottery offers Ronald a payout of 20 equal payments of \$36,000 with the first payment occurring

when Ronald turns in the winning ticket. Ronald will be taxed on each of these payments at a rate of 25%.

Instructions

Assuming Ronald can earn an 8% rate of return (compounded annually) on any money invested during this period, which payout option should he choose?

P6.5 (LO 2, 4) (Analysis of Alternatives) Julia Baker died, leaving to her husband Brent an insurance policy contract that provides that the beneficiary (Brent) can choose any one of the following four options.

- a. €55,000 immediate cash.
- b. €4,000 every 3 months payable at the end of each quarter for 5 years.
- c. €18,000 immediate cash and €1,800 every 3 months for 10 years, payable at the beginning of each 3-month period.
- d. €4,000 every 3 months for 3 years and €1,500 each quarter for the following 25 quarters, all payments payable at the end of each quarter.

Instructions

If money is worth 2½% per quarter, compounded quarterly, which option would you recommend that Brent exercise?

P6.6 (LO 5) (Purchase Price of a Business) During the past year, Stacy McGill planted a new vineyard on 150 acres of land that she leases for €30,000 a year. She has asked you as her accountant to assist her in determining the value of her vineyard operation.

The vineyard will bear no grapes for the first 5 years (1–5). In the next 5 years (6–10), Stacy estimates that the vines will bear grapes that can be sold for €60,000 each year. For the next 20 years (11–30), she expects the harvest will provide annual revenues of €110,000. But during the last 10 years (31–40) of the vineyard's life, she estimates that revenues will decline to €80,000 per year.

During the first 5 years the annual cost of pruning, fertilizing, and caring for the vineyard is estimated at €9,000; during the years of production (6–40), these costs will rise to €12,000 per year. The relevant market rate of interest for the entire period is 12%. Assume that all receipts and payments are made at the end of each year.

Instructions

Dick Button has offered to buy Stacy's vineyard by assuming the 40-year lease. On the basis of the current value of the business, what is the minimum price Stacy should accept?

P6.7 (LO 2, 3, 4) (Time Value Concepts Applied to Solve Business Problems) Answer the following questions related to Dubois Inc.

- a. Dubois Inc. has \$600,000 to invest. The company is trying to decide between two alternative uses of the funds. One alternative provides \$80,000 at the end of each year for 12 years, and the other is to receive a single lump-sum payment of \$1,900,000 at the end of the 12 years. Which alternative should Dubois select? Assume the interest rate is constant over the entire investment.
- b. Dubois Inc. has completed the purchase of new iPad tablets. The fair value of the equipment is \$824,150. The purchase agreement specifies an immediate down payment of \$200,000 and semiannual payments of \$76,952 beginning at the end of 6 months for 5 years. What is the interest rate, to the nearest percent, used in discounting this purchase transaction?
- c. Dubois Inc. loans money to John Kruk Corporation in the amount of \$800,000. Dubois accepts an 8% note due in 7 years with interest payable semiannually. After 2 years (and receipt of interest for 2 years), Dubois needs money and therefore sells the note to Chicago National Bank, which

demands interest on the note of 10% compounded semiannually. What is the amount Dubois will receive on the sale of the note?

- d. Dubois Inc. wishes to accumulate \$1,300,000 by December 31, 2032, to retire bonds outstanding. The company deposits \$200,000 on December 31, 2022, which will earn interest at 10% compounded quarterly, to help in the retirement of this debt. In addition, the company wants to know how much should be deposited at the end of each quarter for 10 years to ensure that \$1,300,000 is available at the end of 2032. (The quarterly deposits will also earn at a rate of 10%, compounded quarterly.) (Round to even dollars.)

P6.8 (LO 4) (Analysis of Alternatives) Ellison plc, a manufacturer of steel school lockers, plans to purchase a new punch press for use in its manufacturing process. After contacting the appropriate vendors, the purchasing department received differing terms and options from each vendor. The Engineering Department has determined that each vendor's punch press is substantially identical and each has a useful life of 20 years. In addition, Engineering has estimated that required year-end maintenance costs will be £1,000 per year for the first 5 years, £2,000 per year for the next 10 years, and £3,000 per year for the last 5 years. Following is each vendor's sales package.

Vendor A: £55,000 cash at time of delivery and 10 year-end payments of £18,000 each. Vendor A offers all its customers the right to purchase at the time of sale a separate 20-year maintenance service contract, under which Vendor A will perform all year-end maintenance at a one-time initial cost of £10,000.

Vendor B: Forty semiannual payments of £9,500 each, with the first installment due upon delivery. Vendor B will perform all year-end maintenance for the next 20 years at no extra charge.

Vendor C: Full cash price of £150,000 will be due upon delivery.

Instructions

Assuming that both Vendor A and B will be able to perform the required year-end maintenance, that Ellison's cost of funds is 10%, and that the machine will be purchased on January 1, from which vendor should the press be purchased?

P6.9 (LO 2, 4) (Analysis of Business Problems) James Kirk is a financial executive with McDowell Enterprises. Although James Kirk has not had any formal training in finance or accounting, he has a "good sense" for numbers and has helped the company grow from a very small company (\$500,000 sales) to a large operation (\$45 million in sales). With the business growing steadily, however, the company needs to make a number of difficult financial decisions in which James Kirk feels a little "over his head." He therefore has decided to hire a new employee with "numbers" expertise to help him. As part of the hiring process, Kirk has decided to ask each prospective employee to prepare answers to questions relating to the following situations he has encountered recently. Here are the questions.

- a. In 2022, McDowell Enterprises negotiated and closed a long-term lease contract for newly constructed truck terminals and freight storage facilities. The buildings were constructed on land owned by the company. On January 1, 2023, McDowell took possession of the leased property. The 20-year lease is effective for the period January 1, 2023, through December 31, 2042. Advance rental payments of \$800,000 are payable to the lessor (owner of facilities) on January 1 of each of the first 10 years of the lease term. Advance payments of \$400,000 are due on January 1 for each of the last 10 years of the lease term. McDowell has an option to purchase all the leased facilities for \$1 on December 31, 2042. At the time the lease was negotiated, the fair value of the truck terminals and freight storage facilities was approximately \$7,200,000. If the company had borrowed the money to purchase the facilities, it would have had to pay 10% interest. Should the company have purchased rather than leased the facilities?
- b. Last year, the company exchanged a piece of land for a zero-interest-bearing note. The note is to be paid at the rate of \$15,000 per year for 9 years, beginning 1 year from the date of disposal of the

land. An appropriate rate of interest for the note was 11%. At the time the land was originally purchased, it cost \$90,000. What is the fair value of the note?

- c. The company has always followed the policy to take any cash discounts on goods purchased. Recently the company purchased a large amount of raw materials at a price of \$800,000 with terms 1/10, n/30 on which it took the discount. McDowell has recently estimated its cost of funds at 10%. Should McDowell continue this policy of always taking the cash discount?

P6.10 (LO 2, 4) (Analysis of Lease vs. Purchase) Dunn Inc. owns and operates a number of hardware stores in New England. Recently, the company has decided to locate another store in a rapidly growing area of Maryland. The company is trying to decide whether to purchase or lease the building and related facilities.

Purchase: The company can purchase the site, construct the building, and purchase all store fixtures. The cost would be \$1,850,000. An immediate down payment of \$400,000 is required, and the remaining \$1,450,000 would be paid off over 5 years at \$350,000 per year (including interest; payments made at end of year). The property is expected to have a useful life of 12 years, and then it will be sold for \$500,000. As the owner of the property, the company will have the following out-of-pocket expenses each period.

Property taxes (to be paid at the end of each year)	\$40,000
Insurance (to be paid at the beginning of each year)	27,000
Other (primarily maintenance which occurs at the end of each year)	16,000
	<u>\$83,000</u>

Lease: First Bank has agreed to purchase the site, construct the building, and install the appropriate fixtures for Dunn Inc. if Dunn will lease the completed facility for 12 years. The annual costs for the lease would be \$270,000. Dunn would have no responsibility related to the facility over the 12 years. The terms of the lease are that Dunn would be required to make 12 annual payments (the first payment to be made at the time the store opens and then each following year). In addition, a deposit of \$100,000 is required when the store is opened. This deposit will be returned at the end of the twelfth year, assuming no unusual damage to the building structure or fixtures.

Currently, the cost of funds for Dunn Inc. is 10%.

Instructions

Which of the two approaches should Dunn Inc. follow?

P6.11 (LO 5) (Pension Funding) You have been hired as a benefit consultant by Jean Barclay, the owner of Attic Angels. She wants to establish a retirement plan for herself and her three employees. Jean has provided the following information. The retirement plan is to be based upon annual salary for the last year before retirement and is to provide 50% of Jean's last-year annual salary and 40% of the last-year annual salary for each employee. The plan will make annual payments at the beginning of each year for 20 years from the date of retirement. Jean wishes to fund the plan by making 15 annual deposits beginning January 1, 2022. Invested funds will earn 12% compounded annually. Information about plan participants as of January 1, 2022, is as follows.

Jean Barclay, owner: Current annual salary of £48,000; estimated retirement date January 1, 2047.

Colin Davis, flower arranger: Current annual salary of £36,000; estimated retirement date January 1, 2052.

Anita Baker, sales clerk: Current annual salary of £18,000; estimated retirement date January 1, 2042.

Gavin Bryars, part-time bookkeeper: Current annual salary of £15,000; estimated retirement date January 1, 2037.

In the past, Jean has given herself and each employee a year-end salary increase of 4%. Jean plans to continue this policy in the future.

Instructions

- Based upon the above information, what will be the annual retirement benefit for each plan participant? (Round to the nearest pound.) (*Hint: Jean will receive raises for 24 years.*)
- What amount must be on deposit at the end of 15 years to ensure that all benefits will be paid? (Round to the nearest pound.)
- What is the amount of each annual deposit Jean must make to the retirement plan?

P6.12 (LO 5) Ethics (Pension Funding) Tim Buhl, newly appointed controller of STL, is considering ways to reduce his company's expenditures on annual pension costs. One way to do this is to switch STL's pension fund assets from First Security to NET Life. STL is a very well-respected computer manufacturer that recently has experienced a sharp decline in its financial performance for the first time in its 25-year history. Despite financial problems, STL still is committed to providing its employees with good pension and postretirement health benefits.

Under its present plan with First Security, STL is obligated to pay £43 million to meet the expected value of future pension benefits that are payable to employees as an annuity upon their retirement from the company. On the other hand, NET Life requires STL to pay only £35 million for identical future pension benefits. First Security is one of the oldest and most reputable insurance companies in Europe. NET Life has a much weaker reputation in the insurance industry. In pondering the significant difference in annual pension costs, Buhl asks himself, "Is this too good to be true?"

Instructions

Answer the following questions.

- Why might NET Life's pension cost requirement be £8 million less than First Security's requirement for the same future value?
- What ethical issues should Tim Buhl consider before switching STL's pension fund assets?
- Who are the stakeholders that could be affected by Buhl's decision?

P6.13 (LO 4, 5) (Expected Cash Flows and Present Value) Danny's Lawn Equipment sells high-quality lawn mowers and offers a 3-year warranty on all new lawn mowers sold. In 2022, Danny sold \$300,000 of new specialty mowers for golf greens for which Danny's service department does not have the equipment to do the service. Danny has entered into an agreement with Mower Mavens to perform all warranty service on the special mowers sold in 2022. Danny wishes to measure the fair value of the agreement to determine the warranty liability for sales made in 2022. The controller for Danny's Lawn Equipment estimates the following expected warranty cash outflows associated with the mowers sold in 2022.

Year	Cash Flow Estimate	Probability Assessment
2023	\$2,500	20%
	4,000	60%
	5,000	20%
2024	\$3,000	30%
	5,000	50%
	6,000	20%
2025	\$4,000	30%
	6,000	40%

	7,000	30%
--	-------	-----

Instructions

Using expected cash flow and present value techniques, determine the value of the warranty liability for the 2022 sales. Use an annual discount rate of 5%. Assume all cash flows occur at the end of the year.

P6.14 (LO 4, 5) (Expected Cash Flows and Present Value) At the end of 2022, Sawyer SE is conducting an impairment test and needs to develop a fair value estimate for machinery used in its manufacturing operations. Given the nature of Sawyer's production process, the equipment is for special use. (No secondhand market values are available.) The equipment will be obsolete in 2 years, and Sawyer's accountants have developed the following cash flow information for the equipment.

Year	Net Cash Flow Estimate	Probability Assessment
2023	€6,000	40%
	9,000	60%
2024	€ (500)	20%
	2,000	60%
	4,000	20%
	Residual Value	
2024	€500	50%
	900	50%

Instructions

Using expected cash flow and present value techniques, determine the fair value of the machinery at the end of 2022. Use a 6% discount rate. Assume all cash flows occur at the end of the year.

P6.15 (LO 5) (Fair Value Estimate) Murphy Mining Company recently purchased a quartz mine that it intends to work for the next 10 years. According to state environmental laws, Murphy must restore the mine site to its original, natural prairie state after it ceases mining operations at the site. To properly account for the mine, Murphy must estimate the fair value of this environmental liability. This amount will be recorded as a liability and added to the value of the mine on Murphy's books. (You will learn more about these environmental liabilities in [Chapters 10](#) and [13](#).)

There is no active market for environmental liabilities such as these, but Murphy has developed the following cash flow estimates based on its prior experience in mining-site restoration. It will take 3 years to restore the mine site when mining operations cease in 10 years. Each estimated cash outflow reflects an annual payment at the end of each year of the 3-year restoration period.

Restoration Estimated Cash Outflow	Probability Assessment
\$15,000	10%
22,000	30%
25,000	50%
30,000	10%

Instructions

- What is the estimated fair value of Murphy's environmental liability? Murphy determines that the appropriate discount rate for this estimation is 5%. Round calculations to the nearest dollar.
- Is the estimate developed for part (a) a Level 1 or Level 3 fair value estimate? Explain.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Examining each item in M&S's statement of financial position, identify those items that require present value, discounting, or interest computations in establishing the amount reported. (The accompanying notes are an additional source for this information.)
- b.
 1. What interest rates are disclosed by M&S as being used to compute interest and present values?
 2. Why are there so many different interest rates applied to M&S's financial statement elements (assets, liabilities, revenues, and expenses)?

Financial Statement Analysis Case

Assume the following information for **Alta Gas** (CAN). In 2021, Alta estimated the cash inflows from its oil- and gas-producing properties to be \$375,000 per year. During 2022, a write-down caused the estimate to be decreased to \$275,000 per year. Production costs (cash outflows) associated with all these properties were estimated to be \$125,000 per year in 2021, but this amount was revised to \$155,000 per year in 2022.

Instructions

(Assume that all cash flows occur at the end of the year.)

- a. Calculate the present value of net cash flows for 2021–2023 (3 years), using the 2021 estimates and a 10% discount factor.
- b. Calculate the present value of net cash flows for 2022–2024 (3 years), using the 2022 estimates and a 10% discount factor.
- c. Compare the results using the two estimates. Is information on future cash flows from oil- and gas-producing properties useful, considering that the estimates must be revised each year? Explain.

Accounting, Analysis, and Principles

Johnson Co. accepts a note receivable from a customer in exchange for some damaged inventory. The note requires the customer to make 10 semiannual installments of \$50,000 each. The first installment begins 6 months from the date the customer took delivery of the damaged inventory. Johnson's management estimates that the fair value of the damaged inventory is \$320,883.

Accounting

- a. What interest rate is Johnson implicitly charging the customer? Express the rate as an annual rate but assume semiannual compounding.
- b. At what dollar amount do you think Johnson should record the note receivable on the day the customer takes delivery of the damaged inventory?

Analysis

Assume the note receivable for damaged inventory makes up a significant portion of Johnson's assets. If interest rates increase, what happens to the fair value of the receivable? Briefly explain why.

Principles

The IASB has issued an accounting standard that allows companies to report assets such as notes receivable at fair value. Discuss how fair value versus historical cost potentially involves a trade-off of one desired quality of accounting information against another.

Research Case

At a recent meeting of the accounting staff in your company, the controller raised the issue of using present value techniques to conduct impairment tests for some of the company's fixed assets. Some of the more senior members of the staff admitted having little knowledge of present value concepts in this context, but they had heard about an appendix to an IFRS that provides some guidance. As the junior staff in the department, you have been asked to conduct some research of the authoritative literature on this topic and report back at the staff meeting next week.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free eIFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the components of present value measurement.
- b. Briefly describe the differences between the “traditional” and “expected cash flow” approaches to present value.
- c. What are the factors that should be taken into account when an asset-specific discount rate is not available from the market?

Notes

- IFRS addresses present value as a measurements basis for a broad array of transactions, such as accounts and loans receivable [2], leases [3], postretirement benefits [4], asset impairments [5], and share-based compensation [6].
- Many regulatory frameworks require the disclosure of interest rates on an annual basis in all contracts. That is, instead of stating the rate as “1% per month,” contracts must state the rate as “12% per year” if it is simple interest or “12.68% per year” if it is compounded monthly.
- Business mathematics and business finance textbooks traditionally state simple interest as I (interest) = P (principal) \times R (rate) \times T (time).
- Because interest is theoretically earned (accruing) every second of every day, it is possible to calculate interest that is **compounded continuously**. Using the natural, or Napierian, system of logarithms facilitates computations involving continuous compounding. As a practical matter, however, most business transactions assume interest to be compounded no more frequently than daily.
- The formula for calculating the **effective rate**, in situations where the compounding frequency (n) is greater than once a year, is as follows.

Effective rate	$= (1 + i)^n - 1$
----------------	-------------------

To illustrate, if the stated annual rate is 8% compounded quarterly (or 2% per quarter), the effective annual rate is:

Effective rate	$= (1 + .02)^4 - 1$
	$= (1.02)^4 - 1$
	$= 1.0824 - 1$
	$= .0824$
	$= 8.24\%$

- In other words, the interest rate(s) used to discount cash flows should reflect assumptions that are consistent with those inherent in the estimated cash flows. Otherwise, the effect of some assumptions will be double-counted or ignored. For example, a discount rate of 12% might be applied to contractual cash flows of a loan receivable. That rate reflects expectations about future defaults from loans with particular characteristics. That same 12% rate should not be used to discount expected cash flows because those cash flows already reflect assumptions about future defaults. [8]

CHAPTER 7

Cash and Receivables

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Indicate how to report cash and related items.
2. Define receivables and explain accounting issues related to their recognition.
3. Explain accounting issues related to valuation of accounts receivable.
4. Explain accounting issues related to recognition and valuation of notes receivable.
5. Explain additional accounting issues related to accounts and notes receivables.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 7

As the following opening story indicates, companies must keep track of global cash balances in order to plan capital expenditures. In this chapter, we discuss cash and receivables—two assets that are important to non-financial companies such as **Nortel** (CAN) and **Nokia** (FIN), and financial companies like **Bankia Group** (ESP) and **UBS** (CHE). The content and organization of the chapter are as follows.

Is Your Cash Trapped?

At one time, **Apple** (USA) executives explained what they planned to do with their \$98 billion in cash (pay a \$2.65 dividend and buy back some of their shares). However, what they were really talking about was not the full \$98 billion but the \$34 billion the company was holding in the United States. The other \$64 billion was

sitting in overseas subsidiaries and likely would never find its way back to the United States. The reason: at that time—before passage of the U.S. Tax Cuts and Jobs Act of 2017 (TCJA)—U.S. tax laws allowed companies to defer taxes on their profits from international operations until they brought the cash back into the country.

In the wake of the TCJA, which enacted a tax on those foreign balances and reduced the U.S. corporate tax rate from 39 percent to 21 percent, U.S. companies now have far fewer incentives to keep cash locked up overseas. Indeed, one of the goals of the TCJA was to encourage companies to bring those cash balances to the United States to increase dividends, expand operations, and add jobs. However, the initial response from the companies was much more muted than expected. As can be seen in the following [chart](#), the tax law change has had a limited impact on overseas cash balances.

In addition, some companies have stopped disclosing foreign cash balances. For example, the foreign cash disclosure disappeared from the first quarterly report after the TCJA was enacted for U.S. companies **Apple**, **Microsoft**, and **Oracle**. The lack of this information makes it more difficult to gauge whether the U.S. tax change is stoking U.S. corporate investment as was hoped by TCJA proponents. Other U.S. companies, like **Qualcomm**, **Cisco**, **Caterpillar**, and **GE**, have continued to put out the number. Of those companies, Caterpillar and GE have reduced their offshore holdings. One analyst doubted a major repatriation of foreign cash balances, noting, “I’m not sure that companies, certainly at this stage of the business cycle, are going to aggressively expand their plant and equipment balances in anticipation of even greater demand for their products.”

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Cash

LEARNING OBJECTIVE 1

Indicate how to report cash and related items.

Cash, the most liquid of assets, is the standard medium of exchange and the basis for measuring and accounting for all other items. Companies generally classify cash as a current asset. Cash consists of coin, currency, and available funds on deposit at the bank. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) Negotiable instruments such as money orders, certified checks, cashier's checks, personal checks, and bank drafts are also viewed as cash. What about savings accounts? Banks do have the legal right to demand notice before withdrawal. But, because banks rarely demand prior notice, savings accounts are considered cash.

Some negotiable instruments provide small investors with an opportunity to earn interest. These items, more appropriately classified as temporary investments than as cash, include money market funds, money market savings certificates, certificates of deposit (CDs), and similar types of deposits and "short-term paper." These securities usually contain restrictions or penalties on their conversion to cash. Money market funds that provide checking account privileges, however, are usually classified as cash.

Certain items present classification problems: Companies treat **postdated checks and I.O.U.s** as receivables. They also treat **travel advances** as receivables if collected from employees or deducted from their salaries. Otherwise, companies classify the travel advance as a prepaid expense. **Postage stamps on hand** are classified as part of office supplies inventory or as a prepaid expense. Because **petty cash funds and change funds are used** to meet current operating expenses and liquidate current liabilities, companies include these funds in current assets as cash.

Reporting Cash

Although the reporting of cash is relatively straightforward, a number of issues merit special attention. These issues relate to the reporting of:

1. Cash equivalents.
2. Restricted cash.
3. Bank overdrafts.

Cash Equivalents

A common current classification is “Cash and cash equivalents.” **Cash equivalents** are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash and (b) subject to an insignificant risk of changes in value. IFRS suggests that only investments with original maturities of three months or less at acquisition qualify under these definitions. In addition, the cash and cash equivalents should be held for the purposes of meeting short-term cash commitments and not for investment purposes. [2] Examples of cash equivalents are government bonds, commercial paper, and certain money market funds. Some companies combine cash with short-term investments on the statement of financial position. In these cases, they describe the amount of the short-term investments either parenthetically or in the notes.

Most individuals think of cash equivalents as cash. Unfortunately, that is not always the case. Some companies found out the hard way and have taken sizable write-downs on cash equivalents. Their losses resulted because they purchased auction-rate notes that declined in value. These notes carry interest rates that usually reset weekly and often have long-maturity dates (as long as 30 years). Companies argued that such notes should be classified as cash equivalents because they can be routinely traded at auction on a daily basis. (In short, they are liquid and risk-free.) Auditors agreed and permitted cash-equivalent treatment even though maturities extended well beyond three months. But when the 2008 credit crunch hit, the auctions stopped, and the value of these securities dropped because no market existed. In retrospect, the cash-equivalent classification was misleading.

The IASB has studied whether to eliminate the cash-equivalent classification from financial statement presentations altogether. One idea would have companies report only cash. If an asset is not cash and is short-term in nature, it should be reported as a temporary investment. An interesting moral to this story is that when times are good, some sloppy accounting may work. But in bad times, it quickly becomes apparent that sloppy accounting can lead to misleading and harmful effects for users of the financial statements.

Restricted Cash

Petty cash, payroll, and dividend funds are examples of cash set aside for a particular purpose. In most situations, these fund balances are not material. Therefore, companies do not segregate them from cash in the financial statements. When material in amount, companies segregate **restricted cash** from “regular” cash for reporting purposes. The reason is that the cash is not being held for the purpose of meeting short-term cash commitments. They are, instead, being held for a more specific purpose. Note that this treatment would be used even if the specific investments would otherwise qualify as cash equivalents.

Companies classify restricted cash either in the current assets or in the non-current assets section, depending on the date of availability or disbursement. Classification in the current section is appropriate if using the cash for payment of existing or

maturing obligations (within a year or the operating cycle, whichever is longer). On the other hand, companies show restricted cash in the non-current section of the statement of financial position if holding the cash for a longer period of time.

Cash classified in the non-current section is frequently set aside for plant expansion and retirement of long-term debt. **Infosys**'s (IND) restricted cash disclosure is shown in [Illustration 7.1](#).

Infosys

Cash and Cash Equivalents (000,000). Cash and cash equivalents as of March 31, 2019 and March 31, 2018 include restricted cash and bank balances of ₹358 and ₹533, respectively. The restrictions are primarily on account of cash and bank balances held by irrevocable trusts controlled by the Company, bank balances held as margin money deposits against guarantees, and balances held in unpaid dividend bank accounts.

ILLUSTRATION 7.1 Disclosure of Restricted Cash

Banks and other lending institutions often require customers to maintain minimum cash balances in checking or savings accounts. These minimum balances, called **compensating balances**, are “that portion of any demand deposit (or any time deposit or certificate of deposit) maintained by a company which constitutes support for existing borrowing arrangements of the company with a lending institution. Such arrangements would include both outstanding borrowings and the assurance of future credit availability.” [3]

To avoid misleading investors about the amount of cash available to meet recurring obligations, companies should state separately **legally restricted deposits** held as compensating balances against **short-term** borrowing arrangements among the “Cash and cash equivalent items” in current assets. Companies should classify separately restricted deposits held as compensating balances against **long-term** borrowing arrangements as non-current assets in either the investments or other assets sections, using a caption such as “Cash on deposit maintained as compensating balance.” In cases where compensating balance arrangements exist without agreements that restrict the use of cash amounts shown on the statement of financial position, companies should describe the arrangements and the amounts involved in the notes.

Bank Overdrafts

Bank overdrafts occur when a company writes a check for more than the amount in its cash account. Companies should report bank overdrafts in the current liabilities section, combining them to the amount reported as accounts payable. If material,

companies should disclose these items separately, either on the face of the statement of financial position or in the related notes.¹

Bank overdrafts are included as a component of cash if such overdrafts are repayable on demand and are an integral part of a company's cash management (such as the common practice of establishing offsetting arrangements against other accounts at the same bank). [4] Overdrafts not meeting these conditions should be reported as a current liability.

Summary of Cash-Related Items

Cash and cash equivalents include the medium of exchange and most negotiable instruments. If the item cannot be quickly converted to coin or currency, a company separately classifies it as an investment, receivable, or prepaid expense. Companies segregate and classify cash that is unavailable for payment of currently maturing liabilities in the non-current assets section. [Illustration 7.2](#) summarizes the classification of cash-related items.

Classification of Cash, Cash Equivalents, and Non-Cash Items		
Item	Classification	Comment
Cash	Cash	If unrestricted, report as cash.
		If restricted, identify and classify as current or non-current assets.
Petty cash and change funds	Cash	Report as cash.
Short-term paper	Cash equivalents	Investments with maturity of less than 3 months at acquisition, often combined with cash.
Short-term paper	Short-term investments	Investments with maturity of 3 to 12 months.
Postdated checks and I.O.U.s	Receivables	Assumed to be collectible.
Travel advances	Receivables	Assumed to be collected from employees or deducted from their salaries.
Postage on hand (as stamps or in postage meters)	Prepaid expenses	May also be classified as office supplies inventory.
Bank overdrafts	Cash	If no offsetting allowed, current liability.
Compensating balances	Cash separately classified as a deposit maintained as compensating balance	Classify as current or non-current in the statement of financial position. Disclose separately in notes details of the arrangement.

ILLUSTRATION 7.2 Classification of Cash-Related Items

Evolving Issue

What Counts for Cash?

What to include in the cash balance has been the subject of debate. As we have learned, companies report both cash and cash equivalents as cash on their statements of financial position. For balances not reported in cash but which need to be available on relatively short notice to pay for inventory, employees, or other expenses, companies have a variety of parking places. As shown in the adjacent [chart](#), companies plow the largest portion of their cash holdings into corporate debt. As indicated, corporate debt is the parking place of choice, followed by U.S. Treasury and agency debt. Surveyed corporate treasurers say that high-grade corporate bonds are preferred because they are reasonably safe while providing a greater yield premium relative to Treasury securities. Seems like a good strategy as long as the corporate issuers can make their payments. However, if the economy takes a downturn, similar to investments in auction-rate notes, these investments may not be true cash equivalents.

What about cryptocurrencies, such as Bitcoin? These currencies are generating a significant amount of press given their rapid increases in value and extreme volatility. Because of this volatility, the value of Bitcoin in circulation has recently fluctuated between \$100 and \$300 billion. Cryptocurrency—despite its name—is not accounted for as currency and is not included in cash and cash equivalents.

Various members of the international accounting community have begun to express their perspectives on the proper accounting for cryptocurrency holdings. Both the Australian and the Japanese standard-setting boards have expressed

their opinions on this matter. Given that the current accounting and reporting framework does not contemplate cryptocurrencies, some are urging standard-setters and regulators to provide guidance by developing an accounting framework for cryptocurrency holdings, including the costs related to “mining” efforts.

In June 2019, the International Financial Reporting Interpretations Committee (IFRIC) of the IASB issued a summary decision concluding that most holdings of cryptocurrency would properly be accounted for as intangible assets. The committee did note in its report that if a business, such as a cryptocurrency broker-dealer, held cryptocurrency for sale in the ordinary course of business, then it should be accounted for as inventory.

Receivables

LEARNING OBJECTIVE 2

Define receivables and explain accounting issues related to their recognition.

Receivables (often referred to as *loans and receivables*) are claims held against customers and others for money, goods, or services. An example of a loan is a financial institution like **HSBC** (GBR) providing funds to **Fiat** (ITA). An example of a receivable is a company like **Airbus** (FRA) recording an account receivable when it sells an airplane on account to **All Nippon Airways Co. Ltd.** (JPN). For purposes of discussion, we will simply use the term *receivables* to mean loans and receivables.

For financial statement purposes, companies classify receivables as either **current** (short-term) or **non-current** (long-term). Companies expect to collect **current receivables** within a year or during the current operating cycle, whichever is longer. They classify all other receivables as **non-current**. Receivables are further classified in the statement of financial position as either trade or non-trade receivables.

Customers often owe a company amounts for goods bought or services rendered. A company may subclassify these **trade receivables**, usually the most significant item in its current assets, into accounts receivable and notes receivable. **Accounts receivable** are oral promises of the purchaser to pay for goods and services sold. They represent “open accounts” resulting from short-term extensions of credit. A company normally collects them within 30 to 60 days. **Notes receivable** are written promises to pay a certain sum of money on a specified future date. They may arise from sales, financing, or other transactions. Notes may be short-term or long-term.

Non-trade receivables arise from a variety of transactions. Some examples of non-trade receivables are:

1. Advances to officers and employees.
2. Advances to subsidiaries.
3. Deposits paid to cover potential damages or losses.
4. Deposits paid as a guarantee of performance or payment.
5. Dividends and interest receivable.
6. Claims against:
 - a. Insurance companies for casualties sustained.
 - b. Defendants under suit.
 - c. Governmental bodies for tax refunds.
 - d. Common carriers for damaged or lost goods.
 - e. Creditors for returned, damaged, or lost goods.
 - f. Customers for returnable items (crates, containers, etc.).

Because of the peculiar nature of non-trade receivables, companies generally report them as separate items in the statement of financial position. [Illustration 7.3](#) shows the reporting of trade and non-trade receivables in the statements of financial position of **Heineken** (NLD) and **Nokia** (FIN).

Heineken
(in millions of €)

Current assets	
Inventories	€ 1,920
Trade and other receivables	3,740
Current tax assets	71
Derivative assets	35
Cash and cash equivalents	2,903
Assets classified as held for sale	<u>401</u>
Total current assets	€ 9,070

Nokia
(in millions of €)

Current assets	
Inventories	€ 3,168
Trade receivables	4,856
Contract assets	1,875
Prepaid expenses and accrued income	1,024
Current income tax assets	227
Other financial assets	243
Current financial investments	612
Cash and cash equivalents	<u>6,261</u>
Total current assets	€18,266

ILLUSTRATION 7.3 Receivables Statement of Financial Position Presentations

The basic issues in accounting for accounts and notes receivable are the same: **recognition** and **valuation**. We discuss these basic issues for accounts and notes receivable next.

Recognition of Accounts Receivable

As indicated, accounts receivable generally arise as part of a revenue arrangement. For example, if **Lululemon Athletica, Inc.** (CAN) sells a yoga outfit to Jennifer Burian for \$100 on account, when does Lululemon recognize revenue (the sale) and the related accounts receivable? As indicated in [Chapter 2](#), the revenue recognition principle indicates that Lululemon should recognize revenue when it satisfies its performance obligation by transferring the good or service to the customer. It follows that in the Lululemon situation, the yoga outfit is transferred when Jennifer obtains control of this outfit.

When this change in control occurs, Lululemon should recognize an account receivable and sales revenue. Lululemon makes the following entry, assuming that \$100 is the amount it expects to receive from Jennifer.

Accounts Receivable	100	
Sales Revenue		100

The concept of change of control is the deciding factor in determining when a performance obligation is satisfied and an account receivable recognized. Here are some key indicators used to determine that Lululemon has transferred and that Jennifer has obtained control of the yoga outfit.

1. **Lululemon has the right to payment from the customer.** If Jennifer is obligated to pay, it indicates that control has passed to the customer.
2. **Lululemon has passed legal title to the customer.** If Jennifer has legal title to the goods, it indicates that control has passed to the customer.
3. **Lululemon has transferred physical possession of the goods.** If Jennifer has physical possession, it indicates that control has passed to the customer.
4. **Lululemon no longer has significant risks and rewards of ownership of the goods.** If Jennifer now has the significant risks and rewards of ownership, it indicates that control has passed to the customer.
5. **Jennifer has accepted the asset.**

Measurement of the Transaction Price

The **transaction price** is the amount of consideration that a company expects to receive from a customer in exchange for transferring goods or services. In the Lululemon case, the transaction price is easily determined because Jennifer Burian agrees to pay a fixed amount to Lululemon over a short period of time. However, in other situations, companies must take into account items such as variable consideration, which may affect the accounts receivable balance.

Variable Consideration

In some cases, the price of a good or service is dependent on future events. These future events often include such items as discounts, returns and allowances, rebates, and performance bonuses. Here are four items that affect the transaction price and thus the accounts receivable balance.

Trade Discounts

Prices may be subject to a trade or quantity discount. Companies use such **trade discounts** to avoid frequent changes in catalogs, to alter prices for different quantities purchased, or to hide the true invoice price from competitors.

Trade discounts are commonly quoted in percentages. For example, say your cell phone has a list price of \$90, and the manufacturer sells it to **Best Buy** (USA) for list less a 40 percent trade discount. The manufacturer then records the receivable at \$54 per phone. The manufacturer, per normal practice, simply deducts the trade discount from the list price and bills the customer net. As another example, assume **Ryobi** (JPN) sells a cordless drill with a suggested retail price of \$99.99 to a retailer like **Home Depot** (USA) for \$70, a trade discount of approximately 30 percent. Home Depot in turn sells the drill for \$99.99. Ryobi records the accounts receivable and related sales revenue at \$70, not \$99.99.

Cash Discounts (Sales Discounts)

Companies offer **cash discounts (sales discounts)** to induce prompt payment. Cash discounts are generally presented in terms such as 2/10, n/30 (2 percent if paid within 10 days, gross amount due in 30 days), or 2/10, E.O.M., net 30, E.O.M. (2 percent if paid any time by the tenth day of the following month, with full payment due by the thirtieth of the following month).

Customers usually take sales discounts unless their cash is severely limited. Why? A customer that receives a 1 percent reduction in the sales price for payment within 10 days, total payment due within 30 days, effectively earns 18.25 percent [$.01 \div (20 \div 365)$], or at least avoids that rate of interest cost.

Companies should record accounts receivable and related revenue at the amount of consideration expected to be received from a customer. [5] For example, assume that Hanley Company sells goods for €10,000 to Murdoch Group with terms 2/10, net 30, and Hanley expects that the discount will be taken. As a result, Hanley records the accounts receivable and related sales revenue at its net price of €9,800. This approach is often referred to as the net method, as it attempts to value the receivable at its cash realizable value.

If Murdoch fails to take the discount, then Hanley debits the discount not taken to accounts receivable and credits Sales Discounts Forfeited. Sales Discounts Forfeited is shown in the “Other income and expense” section of the income statement.² Theoretically, the net method is correct because the receivable is stated at cash realizable value (assuming estimates are correct) and the net sales measures the revenue recognized from the sale. However, many companies continue to use what is referred to as the gross method in recording the receivable and related sales.³

If Hanley uses the gross method, it records the accounts receivable and related sales revenue at €10,000, not €9,800. Under the gross method, Hanley recognizes sales discounts when it receives payment within the discount period. Hanley’s income statement then shows sales discounts as a deduction from sales to arrive at net sales. The entries in [Illustration 7.4](#) show the difference between the gross method and the net method.

<u>Gross Method</u>			<u>Net Method</u>		
Sales of €10,000, terms 2/10, n/30					
Accounts Receivable	10,000		Accounts Receivable	9,800	
Sales Revenue		10,000	Sales Revenue		9,800
Payment on €4,000 of sales received within discount period					
Cash	3,920		Cash	3,920	
Sales Discounts	80		Accounts Receivable		3,920
Accounts Receivable		4,000			
Payment on €6,000 of sales received after discount period					
Cash	6,000		Cash	6,000	
Accounts Receivable		6,000	Accounts Receivable		5,880
			Sales Discounts Forfeited		120

ILLUSTRATION 7.4 Entries under Gross and Net Methods of Recording Cash (Sales) Discounts

We present the gross method because companies may not use the net method for practicability reasons. That is, the net method requires additional analysis and bookkeeping to record sales discounts forfeited on accounts receivable that have passed the discount period. If collection periods are relatively short, using either the gross or the net method results in the same amounts for revenues and receivables, which are equal to the transaction price. Any differences that arise are likely to be immaterial.

Sales Returns and Allowances

Another form of variable consideration relates to sales returns and allowances. For example, assume that Max Glass sells hurricane glasses to Oliver Builders. As part of the sales agreement, Max includes a provision that if Oliver is dissatisfied with the product, Max will grant an allowance on the sales price or agree to take the product back. As a result, Max should record the accounts receivable and related revenue at the amount of consideration expected to be received. The amount to be recorded will include an estimate of sales returns.

To illustrate, assume that on January 4, 2022, Max sells \$5,000 of hurricane glasses to Oliver on account. At the time of the sale, Max expects, based on past experience

and current market conditions, that \$400 of the hurricane glasses will be returned. Max records the sale on account and the estimated amount of the returns as follows.

January 4, 2022		
Accounts Receivable	5,000	
Sales Revenue		4,600
Return Liability		400

On January 16, 2022, Max grants an allowance of \$300 to Oliver because some of the hurricane glasses are defective. The entry to record this transaction is as follows.

January 15, 2022		
Return Liability	300	
Accounts Receivable		300

As a result of these transactions, Max reports net sales revenue on the income statement of \$4,600, which is the amount Max expects to receive from Oliver from the sale of the glasses. In addition, Max reports on its statement of financial position the total accounts receivable balance of \$4,700 (\$5,000 – \$300) and an estimated return liability of \$100 (\$400 – \$300). While the balances in the Accounts Receivable and Return Liability accounts are not netted against one another in the statement of financial position, the net amount of \$4,600 represents the amount of cash that Max expects to receive from this sale.

The use of the Return Liability account is helpful to management because it helps to identify potential problems associated with inferior merchandise, inefficiencies in filling orders, and delivery or shipment mistakes.⁴

Time Value of Money

Another variable consideration issue relates to the time value of money. Ideally, a company should measure receivables in terms of their present value, that is, the discounted value of the cash to be received in the future. When expected cash receipts require a waiting period, the receivable face amount is not worth the amount that the company ultimately receives.

To illustrate, assume that **Carrefour** (FRA) makes a sale on account for €1,000 with payment due in four months. The applicable annual rate of interest is 12 percent, and payment is made at the end of four months. The present value of that receivable is not €1,000 but €961.54 ($€1,000 \times .96154$). In other words, the €1,000 Carrefour receives four months from now is not the same as the €1,000 received today.

Theoretically, any revenue after the period of sale is interest revenue. In practice, companies ignore interest revenue related to accounts receivable because the amount of the discount is not usually material in relation to the net income for the period (see **Underlying Concepts**). The profession specifically excludes from present value considerations “receivables arising from transactions with customers in the normal course of business which are due in customary trade terms not exceeding

approximately one year.” [6] However, when receivables are longer lived, and therefore the financing component is significant, the amount originally recorded should be adjusted for the time value of money.

Underlying Concepts

Materiality means the information must make a difference to a decision-maker. The IASB believes that present value concepts can be ignored for short-term receivables.

Valuation of Accounts Receivable

LEARNING OBJECTIVE 3

Explain accounting issues related to valuation of accounts receivable.

As one revered accountant aptly noted, the credit manager’s idea of heaven probably would be a place where everyone (eventually) paid his or her debts.⁵ Unfortunately, this situation often does not occur. For example, a customer may not be able to pay because of a decline in its sales revenue due to a downturn in the economy. Similarly, individuals may be laid off from their jobs or faced with unexpected hospital bills. Companies record credit losses as debits to Bad Debt Expense (or Uncollectible Accounts Expense). Such losses are a normal and necessary risk of doing business on a credit basis.

Two methods are used in accounting for uncollectible accounts: (1) the direct write-off method and (2) the allowance method. The following sections explain these methods.

Direct Write-Off Method for Uncollectible Accounts

Under the **direct write-off method**, when a company determines a particular account to be uncollectible, it charges the loss to Bad Debt Expense. Assume, for example, that on December 10, 2022, Cruz Ltd. writes off as uncollectible Yusado’s NT\$8,000,000 balance. The entry is as follows.

December 10, 2022		
Bad Debt Expense	8,000,000	
Accounts Receivable (Yusado)		8,000,000
(To record write-off of Yusado account)		

Under this method, Bad Debt Expense will show only **actual losses** from uncollectibles. The company will report accounts receivable at its gross amount.

Supporters of the **direct write-off-method** (which is often used for tax purposes) contend that it records facts, not estimates. It assumes that a good account receivable resulted from each sale, and that later events revealed certain accounts to be uncollectible and worthless. From a practical standpoint, this method is simple and convenient to apply. But the direct write-off method is theoretically deficient. It usually fails to record expenses as incurred and does not result in receivables being stated at cash realizable value on the statement of financial position. **As a result, using the direct write-off method is not considered appropriate, except when the amount uncollectible is immaterial.**

Allowance Method for Uncollectible Accounts

The **allowance method** of accounting for bad debts involves estimating uncollectible accounts at the end of each period. This ensures that companies state receivables on the statement of financial position at their cash realizable value. **Cash realizable value** is the net amount the company expects to receive in cash. At each financial statement date, companies estimate uncollectible accounts and cash realizable value using information about past and current events as well as forecasts of future collectibility. As a result, the statement of financial position reflects the current estimate of expected uncollectible account losses at the reporting date, and the income statement reflects the effects of credit deterioration (or improvement) that has taken place during the period.

Many companies set their credit policies to provide for a certain percentage of uncollectible accounts. (In fact, many feel that failure to reach that percentage means that they are losing sales due to overly restrictive credit policies.) Thus, the IASB requires the allowance method for financial reporting purposes when bad debts are material in amount. This method has three essential features:

1. Companies **estimate** uncollectible accounts receivable and compare the new estimate to the current balance in the allowance account.
2. Companies debit estimated increases in uncollectibles to Bad Debt Expense and credit them to Allowance for Doubtful Accounts (a contra asset account) through an adjusting entry at the end of each period.
3. When companies write off a specific account, they debit actual uncollectibles to Allowance for Doubtful Accounts and credit that amount to Accounts Receivable.

Recording Estimated Uncollectibles

To illustrate the allowance method, assume that in 2022, its first year of operations, Brown Furniture has credit sales of £1,800,000. Of this amount, £150,000 remains uncollected at December 31. The credit manager estimates that £10,000 of these sales will be uncollectible. The adjusting entry to record the estimated uncollectibles (assuming a zero balance in the allowance account) is:

December 31, 2022		

Bad Debt Expense	10,000	
Allowance for Doubtful Accounts		10,000
(To record estimate of uncollectible accounts)		

Brown reports Bad Debt Expense in the income statement as an operating expense. Thus, Brown records the increased estimated uncollectibles as bad debt expense in the period of credit deterioration.

As [Illustration 7.5](#) shows, the company deducts the allowance account from accounts receivable in the current assets section of the statement of financial position.

Brown Furniture Statement of Financial Position (partial)		
Current assets		
Prepaid insurance		£ 25,000
Inventory		300,000
Accounts receivable	£150,000	
Less: Allowance for doubtful accounts	<u>10,000</u>	<u>140,000</u>
Cash		£ 15,000
Total current assets		<u>£480,000</u>

ILLUSTRATION 7.5 Presentation of Allowance for Doubtful Accounts

Allowance for Doubtful Accounts shows the estimated amount of claims on customers that the company expects it will not collect in the future.⁶ Companies use a contra account instead of a direct credit to Accounts Receivable because they do not know which customers will not pay. The credit balance in the allowance account will absorb the specific write-offs when they occur. The amount of £140,000 in [Illustration 7.5](#) represents the **cash realizable value** of the accounts receivable at the statement date. **Companies do not close Allowance for Doubtful Accounts at the end of the fiscal year.**

Recording the Write-Off of an Uncollectible Account

When companies have exhausted all means of collecting a past-due account and collection appears impossible, the company should write off the account. In the credit card industry, for example, it is standard practice to write off accounts that are 210 days past due.

To illustrate a receivables write-off, assume that the financial vice president of Brown Furniture authorizes a write-off of the £1,000 balance owed by Randall plc on March 1, 2023. The entry to record the write-off is:

March 1, 2023		
Allowance for Doubtful Accounts	1,000	

Accounts Receivable (Randall plc)		1,000
(Write-off of Randall plc account)		

Bad Debt Expense does not increase when the write-off occurs. **Under the allowance method, companies debit every bad debt write-off to the allowance account rather than to Bad Debt Expense.** A debit to Bad Debt Expense would be incorrect because the company has already recognized the expense when it made the adjusting entry for estimated bad debts. Instead, the entry to record the write-off of an uncollectible account reduces both Accounts Receivable and Allowance for Doubtful Accounts.

Recovery of an Uncollectible Account

Occasionally, a company collects from a customer after it has written off the account as uncollectible. The company makes two entries to record the recovery of a bad debt: (1) It reverses the entry made in writing off the account. This reinstates the customer's account. (2) It records the collection in the usual manner.

To illustrate, assume that on July 1, 2023, Randall plc pays the £1,000 amount that Brown Furniture had written off on March 1. These are the entries:

July 1, 2023		
Accounts Receivable (Randall plc)	1,000	
Allowance for Doubtful Accounts		1,000
(To reverse write-off of account)		
Cash	1,000	
Accounts Receivable (Randall plc)		1,000
(Collection of account)		

Note that the recovery of a bad debt, like the write-off of a bad debt, affects **only statement of financial position accounts**. The net effect of the two entries above is a debit to Cash and a credit to Allowance for Doubtful Accounts for £1,000.⁷

Estimating the Allowance

To simplify the preceding explanation, we assumed we knew the amount of the expected uncollectibles. In “real life,” companies must estimate that amount when they use the allowance method. As indicated, expected uncollectible accounts are estimated based on information about past events (loss experience), adjusted for current conditions and reasonable forecasts of factors that would affect uncollectible accounts. While much judgment is involved, the goal is to develop the best estimate of expected uncollectible receivables.⁸

For example, a company can estimate the percentage of its outstanding receivables that will become uncollectible, without identifying specific accounts. This procedure provides a reasonably accurate estimate of the receivables' realizable value. Hence, it is referred to as the **percentage-of-receivables approach**.⁹

Companies may apply this method using one **composite rate** that reflects an estimate of the uncollectible receivables. Or, companies may set up an **aging schedule** of accounts receivable, which applies a different percentage based on past experience to the various age categories. An aging schedule also identifies which accounts require special attention by indicating the extent to which certain accounts are past due. The schedule of Wilson & Co. in **Illustration 7.6** is an example.

Wilson reports bad debt expense of €26,610 for this year, assuming that no balance existed in the allowance account.¹⁰

To change the illustration slightly, **assume that the allowance account had a credit balance of €800 before adjustment.** In this case, Wilson adds €25,810 (€26,610 – \$800) to the allowance account and makes the following entry.

Bad Debt Expense	25,810	
Allowance for Doubtful Accounts		25,810

Wilson & Co. Aging Schedule						
Name of Customer	Balance Dec. 31	Under 30 days	30–60 days	61–90 days	91–120 days	Over 120 days
Western Stainless Steel	€ 98,000	€ 15,000	€ 65,000	€18,000		
Brockway Steel	320,000	280,000	40,000			
Freeport Sheet & Tube	55,000					€55,000
Allegheny Iron Works	74,000	50,000	10,000		€14,000	
	<u>€547,000</u>	<u>€345,000</u>	<u>€115,000</u>	<u>€18,000</u>	<u>€14,000</u>	<u>€55,000</u>
Age	Amount	Percentage Estimated to Be Uncollectible*		Required Balance in Allowance		
Under 30 days	€345,000	0.8%		€ 2,760		
30–60 days	115,000	4.0		4,600		
61–90 days	18,000	15.0		2,700		
91–120 days	14,000	20.0		2,800		
Over 120 days	55,000	25.0		<u>13,750</u>		
Year-end balance of allowance for doubtful accounts					<u>€26,610</u>	
* Estimates are based on historical loss rates, taking into consideration whether and, if so, how the historical loss rates differ from what is currently expected over the life of the trade receivables (on the basis of current conditions and reasonable and supportable forecasts about the future).						

ILLUSTRATION 7.6 Accounts Receivable Aging Schedule

Wilson therefore states the balance in the allowance account at €26,610. **If the Allowance for Doubtful Accounts balance before adjustment had a debit balance of €200**, then Wilson records bad debt expense of €26,810 (€26,610 desired balance + €200 debit balance). In the percentage-of-receivables method, Wilson cannot ignore the balance in the allowance account because the percentage is related to a real account (Accounts Receivable).

Companies do not prepare an aging schedule only to determine bad debt expense. They often prepare it as a control device to determine the composition of receivables and to identify delinquent accounts. In the Wilson example, the aging analysis was used to classify receivables according to a risk factor (days past due) that is related to the collectibility of the receivables. Other approaches are acceptable as long as the estimation techniques are applied consistently over time with the objective of faithfully estimating expected uncollectible accounts. [7] For example, a company may use historical loss ratios for customers with different credit ratings as a basis for estimating uncollectible accounts. Or, a company may utilize a probability-weighted discounted cash flow model (as illustrated in [Chapter 6](#)) to estimate expected credit losses. The discounted cash flow approach is generally appropriate when analyzing an individual loan or receivable.

Regardless of the estimation approach used, determining the expense associated with uncollectible accounts requires a large degree of judgment (see [Underlying Concepts](#)). Recent concern exists that some banks use this judgment to manage earnings. By overestimating the amounts of uncollectible loans in a good earnings year, the bank can “save for a rainy day” in a future period. In less-profitable periods, banks can reduce the overly conservative allowance for loan loss account to increase earnings.¹¹

Underlying Concepts

The primary objective for financial statement purposes is to report receivables in the statement of financial position at cash realizable value. The allowance for doubtful accounts as a percentage of receivables will vary, depending on the industry and the economic climate.

Notes Receivable

LEARNING OBJECTIVE 4

Explain accounting issues related to recognition and valuation of notes receivable.

A note receivable is supported by a formal **promissory note**, a written promise to pay a certain sum of money at a specific future date. Such a note is a negotiable instrument that a **maker** signs in favor of a designated **payee** who may legally and readily sell or otherwise transfer the note to others. Although all notes contain an

interest element because of the time value of money, companies classify them as interest-bearing or non-interest-bearing. **Interest-bearing notes** have a stated rate of interest. **Zero-interest-bearing notes** (non-interest-bearing) include interest as part of their face amount. Notes receivable are considered fairly liquid, even if long-term, because companies can easily convert them to cash (although they might pay a fee to do so).

Companies frequently accept notes receivable from customers who need to extend the payment period of an outstanding receivable. Or they require notes from high-risk or new customers. In addition, companies often use notes in loans to employees and subsidiaries, and in the sales of property, plant, and equipment. In some industries (e.g., the pleasure and sport boat industry), notes support all credit sales. The majority of notes, however, originate from lending transactions. The basic issues in accounting for notes receivable are the same as those for accounts receivable: **recognition, valuation, and derecognition.**

Recognition of Notes Receivable

Companies record and report long-term notes receivable at the **present value of the cash they expect to collect.** When the interest stated on an interest-bearing note equals the effective (market) rate of interest, the note is recorded at face value.¹² When the stated rate differs from the market rate, the cash exchanged (present value) differs from the face value of the note. Companies then record this difference, either a discount or a premium, and amortize it over the life of a note to approximate the effective (market) interest rate. This illustrates one of the many situations in which time value of money concepts are applied to accounting measurement.

Note Issued at Face Value

To illustrate the discounting of a note issued at face value, assume that Bigelow SA lends Scandinavian Imports €10,000 in exchange for a €10,000, three-year note bearing interest at 10 percent annually. The market rate of interest for a note of similar risk is also 10 percent. We show the time diagram depicting both cash flows in [Illustration 7.7](#).

ILLUSTRATION 7.7 Time Diagram for Note Issued at Face Value

Bigelow computes the present value or exchange price of the note as shown in [Illustration 7.8](#).

Face value of the note		€10,000
Present value of the principal:		
€10,000 ($PVF_{3,10\%}$) = €10,000 × .75132	€7,513	
Present value of the interest:		
€1,000 ($PVF-OA_{3,10\%}$) = €1,000 × 2.48685	<u>2,487</u>	
Present value of the note		<u>(10,000)</u>
Difference		€ -0-

ILLUSTRATION 7.8 Present Value of Note—Stated and Market Rates the Same

You can use a financial calculator to solve this problem.

 Calculator Solution for Present Value of Note Receivable

	Inputs	Answer
N	3	
I	10	
PV	?	-10,000
PMT	1,000	
FV	10,000	

In this case, the present value of the note equals its face value because the market (effective) and stated rates of interest are the same. Bigelow records the receipt of the note as follows.

Notes Receivable	10,000	
Cash		10,000

Bigelow recognizes interest revenue each year as follows.

Cash	1,000	
Interest Revenue		1,000

Note Not Issued at Face Value

Zero-Interest-Bearing Notes

If a company receives a zero-interest-bearing note, its present value is the cash paid to the issuer. Because the company knows both the future amount and the present value of the note, it can compute the interest rate. This rate is often referred to as the **implicit interest rate**. Companies record the difference between the future (face) amount and the present value (cash paid) as a discount and amortize it to interest revenue over the life of the note.

To illustrate, Jeremiah Company receives a three-year, \$10,000 zero-interest-bearing note, the present value of which is \$7,721.80. The implicit rate that equates the total cash to be received (\$10,000 at maturity) to the present value of the future cash flows (\$7,721.80) is 9 percent (the present value of 1 for three periods at 9 percent is .77218). We show the time diagram depicting the one cash flow in [Illustration 7.9](#).

[ILLUSTRATION 7.9](#) Time Diagram for Zero-Interest-Bearing Note

Jeremiah records the note receivable for the present value (\$7,721.80), as follows.

Notes Receivable	7,721.80	
Cash		7,721.80

Companies amortize the discount, and recognize interest revenue annually using the **effective-interest method**. [Illustration 7.10](#) shows the three-year discount amortization and interest revenue schedule.

Schedule of Note Discount Amortization Effective-Interest Method 0% Note Discounted at 9%				
	Cash Received	Interest Revenue	Discount Amortized	Carrying Amount of Note
Date of issue				\$ 7,721.80
End of year 1	\$ -0-	\$ 694.96 ^a	\$ 694.96 ^b	8,416.76 ^c
End of year 2	-0-	757.51	757.51	9,174.27
End of year 3	-0-	825.73 ^d	825.73	10,000.00
	<u>\$ -0-</u>	<u>\$2,278.20</u>	<u>\$2,278.20</u>	

^a $\$7,721.80 \times .09 = \694.96
^b $\$694.96 - \$0 = \$694.96$
^c $\$7,721.80 + \$694.96 = \$8,416.76$
^d5¢ adjustment to compensate for rounding

ILLUSTRATION 7.10 Discount Amortization Schedule—Effective-Interest Method

 Calculator Solution for Effective-Interest Rate on Note

	Inputs	Answer
N	3	
I	?	9
PV	-7,721.80	
PMT	0	
FV	10,000	

Jeremiah records interest revenue at the end of the first year using the effective-interest method as follows.

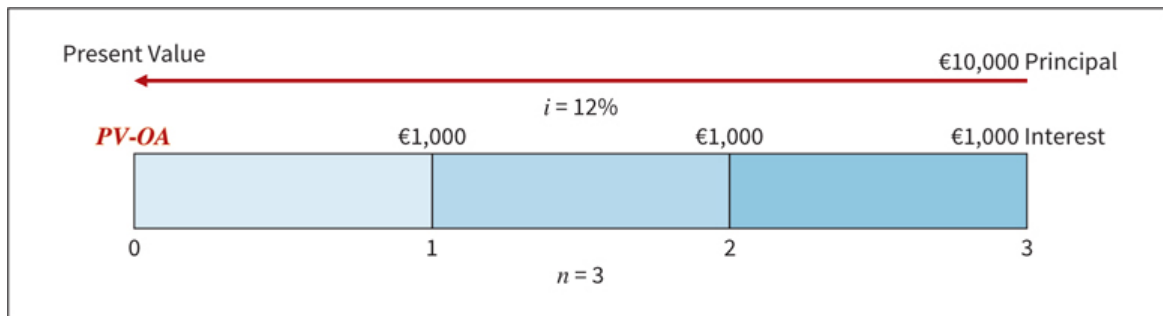

Notes Receivable	694.96	
Interest Revenue ($\$7,721.80 \times .09$)		694.96

At the end of the year, Jeremiah increases notes receivable and interest revenue. At maturity, Jeremiah receives the face value of the note.

Interest-Bearing Notes

Often the stated rate and the effective rate differ. The zero-interest-bearing note is one example.

To illustrate a more common situation, assume that Morgan Group makes a loan to Marie Co. and receives in exchange a three-year, €10,000 note bearing interest at 10 percent annually. The market rate of interest for a note of similar risk is 12 percent. We show the time diagram depicting both cash flows, with interest paid annually in [Illustration 7.11](#).

[ILLUSTRATION 7.11](#) Time Diagram for Interest-Bearing Note

Morgan computes the present value of the two cash flows as shown in [Illustration 7.12](#).

Face value of the note		€10,000
Present value of the principal:		
€10,000 ($PVF_{3,12\%}$) = €10,000 × .71178	€7,118	
Present value of the interest:		
€1,000 ($PVF-OA_{3,12\%}$) = €1,000 × 2.40183	2,402	
Present value of the note		<u>9,520</u>
Difference (Discount)		€ 480

[ILLUSTRATION 7.12](#) Computation of Present Value—Effective Rate Different from Stated Rate

In this case, because the effective rate of interest (12 percent) exceeds the stated rate (10 percent), the present value of the note is less than the face value. That is, Morgan exchanged the note at a **discount**. Morgan records the present value of the note as follows.

Notes Receivable	9,520	
Cash		9,520

Morgan then amortizes the discount and recognizes interest revenue annually using the **effective-interest method**. [Illustration 7.13](#) shows the three-year discount amortization and interest revenue schedule.

Schedule of Note Discount Amortization Effective-Interest Method 10% Note Discounted at 12%				
	Cash Received	Interest Revenue	Discount Amortized	Carrying Amount of Note
Date of issue				€ 9,520
End of year 1	€1,000 ^a	€1,142 ^b	€142 ^c	9,662 ^d
End of year 2	1,000	1,159	159	9,821
End of year 3	1,000	1,179	179	10,000
	<u>€3,000</u>	<u>€3,480</u>	<u>€480</u>	
^a €10,000 × .10 = €1,000 ^b €9,520 × .12 = €1,142 ^c €1,142 – €1,000 = €142 ^d €9,520 + €142 = €9,662				

ILLUSTRATION 7.13 Discount Amortization Schedule—Effective-Interest Method

On the date of issue, the note has a present value of €9,520. Additional interest revenue spread over the three-year life of the note, as a result, is €480 (€10,000 – €9,520).

At the end of year 1, Morgan receives €1,000 in cash. But its interest revenue is €1,142 (€9,520 × .12). The difference between €1,000 and €1,142 is the amortized discount, €142. Morgan records receipt of the annual interest and amortization of the discount for the first year as follows (amounts per amortization schedule).

Cash	1,000	
Notes Receivable	142	
Interest Revenue		1,142

The carrying amount of the note is now €9,662 (€9,520 + €142). Morgan repeats this process until the end of year 3.

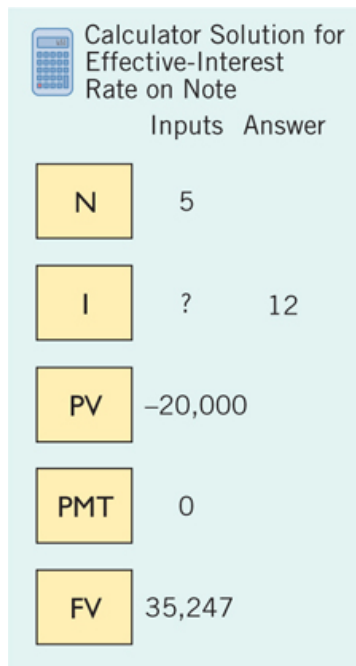

When the present value exceeds the face value, the note is exchanged at a premium. Companies record the premium on a note receivable as a debit and amortize it using the effective-interest method over the life of the note as annual reductions in the amount of interest revenue recognized.

Notes Received for Property, Goods, or Services

When a **note is received in exchange for property, goods, or services** in a bargained transaction entered into at arm's length, the stated interest rate is presumed to be fair unless one of the following occurs.

1. No interest rate is stated.
2. The stated interest rate is unreasonable.
3. The face amount of the note is materially different from the current cash sales price for the same or similar items or from the current fair value of the debt instrument.

In these circumstances, the company measures the present value of the note by the fair value of the property, goods, or services or by an amount that reasonably approximates the fair value of the note.

Calculator Solution for Effective-Interest Rate on Note

	Inputs	Answer
N	5	
I	?	12
PV	-20,000	
PMT	0	
FV	35,247	

To illustrate, Oasis Development Co. sold a corner lot to Rusty Pelican as a restaurant site. Oasis accepted in exchange a five-year note having a maturity value of \$35,247 and no stated interest rate. The land originally cost Oasis \$14,000. At the date of sale, the land had a fair value of \$20,000. Given the criterion above, Oasis uses the fair

value of the land, \$20,000, as the present value of the note. Oasis therefore records the sale as:

Notes Receivable	20,000	
Land		14,000
Gain on Disposal of Land (\$20,000 – \$14,000)		6,000

Oasis amortizes the discount to interest revenue over the five-year life of the note using the effective-interest method.

Choice of Interest Rate

In note transactions, other factors involved in the exchange, such as the fair value of the property, goods, or services, determine the effective or real interest rate. But, if a company cannot determine that fair value because the note has no ready market, determining the present value of the note is more difficult. To estimate the present value of a note under such circumstances, the company must approximate an applicable interest rate that may differ from the stated interest rate. This process of interest-rate approximation is called **imputation**. The resulting interest rate is called an **imputed interest rate**.

The prevailing rates for similar instruments, from issuers with similar credit ratings, affect the choice of a rate. Restrictive covenants, collateral, payment schedule, and the existing prime interest rate also impact the choice. A company determines the imputed interest rate when it receives the note. It ignores any subsequent changes in prevailing interest rates.

Valuation of Notes Receivable

Like accounts receivable, companies record and report short-term notes receivable at their cash realizable value—that is, at their face amount less all necessary allowances. The primary notes receivable allowance account is Allowance for Doubtful Accounts. The computations and estimations involved in valuing short-term notes receivable and in recording bad debt expense and the related allowance **exactly parallel that for trade accounts receivable**. Companies estimate the amount of uncollectibles by an analysis of the receivables. As discussed earlier (see [footnote 8](#)), receivables with a significant financing component (such as long-term notes) involve additional estimation problems. As a result, the IASB has established guidelines for alternative approaches that could be used to estimate impairments of financial instruments, which we discuss in [Chapter 17](#).

Other Issues Related to Receivables

LEARNING OBJECTIVE 5

Explain additional accounting issues related to accounts and notes receivables.

Additional issues related to receivables are:

1. Derecognition of receivables.
2. Presentation and analysis.

Derecognition of Receivables

At what point should a receivable no longer be included as an asset of a company like **Unilever** (NLD)—that is, **derecognized**? One situation occurs when the receivable no longer has any value; that is, the contractual rights to the cash flows of the receivable no longer exist. For example, if Unilever has a receivable from a customer who declares bankruptcy, the value of this receivable has expired. Similarly, when Unilever collects a receivable when due, it removes this receivable from its books. In both cases, Unilever no longer has any contractual rights to these receivables. As a result, the receivables are derecognized.

A second situation often occurs if Unilever transfers (e.g., sells) a receivable to another company, thereby transferring the risks and rewards of ownership to this other company. As an example, if Garcia Company sells its receivables to Holt Inc. and transfers all the risks and rewards of ownership to Holt, the receivables are derecognized. Although this guideline is straightforward, it is sometimes difficult to assess whether some or all of the risks and rewards of ownership are transferred. The following discussion highlights the key issues related to transfers of receivables.

Transfers of Receivables

There are various reasons for the transfer of receivables to another party. For example, in order to accelerate the receipt of cash from receivables, companies may transfer receivables to other companies for cash. In addition, for competitive reasons, providing sales financing for customers is virtually mandatory in many industries. In the sale of durable goods, such as automobiles, trucks, industrial and farm equipment, computers, and appliances, most sales are on an installment contract basis. Many major companies in these industries have created wholly owned subsidiaries specializing in receivables financing. For example, **Daimler** (DEU) has **Daimler Truck Financial** (DEU), and **Toyota** (JPN) has **Toyota Motor Credit** (JPN).

Second, the **holder** may sell receivables because money is tight and access to normal credit is unavailable or too expensive. Also, a firm may sell its receivables, instead of borrowing, to avoid violating existing lending agreements.

Finally, billing and collection of receivables are often time-consuming and costly. Credit card companies such as **MasterCard, Visa and American Express** take over the collection process and provide merchants with immediate cash.

Conversely, some **purchasers** of receivables buy them to obtain the legal protection of ownership rights afforded a purchaser of assets versus the lesser rights afforded a secured creditor. In addition, banks and other lending institutions may need to

purchase receivables because of legal lending limits. That is, they cannot make any additional loans, but they can buy receivables and charge a fee for this service.

The transfer of receivables to a third party for cash happens in one of two ways:

1. Sale of receivables.
2. Secured borrowing.

Sales of Receivables

Sales of receivables have increased substantially in recent years. A common type is a sale to a factor. **Factors** are finance companies or banks that buy receivables from businesses for a fee and then collect the remittances directly from the customers. **Factoring receivables** is traditionally associated with the textile, apparel, footwear, furniture, and home furnishing industries.¹³ [Illustration 7.14](#) shows a typical factoring arrangement.

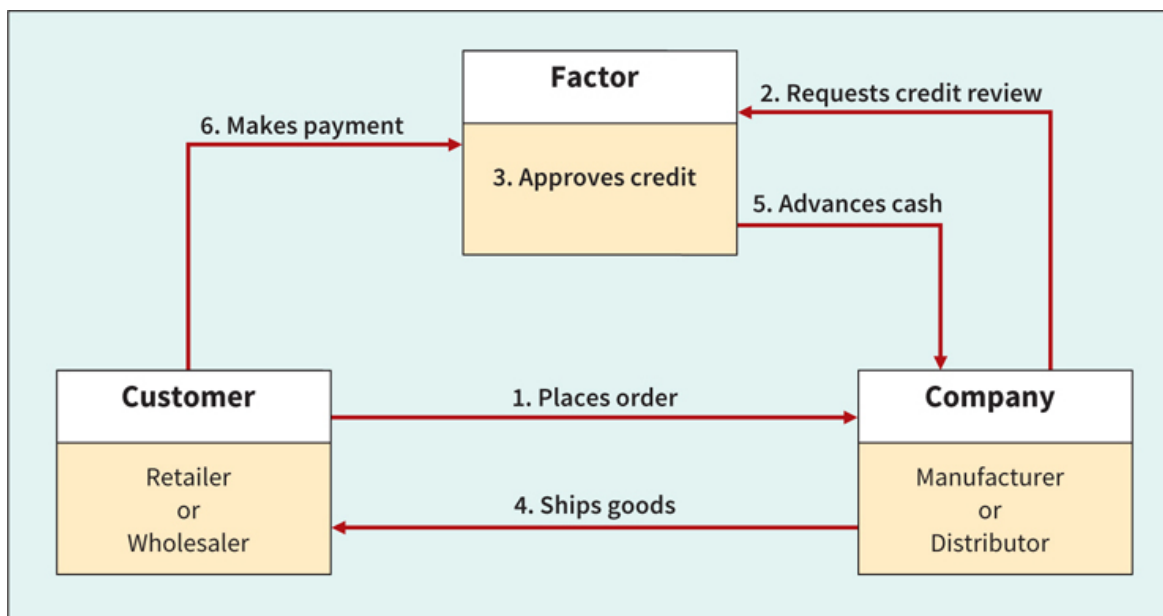

ILLUSTRATION 7.14 Basic Procedures in Factoring

Sale without Guarantee

When buying receivables, the purchaser generally assumes the risk of collectibility and absorbs any credit losses. A sale of this type is often referred to as a **sale without guarantee (without recourse)** against credit loss. The transfer of receivables in this case is an outright sale of the receivables both in form (transfer of title) and substance (transfer of risks and rewards). As in any sale of assets, the seller debits Cash for the proceeds and credits Accounts Receivable for the face value of the receivables. The seller recognizes the difference, reduced by any provision for probable adjustments (discounts, returns, allowances, etc.), as a Loss on Sale of Receivables. The seller uses a Due from Factor account (reported as a receivable) to

account for the proceeds retained by the factor to cover probable sales discounts, sales returns, and sales allowances.

To illustrate, Crest Textiles factors €500,000 of accounts receivable with Commercial Factors on a **non-guarantee** (or **without recourse**) basis. Crest Textiles transfers the receivable records to Commercial Factors, which will receive the collections. Commercial Factors assesses a finance charge of 3 percent of the amount of accounts receivable and retains an amount equal to 5 percent of the accounts receivable (for probable adjustments). Crest Textiles and Commercial Factors make journal entries for the receivables transferred without guarantee as shown in [Illustration 7.15](#).

Crest Textiles			Commercial Factors		
Cash	460,000		Accounts (Notes) Receivable	500,000	
Due from Factor	25,000*		Due to Customer (Crest Textiles)		25,000
Loss on Sale of Receivables	15,000**		Interest Revenue		15,000
Accounts (Notes) Receivable		500,000	Cash		460,000
*(.05 × €500,000)					
**(.03 × €500,000)					

ILLUSTRATION 7.15 Entries for Sale of Receivables without Guarantee

In recognition of the sale of receivables, Crest Textiles records a loss of €15,000. The factor’s net income will be the difference between the interest (financing) revenue of €15,000 and the amount of any uncollectible receivables.

Sale with Guarantee

To illustrate a **sale with guarantee (with recourse)**, in which a purchaser of receivables has protection against credit losses, assume that Crest Textiles issues a guarantee to Commercial Factors to compensate Commercial Factors for any credit losses on receivables transferred. In this situation, the question is whether the risks and rewards of ownership are transferred to Commercial Factors or remain with Crest Textile. In other words, is it to be accounted for as a sale or a borrowing?

In this case, given that there is a guarantee for all defaults, it appears that the risks and rewards of these receivables still remain with Crest Textiles. As a result, the transfer is considered a borrowing—sometimes referred to as a **failed sale**. Crest Textiles continues to recognize the receivable on its books, and the transaction is treated as a borrowing.¹⁴

Assuming the same information as in [Illustration 7.15](#), the journal entries for both Crest Textiles and Commercial Factors are shown in [Illustration 7.16](#).

Crest Textiles			Commercial Factors		
Cash	460,000		Accounts (Notes) Receivable	500,000	
Due from Factor	25,000		Due to Customer		
Finance Charge	15,000		(Crest Textiles)		25,000
Recourse Liability		500,000	Interest Revenue		15,000
			Cash		460,000

ILLUSTRATION 7.16 Sale with Guarantee

In this case, Crest Textiles records a liability to Commercial Factors. Commercial Factors records an accounts receivable from Crest Textiles. The accounting for a failed sale is similar to that for a secured borrowing. As the transferred receivables are collected, the Recourse Liability account on the books of Crest Textiles is reduced. Similarly, on the books of Commercial Factors, the accounts receivable from Crest Textiles is also reduced.

Secured Borrowing

A company often uses receivables as collateral in a borrowing transaction. In fact, a creditor often requires that the debtor designate (assign) or pledge¹⁵ receivables as security for the loan. If the loan is not paid when due, the creditor can convert the collateral to cash—by collecting the receivables.

To illustrate, on March 1, 2022, Meng Mills provides (assigns) NT\$700,000 of its accounts receivable to Sino Bank as collateral for a NT\$500,000 note. Meng Mills continues to collect the accounts receivable; the account debtors are not notified of the arrangement. Sino Bank assesses a finance charge of 1 percent of the accounts receivable and interest on the note of 12 percent. Meng Mills makes monthly payments to the bank for all cash it collects on the receivables. **Illustration 7.17** shows the entries for the secured borrowing for Meng Mills and Sino Bank.

Meng Mills			Sino Bank		
Transfer of accounts receivable and issuance of note on March 1, 2022					
Cash	493,000		Notes Receivable	500,000	
Interest Expense	7,000*		Interest Revenue		7,000*
Notes Payable		500,000	Cash		493,000
*(NT\$700,000 × .01)					
Collection in March of NT\$440,000 of accounts less cash discounts of NT\$6,000 plus receipt of NT\$14,000 sales returns (return liability was recorded at the time of the original sale)					
Cash	434,000				
Sales Discounts	6,000				
Return Liability	14,000		(No entry)		
Accounts Receivable		454,000*			
*(NT\$440,000 + NT\$14,000 = NT\$454,000)					
Remitted March collections plus accrued interest to the bank on April 1, 2022					
Interest Expense	5,000*		Cash	439,000	
Notes Payable	434,000		Interest Revenue		5,000*
Cash		439,000	Notes Receivable		434,000
*(NT\$500,000 × .12 × 1/12)					
Collection in April of the balance of accounts less NT\$2,000 written off as uncollectible					
Cash	244,000				
Allowance for Doubtful Accounts	2,000		(No entry)		
Accounts Receivable		246,000*			
*(NT\$700,000 – NT\$454,000)					
Remitted the balance due of NT\$66,000 (NT\$500,000 – NT\$434,000) on the note plus interest on May 1, 2022					
Interest Expense	660*		Cash	66,660	
Notes Payable	66,000		Interest Revenue		660*
Cash		66,660	Notes Receivable		66,000
*(NT\$66,000 × .12 × 1/12)					

ILLUSTRATION 7.17 Entries for Transfer of Receivables—Secured Borrowing

In addition to recording the collection of receivables, Meng Mills must recognize all discounts, returns and allowances, and bad debts. Each month, Meng Mills uses the proceeds from the collection of the accounts receivable to retire the note obligation. In addition, it pays interest on the note.¹⁶

Summary of Transfers

The IASB uses the term **derecognition** when referring to the accounting for transfers of receivables. According to the IASB, determining whether receivables that are transferred can be derecognized and accounted for as a sale is based on an evaluation of whether the seller has transferred substantially all the risks and rewards of ownership of the financial asset. **Illustration 7.18** summarizes the accounting guidelines for transfers of receivables. [9]

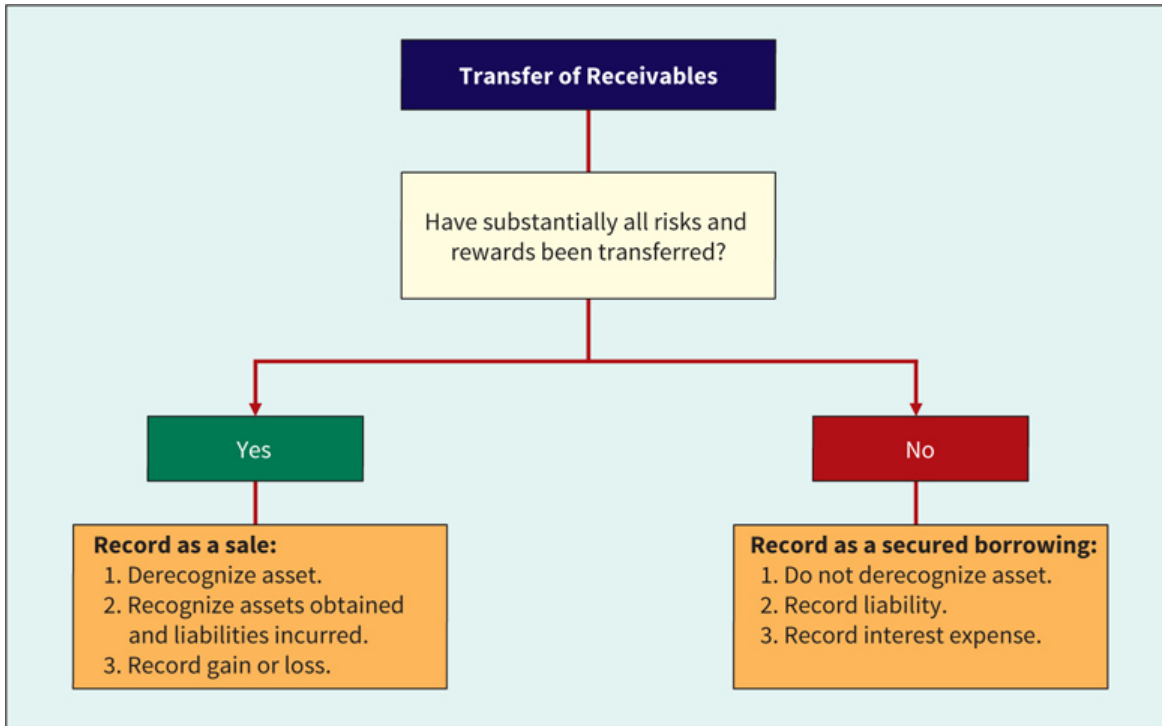

ILLUSTRATION 7.18 Accounting for Transfers of Receivables

As indicated, if substantially all the risks and rewards of ownership of the receivable are transferred, then it is derecognized. However, if substantially all of the risks and rewards are not transferred, then the company treats the transfer as a secured borrowing. If sale accounting is appropriate, a company must still consider assets obtained and liabilities incurred in the transaction (e.g., a guarantee).¹⁷

Presentation and Analysis

Presentation of Receivables

The general rules in classifying receivables are: **[10]**

1. Segregate and report the carrying amounts of the different categories of receivables.
2. Indicate the receivables classified as current and non-current in the statement of financial position.
3. Appropriately offset the valuation accounts for receivables that are impaired, including a discussion of individual and collectively determined impairments.
4. Disclose the fair value of receivables in a way that permits comparisons with the carrying amount of the receivables.
5. Disclose information to assess the credit risk inherent in the receivables by providing information on:
 - a. Receivables that are neither past due nor impaired.

- b. The carrying amount of receivables that would otherwise be past due or impaired, but whose terms have been renegotiated.
 - c. For receivables that are either past due or impaired, provide an analysis of the age of the receivables that are past due as of the end of the reporting period.
6. Disclose any receivables pledged as collateral.
7. Disclose all significant concentrations of credit risk arising from receivables.¹⁸

The assets section of Colton AG's statement of financial position in [Illustration 7.19](#) shows many of the disclosures required for receivables.

Analysis of Receivables

Accounts Receivable Turnover

Analysts frequently compute financial ratios to evaluate the liquidity of a company's accounts receivable. To assess the liquidity of the receivables, they use the **accounts receivable turnover**. This ratio measures the number of times, on average, a company collects receivables during the period. The ratio is computed by dividing net sales by average (net) receivables outstanding during the year. Theoretically, the numerator should include only net credit sales, but this information is frequently unavailable. However, if the relative amounts of credit and cash sales remain fairly constant, the trend indicated by the ratio will still be valid. Barring significant seasonal factors, average receivables outstanding can be computed from the beginning and ending balances of net trade receivables.

To illustrate, **Louis Vuitton (LVMH Group)** (FRA) recently reported net sales of €35,664 million. Its beginning and ending (net) accounts receivable balances were €2,274 million and €2,521 million, respectively. [Illustration 7.20](#) shows the computation of its accounts receivable turnover.

This information¹⁹ shows how successful the company is in collecting its outstanding receivables (see [Underlying Concepts](#)). If possible, an aging schedule should also be prepared to help determine how long receivables have been outstanding. A satisfactory accounts receivable turnover may have resulted because certain receivables were collected quickly though others have been outstanding for a relatively long period. An aging schedule would reveal such patterns.

Underlying Concepts

Providing information that will help users assess a company's current liquidity and prospective cash flows is a primary objective of accounting.

Often, the accounts receivable turnover is transformed to **days to collect accounts receivable or days outstanding**—an average collection period. In this case, 14.9 is

divided into 365 days, resulting in 24.5 days. Companies frequently use the average collection period to assess the effectiveness of their credit and collection policies. The general rule is that the average collection period should not greatly exceed the credit term period. That is, if customers are given a 60-day period for payment, then the average collection period should not be too much in excess of 60 days.

Colton AG Statement of Financial Position (partial) At December 31, 2022 (Amounts in 000)							
Current assets							
Other receivables							€ 1,300
Receivables from associates							2,722
Trade receivables (Note 12)				€20,896			
Less: Provision for impairment of trade receivables				109			20,787
Total receivables							24,809
Less non-current portion							2,322
Total current receivables							22,487
Cash and cash equivalents							20,509
Total current assets							42,996
Non-current receivables							
Receivable from associates							2,126
Other receivables							196
Note 12: Trade and Other Receivables (partial). All non-current receivables are due within 5 years from the statement of financial position date. Trade receivables that are less than 3 months past due are not considered impaired. At December 31, the aging analysis of trade receivables is as follows:							
Amounts (€000)	Total	Neither Past Due or Impaired	<30 days	Past Due but Not Impaired			
				30–60 days	60–90 days	90–120 days	>120 days
2022	20,896	11,991	4,791	2,592	1,070	360	92
As at December 31, 2022, trade receivables at initial value of €109 were impaired and fully provided for. The following table summarizes movements in the provision for impairment of receivables.							
		Individually Impaired (€000)	Collectively Impaired Total (€000)	Total (€000)			
At January 1, 2022		29	69	98			
Expense for the year		10	16	26			
Written off		(3)	(6)	(9)			
Recoveries		(2)	(4)	(6)			
At December 31, 2022		34	75	109			
The fair values of trade and other receivables are as follows:							
				2022			
Trade receivables				€20,896			
Receivables from associates				2,776			
Other receivables				1,300			
				€24,972			
Certain European subsidiaries transferred receivable balances amounting to €1,014 to a bank in exchange for cash during the year ended December 31, 2022. The transaction has been accounted for as a secured borrowing. In case of default under the loan agreement, the borrower has the right to receive the cash flows from the receivables transferred. Without default, the subsidiaries will collect the receivables and assign new receivables as collateral.							

ILLUSTRATION 7.19 Disclosure of Receivables

$\frac{\text{Net Sales}}{\text{Average Trade Receivables (net)}} = \text{Accounts Receivable Turnover}$
$\frac{€35,664}{(€2,274 + €2,521) \div 2} = 14.9 \text{ times, or every } 24.5 \text{ days } (365 \div 14.9)$

ILLUSTRATION 7.20 Computation of Accounts Receivable Turnover

What Do the Numbers Mean?

Securitizations—Good or Bad?

A popular form of sale (transfer) of receivables is securitization. Securitization takes a pool of assets, such as credit card receivables, mortgage receivables, or car loan receivables, and sells shares in these pools of interest and principal payments. This, in effect, creates securities backed by these pools of assets. Virtually every asset with a payment stream and a long-term payment history is a candidate for securitization. What are the differences between factoring and securitization? Factoring usually involves sale to only one company, fees are high, the quality of the receivables is low, and the seller afterward does not service the receivables. In a securitization, many investors are involved, margins are tight, the receivables are of generally higher quality, and the seller usually continues to service the receivables.

Securitizations can be a positive force in the mortgage market by increasing liquidity that banks need for mortgage lending. This improved accounting supports positive outcomes from securitizations in the mortgage market.

However, securitizations got a black eye in the booming mortgage market leading up to the financial crisis of 2008. In that setting, mortgage loans to high-risk (subprime) borrowers were securitized with lenders selling the loans to investment banks or trusts (special purpose entities) at a gain. Investors in the securities issued by the trusts were happy because they earned a return that they believed was excellent, given the risk they took. However, due to lax regulatory oversight of the mortgage lending process, many of the securitizations resulted in lenders having to take back the loans when subprime borrowers could not make the payments as the economy and the housing market slowed.

The costs of these bad securitizations were still being felt by banks several years after the mortgage market meltdown. The moral of the story is that accounting matters. Lenders had strong incentives to want to report upfront gains on sales of loans. But, in most cases, these gains should never have been booked. Standard-setters have since issued new rules to tighten up “gain-on-sale” accounting for securitizations and loan losses. With these new rules, lenders have to keep the loans on their statements of financial position. Under these conditions, lenders would be much less likely to lend so much money to individuals with poor credit ratings.

APPENDIX 7A Cash Controls

LEARNING OBJECTIVE *6

Explain common techniques employed to control cash.

Cash is the asset most susceptible to improper diversion and use. Management faces two problems in accounting for cash transactions: (1) to establish proper controls to prevent any unauthorized transactions by officers or employees, and (2) to provide information necessary to properly manage cash on hand and cash transactions. Yet, even with sophisticated control devices, errors can and do happen. For example, the *Wall Street Journal* ran a story entitled “A \$7.8 Million Error Has a Happy Ending for a Horrified Bank.” The story described how **Manufacturers Hanover Trust Co.** (USA) mistakenly overpaid about \$7.8 million in cash dividends to its shareholders. (As implied in the headline, most shareholders returned the monies.)

To safeguard cash and to ensure the accuracy of the accounting records for cash, companies need effective **internal control** over cash. For example, in the United States, provisions of the Sarbanes-Oxley Act call for enhanced efforts to increase the quality of internal control (for cash and other assets). Such efforts are expected to result in improved financial reporting. In this appendix, we discuss some of the basic control issues related to cash.

Using Bank Accounts

To obtain desired control objectives, a company can vary the number and location of banks and the types of bank accounts. For large companies operating in multiple locations, the location of bank accounts can be important. Establishing collection accounts in strategic locations can accelerate the flow of cash into the company by shortening the time between a customer’s mailing of a payment and the company’s use of the cash. Multiple collection centers generally reduce the size of a company’s **collection float**. This is the difference between the amount on deposit according to the company’s records and the amount of collected cash according to the bank records.

Large, multilocation companies frequently use **lockbox accounts** to collect in cities with heavy customer billing. The company rents a local post office box and authorizes a local bank to pick up the remittances mailed to that box number. The bank empties the box at least once a day and immediately credits the company’s account for collections. The greatest advantage of a lockbox is that it accelerates the availability of collected cash. Generally, in a lockbox arrangement, the bank images the checks for recordkeeping purposes and provides the company with a deposit slip, a list of collections, and any customer correspondence. Thus, a lockbox system improves the control over cash and accelerates collection of cash. If the income generated from accelerating the receipt of funds exceeds the cost of the lockbox system, then it is a worthwhile undertaking.

The **general checking account** is the principal bank account in most companies and frequently the only bank account in small businesses. A company deposits cash into and disburses cash from this account. A company cycles all transactions through it. For example, a company deposits from and disburses to all other bank accounts through the general checking account.

Companies use **imprest bank accounts** to make a specific amount of cash available for a limited purpose. The account acts as a clearing account for a large volume of checks or for a specific type of check. To clear a specific and intended amount through the imprest account, a company transfers that amount from the general checking account or other source. Companies often use imprest bank accounts for disbursing payroll checks, dividends, commissions, bonuses, confidential expenses (e.g., officers' salaries), and travel expenses.

The Imprest Petty Cash System

Almost every company finds it necessary to pay small amounts for miscellaneous expenses such as taxi fares, minor office supplies, and employees' lunches. Disbursements by check for such items are often impractical, yet some control over them is important. A simple method of obtaining reasonable control, while adhering to the rule of disbursement by check, is the **imprest system for petty cash** disbursements. This is how the system works:

1. The company designates a petty cash custodian, and gives the custodian a small amount of currency from which to make payments. It records transfer of funds to petty cash as:

Petty Cash	300	
Cash		300

2. The petty cash custodian obtains signed receipts from each individual to whom he or she pays cash, attaching evidence of the disbursement to the petty cash receipt. Petty cash transactions are not recorded until the fund is reimbursed; someone other than the petty cash custodian records those entries.
3. When the supply of cash runs low, the custodian presents to the controller or accounts payable cashier a request for reimbursement supported by the petty cash receipts and other disbursement evidence. The custodian receives a company check to replenish the fund. At this point, the company records transactions based on petty cash receipts.

Supplies Expense	42	
Postage Expense	53	
Miscellaneous Expense	76	
Cash Over and Short	2	
Cash		173

4. If the company decides that the amount of cash in the petty cash fund is excessive, it lowers the fund balance as follows.

Cash	50	
Petty Cash		50

Subsequent to establishment, a company makes entries to the Petty Cash account only to increase or decrease the size of the fund.

A company uses a **Cash Over and Short** account when the petty cash fund fails to prove out. That is, when an error occurs, such as incorrect change, overpayment of expense, or lost receipt. If cash proves out **short** (i.e., the sum of the receipts and cash in the fund is less than the imprest amount), the company debits the shortage to the Cash Over and Short account. If cash proves out **over**, it credits the overage to Cash Over and Short. The company closes Cash Over and Short only at the end of the year. It generally shows Cash Over and Short on the income statement as an “Other expense or revenue.”

There are usually expense items in the fund except immediately after reimbursement. Therefore, to maintain accurate financial statements, a company must reimburse the funds at the end of each accounting period and also when nearly depleted.

Under the imprest system, the petty cash custodian is responsible at all times for the amount of the fund on hand either as cash or in the form of signed receipts. These receipts provide the evidence required by the disbursing officer to issue a reimbursement check. Further, a company follows two additional procedures to obtain more complete control over the petty cash fund:

1. A superior of the petty cash custodian makes surprise counts of the fund from time to time to determine that a satisfactory accounting of the fund has occurred.
2. The company cancels or mutilates petty cash receipts after they have been submitted for reimbursement, so that they cannot be used to secure a second reimbursement.

Physical Protection of Cash Balances

Not only must a company safeguard cash receipts and cash disbursements through internal control measures, but it must also protect the cash on hand and in banks. Because receipts become cash on hand and disbursements are made from cash in

banks, adequate control of receipts and disbursements is part of the protection of cash balances, along with certain other procedures.

Physical protection of cash is so elementary a necessity that it requires little discussion. A company should make every effort to minimize the cash on hand in the office. It should only have on hand a petty cash fund, the current day's receipts, and perhaps funds for making change. Insofar as possible, it should keep these funds in a vault, safe, or locked cash drawer. The company should transmit intact each day's receipts to the bank as soon as practicable. Accurately stating the amount of available cash both in internal management reports and in external financial statements is also extremely important.

Every company has a record of cash received and disbursed, and the balance. Because of the many cash transactions, however, errors or omissions may occur in keeping this record. Therefore, a company must periodically prove the balance shown in the general ledger. It can count cash actually present in the office—petty cash, change funds, and undeposited receipts—for comparison with the company records. For cash on deposit, a company prepares a bank reconciliation—a reconciliation of the company's record and the bank's record of the company's cash.

Reconciliation of Bank Balances

At the end of each calendar month, the bank supplies each customer with a **bank statement** (a copy of the bank's account with the customer) together with the customer's checks that the bank paid during the month.²⁰ If neither the bank nor the customer made any errors, if all deposits made and all checks drawn by the customer reached the bank within the same month, and if no unusual transactions occurred that affected either the company's or the bank's record of cash, the balance of cash reported by the bank to the customer equals that shown in the customer's own records. This condition seldom occurs due to one or more of the reconciling items presented below.

Reconciling Items

Deposits in transit. End-of-month deposits of cash recorded on the depositor's books in one month are received and recorded by the bank in the following month.

Outstanding checks. Checks written by the depositor are recorded when written but may not be recorded by (may not "clear") the bank until the next month.

Bank charges. Charges recorded by the bank against the depositor's balance for such items as bank services, printing checks, **not-sufficient-funds (NSF) checks**, and safe-deposit box rentals. The depositor may not be aware of these charges until the receipt of the bank statement.

Bank credits. Collections or deposits by the bank for the benefit of the depositor that may be unknown to the depositor until receipt of the bank statement. Examples are note collection for the depositor and interest earned on interest-bearing checking accounts.

Bank or depositor errors. Errors on either the part of the bank or the part of the depositor cause the bank balance to disagree with the depositor's book balance.

Hence, a company expects differences between its record of cash and the bank's record. Therefore, it must reconcile the two to determine the nature of the differences between the two amounts.

A **bank reconciliation** is a schedule explaining any differences between the bank's and the company's records of cash. If the difference results only from transactions not yet recorded by the bank, the company's record of cash is considered correct. But, if some part of the difference arises from other items, either the bank or the company must adjust its records.

A company may prepare two forms of a bank reconciliation. One form reconciles from the bank statement balance to the book balance or vice versa. The other form reconciles both the bank balance and the book balance to a correct cash balance. Most companies use this latter form. **Illustration 7A.1** shows a sample of that form and its common reconciling items.

This form of reconciliation consists of two sections: (1) "Balance per bank statement" and (2) "Balance per depositor's books." Both sections end with the same "Correct cash balance." The correct cash balance is the amount to which the books must be adjusted and is the amount reported on the statement of financial position.

Companies prepare adjusting journal entries for all the addition and deduction items appearing in the "Balance per depositor's books" section. Companies should immediately call to the bank's attention any errors attributable to it.

To illustrate, Nugget Mining Company’s books show a cash balance at the Denver National Bank on November 30, 2022, of \$20,502. The bank statement covering the month of November shows an ending balance of \$22,190. An examination of Nugget’s accounting records and November bank statement identified the following reconciling items.

Balance per bank statement (end of period)		\$\$\$
Add: Deposits in transit	\$\$	
Undeposited receipts (cash on hand)	\$\$	
Bank errors that understate the bank statement balance	\$\$	\$\$
		\$\$\$
Deduct: Outstanding checks	\$\$	
Bank errors that overstate the bank statement balance	\$\$	\$\$
Correct cash balance		\$\$\$
Balance per depositor’s books		\$\$\$
Add: Bank credits and collections not yet recorded in the books	\$\$	
Book errors that understate the book balance	\$\$	\$\$
		\$\$\$
Deduct: Bank charges not yet recorded in the books	\$\$	
Book errors that overstate the book balance	\$\$	\$\$
Correct cash balance		\$\$\$

ILLUSTRATION 7A.1 Bank Reconciliation Form and Content

1. A deposit of \$3,680 that Nugget mailed November 30 does not appear on the bank statement.
2. Checks written in November but not charged to the November bank statement are:

Check #7327	\$	150
#7348		4,820
#7349		31

3. Nugget has not yet recorded the \$600 of interest collected by the bank November 20 on Sequoia Co. bonds held by the bank for Nugget.
4. Bank service charges of \$18 are not yet recorded on Nugget’s books.
5. The bank returned one of Nugget’s customer’s checks for \$220 with the bank statement, marked “NSF.” The bank treated this bad check as a disbursement.
6. Nugget discovered that it incorrectly recorded check #7322, written in November for \$131 in payment of an account payable, as \$311.

7. A check for Nugent Oil Co. in the amount of \$175 that the bank incorrectly charged to Nugget accompanied the statement.

Nugget reconciled the bank and book balances to the correct cash balance of \$21,044 as shown in [Illustration 7A.2](#).

Nugget Mining Company Bank Reconciliation Denver National Bank, November 30, 2022			
Balance per bank statement (end of period)			\$22,190
Add: Deposit in transit	(1)	\$3,680	
Bank error—incorrect check charged to account by bank	(7)	175	3,855
			26,045
Deduct: Outstanding checks	(2)		5,001
Correct cash balance			<u>\$21,044</u>
Balance per books			\$20,502
Add: Interest collected by the bank	(3)	\$ 600	
Error in recording check #7322	(6)	180	780
			21,282
Deduct: Bank service charges	(4)	18	
NSF check returned	(5)	220	238
Correct cash balance			<u>\$21,044</u>

ILLUSTRATION 7A.2 Sample Bank Reconciliation

The journal entries required to adjust and correct Nugget’s books in early December 2022 are taken from the items in the “Balance per books” section and are as follows.

To record interest on Sequoia Co. bonds, collected by bank		
Cash	600	
Interest Revenue		600
To correct error in recording amount of check #7322		
Cash	180	
Accounts Payable		180
To record bank service charges for November		
Office Expense (bank charges)	18	
Cash		18
To record customer's check returned NSF		
Accounts Receivable	220	
Cash		220

After posting the entries, Nugget's cash account will have a balance of \$21,044. Nugget should return the Nugent Oil Co. check to Denver National Bank, informing the bank of the error.

Learning Objectives Review

1 Indicate how to report cash and related items.

To be reported as “cash,” an asset must be readily available for the payment of current obligations and free from contractual restrictions that limit its use in satisfying debts.

Cash consists of coin, currency, and available funds on deposit at the bank.

Negotiable instruments such as money orders, certified checks, cashier’s checks, personal checks, and bank drafts are also viewed as cash. Savings accounts are usually classified as cash.

Companies report cash as a current asset in the statement of financial position. The reporting of other related items are as follows.

1. *Restricted cash*: Companies should state separately legally restricted deposits held as compensating balances against short-term borrowing among the “Cash and cash equivalent items” in current assets. Restricted deposits held against long-term borrowing arrangements should be separately classified as non-current assets in either the investments or other assets sections.
2. *Bank overdrafts*: Companies should report overdrafts in the current liabilities section and usually add them to the amount reported as accounts payable. If material, these items should be separately disclosed either on the face of the statement of financial position or in the related notes.
3. *Cash equivalents*: Companies often report this item together with cash as “Cash and cash equivalents.”

2 Define receivables and explain accounting issues related to their recognition.

Receivables are claims held against customers and others for money, goods, or services. The receivables are classified into three types: (1) current or non-current, (2) trade or non-trade, and (3) accounts receivable or notes receivable. Two issues that may complicate the measurement of accounts receivable are (1) the availability of discounts (trade and cash discounts), and (2) the length of time between the sale and the payment due dates (the interest element).

Ideally, companies should measure receivables in terms of their present value—that is, the discounted value of the cash to be received in the future. The profession specifically excludes from the present value considerations receivables arising from normal business transactions that are due in customary trade terms within approximately one year.

3 Explain accounting issues related to valuation of accounts receivable.

Companies value and report short-term receivables at cash realizable value—the net amount expected to be received in cash, which is not necessarily the amount legally receivable. Determining cash realizable value requires estimating uncollectible receivables.

4 Explain accounting issues related to recognition and valuation of notes receivable.

Companies record short-term notes at face value and long-term notes receivable at the present value of the cash they expect to collect. When the interest stated on an interest-bearing note equals the effective (market) rate of interest, the note sells at face value. When the stated rate differs from the effective rate, a company records the receivable net of the discount or premium. As with accounts receivable, companies

record and report short-term notes receivable at their cash realizable value. The same is also true of long-term receivables.

5 Explain additional accounting issues related to accounts and notes receivables.

Derecognition. To accelerate the receipt of cash from receivables, the owner may transfer the receivables to another company for cash in one of two ways. (1) *Sales (factoring) of receivables:* Factors are finance companies or banks that buy receivables from businesses and then collect the remittances directly from the customers. (2) *Secured borrowing:* A creditor often requires that the debtor designate or pledge receivables as security for the loan. In many cases, transferors may have some continuing involvement with the receivable sold.

Reporting and Analysis. Companies should report receivables with appropriate offset of valuation accounts against receivables, classify receivables as current or non-current, identify pledged or designated receivables, and disclose the credit risk inherent in the receivables. Analysts assess receivables based on turnover and the days outstanding.

***6 Explain common techniques employed to control cash.**

The common techniques employed to control cash are as follows. (1) *Using bank accounts:* A company can vary the number and location of banks and the types of accounts to obtain desired control objectives. (2) *The imprest petty cash system:* It may be impractical to require that small amounts of various expenses be paid by check, yet some control over them is important. (3) *Physical protection of cash balances:* Adequate control of receipts and disbursements is a part of the protection of cash balances. Every effort should be made to minimize the cash on hand in the office. (4) *Reconciliation of bank balances:* Cash on deposit is not available for count and is proved by preparing a bank reconciliation.

Practice Problem

The trial balance before adjustment for Slamar Ltd. shows the following balances (in thousands).

	Debit	Credit
Net sales	¥860,000	

Accounts receivable	338,000	
Allowance for doubtful accounts		¥4,240

Consider the following independent situations:

1. To obtain additional cash, Slamar factors without guarantee ¥50,000 of accounts receivable with Ijiri Finance. The finance charge is 11% of the amount factored.
2. To obtain a 1-year loan of ¥75,000, Slamar assigns ¥80,000 of specific receivable accounts to Chen Financial. The finance charge is 9% of the loan; the cash is received and the accounts turned over to Chen Financial.
3. The company wants to maintain Allowance for Doubtful Accounts at 6% of gross accounts receivable.

Instructions

- a. Using the data above, give the journal entries required to record situations 1–3.
- b. Discuss how analysis based on the current ratio and the accounts receivable turnover would be affected if Slamar had transferred the receivables in situation 1 using a secured borrowing.

Solution

a.

1. Cash	44,500	
Loss on Sale of Receivables ($¥50,000 \times .11$)	5,500	
Accounts Receivable		50,000
2. Cash	68,250	
Interest Expense ($¥75,000 \times .09$)	6,750	
Notes Payable		75,000
3. Bad Debt Expense	16,040	
Allowance for Doubtful Accounts [$(¥338,000 \times .06) - ¥4,240$]		16,040

- b. With a secured borrowing, the receivables would stay on Slamar's books, and Slamar would record a note payable. This would reduce the current ratio and accounts receivable turnover.

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. What may be included under the heading of “cash”?
2. In what accounts should the following items be classified?
 - a. Coins and currency.
 - b. Government bonds.
 - c. Certificate of deposit (matures in 5 months).
 - d. Cash in a bank that is in receivership.
 - e. NSF check (returned with bank statement).
 - f. Deposit in foreign bank (exchangeability limited).
 - g. Postdated checks.
 - h. Cash to be used for retirement of long-term bonds.
 - i. Deposits in transit.
 - j. 100 shares of **Daimler (DEU)** (intention is to sell in one year or less).
 - k. Savings and checking accounts.
 - l. Petty cash.
 - m. Stamps.
 - n. Travel advances.
3. Define a “compensating balance.” How should a compensating balance be reported?
4. Feng Group reported in a recent annual report “Restricted cash for debt redemption.” What section of the statement of financial position would report this item?
5. What are the reasons that a company gives trade discounts? Why are trade discounts not recorded in the accounts like cash discounts?
6. What are two methods of recording accounts receivable transactions when a cash discount situation is involved? Which is more theoretically correct? Which is used in practice more of the time? Why?

- 7.** Discuss the accounting for sales allowances and how they relate to the concept of variable consideration.
- 8.** What are the basic problems that occur in the valuation of accounts receivable?
- 9.** What is the theoretical justification of the allowance method as contrasted with the direct write-off method of accounting for bad debts?
- 10.** Indicate how the percentage-of-receivables method, based on an aging schedule, accomplishes the objectives of the allowance method of accounting for bad debts. What other methods, besides an aging analysis, can be used for estimating uncollectible accounts?
- 11.** Of what merit is the contention that the allowance method lacks the objectivity of the direct write-off method? Discuss in terms of accounting's measurement function.
- 12.** Explain how the accounting for bad debts can be used for earnings management.
- 13.** Because of calamitous earthquake losses, Bernstein Company, one of your client's oldest and largest customers, suddenly and unexpectedly became bankrupt. Approximately 30% of your client's total sales have been made to Bernstein Company during each of the past several years. The amount due from Bernstein Company—none of which is collectible—equals 22% of total accounts receivable, an amount that is considerably in excess of what was determined to be an adequate provision for doubtful accounts at the close of the preceding year. How would your client record the write-off of the Bernstein Company receivable if it is using the allowance method of accounting for bad debts? Justify your suggested treatment.
- 14.** What is the normal procedure for handling the collection of accounts receivable previously written off using the direct write-off method? The allowance method?
- 15.** On January 1, 2022, Antorio SpA sells property for which it had paid €690,000 to Sargent Company, receiving in return Sargent's zero-interest-bearing note for €1,000,000 payable in 5 years. What entry would Antorio make to record the sale, assuming that Antorio frequently sells similar items of property for a cash sales price of €640,000?
- 16.** What is "imputed interest"? In what situations is it necessary to impute an interest rate for notes receivable? What are the considerations in imputing an appropriate interest rate?
- 17.** Indicate three reasons why a company might sell its receivables to another company.
- 18.** When is the risks and rewards approach to recording the transfers of receivables used? When should a transfer of receivables be recorded as a sale?
- 19.** Moon Hardware is planning to factor some of its receivables. The cash received will be used to pay for inventory purchases. The factor has indicated that it will require a full guarantee (with recourse) on the sold receivables. Explain to the controller of Moon Hardware what "full guarantee" is and how the guarantee will be reflected in Moon's financial statements after the sale of the receivables.

20. Horizon Outfitters AG includes in its trial balance for December 31 an item for Accounts Receivable €789,000. This balance consists of the following items:

Due from regular customers	€523,000
Refund receivable on prior year's income taxes (an established claim)	15,500
Travel advance to employees	22,000
Loan to wholly owned subsidiary	45,500
Advances to creditors for goods ordered	61,000
Accounts receivable assigned as security for loans payable	75,000
Notes receivable past due plus interest on these notes	47,000
Total	<u>€789,000</u>

Illustrate how these items should be shown in the statement of financial position as of December 31.

21. What is the accounts receivable turnover, and what type of information does it provide?

22. You are evaluating Woodlawn Racetrack for a potential loan. An examination of the notes to the financial statements indicates restricted cash at year-end amounts to \$100,000. Explain how you would use this information in evaluating Woodlawn's liquidity.

***23.** Distinguish among the following: (1) a general checking account, (2) an imprest bank account, and (3) a lockbox account.

Brief Exercises

BE7.1 (LO 1) Kraft Enterprises owns the following assets at December 31, 2022.

Cash in bank—savings account	€68,000
Cash on hand	9,300
Tax refund due	31,400
Checking account balance	17,000
Postdated checks	750
Certificates of deposit (180-day)	90,000

What amount should be reported as cash?

BE7.2 (LO 2) Restin plc uses the gross method to record sales made on credit. On June 1, 2022, it made sales of £50,000 with terms 3/15, n/45. On June 12, 2022, Restin received full payment for the June 1 sale. Prepare the required journal entries for Restin plc.

BE7.3 (LO 2) Use the information from BE7.2, assuming Restin plc uses the net method to account for cash discounts. Prepare the required journal entries for Restin

plc.

BE7.4 (LO 3) Roeher Company sold \$9,000 of its specialty shelving to Elkins Office Supply Co. on account. Prepare the entries when (a) Roeher makes the sale, (b) Roeher grants an allowance of \$700 when some of the shelving does not meet exact specifications but still could be sold by Elkins, and (c) at year-end, Roeher estimates that an additional \$200 in allowances will be granted to Elkins.

BE7.5 (LO 3) Wilton, AG had net sales in 2022 of €1,400,000. At December 31, 2022, before adjusting entries, the balances in selected accounts were Accounts Receivable €250,000 debit, and Allowance for Doubtful Accounts €2,400 credit. If Wilton estimates that 8% of its receivables will prove to be uncollectible, prepare the December 31, 2022, journal entry to record bad debt expense.

BE7.6 (LO 3) Use the information presented in BE7.5 for Wilton, AG.

- a. Instead of an Allowance for Doubtful Accounts Balance of €2,400 credit, the balance was €1,900 debit. Assume that 10% of accounts receivable will prove to be uncollectible. Prepare the entry to record bad debt expense.
- b. Instead of estimating uncollectibles based on a percentage of receivables, assume Wilton prepares an aging schedule that estimates total uncollectible accounts at €24,600. (Assume an allowance of €2,400 credit.) Prepare the entry to record bad debt expense.

BE7.7 (LO 4) Milner Family Importers sold goods to Tung Decorators for \$30,000 on November 1, 2022, accepting Tung's \$30,000, 6-month, 6% note. Prepare Milner's November 1 entry, December 31 annual adjusting entry, and May 1, 2023, entry for the collection of the note and interest.

BE7.8 (LO 4) On January 1, 2022, Deng Acrobats lent NT\$16,529 to Donaldson, Inc., accepting Donaldson's 2-year, NT\$20,000, zero-interest-bearing note. The implied interest rate is 10%. Prepare Deng's journal entries for the initial transaction, recognition of interest each year, and the collection of NT\$20,000 at maturity.

BE7.9 (LO 4) Modest Mouse SE had the following information related to an account receivable from Counting Crows Inc. Initial face value, €22,000; payments received, €3,000; provision for uncollectibility, €5,000. Determine the cash realizable value for the Counting Crows receivable.

BE7.10 (LO 5) On October 1, 2022, Chung Group assigns ¥1,000,000 of its accounts receivable to Seneca National Bank as collateral for a ¥750,000 note. The bank assesses a finance charge of 2% of the receivables assigned and interest on the note of 9%. Prepare the October 1, 2022, journal entries for both Chung and Seneca.

BE7.11 (LO 5) Wood SA factored €150,000 of accounts receivable with Engram Factors, without guarantee of credit loss. Engram assesses a 2% finance charge of the amount of accounts receivable and retains an amount equal to 6% of accounts receivable for possible adjustments. Prepare the journal entry for Wood SA and Engram Factors to record the factoring of the accounts receivable to Engram.

BE7.12 (LO 5) Use the information in BE7.11 for Wood SA. Assume that the receivables are sold with recourse (guarantee). Prepare the journal entry for Wood to record the sale.

BE7.13 (LO 5) Arness Woodcrafters sells \$250,000 of receivables to Commercial Factors, Inc. on a without guarantee basis. Commercial assesses a finance charge of 5% and retains an amount equal to 4% of accounts receivable. Prepare the journal entry for Arness to record the sale.

BE7.14 (LO 5) Use the information presented in BE7.13 for Arness Woodcrafters but assume that the receivables were sold with a full guarantee for credit losses. Prepare the journal entry and discuss the effects on Arness's financial statements.

BE7.15 (LO 5) Recent financial statements of **adidas** (DEU) report net sales of €21,915 million. Accounts receivable (net) are €2,410 million at the beginning of the year and €2,315 million at the end of the year. Compute adidas's accounts receivable turnover. Compute adidas's average collection period for accounts receivable in days.

***BE7.16 (LO 6)** Finman plc designated Jill Holland as petty cash custodian and established a petty cash fund of £200. The fund is reimbursed when the cash in the fund is at £15. Petty cash receipts indicate funds were disbursed for office supplies £94 and miscellaneous expense £87. Prepare journal entries for the establishment of the fund and the reimbursement.

***BE7.17 (LO 6)** Horton Corporation is preparing a bank reconciliation and has identified the following potential reconciling items. For each item, indicate if it is (1) added to balance per bank statement, (2) deducted from balance per bank statement, (3) added to balance per books, or (4) deducted from balance per books.

- a. Deposit in transit \$5,500.
- b. Bank service charges \$25.
- c. Interest credited to Horton's account \$31.
- d. Outstanding checks \$7,422.
- e. NSF check returned \$377.

***BE7.18 (LO 6)** Use the information presented in BE7.17 for Horton Corporation. Prepare any entries necessary to make Horton's accounting records correct and complete.

Exercises

E7.1 (LO 1) (Determine Cash Balance) The controller for Wallaby plc is attempting to determine the amount of cash and cash equivalents to be reported on its December 31, 2022, statement of financial position. The following information is provided.

1. Commercial savings account of £600,000 and a commercial checking account balance of £800,000 are held at First National Bank of Olathe.
2. Money market fund account held at Volonte Co. (a mutual fund organization) permits Wallaby to write checks on this balance, £5,000,000.
3. Travel advances of £180,000 for executive travel for the first quarter of next year (employee to reimburse through salary reduction).
4. A separate cash fund in the amount of £1,500,000 is restricted for the retirement of long-term debt.
5. Petty cash fund of £1,000.
6. An I.O.U. from Marianne Koch, a company customer, in the amount of £150,000.
7. A bank overdraft of £110,000 has occurred at one of the banks the company uses to deposit its cash receipts. At the present time, the company has no deposits at this bank.
8. The company has two certificates of deposit, each totaling £500,000. These CDs have a maturity of 120 days.
9. Wallaby has received a check from a customer that is dated January 12, 2023, in the amount of £125,000.
10. Wallaby has agreed to maintain a cash balance of £500,000 at all times at First National Bank of Olathe to ensure future credit availability.
11. Wallaby has purchased £2,100,000 of commercial paper of Sergio Leone Co. which is due in 60 days.
12. Currency and coin on hand amounted to £7,700.

Instructions

- a. Compute the amount of cash (and cash equivalents) to be reported on Wallaby plc's statement of financial position at December 31, 2022.
- b. Indicate the proper reporting for items that are not reported as cash on the December 31, 2022, statement of financial position.

E7.2 (LO 1) (Determine Cash Balance) The following are independent situations.

1. Checking account balance \$925,000; certificate of deposit \$1,400,000; cash advance to subsidiary of \$980,000; utility deposit paid to gas company \$180.
2. Checking account balance \$500,000; an overdraft in special checking account at same bank as normal checking account of \$17,000; cash held in a bond sinking fund \$200,000; petty cash fund \$300; coins and currency on hand \$1,350.
3. Checking account balance \$590,000; postdated check from customer \$11,000; cash restricted due to maintaining compensating balance requirement of \$100,000; certified check from customer \$9,800; postage stamps on hand \$620.

4. Checking account balance at bank \$42,000; money market balance at mutual fund (has checking privileges) \$48,000; NSF check received from customer \$800.
5. Checking account balance \$700,000; cash restricted for future plant expansion \$500,000; short-term Treasury bills \$180,000; cash advance received from customer \$900 (not included in checking account balance); cash advance of \$7,000 to company executive, payable on demand; refundable deposit of \$26,000 paid to the government to guarantee performance on construction contract.

Instructions

For each individual situation, determine the amount that should be reported as cash. If the item(s) is not reported as cash, explain the rationale.

E7.3 (LO 2) (Financial Statement Presentation of Receivables) Pique AG shows a balance of €241,140 in the Accounts Receivable account on December 31, 2022. The balance consists of the following.

Installment accounts due in 2023	€23,000
Installment accounts due after 2023 (within the operating cycle)	34,000
Overpayments to creditors	2,640
Due from regular customers, of which €40,000 represents accounts pledged as security for a bank loan	89,000
Advances to employees	1,500
Advance to subsidiary company (made in 2020)	91,000

Instructions

Illustrate how the information should be shown on the statement of financial position of Pique AG on December 31, 2022.

E7.4 (LO 2) (Determine Ending Accounts Receivable) Your accounts receivable clerk, Mary Herman, to whom you pay a salary of \$1,500 per month, has just purchased a new Audi. You decided to test the accuracy of the accounts receivable balance of \$117,000 as shown in the ledger.

The following information is available for your *first year* in business.

1. Collections from customers	\$198,000
2. Merchandise purchased	320,000
3. Ending merchandise inventory	70,000
4. Goods are marked to sell at 40% above cost	

Instructions

Compute an estimate of the ending balance of accounts receivable from customers that should appear in the ledger and any apparent shortages. Assume that all sales are made on account.

E7.5 (LO 2) (Recording Sales Gross and Net) On June 3, Bolton plc sold to Arquette Company merchandise having a sales price of £2,000 with terms of 2/10, n/60. An invoice totaling £90, terms n/30, was received by Arquette on June 8 from John Booth Transport Service for the freight cost. On June 12, the company received a check for the balance due from Arquette Company.

Instructions

- a. Prepare journal entries on the Bolton plc books to record sales and receivables for all the events noted above under each of the following bases.
 - 1. Sales and receivables are entered at gross selling price.
 - 2. Sales and receivables are entered at net of cash discounts.
- b. Prepare the journal entry under basis (a)(2), assuming that Arquette Company did not remit payment until July 29.

E7.6 (LO 2) (Recording Sales Transactions) Presented below is information from Lopez Computers.

July	1	Sold R\$30,000 of computers to Smallwood Company with terms 3/15, n/60. Lopez uses the gross method to record cash discounts.
	10	Lopez received payment from Smallwood for the full amount owed from the July transactions.
	17	Sold R\$250,000 in computers and peripherals to The Hernandez Store with terms of 2/10, n/30.
	30	The Hernandez Store paid Lopez for its purchase of July 17.

Instructions

Prepare the necessary journal entries for Lopez Computers.

E7.7 (LO 3) (Recording Bad Debts) Duncan SA reports the following financial information before adjustments.

	Dr.	Cr.
Accounts Receivable	€100,000	
Allowance for Doubtful Accounts		€ 2,000
Sales Revenue		900,000

Instructions

Prepare the journal entry to record bad debt expense assuming Duncan estimates bad debts at (a) 5% of accounts receivable and (b) 5% of accounts receivable, and the Allowance for Doubtful Accounts has a €1,500 debit balance.

E7.8 (LO 3) (Recording Bad Debts) At the end of 2022, Sorter plc has accounts receivable of £900,000 and an allowance for doubtful accounts of £40,000. On

January 16, 2023, Sorter determined that its receivable from Ordonez Orchards of £8,000 will not be collected, and management authorized its write-off.

Instructions

- a. Prepare the journal entry for Sorter plc to write off the Ordonez receivable.
- b. What is the cash realizable value of Sorter plc’s accounts receivable before the write-off of the Ordonez receivable?
- c. What is the cash realizable value of Sorter plc’s accounts receivable after the write-off of the Ordonez receivable?

E7.9 (LO 3) (Computing Bad Debts and Preparing Journal Entries) The trial balance before adjustment of Estefan Inc. shows the following balances.

	Dr.	Cr.
Accounts Receivable	\$80,000	
Allowance for Doubtful Accounts	1,750	
Sales Revenue		\$580,000

Instructions

Give the entry for estimated bad debts assuming that the allowance is to provide for doubtful accounts on the basis of (a) 4% of gross accounts receivable and (b) 5% of gross accounts receivable, and the Allowance for Doubtful accounts has a \$1,700 credit balance.

E7.10 (LO 3) (Bad-Debt Reporting) The chief accountant for Dickinson Corporation provides you with the following list of accounts receivable written off in the current year.

Date	Customer	Amount
March 31	E. L. Masters Company	\$7,800
June 30	Stephen Crane Associates	9,700
September 30	Amy Lowell’s Dress Shop	7,000
December 31	R. Frost, Inc.	9,830

Dickinson follows the policy of debiting Bad Debt Expense as accounts are written off. The chief accountant maintains that this procedure is appropriate for financial statement purposes because the tax authority will not accept other methods for recognizing bad debts.

All of Dickinson’s sales are on a 30-day credit basis. Sales for the current year total \$2,200,000. The balance in Accounts Receivable at year-end is \$77,000 and an analysis of customer risk and charge-off experience indicates that 12% of receivables will be uncollectible (assume a zero balance in the allowance).

Instructions

- a. Do you agree or disagree with Dickinson's policy concerning recognition of bad debt expense? Why or why not?
- b. By what amount would net income differ if bad debt expense was computed using the percentage-of-receivables approach?

E7.11 (LO 3) (Bad Debts—Aging) Puckett, AG includes the following account among its trade receivable (amounts in dollars).

Alstott Co.					
1/1	Balance forward	700	1/28	Cash (#1710)	1,100
1/20	Invoice #1710	1,100	4/2	Cash (#2116)	1,350
3/14	Invoice #2116	1,350	4/10	Cash (1/1 Balance)	255
4/12	Invoice #2412	1,710	4/30	Cash (#2412)	1,000
9/5	Invoice #3614	490	9/20	Cash (#3614 and part of #2412)	890
10/17	Invoice #4912	860	10/31	Cash (#4912)	860
11/18	Invoice #5681	2,000	12/1	Cash (#5681)	1,250
12/20	Invoice #6347	800	12/29	Cash (#6347)	800

Instructions

Age the balance and specify any items that apparently require particular attention at year-end.

E7.12 (LO 2, 3, 5) (Journalizing Various Receivable Transactions) The following information is related to Sanford SA.

July	1	Sanford SA sold to Legler Co. merchandise having a sales price of €10,000 with terms 2/10, net/60. Sanford records its sales and receivables net.
	5	Accounts receivable of €12,000 (gross) are factored with Rothchild Credit without guarantee at a financing charge of 9%. Cash is received for the proceeds; collections are handled by the finance company. (These accounts were all past the discount period.)
	9	Specific accounts receivable of €9,000 (gross) are pledged to Rather Credit Corp. as security for a loan of €6,000 at a finance charge of 6% of the amount of the loan. The finance company will make the collections. (All the accounts receivable are past the discount period.)
Dec.	29	Legler Co. notifies Sanford that it is bankrupt and will pay only 10% of its account. Give the entry to write off the uncollectible balance using the allowance method. (<i>Note:</i> First record the increase in the receivable on July 11 when the discount period passed.)
	31	Sanford conducts an individual assessment of a note receivable with a carrying value of €350,000. Sanford determines the present value of the note is €275,000.

Instructions

Prepare all necessary entries in general journal form for Sanford SA.

E7.13 (LO 4) (Notes Transactions at Unrealistic Interest Rates) On July 1, 2022, Rentoul plc made two sales.

1. It sold land having a fair value of £900,000 in exchange for a 4-year, zero-interest-bearing promissory note in the face amount of £1,416,163. The land is carried on Rentoul's books at a cost of £590,000.
2. It rendered services in exchange for a 3%, 8-year promissory note having a face value of £400,000 (interest payable annually).

Rentoul recently had to pay 8% interest for money that it borrowed from British National Bank. The customers in these two transactions have credit ratings that require them to borrow money at 12% interest.

Instructions

Record the two journal entries that should be recorded by Rentoul plc for the sales transactions above that took place on July 1, 2022.

E7.14 (LO 4) (Notes Receivable with Unrealistic Interest Rate) On December 31, 2022, Hurly Co. performed environmental consulting services for Cascade Co. Cascade was short of cash, and Hurly Co. agreed to accept a \$300,000 zero-interest-bearing note due December 31, 2024, as payment in full. Cascade is somewhat of a credit risk and typically borrows funds at a rate of 10%. Hurly is much more creditworthy and has various lines of credit at 6%.

Instructions

- a. Prepare the journal entry to record the transaction of December 31, 2022, for Hurly Co.
- b. Assuming Hurly Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2023.
- c. Assuming Hurly Co.'s fiscal year-end is December 31, prepare the journal entry for December 31, 2024.

E7.15 (LO 5) (Assigning Accounts Receivable) On April 1, 2022, Prince Company assigns \$500,000 of its accounts receivable to the Hibernia Bank as collateral for a \$300,000 loan due July 1, 2022. The assignment agreement calls for Prince Company to continue to collect the receivables. Hibernia Bank assesses a finance charge of 2% of the accounts receivable, and interest on the loan is 10% (a realistic rate of interest for a note of this type).

Instructions

- a. Prepare the April 1, 2022, journal entry for Prince Company.

- b. Prepare the journal entry for Prince's collection of \$350,000 of the accounts receivable during the period from April 1, 2022, through June 30, 2022.
- c. On July 1, 2022, Prince paid Hibernia all that was due from the loan it secured on April 1, 2022. Prepare the journal entry to record this payment.

E7.16 (LO 3, 5) (Journalizing Various Receivable Transactions) The trial balance before adjustment for Misumi Ltd. shows the following balances (amounts in thousands).

	Dr.	Cr.
Accounts Receivable	¥82,000	
Allowance for Doubtful Accounts	1,750	
Sales Revenue		¥430,000

Instructions

Using the data above, give the journal entries required to record each of the following cases. (Each situation is independent.)

1. To obtain additional cash, Misumi factors without guarantee of credit loss ¥20,000 of accounts receivable with Stills Finance. The finance charge is 10% of the amount factored.
2. To obtain a one-year loan of ¥55,000, Misumi assigns ¥65,000 of specific receivable accounts to Obihiro Financial. The finance charge is 8% of the loan; the cash is received and the accounts turned over to Obihiro Financial.
3. The company wants to maintain Allowance for Doubtful Accounts at 5% of gross accounts receivable.
4. Based on an aging analysis, an allowance of ¥5,800 should be reported. Assume the allowance has a credit balance of ¥1,100.

E7.17 (LO 5) (Transfer of Receivables with Guarantee) Bryant Ltd. factors receivables with a carrying amount of £200,000 to Warren Company for £190,000 and guarantees all credit losses.

Instructions

Prepare the appropriate journal entry to record this transaction on the books of Bryant Ltd.

E7.18 (LO 5) (Transfer of Receivables without Guarantee) Bohannon SA factors €250,000 of accounts receivable with Winkler Financing, on a without guarantee (no recourse) basis. Winkler Financing will collect the receivables. The receivables records are transferred to Winkler Financing on August 15, 2022. Winkler Financing assesses a finance charge of 2% of the amount of accounts receivable and also reserves an amount equal to 4% of accounts receivable to cover probable adjustments.

Instructions

- a. What conditions must be met for a transfer of receivables with guarantee to be accounted for as a sale?
- b. Assume the conditions from part (a) are met. Prepare the journal entry on August 15, 2022, for Bohannon to record the sale of receivables.

E7.19 (LO 5) (Transfer of Receivables without Guarantee) SEK Group factors ¥400,000 of accounts receivable with Mays Finance without guaranteeing any payment for possible credit losses (without recourse) on July 1, 2022. The receivables records are transferred to Mays Finance, which will receive the collections. Mays Finance assesses a finance charge of 1½% of the amount of accounts receivable and retains an amount equal to 4% of accounts receivable to cover sales discounts, returns, and allowances. The transaction is to be recorded as a sale.

Instructions

- a. Prepare the journal entry on July 1, 2022, for SEK Group to record the sale of receivables without recourse.
- b. Prepare the journal entry on July 1, 2022, for Mays Finance to record the purchase of receivables without recourse.

E7.20 (LO 2, 5) (Analysis of Receivables) The following information is for Grant AG.

1. Beginning-of-the-year Accounts Receivable balance was €15,000.
2. Net sales (all on account) for the year were €100,000. Grant does not offer cash discounts.
3. Collections on accounts receivable during the year were €80,000.

Instructions

- a. Prepare (summary) journal entries to record the items noted above.
- b. Compute Grant's accounts receivable turnover for the year. The company does not believe it will have any bad debts.
- c. Use the turnover ratio computed in (b) to analyze Grant's liquidity. The turnover ratio last year was 7.0.

E7.21 (LO 5) (Transfer of Receivables) Use the information for Grant AG as presented in E7.20. Grant is planning to factor some accounts receivable at the end of the year. Accounts totaling €10,000 will be transferred to Credit Factors without guarantee. Credit Factors will retain 5% of the balances for probable adjustments and assesses a finance charge of 4%.

Instructions

- a. Prepare the journal entry to record the sale of the receivables.
- b. Compute Grant's accounts receivable turnover for the year, assuming the receivables are sold. Discuss how factoring of receivables affects the turnover ratio.

***E7.22 (LO 6) (Petty Cash)** McMann, Inc. decided to establish a petty cash fund to help ensure internal control over its small cash expenditures. The following information is available for the month of April.

1. On April 1, it established a petty cash fund in the amount of \$200.
2. A summary of the petty cash expenditures made by the petty cash custodian as of April 10 is as follows.

Delivery charges paid on merchandise purchased	\$60
Supplies purchased and used	25
Postage expense	40
I.O.U. from employees	17
Miscellaneous expense	36

The petty cash fund was replenished on April 10. The balance in the fund was \$12.

3. The petty cash fund balance was increased \$100 to \$300 on April 20.

Instructions

Prepare the journal entries to record transactions related to petty cash for the month of April.

***E7.23 (LO 6) (Petty Cash)** The petty cash fund of Teasdale's Auto Repair Service, a sole proprietorship, contains the following.

1. Coins and currency		\$ 10.20
2. Postage stamps		7.90
3. An I.O.U. from Richie Cunningham, an employee, for cash advance		40.00
4. Check payable to Teasdale's Auto Repair from Pottsie Weber, an employee, marked NSF		34.00
5. Vouchers for the following:		
Stamps	\$ 20.00	
Two Premier Cup tickets for Nick Teasdale	170.00	
Printer cleaning	14.35	204.35
		<u>\$296.45</u>

The general ledger account Petty Cash has a balance of \$300.

Instructions

Prepare the journal entry to record the reimbursement of the petty cash fund.

***E7.24 (LO 6) (Bank Reconciliation and Adjusting Entries)** Kipling plc deposits all receipts and makes all payments by check. The following information is available from the cash records.

June 30 Bank Reconciliation	
Balance per bank	£7,000
Add: Deposits in transit	1,540
Deduct: Outstanding checks	2,000
Balance per books	<u>£6,540</u>

Month of July Results		
	Per Bank	Per Books
Balance July 31	£8,650	£9,250
July deposits	4,500	5,810
July checks	4,000	3,100
July note collected (not included in July deposits)	1,500	—
July bank service charge	15	—
July NSF check from a customer, returned by the bank (recorded by bank as a charge)	335	—

Instructions

- a. Prepare a bank reconciliation going from balance per bank and balance per book to correct the cash balance.
- b. Prepare the general journal entry or entries to correct the Cash account.

***E7.25 (LO 6) (Bank Reconciliation and Adjusting Entries)** Aragon Company has just received the August 31, 2022, bank statement, which is summarized below.

County National Bank	Disbursements	Receipts	Balance
Balance, August 1			\$ 9,369
Deposits during August		\$32,200	41,569
Note collected for depositor, including \$40 interest		1,040	42,609
Checks cleared during August	\$34,500		8,109
Bank service charges	20		8,089
Balance, August 31			8,089

The general ledger Cash account contained the following entries for the month of August.

Cash			
Balance, August 1	10,050	Disbursements in August	35,403
Receipts during August	35,000		

Deposits in transit at August 31 are \$3,800, and checks outstanding at August 31 total \$1,550. Cash on hand at August 31 is \$310. The bookkeeper improperly entered one check in the books at \$146.50 which was written for \$164.50 for supplies (expense); it cleared the bank during the month of August.

Instructions

- Prepare a bank reconciliation dated August 31, 2022, proceeding to a correct balance.
- Prepare any entries necessary to make the books correct and complete.
- What amount of cash should be reported in the August 31 statement of financial position?

Problems

P7.1 (LO 1) (Determine Proper Cash Balance) Francis Equipment AG closes its books regularly on December 31, but at the end of 2022 it held its cash account open so that a more favorable statement of financial position could be prepared for credit purposes. Cash receipts and disbursements for the first 10 days of January were recorded as December transactions. The information is given below.

- January cash receipts recorded in the December cash account totaled €45,640, of which €28,000 represents cash sales, and €17,640 represents collections on account for which cash discounts of €360 were given.
- January cash disbursements recorded in the December check register liquidated accounts payable of €22,450 on which discounts of €250 were taken.
- The ledger has not been closed for 2022.
- The amount shown as inventory was determined by physical count on December 31, 2022.

The company uses the periodic method of inventory.

Instructions

- Prepare any entries you consider necessary to correct Francis's accounts at December 31.
- To what extent was Francis Equipment AG able to show a more favorable statement of financial position at December 31 by holding its cash book open?

(Compute working capital and the current ratio.) Assume that the statement of financial position that was prepared by the company showed the following amounts:

	Dr.	Cr.
Cash	€39,000	
Accounts receivable	42,000	
Inventory	67,000	
Accounts payable		€45,000
Other current liabilities		14,200

P7.2 (LO 3) Groupwork (Bad-Debt Reporting) The following are a series of unrelated situations.

1. Halen Company's unadjusted trial balance at December 31, 2022, included the following accounts.

	Debit	Credit
Accounts receivable	\$53,000	
Allowance for doubtful accounts	4,000	
Net sales		\$1,200,000

Halen Company estimates its bad debt expense to be 7% of gross accounts receivable. Determine its bad debt expense for 2022.

2. An analysis and aging of Stuart Corp. accounts receivable at December 31, 2022, disclosed the following.

Amounts estimated to be uncollectible	\$ 180,000
Accounts receivable	1,750,000
Allowance for doubtful accounts (per books)	125,000

What is the cash realizable value of Stuart's receivables at December 31, 2022?

3. Shore Co. provides for doubtful accounts based on 4% of gross accounts receivable, which had a balance of \$1,500,000 at year-end. The following data are available for 2022.

Credit sales during 2022	\$4,400,000
Allowance for doubtful accounts 1/1/22	17,000
Collection of accounts written off in prior years (customer credit was reestablished)	8,000
Customer accounts written off as uncollectible during 2022	30,000

What is the balance in Allowance for Doubtful Accounts at December 31, 2022?

4. At the end of its first year of operations, December 31, 2022, Darden Inc. reported the following information.

Accounts receivable, net of allowance for doubtful accounts	\$950,000
Customer accounts written off as uncollectible during 2022	24,000
Bad debt expense for 2022	84,000

What should be the balance in accounts receivable at December 31, 2022, before subtracting the allowance for doubtful accounts?

5. The following accounts were taken from Bullock Inc.'s trial balance at December 31, 2022.

	Debit	Credit
Net credit sales		\$750,000
Allowance for doubtful accounts	\$ 14,000	
Accounts receivable	310,000	

If doubtful accounts are 3% of accounts receivable, determine the bad debt expense to be reported for 2022.

Instructions

Answer the questions relating to each of the five independent situations as requested.

P7.3 (LO 3) (Bad-Debt Reporting—Aging) Manilow Corporation operates in an industry that has a high rate of bad debts. Before any year-end adjustments, the balance in Manilow's Accounts Receivable was \$555,000 and Allowance for Doubtful Accounts had a credit balance of \$40,000. The year-end balance reported in the statement of financial position for Allowance for Doubtful Accounts will be based on the following aging schedule.

Days Account Outstanding	Amount	Probability of Collection
Less than 16 days	\$300,000	.98
16–30 days	100,000	.90
31–45 days	80,000	.85
46–60 days	40,000	.80
61–75 days	20,000	.55
Over 75 days	15,000	.00

Instructions

- a. What is the appropriate balance for Allowance for Doubtful Accounts at year-end?

- b. Show how accounts receivable would be presented on the statement of financial position.
- c. What is the dollar effect of the year-end bad debt adjustment on the before-tax income?

P7.4 (LO 3) (Bad-Debt Reporting) From inception of operations to December 31, 2022, Fortner plc provided for uncollectible accounts receivable under the allowance method. The provisions are recorded based on analysis of customers with different risk characteristics. Bad debts written off were charged to the allowance account; recoveries of bad debts previously written off were credited to the allowance account; and no year-end adjustments to the allowance account were made. Fortner’s usual credit terms are net 30 days.

The balance in Allowance for Doubtful Accounts was £130,000 at January 1, 2022. During 2022, credit sales totaled £9,000,000, the provision for doubtful accounts was determined to be £180,000, £90,000 of bad debts were written off, and recoveries of accounts previously written off amounted to £15,000. Fortner installed a computer system in November 2022, and an aging of accounts receivable was prepared for the first time as of December 31, 2022. A summary of the aging is as follows.

Classification by Month of Sale	Balance in Each Category	Estimated %Uncollectible
November–December 2022	£1,080,000	2%
July–October	650,000	10%
January–June	420,000	25%
Prior to 1/1/22	150,000	80%
	<u>£2,300,000</u>	

Based on the review of collectibility of the account balances in the “prior to 1/1/22” aging category, additional receivables totaling £60,000 were written off as of December 31, 2022. The 80% uncollectible estimate applies to the remaining £90,000 in the category. Effective with the year ended December 31, 2022, Fortner adopted a different method for estimating the allowance for doubtful accounts at the amount indicated by the year-end aging analysis of accounts receivable.

Instructions

- a. Prepare a schedule analyzing the changes in Allowance for Doubtful Accounts for the year ended December 31, 2022. Show supporting computations in good form. (*Hint:* In computing the 12/31/22 allowance, subtract the £60,000 write-off.)
- b. Prepare the journal entry for the year-end adjustment to the Allowance for Doubtful Accounts balance as of December 31, 2022.

P7.5 (LO 3) (Bad-Debt Reporting) The following is information related to the Accounts Receivable accounts of Gulistan AG during the current year 2022.

1. An aging schedule of the accounts receivable as of December 31, 2022, is as follows.

Age	Net Debit Balance	% to Be Applied after Correction Is Made
Under 60 days	€172,342	1%
60–90 days	136,490	3%
91–120 days	39,924*	6%
Over 120 days	23,644	€3,700 definitely uncollectible; estimated remainder uncollectible is 25%
	<u>€372,400</u>	

*The €3,240 write-off of receivables is related to the 91-to-120 day category.

2. The Accounts Receivable account has a debit balance of €372,400 on December 31, 2022.
3. Two entries were made in the Bad Debt Expense account during the year: (1) a debit on December 31 for the amount credited to Allowance for Doubtful Accounts, and (2) a credit for €3,240 on November 3, 2022, and a debit to Allowance for Doubtful Accounts because of a bankruptcy.
4. Allowance for Doubtful Accounts is as follows for 2022.

Allowance for Doubtful Accounts					
Nov. 3	Uncollectible accounts		Jan. 1	Beginning balance	8,750
	written off	3,240	Dec. 31	5% of €372,400	18,620

5. A credit balance exists in Accounts Receivable (60–90 days) of €4,840, which represents an advance on a sales contract.

Instructions

Assuming that the books have not been closed for 2022, make the necessary correcting entries.

P7.6 (LO 2, 3) (Journalize Various Accounts Receivable Transactions) The statement of financial position of Stancia SA at December 31, 2021, includes the following (in thousands).

Notes receivable	R\$ 36,000	
Accounts receivable	182,100	
Less: Allowance for doubtful accounts	<u>17,300</u>	R\$200,800

Transactions in 2022 include the following.

1. Accounts receivable of R\$138,000 were collected including accounts of R\$60,000 on which 2% sales discounts were allowed.
2. R\$5,300 was received in payment of an account which was written off the books as worthless in 2022. (*Hint: Reestablish the receivable account.*)
3. Customer accounts of R\$17,500 were written off during the year.
4. At year-end, Allowance for Doubtful Accounts was estimated to need a balance of R\$20,000. This estimate is based on an analysis of aged accounts receivable.

Instructions

Prepare all journal entries necessary to reflect the transactions above.

P7.7 (LO 4) (Notes Receivable with Realistic Interest Rate) On October 1, 2022, Arden Farm Equipment Company sold a pecan-harvesting machine to Valco Brothers Farm. In lieu of a cash payment Valco Brothers Farm gave Arden a 2-year, \$120,000, 8% note (a realistic rate of interest for a note of this type). The note required interest to be paid annually on October 1. Arden's financial statements are prepared on a calendar-year basis.

Instructions

Assuming Valco Brothers Farm fulfills all the terms of the note, prepare the necessary journal entries for Arden Farm Equipment Company for the entire term of the note.

P7.8 (LO 4) (Notes Receivable Journal Entries) On December 31, 2022, Regent plc rendered services to Begin Group at an agreed price of £102,049, accepting £40,000 down and agreeing to accept the balance in four equal installments of £20,000 receivable each December 31. An assumed interest rate of 11% is imputed.

Instructions

Prepare the entries that would be recorded by Regent plc for the sale and for the receipts and interest on the following dates. (Assume that the effective-interest method is used for amortization purposes.)

- a. December 31, 2022.
- b. December 31, 2023.
- c. December 31, 2024.
- d. December 31, 2025.
- e. December 31, 2026.

P7.9 (LO 4) (Comprehensive Receivables Problem) Braddock Inc. had the following long-term receivable account balances at December 31, 2021.

Note receivable from sale of division	\$1,500,000
Note receivable from officer	400,000

Transactions during 2022 and other information relating to Braddock's long-term receivables were as follows.

1. The \$1,500,000 note receivable is dated May 1, 2021, bears interest at 9%, and represents the balance of the consideration received from the sale of Braddock's electronics division to New York Company. Principal payments of \$500,000 plus appropriate interest are due on May 1, 2022, 2023, and 2024. The first principal and interest payment was made on May 1, 2022. Collection of the note installments is reasonably assured.
2. The \$400,000 note receivable is dated December 31, 2021, bears interest at 8%, and is due on December 31, 2024. The note is due from Sean May, president of Braddock Inc., and is collateralized by 10,000 of Braddock's ordinary shares. Interest is payable annually on December 31, and all interest payments were paid on their due dates through December 31, 2022. The quoted market price of Braddock's ordinary shares was \$45 per share on December 31, 2022.
3. On April 1, 2022, Braddock sold a patent to Pennsylvania Company in exchange for a \$100,000 zero-interest-bearing note due on April 1, 2024. There was no established exchange price for the patent, and the note had no ready market. The prevailing rate of interest for a note of this type at April 1, 2022, was 12%. The present value of \$1 for two periods at 12% is 0.797 (use this factor). The patent had a carrying value of \$40,000 at January 1, 2022, and the amortization for the year ended December 31, 2022, would have been \$8,000. The collection of the note receivable from Pennsylvania is reasonably assured.
4. On July 1, 2022, Braddock sold a parcel of land to Splinter Company for \$200,000 under an installment sale contract. Splinter made a \$60,000 cash down payment on July 1, 2022, and signed a 4-year 11% note for the \$140,000 balance. The equal annual payments of principal and interest on the note will be \$45,125 payable on July 1, 2023, through July 1, 2026. The land could have been sold at an established cash price of \$200,000. The cost of the land to Braddock was \$150,000. Circumstances are such that the collection of the installments on the note is reasonably assured.

Instructions

- a. Prepare the long-term receivables section of Braddock's statement of financial position at December 31, 2022.
- b. Prepare a schedule showing the current portion of the long-term receivables and accrued interest receivable that would appear in Braddock's statement of financial position at December 31, 2022.
- c. Prepare a schedule showing interest revenue from the long-term receivables that would appear on Braddock's income statement for the year ended December 31, 2022.

P7.10 (LO 5) (Assigned Accounts Receivable—Journal Entries) Salen Ltd. finances some of its current operations by assigning accounts receivable to a finance company. On July 1, 2022, it assigned, under guarantee, specific accounts amounting to ¥150,000,000. The finance company advanced to Salen 80% of the accounts assigned (20% of the total to be withheld until the finance company has made its full recovery), less a finance charge of ½% of the total accounts assigned.

On July 31, Salen Ltd. received a statement that the finance company had collected ¥80,000,000 of these accounts and had made an additional charge of ½% of the total accounts outstanding as of July 31. This charge is to be deducted at the time of the first remittance due Salen from the finance company. (*Hint:* Make entries at this time.) On August 31, 2022, Salen received a second statement from the finance company, together with a check for the amount due. The statement indicated that the finance company had collected an additional ¥50,000,000 and had made a further charge of ½% of the balance outstanding as of August 31.

Instructions

Make all entries on the books of Salen Ltd. that are involved in the transactions above.

P7.11 (LO 5) Groupwork (Income Effects of Receivables Transactions)

Sandburg Mining requires additional cash for its business. Sandburg has decided to use its accounts receivable to raise the additional cash and has asked you to determine the income statement effects of the following contemplated transactions.

1. On July 1, 2022, Sandburg assigned €400,000 of accounts receivable to Keller Finance Company. Sandburg received an advance from Keller of 80% of the assigned accounts receivable less a commission of 3% on the advance. Prior to December 31, 2022, Sandburg collected €220,000 on the assigned accounts receivable, and remitted €232,720 to Keller, €12,720 of which represented interest on the advance from Keller.
2. On December 1, 2022, Sandburg sold €300,000 of net accounts receivable to Wunsch Company for €270,000. The receivables were sold outright on a without guarantee (recourse) basis.
3. On December 31, 2022, Sandburg received an advance of €120,000 from First Bank by pledging €160,000 of its accounts receivable. Sandburg's first payment to First Bank is due on January 30, 2023.

Instructions

Prepare a schedule showing the income statement effects for the year ended December 31, 2022, as a result of the above facts.

***P7.12 (LO 6) (Petty Cash, Bank Reconciliation)** Bill Jovi is reviewing the cash accounting for Nettleman, plc, a local mailing service. Jovi's review will focus on the petty cash account and the bank reconciliation for the month ended May 31, 2022. He has collected the following information from Nettleman's bookkeeper for this task.

Petty Cash

1. The petty cash fund was established on May 10, 2022, in the amount of £250.
2. Expenditures from the fund by the custodian as of May 31, 2022, were evidenced by approved receipts for the following.

Postage expense	£33.00
Mailing labels and other supplies	65.00
I.O.U. from employees	30.00
Shipping charges	57.45
Newspaper advertising	22.80
Miscellaneous expense	15.35

On May 31, 2022, the petty cash fund was replenished and increased to £300; currency and coin in the fund at that time totaled £26.40.

Bank Reconciliation

Shire Bank Bank Statement			
	Disbursements	Receipts	Balance
Balance, May 1, 2022			£8,769
Deposits		£28,000	
Note payment direct from customer (interest of £30)		930	
Checks cleared during May	£31,150		
Bank service charges	27		
Balance, May 31, 2022			6,522

Nottleman's Cash Account	
Balance, May 1, 2022	£ 8,850
Deposits during May 2022	31,000
Checks written during May 2022	(31,835)

Deposits in transit are determined to be £3,000, and checks outstanding at May 31 total £850. Cash on hand (besides petty cash) at May 31, 2022, is £246.

Instructions

- a. Prepare the journal entries to record the transactions related to the petty cash fund for May.

- b. Prepare a bank reconciliation dated May 31, 2022, proceeding to a correct cash balance, and prepare the journal entries necessary to make the books correct and complete.
- c. What amount of cash should be reported in the May 31, 2022, statement of financial position?

***P7.13 (LO 6) (Bank Reconciliation and Adjusting Entries)** The Cash account of Aguilar Co. showed a ledger balance of \$3,969.85 on June 30, 2022. The bank statement as of that date showed a balance of \$4,150. Upon comparing the statement with the cash records, the following facts were determined.

1. There were bank service charges for June of \$25.
2. A bank memo stated that Bao Dai's note for \$1,200 and interest of \$36 had been collected on June 29, and the bank had made a charge of \$5.50 on the collection. (No entry had been made on Aguilar's books when Bao Dai's note was sent to the bank for collection.)
3. Receipts for June 30 for \$3,390 were not deposited until July 2.
4. Checks outstanding on June 30 totaled \$2,136.05.
5. The bank had reduced Aguilar Co.'s account for a customer's uncollectible check amounting to \$253.20 on June 29.
6. A customer's check for \$90 (payment on account) had been entered as \$60 in the cash receipts journal by Aguilar on June 15.
7. Check no. 742 in the amount of \$491 had been entered in the cash journal as \$419, and check no. 747 in the amount of \$58.20 had been entered as \$582. Both checks had been issued to pay for purchases of equipment.

Instructions

- a. Prepare a bank reconciliation dated June 30, 2022, proceeding to a correct cash balance.
- b. Prepare any entries necessary to make the books correct and complete.

***P7.14 (LO 6) (Bank Reconciliation and Adjusting Entries)** The following information is related to Haselhof Inc.

Balance per books at October 31, \$41,847.85; November receipts \$173,523.91; November disbursements \$164,893.54. Balance per bank statement November 30, \$56,274.20.

The following checks were outstanding at November 30.

1224	\$1,635.29
1230	2,468.30

1232	2,125.15
1233	482.17

Included with the November bank statement and not recorded by the company were a bank debit memo for \$27.40 covering bank charges for the month, a debit memo for \$372.13 for a customer's check returned and marked NSF, and a credit memo for \$1,400 representing bond interest collected by the bank in the name of Haselhof Inc. Cash on hand at November 30 recorded and awaiting deposit amounted to \$1,915.40.

Instructions

- Prepare a bank reconciliation (to the correct balance) at November 30 for Haselhof Inc. from the information above.
- Prepare any journal entries required to adjust the cash account at November 30.

Concepts for Analysis

CA7.1 (LO 3) (Bad-Debt Accounting) Simms Company has significant amounts of trade accounts receivable. Simms uses the allowance method to estimate bad debts instead of the direct write-off method. During the year, some specific accounts were written off as uncollectible, and some that were previously written off as uncollectible were collected.

Instructions

- What are the deficiencies of the direct write-off method?
- Describe the allowance method used to estimate bad debts and the theoretical justification for its use.
- How should Simms account for the collection of the specific accounts previously written off as uncollectible?

CA7.2 (LO 3, 5) (Various Receivable Accounting Issues) Kimmel Company uses the net method of accounting for sales discounts. Kimmel also offers trade discounts to various groups of buyers.

On August 1, 2022, Kimmel sold some accounts receivable on a without guarantee (recourse) basis. Kimmel incurred a finance charge.

Kimmel also has some notes receivable bearing an appropriate rate of interest. The principal and total interest are due at maturity. The notes were received on October 1, 2022, and mature on September 30, 2024. Kimmel's operating cycle is less than one year.

Instructions

-

1. Using the net method, how should Kimmel account for the sales discounts at the date of sale? What is the rationale for the amount recorded as sales under the net method?
 2. Using the net method, what is the effect on Kimmel's sales revenues and net income when customers do not take the sales discounts?
- b. What is the effect of trade discounts on sales revenues and accounts receivable? Why?
 - c. How should Kimmel report the accounts receivable factored on August 1, 2022? Why?
 - d. How should Kimmel report the note receivable and the related interest on December 31, 2022? Why?

CA7.3 (LO 3) Writing (Bad-Debt Reporting Issues) Clark Pierce conducts a wholesale merchandising business that sells approximately 5,000 items per month with a total monthly average sales value of €250,000. Its annual bad debt rate has been approximately 1½% of gross receivables. In recent discussions with his bookkeeper, Mr. Pierce has become confused by all the alternatives apparently available in handling the Allowance for Doubtful Accounts balance. The following information has been presented to Pierce.

1. An allowance can be set up (a) on the basis of a percentage of receivables or (b) on the basis of a valuation of all past due or otherwise questionable accounts receivable. Those considered uncollectible can be charged to such allowance at the close of the accounting period, or specific items can be charged off directly against (1) Gross Sales or to (2) Bad Debt Expense in the year in which they are determined to be uncollectible.
2. Collection agency and legal fees, and so on, incurred in connection with the attempted recovery of bad debts can be charged to (a) Bad Debt Expense, (b) Allowance for Doubtful Accounts, (c) Legal Expense, or (d) General Expense.
3. Debts previously written off in whole or in part but currently recovered can be credited to (a) Other Revenue, (b) Bad Debt Expense, or (c) Allowance for Doubtful Accounts.

Instructions

Which of the above methods would you recommend to Mr. Pierce in regard to (1) allowances and account write-offs, (2) collection expenses, and (3) recoveries? State briefly and clearly the reasons supporting your recommendations.

CA7.4 (LO 2, 4) Writing (Basic Note and Accounts Receivable Transactions)

Part 1: On July 1, 2022, Wallace Company, a calendar-year company, sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Wallace Company will receive interest at the prevailing rate for a

note of this type. Both the principal and interest are due in one lump sum on June 30, 2023.

Instructions

When should Wallace Company report interest revenue from the note receivable? Discuss the rationale for your answer.

Part 2: On December 31, 2022, Wallace Company had significant amounts of accounts receivable as a result of credit sales to its customers. Wallace uses the allowance method based on credit sales to estimate bad debts. Past experience indicates that a reliable estimate of uncollectible accounts can be developed based on an aging analysis of receivable balances. This pattern is expected to continue.

Instructions

- a. Discuss the rationale for using the allowance method based on the balance in the trade receivables accounts.
- b. How should Wallace Company report the allowance for doubtful accounts on its statement of financial position at December 31, 2022? Also, describe the alternatives, if any, for presentation of bad debt expense in Wallace Company’s 2022 income statement.

CA7.5 (LO 3) (Bad-Debt Reporting Issues) Valasquez SA sells office equipment and supplies to many organizations in the city and surrounding area on contract terms of 2/10, n/30. In the past, over 75% of the credit customers have taken advantage of the discount by paying within 10 days of the invoice date.

The number of customers taking the full 30 days to pay has increased within the last year. Current indications are that less than 60% of the customers are now taking the discount. Bad debts as a percentage of gross credit sales have risen from 1.5% in past years to about 4% in the current year.

The controller has responded to a request for more information on the deterioration in collections of accounts receivable with the report reproduced below.

Valasquez SA		
Finance Committee Report—Accounts Receivable Collections		
May 31, 2022		
<p>The fact that some credit accounts will prove uncollectible is normal. Annual bad debt write-offs have been 1.5% of gross credit sales over the past five years. During the last fiscal year, this percentage increased to 4%. The current Accounts Receivable balance is R\$1,600,000. The condition of this balance in terms of age and probability of collection is as follows.</p>		
Proportion of Total	Age Categories	Probability of Collection
68%	not yet due	99%
15%	less than 30 days past due	96½%

8%	30 to 60 days past due	95%
5%	61 to 120 days past due	91%
2½%	121 to 180 days past due	70%
1½%	over 180 days past due	20%

Allowance for Doubtful Accounts had a credit balance of R\$43,300 on June 1, 2021. Valasquez SA has provided for a monthly bad debt expense accrual during the current fiscal year based on the assumption that 4% of gross credit sales will be uncollectible. Total gross credit sales for the 2021–2022 fiscal year amounted to R\$4,000,000. Write-offs of bad accounts during the year totaled R\$145,000.

Instructions

- a. Prepare an accounts receivable aging schedule for Valasquez SA using the age categories identified in the controller’s report to the finance committee showing:
 1. The amount of accounts receivable outstanding for each age category and in total.
 2. The estimated amount that is uncollectible for each category and in total.
- b. Compute the amount of the year-end adjustment necessary to bring Allowance for Doubtful Accounts to the balance indicated by the aging analysis. Then, prepare the necessary journal entry to adjust the accounting records.
- c. In a recessionary environment with tight credit and high interest rates:
 1. Identify steps Valasquez SA might consider to improve the accounts receivable situation.
 2. Then evaluate each step identified in terms of the risks and costs involved.

CA7.6 (LO 4) (Sale of Notes Receivable) Corrs Wholesalers Co. sells industrial equipment for a standard 3-year note receivable. Revenue is recognized at time of sale. Each note is secured by a lien on the equipment and has a face amount equal to the equipment’s list price. Each note’s stated interest rate is below the customer’s market rate at date of sale. All notes are to be collected in three equal annual installments beginning one year after sale. Some of the notes are subsequently sold to a bank with guarantee (recourse), some are subsequently sold without guarantee (recourse), and some are retained by Corrs. At year-end, Corrs evaluates all outstanding notes receivable and provides for estimated losses arising from defaults.

Instructions

- a. What is the appropriate valuation basis for Corrs’s notes receivable at the date it sells equipment?
- b. How should Corrs account for the sale, without guarantee (recourse), of a February 1, 2022, note receivable sold on May 1, 2022? Why is it appropriate to

account for it in this way?

- c. At December 31, 2022, how should Corrs measure and account for the impact of estimated losses resulting from notes receivable that it
 1. Retained and did **not** sell?
 2. Sold to bank with guarantee (recourse)?

CA7.7 (LO 4) (Zero-Interest-Bearing Note Receivable) On September 30, 2022, Rolen Machinery Co. sold a machine and accepted the customer's zero-interest-bearing note. Rolen normally makes sales on a cash basis. Since the machine was unique, its sales price was not determinable using Rolen's normal pricing practices.

After receiving the first of two equal annual installments on September 30, 2023, Rolen immediately sold the note with guarantee. On October 9, 2024, Rolen received notice that the note was dishonored, and it paid all amounts due. At all times prior to default, the note was reasonably expected to be paid in full.

Instructions

- a.
 1. How should Rolen determine the sales price of the machine?
 2. How should Rolen report the effects of the zero-interest-bearing note on its income statement for the year ended December 31, 2022? Why is this accounting presentation appropriate?
- b. What are the effects of the sale of the note receivable with guarantee on Rolen's income statement for the year ended December 31, 2023, and its statement of financial position at December 31, 2023?
- c. How should Rolen account for the effects of the note being dishonored?

CA7.8 (LO 4) Groupwork (Reporting of Notes Receivable, Interest, and Sale of Receivables) On July 1, 2022, Moresan Company sold special-order merchandise on credit and received in return an interest-bearing note receivable from the customer. Moresan will receive interest at the prevailing rate for a note of this type. Both the principal and interest are due in one lump sum on June 30, 2023.

On September 1, 2022, Moresan sold special-order merchandise on credit and received in return a zero-interest-bearing note receivable from the customer. The prevailing rate of interest for a note of this type is determinable. The note receivable is due in one lump sum on August 31, 2024.

Moresan also has significant amounts of accounts receivable as a result of credit sales to its customers. On October 1, 2022, some accounts receivable were assigned to Indigo Finance Company on a non-notification basis (Moresan handles collections) for an advance of 75% of their amount at an interest charge of 8% on the balance outstanding.

On November 1, 2022, other accounts receivable were sold on a without guarantee (recourse) basis. The factor withheld 5% of the accounts receivable factored as protection against sales returns and allowances and charged a finance charge of 3%.

Instructions

- a. How should Moresan determine the interest revenue for 2022 on the:
 - 1. Interest-bearing note receivable? Why?
 - 2. Zero-interest-bearing note receivable? Why?
- b. How should Moresan report the interest-bearing note receivable and the zero-interest-bearing note receivable on its statement of financial position at December 31, 2022?
- c. How should Moresan account for subsequent collections on the accounts receivable assigned on October 1, 2022, and the payments to Indigo Finance? Why?
- d. How should Moresan account for the accounts receivable factored on November 1, 2022? Why?

CA7.9 (LO 4) Writing (Accounting for Zero-Interest-Bearing Note) Soon after beginning the year-end audit work on March 10 at Engone plc, the auditor has the following conversation with the controller.

Controller:	The year ended March 31st should be our most profitable in history and, as a consequence, the board of directors has just awarded the officers generous bonuses.
Auditor:	I thought profits were down this year in the industry, according to your latest interim report.
Controller:	Well, they were down, but 10 days ago we closed a deal that will give us a substantial increase for the year.
Auditor:	Oh, what was it?
Controller:	Well, you remember a few years ago our former president bought shares in Henderson Enterprises because he had those grandiose ideas about becoming a conglomerate. For 6 years, we have not been able to sell these shares, which cost us £3,000,000 and have not paid anything in dividends. Thursday, we sold these shares to Bimini Ltd. for £4,000,000. So, we will have a gain of £700,000 (£1,000,000 pretax) which will increase our net income for the year to £4,000,000, compared with last year's £3,800,000. As far as I know, we'll be the only company in the industry to register an increase in net income this year. That should help the market price of the shares!
Auditor:	Do you expect to receive the £4,000,000 in cash by March 31st, your fiscal year-end?

Controller:	No. Although Bimini Ltd. is an excellent company, it is a little tight for cash because of its rapid growth. Consequently, we will receive a £4,000,000 zero-interest-bearing note with payments of £400,000 per year for the next 10 years. The first payment is due on March 31 of next year.
Auditor:	Why is the note zero-interest-bearing?
Controller:	Because that's what everybody agreed to. Since we don't have any interest-bearing debt, the funds invested in the note do not cost us anything. Besides, we were not getting any dividends on the Henderson Enterprises shares.

Instructions

Do you agree with the way the controller has accounted for the transaction? If not, how should the transaction be accounted for?

CA7.10 (LO 3) Writing (Receivables Management) As the manager of the accounts receivable department for Beavis Leather Goods, Ltd., you recently noticed that Kelly Collins, your accounts receivable clerk, who is paid \$1,200 per month, has been wearing unusually tasteful and expensive clothing. (This is Beavis's first year in business.) This morning, Collins drove up to work in a brand new Lexus.

Naturally suspicious by nature, you decide to test the accuracy of the accounts receivable balance of \$132,000 as shown in the ledger. The following information is available for your first year (precisely 9 months ended September 30, 2022) in business.

1. Collections from customers	\$188,000
2. Merchandise purchased	360,000
3. Ending merchandise inventory	90,000
4. Goods are marked to sell at 40% above cost.	

Instructions

Assuming all sales were made on account, compute the ending accounts receivable balance that should appear in the ledger, noting any apparent shortage. Then, draft a memo dated October 3, 2022, to Mark Price, the branch manager, explaining the facts in this situation. Remember that this problem is serious, and you do not want to make hasty accusations.

CA7.11 (LO 3) Ethics (Bad-Debt Reporting) Marvin Company is a subsidiary of Hughes Corp. The controller believes that the yearly allowance for doubtful accounts for Marvin should be 8% of gross accounts receivable. The president, nervous that the parent company might expect the subsidiary to sustain its 10% growth rate, suggests that the controller increase the allowance for doubtful accounts to 9% yearly. The president thinks that the lower net income, which reflects a 6% growth rate, will be a more sustainable rate for Marvin Company.

Instructions

- a. Should the controller be concerned with Marvin Company's growth rate in estimating the allowance? Explain your answer.
- b. Does the president's request pose an ethical dilemma for the controller? Give your reasons.

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What criteria does M&S use to classify "Cash and cash equivalents" as reported in its statement of financial position?
- b. As of March 30, 2019, what balances did M&S have in cash and cash equivalents? What were the major uses of cash during the year?
- c. What amounts related to trade receivables does M&S report? Does M&S have any past due but not impaired receivables?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What were the cash and cash equivalents reported by adidas and Puma at the end of 2018? What does each company classify as cash equivalents?
- b. What were the accounts receivable (net) for adidas and Puma at the end of 2018? Which company reports the greater allowance for doubtful accounts receivable (amount and percentage of gross receivable) at the end of 2018?

- c. Assuming that all “Net sales” (adidas) and all “Sales” (Puma) were net *credit* sales, compute the accounts receivable turnovers for 2018 for adidas and Puma; also compute the days outstanding for receivables. What is your evaluation of the difference?

Financial Statement Analysis Cases

Case 1: PetroChina Company Limited

PetroChina Company Limited (CHN) reported the following information in a recent annual report.

PetroChina Company Limited Consolidated Balance Sheets (in RMB millions)		
Assets at December 31	Current Year	Prior Year
Current assets		
Cash at bank and on hand	49,953	64,299
Notes receivable	9,981	12,688
Accounts receivable	64,450	53,822
Advances to suppliers	32,813	39,296
Other receivables	14,165	8,576
Inventories	214,117	182,253
Other current assets	<u>32,561</u>	<u>24,486</u>
Total current assets	<u>418,040</u>	<u>385,420</u>

Notes to Consolidated Financial Statements

Cash and Cash Equivalents. Cash and cash equivalents refer to all cash on hand and deposits held at call with banks, short-term highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value.

Notes Receivable. Notes receivable represents mainly bills of acceptance issued by banks for the sale of goods and products. All notes receivable of the Group are due within one year.

Instructions

- What items other than coin and currency may be included in “cash”?
- What items may be included in “cash equivalents”?
- What are compensating balance arrangements, and how should they be reported in financial statements?

- d. Assume that PetroChina has an agreement to transfer receivables to various banks. If the sale agreement meets the criteria for sale accounting, cash proceeds were RMB345 million, the carrying value of the receivables sold was RMB360 million, and the fair value of the recourse obligation was RMB15 million, what was the effect on income from the sale of receivables?
- e. Briefly discuss the impact of the transaction in (d) on PetroChina's liquidity.

Case 2: Meriter Group

Meriter Group is a sports manufacturer. To continue to be successful, Meriter must generate new products, which requires significant amounts of cash. The following current asset and current liability information is from a recent Meriter statement of financial position. Following the Meriter data is the current asset and current liability information for Monitor, another major sports manufacturer.

Meriter Statements of Financial Position (partial) As of December 31 (in millions)		
Current assets	Current Year	Prior Year
Cash and equivalents	€ 244	€ 295
Short-term investments	141	86
Accounts receivable	1,624	1,459
Other	2,925	2,298
Total current assets	€4,934	€4,138
Total current liabilities	€3,645	€2,615
Monitor Statements of Financial Position (partial) As of December 31 (in millions)		
Current assets	Current Year	Prior Year
Cash and equivalents	€ 375.0	€ 522.5
Receivables	396.5	389.6
Other current assets	590.6	483.3
Total current assets	€1,362.1	€1,395.4
Current liabilities	€ 614.8	€ 603.1

Part 1 (Cash and Cash Equivalents)

Instructions

- What is the definition of a cash equivalent? Give some examples of cash equivalents. How do cash equivalents differ from other types of short-term investments?
- Calculate (1) the current ratio and (2) working capital for each company for the current year and discuss your results.
- Is it possible to have too many liquid assets?

Part 2 (Accounts Receivable)

Meriter provided the following disclosure related to its accounts receivable.

(€ in millions)		
	Current Year	Prior Year
Accounts receivable, gross	1,743	1,570
Less: allowance for doubtful accounts	119	111
Accounts receivable, net	1,624	1,459
Movement in allowances for doubtful accounts		
	Current Year	Prior Year
Allowances at January 1	111	112
Additions	53	78
Write-offs and other	(45)	(79)
Allowances at December 31	119	111

Instructions

- Compute Meriter's accounts receivable turnover for the current year and discuss your results. Meriter had net credit sales revenue of €10,799 million in the current year.
- Reconstruct the summary journal entries for the current year based on the information in the disclosure.
- Briefly discuss how the accounting for bad debts affects the analysis in Part 2 (a).

Accounting, Analysis, and Principles

The Flatiron Pub provides catering services to local businesses. The following information was available for Flatiron for the years ended December 31, 2021 and 2022.

	31-Dec-21	31-Dec-22
Cash	€ 2,000	€ 1,685
Accounts receivable	46,000	?
Allowance for doubtful accounts	550	?

Other current assets	8,500	7,925
Current liabilities	37,000	44,600
Total net credit sales	205,000	255,000
Collections on accounts receivable	190,000	228,000

Flatiron management is preparing for a meeting with its bank concerning renewal of a loan and has collected the following information related to the above balances.

1. The cash reported at December 31, 2022, reflects the following items: petty cash €1,575 and postage stamps €110. The other current assets balance at 12/31/22 includes the checking account balance of €4,000.
2. On November 30, 2022, Flatiron agreed to accept a 6-month, €5,000 note bearing 12% interest, payable at maturity, from a major client in settlement of a €5,000 bill. The above balances do not reflect this transaction.
3. Flatiron factored some accounts receivable at the end of 2022. It transferred accounts totaling €10,000 to Final Factor, Inc. without guarantee (recourse). Final Factor will receive the collections from Flatiron's customers and will retain 2% of the balances. Final Factor assesses Flatiron a finance charge of 3% on this transfer. However, management has determined that the amount due from the factor has not been recorded and is not included in the balances above.
4. Flatiron wrote off uncollectible accounts with balances of €1,600. On the basis of the latest available information, the 2022 uncollectible accounts are estimated to be 2.5% of accounts receivable.

Accounting

- a. Based on the above transactions, determine the balance for (1) Accounts Receivable and (2) Allowance for Doubtful Accounts at December 31, 2022.
- b. Prepare the current assets section of Flatiron's statement of financial position at December 31, 2022.

Analysis

- a. Compute Flatiron's current ratio and accounts receivable turnover for December 31, 2022. Use these measures to analyze Flatiron's liquidity. The accounts receivable turnover in 2021 was 4.37.
- b. Discuss how the above analysis of Flatiron's liquidity would be affected if Flatiron had transferred the receivables in a secured borrowing transaction.

Principles

What is the conceptual basis for recording bad debt expense based on the percentage-of-receivables at December 31, 2022?

Research Case

As the new staff person in your company’s treasury department, you have been asked to conduct research related to a proposed transfer of receivables. Your supervisor wants the authoritative sources for the following items that are discussed in the securitization agreement.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the

search tool in your Internet browser to prepare responses to the following items. (Provide paragraph citations.)

- a. Identify relevant IFRSs that address derecognition of receivables.
- b. What are the objectives for reporting transfers of receivables?
- c. What transfers qualify for derecognition?
- d. What are the provisions in IFRS related to continuing involvement?

Global Accounting Insights

LEARNING OBJECTIVE 7

Compare the accounting procedures for cash and receivables under IFRS and U.S. GAAP.

The basic accounting and reporting issues related to recognition and measurement of cash and receivables are similar in U.S. GAAP and IFRS. For example, the definition of cash and cash equivalents as well as the use of allowance accounts, how to record discounts, use of the allowance method to account for bad debts, and factoring are similar for both IFRS and U.S. GAAP. In the wake of the international credit crisis, the Boards worked together to improve the accounting for loan impairments and securitizations.

Relevant Facts

Following are the key similarities and differences between IFRS and U.S. GAAP related to cash and receivables.

Similarities

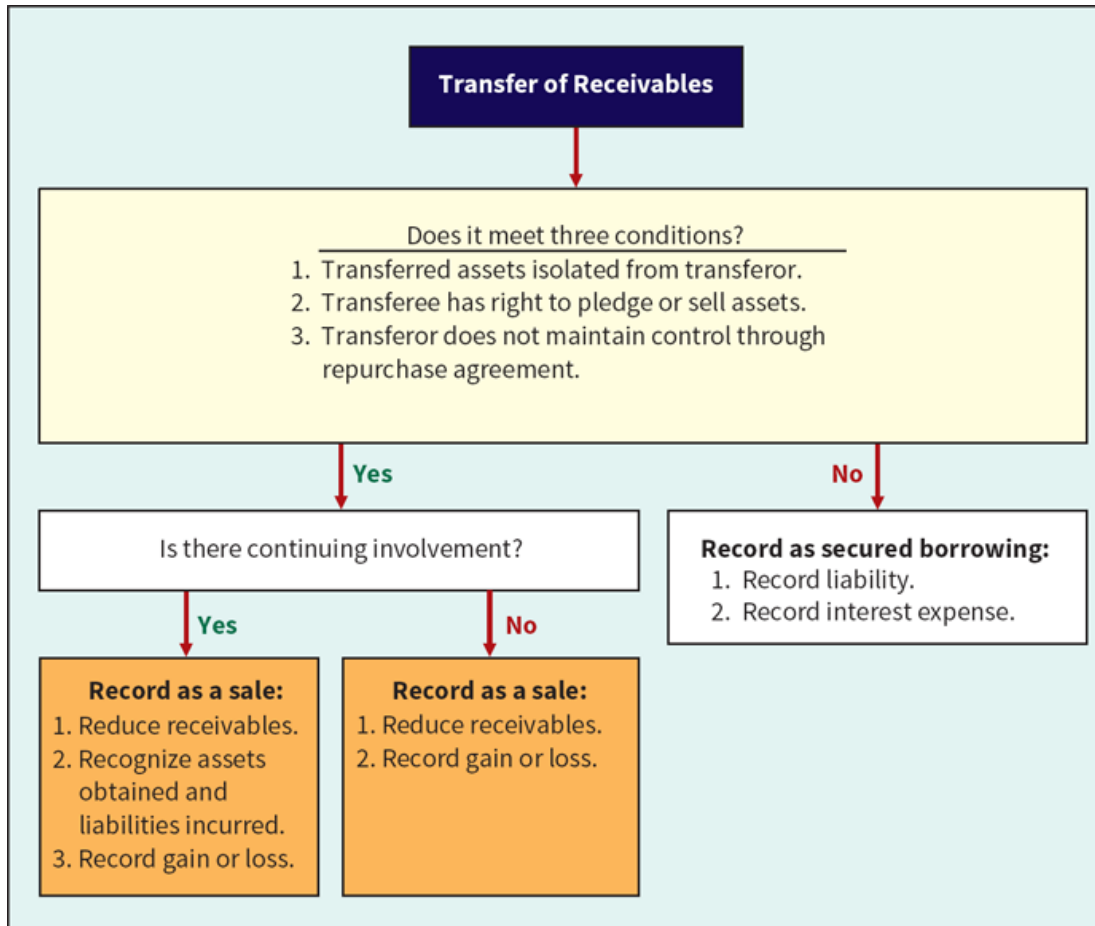

- The accounting and reporting related to cash is essentially the same under both IFRS and U.S. GAAP. In addition, the definition used for cash equivalents is similar.
- As with IFRS, cash and receivables are generally reported in the current assets section of the statement of financial position (balance sheet) under U.S. GAAP.
- As with IFRS, for trade and other accounts receivable without a significant financing component, an allowance for uncollectible accounts should be recorded to result in receivables reported at cash (net) realizable value. The estimation approach used is similar to that under IFRS.
- Similar to U.S. GAAP, IFRS requires that loans and receivables be accounted for at amortized cost, adjusted for allowances for doubtful accounts.

Differences

- Under IFRS, companies may report cash and receivables as the last items in current assets. Under U.S. GAAP, these items are reported in order of liquidity.
- While IFRS implies that receivables with different characteristics should be reported separately, there is no standard that mandates this segregation. U.S. GAAP has explicit guidance in the area.
- IFRS differs from U.S. GAAP in its approach to estimating uncollectible accounts on receivables with a significant financing component (e.g., notes receivable). For long-term receivables that have not experienced a deterioration in credit quality after origination, uncollectible accounts are estimated based on expected losses over the next 12 months. For long-term receivables that experience a credit quality decline, uncollectible accounts are estimated based on lifetime expected losses (which is the model used under U.S. GAAP for all receivables).
- Under IFRS, bank overdrafts are generally reported as cash. Under U.S. GAAP, such balances are reported as liabilities.
- IFRS and U.S. GAAP differ in the criteria used to account for transfers of receivables. IFRS uses a combined approach focused on risks and rewards and loss of control. U.S. GAAP uses loss of control as the primary criterion (see the [About the Numbers](#) discussion below). In addition, IFRS generally permits partial transfers; U.S. GAAP does not.

About the Numbers

The following illustration shows the rules of accounting for transfers of receivables under U.S. GAAP.

As indicated, under U.S. GAAP, the accounting for transfers is a two-step process: (1) determine if there is transfer of control, based on evaluation of three conditions, and (2) if there is continuing involvement in a sale transaction, record the assets obtained and liabilities incurred.

On the Horizon

The question of recording fair values for financial instruments will continue to be an important issue to resolve as the Boards work together to narrow differences between U.S. GAAP and IFRS. Both the IASB and the FASB have indicated that they believe that financial statements would be more transparent and understandable if companies recorded and reported all financial instruments at fair value. With the recently issued guidance on impairments by both boards, IFRS and U.S. GAAP are now more closely aligned with earlier recognition of impairments. Most believe that both Boards' approaches to estimating uncollectible accounts represent improvements and address the weakness in previous bad debt accounting that was highlighted by the 2007-2008 financial crisis. Time will tell if one model or the other provides more useful information to investors and creditors.

GAAP Self-Test Questions

1. U.S. GAAP reports cash and cash equivalents:
 - a. similarly to IFRS.
 - b. as separate items.
 - c. similarly to IFRS, except for the reporting of bank overdrafts.
 - d. always as the first items in the current assets section.
2. Under U.S. GAAP, receivables are reported on the balance sheet at:
 - a. amortized cost.
 - b. amortized cost less allowance for doubtful accounts.
 - c. historical cost.
 - d. replacement cost.
3. Which of the following statements is **false**?
 - a. Receivables include equity securities purchased by the company.
 - b. Receivables include credit card receivables.
 - c. Receivables include amounts owed by employees as result of company loans to employees.
 - d. Receivables include amounts resulting from transactions with customers.
4. Which of the following is the **correct** accounting under U.S. GAAP for cash?
 - a. Cash cannot be combined with cash equivalents.
 - b. Restricted cash funds are reported as liabilities.
 - c. Bank overdrafts are reported as liabilities.
 - d. Cash on hand is not reported on the balance sheet as Cash.
5. In recording a transfer of receivables:
 - a. IFRS focuses on loss of control.
 - b. U.S. GAAP focuses on loss of control and risks and rewards.
 - c. IFRS and U.S. GAAP allow partial derecognition.
 - d. IFRS allows partial derecognition.

GAAP Concepts and Application

GAAP7.1 What are some steps taken by both the FASB and IASB to move to fair value measurement for financial instruments?

GAAP7.2 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for cash and receivables.

Answers to GAAP Self-Test Questions

1. c 2. b 3. a 4. c 5. d

Notes

- 1 Bank overdrafts usually occur because of a simple oversight by the company writing the check. Banks often expect companies to have overdrafts from time to time and therefore negotiate a fee as payment for this possible occurrence. However, at one time, one large brokerage firm began intentionally overdrawing its accounts by astronomical amounts—on some days exceeding \$1 billion—thus obtaining interest-free loans that it could invest. Because the amounts were so large and fees were not negotiated in advance, the company came under criminal investigation for its actions.
- 2 To the extent that discounts not taken reflect short-term financing, some argue that companies could use an interest revenue account to record these amounts.
- 3 Cash discounts represent a form of variable consideration. Under the current revenue recognition guidance, variable consideration should not be recognized until the point in time when receipt of consideration is highly probable. See the discussion on sales returns and allowances in the next section and in [Chapter 18](#) for further information about variable consideration.
- 4 As indicated, at the date of sale, both the sales revenue and the return liability are recorded based on estimated amounts. If the actual amounts later prove to be higher or lower than the estimated amount, an adjustment will be made to the Sales Revenue account. If returns are lower than expected, Sales Revenue will be adjusted upward. If returns are greater than expected, Sales Revenue would be adjusted down. IFRS requires that the estimate of returns be constrained so that subsequent downward adjustments to Sales Revenue are highly unlikely. See [Chapter 18](#) for an extended discussion of variable consideration.
- 5 William J. Vatter, *Managerial Accounting* (Englewood Cliffs, N.J.: Prentice-Hall, 1950), p. 60.
- 6 The account description employed for the allowance account is usually Allowance for Doubtful Accounts or Provision for Doubtful Accounts.
- 7 If using the direct write-off approach, the company debits the amount collected to Cash and credits a revenue account entitled Uncollectible Amounts Recovered, with proper notation in the customer's account.
- 8 For trade receivables that do not have a significant financing component, lifetime expected credit losses must be recognized in the measurement of the impairment.

If a trade receivable has a significant financing component, companies may employ various estimation approaches (e.g., discounted cash flow techniques) to estimate the impairment allowance. We discuss these approaches in more detail in [Chapter 17](#), related to the discussion of investments.

- 9 In general, estimating bad debt expense with a focus on the income statement (e.g., percentage-of-sales) is not appropriate. That is, the goal is to arrive at an estimate in the allowance, which reduces the receivables amount to cash realizable value (i.e., the amount of receivables expected to be collected). While a percentage-of-sales approach may provide a better “matching” of bad debt expense to sales, the balance in the allowance likely will not provide a representationally faithful estimate of cash realizable value.
- 10 Companies must measure expected uncollectible accounts and record bad debt expense on all receivables, even those with a low risk of loss (e.g., receivables that are not past due). Thus, in the Wilson example, an estimate for uncollectible accounts is developed for balances that are under 30 days past due.
- 11 One regulatory agency brought action against a large financial institution, requiring a reversal of \$100 million of bad debt expense. This reversal increased after-tax profit by \$61 million. Recall from our earnings management discussion in [Chapter 4](#) that increasing or decreasing income through management manipulation can reduce the quality of financial reports.
- 12 The **stated interest rate**, also referred to as the face rate or the coupon rate, is the rate contracted as part of the note. The **effective interest rate**, also referred to as the market rate or the effective yield, is the rate used in the market to determine the value of the note—that is, the discount rate used to determine present value.
- 13 Credit cards like **MasterCard** and **Visa** are a type of factoring arrangement. Typically, the purchaser of the receivable charges a commission of $\frac{3}{4}$ – $1\frac{1}{2}$ percent the receivables purchased (the commission is 4–5 percent for credit card factoring).
- 14 In general, IFRS does not allow netting of assets and liabilities unless there is an explicit right of set-off. [\[8\]](#) Thus, Crest Textiles reports both a receivable and a liability of €500,000 in its statement of financial position.
- 15 If a company transfers the receivables for custodial purposes, the custodial arrangement is often referred to as a **pledge**.
- 16 What happens if Sino Bank collects the transferred accounts receivable rather than Meng Mills? Sino Bank would simply remit the cash proceeds to Meng Mills, and Meng Mills would make the same entries shown in [Illustration 7.17](#). As a result, Meng Mills reports these “collateralized” receivables as an asset on the statement of financial position. The point here is that the risks and rewards of ownership have not been transferred to Sino Bank.

17 In some situations, a company may continue to hold the receivable but does not retain substantially all the risks and rewards of the receivable. In this case, the company must determine whether it has retained control of the receivable. The primary indicator that the company has control of an asset is if it can sell the asset. If control has not been retained, the asset is derecognized and sale accounting is applied. In all other cases, the company has retained control and the arrangement is accounted for as a secured borrowing. As noted in [Chapter 18](#), concepts of risks and rewards and control are relevant in determining revenue recognition. However, transfers of financial assets are outside the scope of the recently issued revenue standard.

18 Concentrations of credit risk exist when receivables have common characteristics that may affect their collection. These common characteristics might be companies in the same industry or same geographic region. For example, **Abu Dhabi Aviation** (ARE) recently reported nearly 61 percent of its trade receivables were due from the United Arab Emirates (UAE) government and 16 percent from UAE's oil industry. Financial statement users want to know if a substantial amount of receivables from such sales are to customers facing similar uncertain economic conditions. No numerical guidelines are provided as to what is meant by a "concentration of credit risk." Information to be disclosed includes such items as (1) the carrying amounts of the concentration, (2) information on the characteristic that determines the concentration, (3) the amount of loss that could occur upon non-performance, and (4) information on any collateral related to the receivable.

[11]

19 Several figures other than 365 could be used. A common alternative is 360 days because it is divisible by 30 (days) and 12 (months). *Use 365 days in any homework computations.*

20 As we mentioned in Chapter 7, paper checks continue to be used as a means of payment. However, ready availability of desktop publishing software and hardware has created new opportunities for check fraud in the form of duplicate, altered, and forged checks. At the same time, new fraud-fighting technologies, such as ultraviolet imaging, high-capacity barcodes, and biometrics, are being developed. These technologies convert paper documents into electronically processed document files, thereby reducing the risk of fraud.

CHAPTER 8

Valuation of Inventories: A Cost-Basis Approach

LEARNING OBJECTIVES

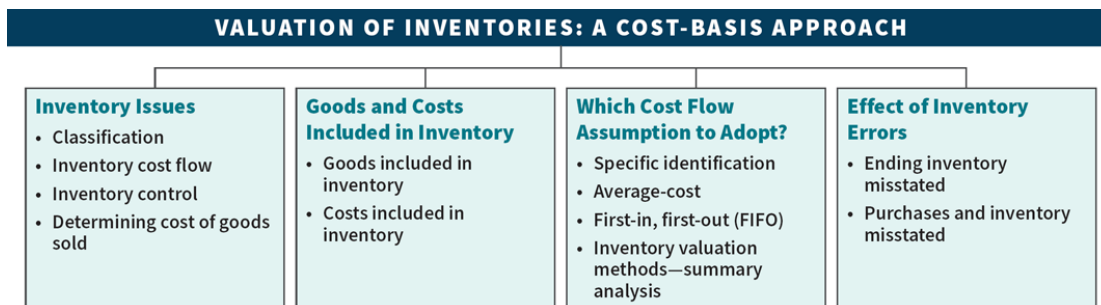

After studying this chapter, you should be able to:

1. Describe inventory classifications and different inventory systems.
2. Identify the goods and costs included in inventory.
3. Compare the cost flow assumptions used to account for inventories.
4. Determine the effects of inventory errors on the financial statements.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 8

As the following opening story indicates, the issues related to accounting and reporting for inventory are complex. Inappropriate recognition and measurement of inventory leads to misstatements of key measures of financial performance. The content and organization of the chapter are as follows. (Note that *Global Accounting Insights* related to inventory is presented in [Chapter 9](#).)

It Should Be Easy, but It Isn't!

The accounting for inventory should be straightforward. You simply determine the cost of the inventory and carry this amount forward until the goods are sold. Unfortunately, the devil is in the details. Questions about whether costs

should be inventoried or expensed are sometimes difficult to answer. And in some cases, it is even difficult to determine whether inventory has really been sold. The following are some situations that may test your accounting knowledge.

Case 1

Chocola Company, a manufacturer of chocolate bars, has a sales promotion in which customers receive a free chocolate bar for each bar purchased—a two-for-one special. The sales price of a chocolate bar is €3, and the cost to produce one bar is €1.

Question: When a chocolate bar is sold to a customer, what is the inventory cost that should be assigned to that product? Is it €2 in inventory cost or is it €1 of inventory cost and €1 of selling expense?

Case 2

Wellness Pharmacy offers manufacturers more attractive product placement in its stores, for a defined period of time, if they pay a fixed fee (which is generally independent of the volume of goods sold) for this upgraded space. These fees are often referred to as slotting fees.

Question: Should Wellness Pharmacy report these slotting fees as revenue when received, or should these fees reduce the cost of goods sold of the merchandise?

Case 3

Digital Age, an electronics retailer, purchases computers from a manufacturer and stores them in warehouses before delivery to its various retail stores. Digital Age then transfers these computers between internal warehouses and retail stores, incurring transportation costs.

Question: How should Digital Age account for the transportation costs both between different internal warehouses and from the internal warehouses to its retail stores?

Here are the solutions to these questions.

Case 1: The purchase cost of the free chocolate bar is a component of inventory cost and should be reported as cost of goods sold at the time a chocolate bar is sold. The cost of goods sold is therefore €2, not €1. Chocola Company should not charge the free bar to selling expense, as gross profit will be misstated.

Case 2: Wellness Pharmacy should record the slotting fees as a reduction of cost of goods sold (and therefore a reduction in inventory value). To recognize the fee revenue immediately is premature as Wellness Pharmacy has a performance obligation to provide space for a given period of time. The fee received is best associated with the inventory sold over the period of time allocated to the manufacturer.

Case 3: Intermediate transportation costs between different internal warehouses and to the retail stores should be included in the cost of inventory. These costs represent an unavoidable part of the supply chain in getting inventory to the first point of sale.

As indicated, the issues involving inventory are sometimes difficult and complex. Finding the appropriate answer is important because inventory is often the largest current asset on a company's statement of financial position. Failure to record inventory correctly leads to misstatements of key measures of financial performance, such as gross profit and net income.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Inventory Issues

LEARNING OBJECTIVE 1

Describe inventory classifications and different inventory systems.

Classification

Inventories are asset items that a company holds for sale in the ordinary course of business, or goods that it will use or consume in the production of goods to be sold. The description and measurement of inventory require careful attention. The investment in inventories is frequently the largest current asset of merchandising (retail) and manufacturing businesses.

A **merchandising concern**, such as **Carrefour** (FRA), usually purchases its merchandise in a form ready for sale. It reports the cost assigned to unsold

units left on hand as **merchandise inventory**. Only one inventory account, Inventory, appears in the financial statements.

Manufacturing concerns, on the other hand, produce goods to sell to merchandising firms. Many of the largest businesses are manufacturers, such as **China Petroleum & Chemical Corp.** (CHN), **Nissan** (JPN), **Royal Dutch Shell** (NLD), **Procter & Gamble** (USA), **George Weston Ltd.** (CAN), and **Nokia** (FIN). Although the products they produce may differ, manufacturers normally have three inventory accounts—Raw Materials, Work in Process, and Finished Goods.

A company reports the cost assigned to goods and materials on hand but not yet placed into production as **raw materials inventory**. Raw materials include the wood to make a baseball bat or the steel to make a car. These materials can be traced directly to the end product.

At any point in a continuous production process, some units are only partially processed. The cost of the raw material for these unfinished units, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs, constitute the **work in process inventory**.

Companies report the costs identified with the completed but unsold units on hand at the end of the fiscal period as **finished goods inventory**.

Illustration 8.1 contrasts the financial statement presentation of inventories of **Carrefour** (FRA) (a merchandising company) with those of **Nissan** (JPN) (a manufacturing company). The remainder of the statement of financial position is essentially similar for the two types of companies.

Merchandising Company

Carrefour

Statement of Financial Position (Balance Sheet)

Current assets (in millions)	
Inventories	€ 3,168
Trade receivables	4,856
Contract assets	1,875
Prepaid expenses and accrued income	1,024
Current income tax assets	227
Other financial assets	243
Current financial assets	612
Cash and cash equivalents	6,261
Total current assets	<u>€18,266</u>

Manufacturing Company

Nissan

Statement of Financial Position (Balance Sheet) March 31, 2019

Current assets (in millions)	
Cash on hand and in banks	¥ 1,219,588
Trade notes and accounts receivable	512,164
Sales finance receivables	7,665,603
Securities	139,470
Merchandise and finished goods	827,289
Work in process	64,386
Raw materials and supplies	366,248
Other	945,449

Manufacturing Company

Allowance for doubtful accounts	(127,092)
Total current assets	<u>¥11,613,105</u>

ILLUSTRATION 8.1 Comparison of Presentation of Current Assets for Merchandising and Manufacturing Companies

A manufacturing company, such as **Nissan**, also might include a Manufacturing or Factory **Supplies Inventory** account. In it, Nissan would include such items as machine oils, screws, welding supplies, and the like—supplies that are used in production but are not the primary materials being processed.

Illustration 8.2 shows the differences in the flow of costs through a merchandising company and a manufacturing company.

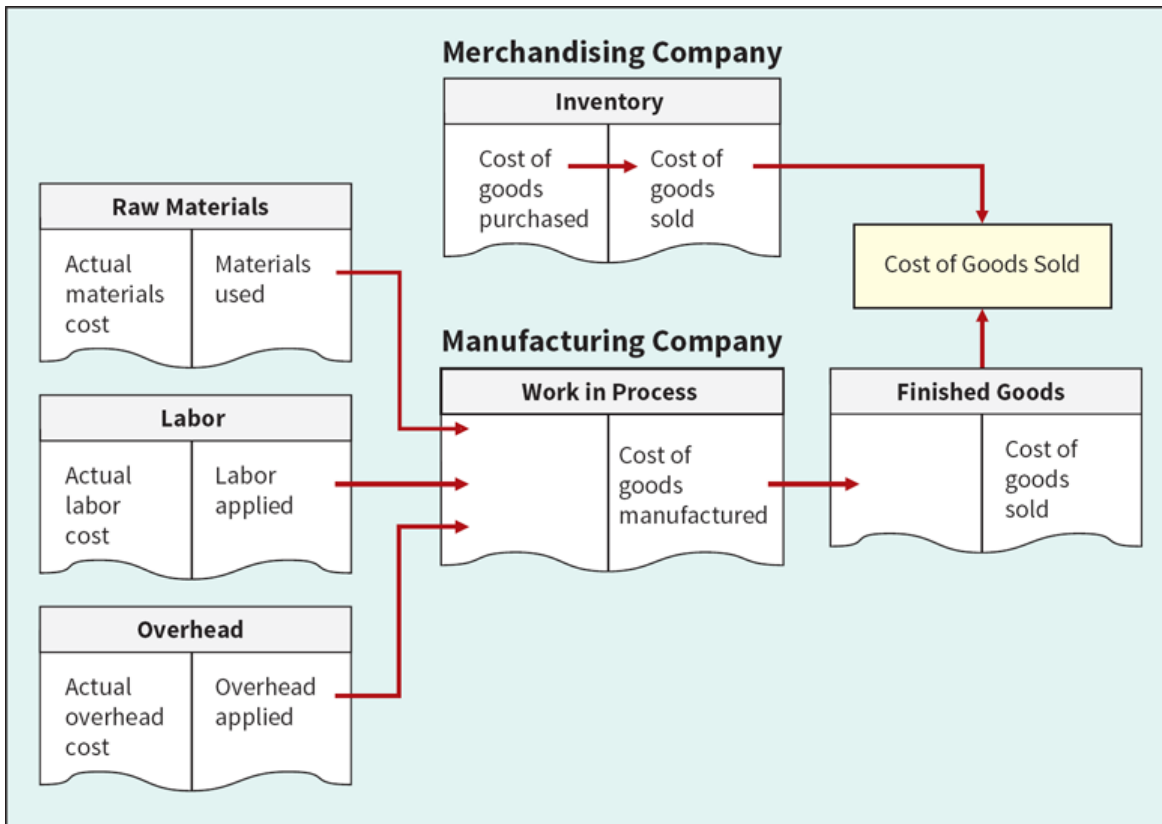

ILLUSTRATION 8.2 Flow of Costs through Manufacturing and Merchandising Companies

Inventory Cost Flow

Companies that sell or produce goods report inventory and cost of goods sold at the end of each accounting period. The flow of costs for a company is as follows. Beginning inventory plus the cost of goods purchased is the cost of goods available for sale. As goods are sold, they are assigned to cost of goods sold. Those goods that are not sold by the end of the accounting period represent ending inventory. [Illustration 8.3](#) shows these relationships.

ILLUSTRATION 8.3 Inventory Cost Flow

Companies use one of two types of systems for maintaining accurate inventory records for these costs—the perpetual system or the periodic system.

Perpetual System

A **perpetual inventory system** continuously tracks changes in the Inventory account. That is, a company records all purchases and sales (issues) of goods directly in the Inventory account **as they occur**. The accounting features of a perpetual inventory system are as follows.

1. Purchases of merchandise for resale or raw materials for production are debited to Inventory rather than to Purchases.
2. Freight-in is debited to Inventory, not Purchases. Purchase returns and allowances and purchase discounts are credited to Inventory rather than to separate accounts.
3. Cost of goods sold is recorded at the time of each sale by debiting Cost of Goods Sold and crediting Inventory.
4. A subsidiary ledger of individual inventory records is maintained as a control measure. The subsidiary records show the quantity and cost of each type of inventory on hand.

The perpetual inventory system provides a continuous record of the balances in both the Inventory account and the Cost of Goods Sold account.

Periodic System

Under a **periodic inventory system**, a company determines the quantity of inventory on hand only periodically, as the name implies. It records all acquisitions of inventory during the accounting period by debiting the Purchases account. A company then adds the total in the Purchases account at the end of the accounting period to the cost of the inventory on hand at the beginning of the period. This sum determines the total cost of the goods available for sale during the period.

To compute the cost of goods sold, the company then subtracts the ending inventory from the cost of goods available for sale. Note that **under a periodic inventory system, the cost of goods sold is a residual amount that depends on a physical count of ending inventory**. This process is referred to as “taking a physical inventory.” Companies that use the periodic system take a physical inventory at least once a year.

Comparing Perpetual and Periodic Systems

To illustrate the difference between a perpetual and a periodic system, assume that Fesmire Company had the following transactions during the current year.

Beginning inventory	100 units at \$6 = \$ 600
Purchases	900 units at \$6 = \$5,400
Sales	600 units at \$12 = \$7,200
Ending inventory	400 units at \$6 = \$2,400

Fesmire records these transactions during the current year as shown in [**Illustration 8.4**](#).

Perpetual Inventory System			Periodic Inventory System		
Beginning inventory, 100 units at \$6					
The Inventory account shows the inventory on hand at \$600.			The Inventory account shows the inventory on hand at \$600.		
Purchase 900 units at \$6					
Inventory	5,400		Purchases	5,400	
Accounts Payable		5,400	Accounts Payable		5,400
Sale of 600 units at \$12					
Accounts Receivable	7,200		Accounts Receivable	7,200	
Sales Revenue		7,200	Sales Revenue		7,200
Cost of Goods Sold (600 at \$6)	3,600			(No entry)	
Inventory		3,600			
End-of-period entries for inventory accounts, 400 units at \$6					
No entry necessary.			Inventory (ending, by count)	2,400	
The Inventory account shows the ending balance of \$2,400 (\$600 + \$5,400 – \$3,600).			Cost of Goods Sold	3,600	
			Purchases		5,400
			Inventory (beginning)		600

ILLUSTRATION 8.4 Comparative Entries—Perpetual vs. Periodic

When a company uses a perpetual inventory system and a difference exists between the perpetual inventory balance and the physical inventory count, it needs a separate entry to adjust the perpetual inventory account. To illustrate, assume that at the end of the reporting period, the perpetual inventory account reported an inventory balance of \$4,000. However, a physical count indicates inventory of \$3,800 is actually on hand. The entry to record the necessary write-down is as follows.

Inventory Over and Short	200	
Inventory		200

Perpetual inventory overages and shortages generally represent a misstatement of cost of goods sold. The difference results from normal and expected shrinkage, breakage, shoplifting, incorrect recordkeeping, and the like. Inventory Over and Short therefore adjusts Cost of Goods Sold. In practice, companies sometimes report Inventory Over and Short in the “Other income and expense” section of the income statement.

Note that a company using the periodic inventory system does not report the account Inventory Over and Short. The reason: The periodic method does not have accounting records against which to compare the physical count. As a

result, a company buries inventory overages and shortages in cost of goods sold.

Inventory Control

For various reasons, management is vitally interested in inventory planning and control. Whether a company manufactures or merchandises goods, it needs an accurate accounting system with up-to-date records. It may lose sales and customers if it does not stock products in the desired style, quality, and quantity. Further, companies must monitor inventory levels carefully to limit the financing costs of carrying large amounts of inventory.

In a perfect world, companies would like a continuous record of both their inventory levels and their cost of goods sold. The popularity and affordability of accounting software make the perpetual system cost-effective for many kinds of businesses. Companies like **Loblaw Companies Ltd.** (CAN), **Woolworths Ltd.** (AUS), and **J. Sainsbury** (GBR) now incorporate the recording of sales with optical scanners at the cash register into perpetual inventory systems.

However, for many companies a complete perpetual system is not cost-effective. But, most of these companies need current information regarding their inventory levels, to protect against stockouts or overpurchasing and to aid in preparation of monthly or quarterly financial data. As a result, these companies use a **modified perpetual inventory system**. This system provides detailed inventory records of increases and decreases in quantities only—not currency amounts. It is merely a memorandum device outside the double-entry system, which helps in determining the level of inventory at any point in time.

Whether a company maintains a complete perpetual inventory in quantities and currency amounts or a modified perpetual inventory system, it probably takes a physical inventory once a year. No matter what type of inventory records companies use, they all face the danger of loss and error. Waste, breakage, theft, improper entry, failure to prepare or record requisitions, and other similar possibilities may cause the inventory records to differ from the actual inventory on hand. Thus, **all companies** need periodic verification of the inventory records by actual count, weight, or measurement, with the counts compared with the detailed inventory records. As indicated earlier, a company corrects the records to agree with the quantities actually on hand.

If possible, companies should take the physical inventory near the end of their fiscal year, to properly report inventory quantities in their annual accounting reports. Because this is not always feasible, physical inventories taken within

two or three months of the year's end are satisfactory if a company maintains detailed inventory records with a fair degree of accuracy.¹

Determining Cost of Goods Sold

Goods sold (or used) during an accounting period seldom correspond exactly to the goods bought (or produced) during that period. As a result, inventories either increase or decrease during the period. Companies must then allocate the cost of all the goods available for sale (or use) between the goods that were sold or used and those that are still on hand. The **cost of goods available for sale or use** is the **sum** of (1) the cost of the goods on hand at the beginning of the period, and (2) the cost of the goods acquired or produced during the period. The **cost of goods sold** is the **difference** between (1) the cost of goods available for sale during the period, and (2) the cost of goods on hand at the end of the period. **Illustration 8.5** shows these calculations.

Beginning inventory, Jan. 1	\$100,000
Cost of goods acquired or produced during the year	800,000
Total cost of goods available for sale	900,000
Ending inventory, Dec. 31	(200,000)
Cost of goods sold during the year	\$700,000

ILLUSTRATION 8.5 Computation of Cost of Goods Sold

What Do the Numbers Mean?

Staying Lean

When you drop by a **Walmart** (USA) store, you are witnessing one of history's greatest logistical and operational successes. As one article noted, the retail giant stocks products in more than 70 countries and at any given time operates more than 11,000 stores in 27 countries around the world. It manages an average of \$32 billion in inventory.

With these kinds of numbers, having an effective and efficient supply chain management system and a sound internal control system is imperative. For example, Walmart uses its buying power in the supply chain to purchase an increasing proportion of its goods directly from manufacturers and on a combined basis across geographic borders. Walmart estimates that it saves 5–15% in costs across its supply chain by implementing direct purchasing on a combined basis for the 15 countries in which it operates. Thus, Walmart has a good handle on what products it needs to stock, and it gets the best prices when it purchases.

Walmart also provides a classic example of the use of tight inventory controls. Department managers use a scanner that when placed over the bar code corresponding to a particular item, will tell them how many of the items the store sold yesterday, last week, and over the same period last year. It will tell them how many of those items are in stock, how many are on the way, and how many the neighboring Walmart stores are carrying (in case one store runs out). Walmart's inventory management practices have helped it become one of the top-ranked companies in terms of sales.

Sources: J. Birchall, "Walmart Aims to Cut Supply Chain Cost," *Financial Times* (January 4, 2010); www.tradegeko.com/blog/incredibly-successful-supply-chain-management-walmart; and K. Nash, "Wal-Mart Builds Supply Chain to Meet E-Commerce Demands," *Wall Street Journal* (May 7, 2015).

Goods and Costs Included in Inventory

LEARNING OBJECTIVE 2

Identify the goods and costs included in inventory.

Goods Included in Inventory

A company recognizes inventory and accounts payable at the time it controls the asset. For example, when Lee Ltd. purchases **Apple** (USA) watches for resale, Lee records these watches as inventory at the time control passes to Lee. Control is therefore the key factor in determining when purchases and sales of a product are recognized.

The IASB indicates that Lee controls the Apple watches when it has the ability to direct the use of, and obtain substantially all the benefits from, these watches. Control also includes Lee's ability to prevent other companies from directing the use of or receiving the benefits from these watches. As noted in [Chapter 7](#) in the **Lululemon** (CAN) example, companies then look to various indicators to determine whether control has passed.²

One of these indicators, passage of title, is often used to determine control because the rights and obligations are established legally. For example, when Lee purchases the Apple watches, legal title belongs to Lee until the watches are sold to customers. However in some limited cases, other indicators must be considered because legal title and passage of control do not match.

Goods in Transit

Often, a company such as **LG Electronics** (KOR) purchases merchandise that remains in transit—not yet received—at the end of a fiscal period. The accounting for these shipped goods depends on who controls the merchandise. In these situations, companies generally determine control based on who has legal title to the goods by applying the “passage of title” rule. If a supplier ships goods to LG **f.o.b. shipping point**, title passes to LG when the supplier delivers the goods to the common carrier, which acts as an agent for LG (the abbreviation f.o.b. stands for free on board). If the supplier ships the goods **f.o.b. destination**, title passes to LG only when it receives the goods from the common carrier. “Shipping point” and “destination” are often designated by a particular location, for example, f.o.b. Seoul.

When LG obtains legal title to goods, it must record them as purchases in that fiscal period, assuming a periodic inventory system. Thus, goods shipped to LG f.o.b. shipping point, but in transit at the end of the period, belong to LG. It should show the purchase in its records because legal title to these goods passed to LG upon shipment of the goods. To disregard such purchases results in understating inventories and accounts payable in the statement of financial position, and understating purchases and ending inventories in the income statement.

Consigned Goods

Companies market certain products through **consignment**. Under this arrangement, a company like Williams Art Gallery (the consignor) ships various art merchandise to **Sotheby's Holdings** (USA) (the consignee), who acts as Williams' agent in selling the **consigned goods**. Sotheby's agrees to accept the goods without any liability, except to exercise due care and reasonable protection from loss or damage, until it sells the goods to a third party. When Sotheby's sells the goods, it remits the revenue, less a selling commission and expenses incurred in accomplishing the sale, to Williams.

Goods out on consignment remain the property of the consignor (Williams in the example above). Although Sotheby's has physical possession of the goods, it does not have control because legal title and the risks and rewards of ownership remain with Williams. Williams thus includes the goods in its inventory at purchase price or production cost. Occasionally, and only for a significant amount, the consignor shows the inventory out on consignment as a separate item. Sometimes a consignor reports the inventory on consignment in the notes to the financial statements. For example, **Eagle Clothes, Inc.** (USA) reported the following related to consigned goods: "Inventories consist of finished goods shipped on consignment to customers of the Company's subsidiary **April-Marcus, Inc.**"

The consignee makes no entry to the inventory account for goods received. Remember, these goods remain the property of the consignor until sold. In fact, the consignee should be extremely careful *not* to include any of the goods consigned as a part of inventory. Additional discussion related to consignments is provided in [Chapter 18](#).

Special Sales Agreements

As we indicated earlier, transfer of legal title is the general guideline used to determine whether a company should include an item in inventory. Unfortunately, transfer of legal title and the underlying substance of the transaction sometimes do not match. For example, legal title may have passed to the purchaser, but the seller of the goods retains control of the inventory.

Two special sales situations are illustrated here to indicate the types of problems companies encounter in practice:

1. Sales with repurchase agreement.
2. Sales with high rates of return.

Sales with Repurchase Agreement

Sometimes a company finances its inventory without reporting either a liability or the inventory on its statement of financial position. This approach, often referred to as a repurchase (or product financing) agreement, usually involves a transfer (sale) with either an implicit or explicit repurchase agreement.

To illustrate, Hill Enterprises transfers (“sells”) inventory to Chase plc. and simultaneously agrees to repurchase this merchandise at a specified price over a specified period of time. Chase then uses the inventory as collateral and borrows against it. Chase uses the loan proceeds to pay Hill, which repurchases the inventory in the future. Chase employs the proceeds from repayment to meet its loan obligation.

The essence of this transaction is that Hill is financing its inventory—and retaining control—even though it transferred to Chase technical legal title to the merchandise. By structuring a transaction in this manner, Hill may avoid personal property taxes in certain jurisdictions. Other advantages of this transaction for Hill are the removal of the current liability from its statement of financial position and the ability to manipulate income. For Chase, the purchase of the goods may solve an inventory liquidation problem (discussed later), or Chase may enter into a similar reciprocal agreement at a later date.

These arrangements are often described in practice as “**parking transactions**” (see [Underlying Concepts](#)). In this situation, Hill simply parks the inventory on Chase’s statement of financial position for a short period of time. Generally, when a repurchase agreement exists, Hill should report the inventory and related liability on its books. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) The reason? Hill has retained control of the asset; that is, Hill still owns the asset.

Underlying Concepts

Recognizing revenue at the time the inventory is “parked” violates the revenue recognition principle. That is, a performance obligation is not met because control has not been transferred to the buyer.

Sales with High Rates of Return

In industries such as publishing, music, toys, and sporting goods, formal or informal agreements often exist that permit purchasers to return inventory for a full or partial refund.

To illustrate, Quality Publishing Company sells textbooks to Campus Bookstores with an agreement that Campus may return for full credit any

books not sold. Historically, Campus Bookstores returned approximately 25 percent of the textbooks from Quality Publishing. How should Quality Publishing report its sales transactions?

The key question to determine whether a sale occurs is: Has Quality Publishing transferred control of these goods to Campus Bookstore? Because Campus Bookstore now has the ability to direct the use of and obtain substantially all the benefits from these textbooks, these transactions are normally recorded as a sale by Quality Publishing. In addition, the normal indicators for transfer of control, such as passage of legal title, loss of physical control, and transfer of risks and rewards of ownership, appear to have occurred. However, Quality Publishing must also recognize that only partial control has transferred to Campus Bookstore. Therefore, Quality Publishing does the following.

- 1. Record sales revenue at the amount it expects to receive from the transaction.** This transaction involves variable consideration and therefore the transaction price is adjusted to recognize that a portion of these textbooks will be returned.
- 2. Establish an estimated inventory return account to recognize that some of its textbooks will be returned.** The reason for recording estimated inventory is that control over a significant number of the textbooks has not passed to Campus Bookstore.

In other words, control does pass from seller to buyer for a majority of the textbooks but not all of them. Quality Publishing therefore records an estimated inventory return amount to recognize that fact. If returns are unpredictable and uncertain, Quality Publishing should not consider the textbooks sold and should not remove the goods from its inventory. This example illustrates the difficulty of determining when control has passed in situations where substantial returns are involved. [2] We provide expanded discussion of special sales agreements and returns in [Chapter 18](#).

What Do the Numbers Mean?

A Retail Apocalypse!

As the size and scope of ecommerce businesses such as [Amazon.com](https://www.amazon.com) (USA) and **Alibaba** (CHN) continue to expand, traditional retailers with brick-and-mortar stores are struggling to keep up and, in some cases, to remain in business.

The most common response is to adopt an omnichannel approach. An omnichannel retailer provides multiple customer pathways that include online and mobile phone, as well as physical opportunities to learn about products, compare them, and eventually make a purchase. For example, an omnichannel merchant can allow a customer to comparison-shop via its website, to order the product on his or her phone, and then to pick up the merchandise in the store that same day.

The movement in this direction is essential for traditional retail merchants, due to the growth in online purchasing coupled with rapid delivery. The threat to retail has become so significant that an estimated 75,000 stores are expected to close during the next few years. But, this also means that retailers will need to push out older and slow moving inventories, often by aggressive price cutting, to make way for a leaner and more focused product selection in their stores.

These changes have resulted in challenging times for retailers and in better prices and selections for consumers. In most markets, the reality is that when one sector wins, another has to lose. While the eventual winners are hard to predict, it would appear that companies that can master both omnichannel and supply chain management have the best likelihood to survive and possibly thrive.

Costs Included in Inventory

One of the most important problems in dealing with inventories concerns the dollar amount at which to carry the inventory in the accounts. **Companies generally account for the acquisition of inventories, like other assets, on a cost basis.**

Product Costs

Product costs are those costs that “attach” to the inventory. As a result, a company records product costs in the Inventory account. These costs are directly connected with bringing the goods to the buyer’s place of business and converting such goods to a salable condition. Such charges generally include (1) costs of purchase, (2) costs of conversion, and (3) “other costs” incurred in bringing the inventories to the point of sale and in salable condition.

Costs of purchase include:

1. The purchase price.
2. Import duties and other taxes.
3. Transportation costs.
4. Handling costs directly related to the acquisition of the goods. [3]

Conversion costs for a manufacturing company include direct materials, direct labor, and manufacturing overhead costs. Manufacturing overhead costs include indirect materials, indirect labor, and various costs, such as depreciation, taxes, insurance, and utilities.³

“Other costs” include those incurred to bring the inventory to its present location and condition ready to sell, such as the cost to design a product for specific customer needs. For example, if a customer of **Lenovo** (CHN) requests that computers to be sold in Europe have an additional power adapter that is compatible with European power sources, the cost to design a multisource-adapter would be included in the cost of the computer.

It seems proper also to allocate to inventories a share of any purchasing costs or expenses of a purchasing department, storage costs, and other costs incurred in storing or handling the goods before their sale. However, because of the practical difficulties involved in allocating such costs and expenses, companies usually exclude these items in valuing inventories.

Period Costs

Period costs are those costs that are indirectly related to the acquisition or production of goods. Period costs such as selling expenses and, under ordinary circumstances, general and administrative expenses are therefore not included as part of inventory cost.

Yet, conceptually, these expenses are as much a cost of the product as the initial purchase price and related freight charges attached to the product. Why then do companies exclude these costs from inventoriable items? Because

companies generally consider selling expenses as more directly related to the cost of goods sold than to the unsold inventory. In addition, period costs, especially administrative expenses, are so unrelated or indirectly related to the immediate production process that any allocation is purely arbitrary.⁴

Interest is another period cost. Companies usually expense **interest costs** associated with getting inventories ready for sale. Supporters of this approach argue that interest costs are really a **cost of financing**. Others contend that interest costs incurred to finance activities associated with readying inventories for sale are as much a **cost of the asset** as materials, labor, and overhead. Therefore, they reason, companies should capitalize interest costs.

The IASB ruled that companies should capitalize interest costs related to assets constructed for internal use or assets produced as discrete projects (such as ships or real estate projects) for sale or lease. [7]⁵ The IASB emphasized that these discrete projects should take considerable time, entail substantial expenditures, and be likely to involve significant amounts of interest cost. Thus, a company **should not capitalize interest costs for inventories** that it routinely manufactures or otherwise produces in large quantities on a repetitive basis. In this case, the informational benefit does not justify the cost.

Treatment of Purchase Discounts

Purchase or trade discounts are reductions in the selling prices granted to customers. These discounts may be used to provide an incentive for a first-time purchase or as a reward for a large order. In some cases, incentives are provided to encourage early payment. There has been some diversity in practice regarding the accounting for these discounts, with some companies recording the discount as a reduction in inventory while others treated the discount as revenue. However, the IASB requires these discounts to be recorded as a reduction from the cost of inventories. [8]

With respect to the bookkeeping related to purchase discounts, the use of a **Purchase Discounts** account in a periodic inventory system indicates that the company is reporting its purchases and accounts payable at the gross amount. If a company uses this **gross method**, it reports purchase discounts as a deduction from purchases on the income statement.

Another approach is to record the purchases and accounts payable at an amount **net of the cash discount**. In this approach, the company records failure to take a purchase discount within the discount period in a Purchase Discounts Lost account. If a company uses this **net method**, it considers purchase discounts lost as a financial expense and reports it in the “Other

income and expense” section of the income statement. This treatment is considered better for two reasons. (1) It provides a correct reporting of the cost of the asset and related liability and (2) It can measure management inefficiency by holding management responsible for discounts not taken.

To highlight the difference between the gross and net methods, assume the transactions shown in [Illustration 8.6](#).

Many believe that the somewhat more complicated net method is not justified by the resulting benefits (see [Underlying Concepts](#)). This could account for the widespread use of the less logical but simpler gross method. In addition, some contend that management is reluctant to report in the financial statements the amount of purchase discounts lost. *For homework purposes, unless otherwise specified, use the gross method to record purchase discounts.*

Underlying Concepts

Not using the net method because of resultant difficulties is an example of the application of the cost constraint.

Gross Method			Net Method		
Purchase cost \$10,000, terms 2/10, net 30					
Purchases	10,000		Purchases	9,800	
Accounts Payable		10,000	Accounts Payable		9,800
Invoices of \$4,000 are paid within discount period					
Accounts Payable	4,000		Accounts Payable	3,920	
Purchase Discounts		80	Cash		3,920
Cash		3,920			
Invoices of \$6,000 are paid after discount period					
Accounts Payable	6,000		Accounts Payable	5,880	
Cash		6,000	Purchase Discounts Lost	120	
			Cash		6,000

ILLUSTRATION 8.6 Entries under Gross and Net Methods

Which Cost Flow Assumption to Adopt?

LEARNING OBJECTIVE 3

Compare the cost flow assumptions used to account for inventories.

During any given fiscal period, companies typically purchase merchandise at several different prices. If a company prices inventories at cost and it made numerous purchases at different unit costs, which cost should it use? Conceptually, a specific identification of the given items sold and unsold seems optimal. Therefore, the IASB requires use of the specific identification method in cases where inventories **are not ordinarily interchangeable, or for goods and services produced or segregated for specific projects**. For example, an inventory of single-family homes is a good candidate for use of the specific identification method. Unfortunately, for most companies, the specific identification method is not practicable. Only in situations where inventory turnover is low, unit price is high, or inventory quantities are small are the specific identification criteria met. In other cases, the cost of inventory should be measured using one of two cost flow assumptions: (1) first-in, first-out (FIFO) or (2) average-cost. [9]

To illustrate these cost flow methods, assume that Call-Mart SpA had the following transactions in its first month of operations.

Date	Purchases	Sold or Issued	Balance
March 2	2,000 @ €4.00		2,000 units
March 15	6,000 @ €4.40		8,000 units
March 19		4,000 units	4,000 units
March 30	2,000 @ €4.75		6,000 units

From this information, **Call-Mart computes the ending inventory of 6,000 units and the cost of goods available for sale (beginning inventory + purchases) of €43,900** [(2,000 @ €4.00) + (6,000 @ €4.40) + (2,000 @ €4.75)]. The question is, which price or prices should it assign to the 6,000 units of ending inventory? The answer depends on which cost flow assumption it uses.

Specific Identification

Specific identification calls for identifying each item sold and each item in inventory. A company includes in cost of goods sold the costs of the specific items sold. It includes in inventory the costs of the specific items on hand. This method may be used only in instances where it is practical to separate physically the different purchases made. As a result, most companies only use this method when handling a relatively small number of costly, easily distinguishable items. In the retail trade, this includes some types of jewelry, fur coats, automobiles, and some furniture. In manufacturing, it includes special orders and many products manufactured under a job cost system.

To illustrate, assume that Call-Mart’s 6,000 units of inventory consists of 1,000 units from the March 2 purchase, 3,000 from the March 15 purchase, and 2,000 from the March 30 purchase. [Illustration 8.7](#) shows how Call-Mart computes the ending inventory and cost of goods sold.

Date	No. of Units	Unit Cost	Total Cost
March 2	1,000	€4.00	€ 4,000
March 15	3,000	4.40	13,200
March 30	2,000	4.75	9,500
Ending inventory	<u>6,000</u>		<u>€26,700</u>
Cost of goods available for sale (computed in previous section)			€43,900
Deduct: Ending inventory			26,700
Cost of goods sold			<u>€17,200</u>

ILLUSTRATION 8.7 Specific Identification Method

This method appears ideal. Specific identification matches actual costs against actual revenue. Thus, a company reports ending inventory at actual cost. In other words, **under specific identification the cost flow matches the physical flow of the goods**. On closer observation, however, this method has certain deficiencies in addition to its lack of practicability in many situations.

Some argue that specific identification allows a company to manipulate net income. For example, assume that a wholesaler purchases identical plywood early in the year at three different prices. When it sells the plywood, the wholesaler can select either the lowest or the highest price to charge to expense. It simply selects the plywood from a specific lot for delivery to the customer. A business manager, therefore, can manipulate net income by delivering to the customer the higher- or lower-priced item, depending on whether the company seeks lower or higher reported earnings for the period.

Another problem relates to the arbitrary allocation of costs that sometimes occurs with specific inventory items. For example, a company often faces difficulty in relating freight charges, storage costs, and discounts directly to a given inventory item. This results in allocating these costs somewhat arbitrarily, leading to a “breakdown” in the precision of the specific identification method.⁶

Average-Cost

As the name implies, the **average-cost method** prices items in the inventory on the basis of the average cost of all similar goods available during the period. To illustrate use of the periodic inventory method (amount of inventory computed at the end of the period), Call-Mart computes the ending inventory and cost of goods sold using a **weighted-average method** as shown in **Illustration 8.8**.

Date of Invoice	No. of Units	Unit Cost	Total Cost
March 2	2,000	€4.00	€ 8,000
March 15	6,000	4.40	26,400
March 30	2,000	4.75	9,500
Total goods available	<u>10,000</u>		<u>€43,900</u>
Weighted-average cost per unit		$\frac{€43,900}{100,00} = €4.39$	
Inventory in units	6,000 units		
Ending inventory	6,000 × €4.39 = €26,340		
	Cost of goods available for sale		€43,900
	Deduct: Ending inventory		<u>26,340</u>
	Cost of goods sold		<u>€17,560</u>

ILLUSTRATION 8.8 Weighted-Average Method—Periodic Inventory

In computing the average cost per unit, Call-Mart includes the beginning inventory, if any, both in the total units available and in the total cost of goods available.

Companies use the **moving-average method** with perpetual inventory records. **Illustration 8.9** shows the application of the average-cost method for perpetual records.

Date	Purchased		Sold or Issued	Balance	
March 2	(2,000 @ €4.00)	€ 8,000		(2,000 @ €4.00)	€ 8,000
March 15	(6,000 @ 4.40)	26,400		(8,000 @ 4.30)	34,400
March 19			(4,000 @ €4.30) €17,200	(4,000 @ 4.30)	17,200
March 30	(2,000 @ 4.75)	9,500		(6,000 @ 4.45)	26,700

ILLUSTRATION 8.9 Moving-Average Method—Perpetual Inventory

In this method, Call-Mart computes a **new average unit cost** each time it makes a purchase. For example, on March 15, after purchasing 6,000 units for €26,400, Call-Mart has 8,000 units costing €34,400 (€8,000 plus €26,400) on hand. The average unit cost is €34,400 divided by 8,000, or €4.30. Call-Mart uses this unit cost in costing withdrawals until it makes another purchase. At that point, Call-Mart computes a new average unit cost. Accordingly, the company shows the cost of the 4,000 units withdrawn on March 19 at €4.30, for a total cost of goods sold of €17,200. On March 30, following the purchase of 2,000 units for €9,500, Call-Mart determines a new unit cost of €4.45, for an ending inventory of €26,700.

Companies often use average-cost methods for practical rather than conceptual reasons. These methods are simple to apply and objective. They are not as subject to income manipulation as some of the other inventory pricing methods. In addition, proponents of the average-cost methods reason that measuring a specific physical flow of inventory is often impossible. Therefore, it is better to cost items on an average-price basis. This argument is particularly persuasive when dealing with similar inventory items.

First-In, First-Out (FIFO)

The **first-in, first-out (FIFO) method** assumes that a company uses goods in the order in which it purchases them. In other words, the FIFO method assumes that **the first goods purchased are the first used** (in a manufacturing concern) **or the first sold** (in a merchandising concern). The inventory remaining must therefore represent the most recent purchases.

To illustrate, assume that Call-Mart uses the periodic inventory system. It determines its cost of the ending inventory by taking the cost of the most recent purchase and working back until it accounts for all units in the

inventory. Call-Mart determines its ending inventory and cost of goods sold as shown in [Illustration 8.10](#).

Date	No. of Units	Unit Cost	Total Cost
March 30	2,000	€4.75	€ 9,500
March 15	4,000	4.40	17,600
Ending inventory	6,000		€27,100
Cost of goods available for sale			€43,900
Deduct: Ending inventory			27,100
Cost of goods sold			€16,800

ILLUSTRATION 8.10 FIFO Method—Periodic Inventory

If Call-Mart instead uses a perpetual inventory system in quantities and euros, it attaches a cost figure to each withdrawal. Then, the cost of the 4,000 units removed on March 19 consists of the cost of the items purchased on March 2 and March 15. [Illustration 8.11](#) shows the inventory on a FIFO basis perpetual system for Call-Mart.

Date	Purchased	Sold or Issued	Balance
March 2	(2,000 @ €4.00) € 8,000		2,000 @ €4.00 € 8,000
March 15	(6,000 @ 4.40) 26,400		2,000 @ 4.00 } 6,000 @ 4.40 } 34,400
March 19		2,000 @ €4.00 } 2,000 @ 4.40 } (€16,800)	4,000 @ 4.40 17,600
March 30	(2,000 @ 4.75) 9,500		4,000 @ 4.40 } 2,000 @ 4.75 } 27,100

ILLUSTRATION 8.11 FIFO Method—Perpetual Inventory

Here, the ending inventory is €27,100, and the cost of goods sold is €16,800 [(2,000 @ €4.00) + (2,000 @ €4.40)].

Notice that in these two FIFO examples, the cost of goods sold (€16,800) and ending inventory (€27,100) are the same. **In all cases where FIFO is used, the amount reported for ending inventory and cost of goods sold would be the same at the end of the month whether a perpetual or periodic system is used.** Why? Because the same costs will always be first in and, therefore, first out. This is true whether a company computes cost of goods sold as it sells goods throughout the accounting period (the perpetual system) or as a residual at the end of the accounting period (the periodic system).

One objective of FIFO is to approximate the physical flow of goods. When the physical flow of goods is actually first-in, first-out, the FIFO method closely approximates specific identification. At the same time, it prevents manipulation of income. With FIFO, a company cannot pick a certain cost item to charge to expense.

Another advantage of the FIFO method is that the ending inventory is close to current cost. Because the first goods in are the first goods out, the ending inventory amount consists of the most recent purchases. This is particularly true with rapid inventory turnover. This approach generally approximates replacement cost on the statement of financial position when price changes have not occurred since the most recent purchases.

However, the FIFO method fails to match current costs against current revenues on the income statement. A company charges the oldest costs against the more current revenue, possibly distorting gross profit and net income.

Companies often combine inventory methods. For example, **Nestlé** (CHE) uses FIFO for its raw materials inventories and prices the remainder using average-cost. For high inventory turnover in certain product lines, a company cannot justify FIFO's additional recordkeeping and expense. In such cases, a company often uses average-cost because it is easy to compute.⁷

Although a company may use a variety of inventory methods to assist in accurate computation of net income, **once it selects a pricing method, it must apply it consistently thereafter.** If conditions indicate that the inventory pricing method in use is unsuitable, the company must seriously consider all other possibilities before selecting another method. It should clearly explain any change and disclose its effect in the financial statements.⁸

Inventory Valuation Methods—Summary Analysis

The preceding sections of this chapter described a number of inventory valuation methods. Here, we present a brief summary of the two commonly used inventory cost flow methods to show the effects these valuation methods have on the financial statements. This comparison assumes periodic inventory procedures and the following selected data.

Selected Data		
Beginning cash balance		€ 7,000
Beginning retained earnings		€10,000
Beginning inventory:	4,000 units @ € 3	€12,000
Purchases:	6,000 units @ € 4	€24,000

Sales:	5,000 units @ €12	€60,000
Operating expenses		€10,000
Income tax rate		40%

Illustration 8.12 shows the comparative results on net income of the use of average-cost and FIFO.

	Average-Cost	FIFO
Sales	€60,000	€60,000
Cost of goods sold	18,000 ^a	16,000 ^b
Gross profit	42,000	44,000
Operating expenses	10,000	10,000
Income before taxes	32,000	34,000
Income taxes (40%)	12,800	13,600
Net income	<u>€19,200</u>	<u>€20,400</u>
	^a 4,000 @ €3 = €12,000	^b 4,000 @ €3 = €12,000
	6,000 @ €4 = 24,000	1,000 @ €4 = 4,000
	<u>€36,000</u>	<u>€16,000</u>
	€36,000 ÷ 10,000 = €3.60	
	€3.6 × 5,000 = <u>€18,000</u>	

ILLUSTRATION 8.12 Comparative Results of Average-Cost and FIFO Methods

Notice that gross profit and net income are higher under FIFO compared to average-cost because prices are increasing.

Illustration 8.13 shows the final balances of selected items at the end of the period.

	Inventory	Gross Profit	Taxes	Net Income	Retained Earnings	Cash
Average-Cost	€18,000 (5,000 × €3.60)	€42,000	€12,800	€19,200	€29,200 (€10,000 + €19,200)	€20,200 ^a
FIFO	€20,000 (5,000 × €4)	€44,000	€13,600	€20,400	€30,400 (€10,000 + €20,400)	€19,400 ^a
^a Cash at Year-End	= Beg. Balance	+ Sales	- Purchases	- Operating expenses	-	Taxes
Average-cost— €20,200	= €7,000	+ €60,000	- €24,000	- €10,000	-	€12,800
FIFO— €19,400	= €7,000	+ €60,000	- €24,000	- €10,000	-	€13,600

ILLUSTRATION 8.13 Balances of Selected Items under Alternative Inventory Valuation Methods

The average-cost method results in the higher cash balance at year-end (because taxes are lower). This example assumes that prices are rising. The opposite result occurs if prices are declining.

Effect of Inventory Errors

LEARNING OBJECTIVE 4

Determine the effects of inventory errors on the financial statements.

Items incorrectly included or excluded in determining cost of goods sold through inventory misstatements will result in errors in the financial statements. Let's look at two cases, assuming a periodic inventory system.

Ending Inventory Misstated

What would happen if **Lenovo** (CHN) correctly records its beginning inventory and purchases, but fails to include some items in ending inventory?

In this situation, [Illustration 8.14](#) shows the resultant effects on the financial statements at the end of the period.

Statement of Financial Position		Income Statement	
Inventory	Understated	Cost of goods sold	Overstated
Retained earnings	Understated		
Working capital	Understated	Net income	Understated
Current ratio	Understated		

ILLUSTRATION 8.14 Financial Statement Effects of Misstated Ending Inventory

If ending inventory is understated, working capital and the current ratio are understated. If cost of goods sold is overstated, then net income is understated.

To illustrate the effect on net income over a two-year period (2022–2023), assume that Yei Chen Ltd. understates its ending inventory by HK\$10,000 (in thousands) in 2022; all other items are correctly stated. The effect of this error is to decrease net income in 2022 and to increase net income in 2023. The error is counterbalanced (offset) in 2023 because beginning inventory is understated and net income is overstated. As [Illustration 8.15](#) shows, the income statement misstates the net income figures for both 2022 and 2023, although the *total* for the two years is correct (see [Underlying Concepts](#)).

Underlying Concepts

When inventory is misstated, its presentation lacks representational usefulness.

Yei Chen Ltd. (in thousands)				
	Incorrect Recording		Correct Recording	
	2022	2023	2022	2023
Revenues	HK\$100,000	HK\$100,000	HK\$100,000	HK\$100,000
Cost of goods sold				
Beginning inventory	25,000	20,000	25,000	30,000
Purchased or produced	45,000	60,000	45,000	60,000
Goods available for sale	70,000	80,000	70,000	90,000
Less: Ending inventory	20,000*	40,000	30,000	40,000
Cost of goods sold	50,000	40,000	40,000	50,000
Gross profit	50,000	60,000	60,000	50,000
Administrative and selling expenses	40,000	40,000	40,000	40,000
Net income	<u>HK\$ 10,000</u>	<u>HK\$ 20,000</u>	<u>HK\$ 20,000</u>	<u>HK\$ 10,000</u>
	Total income for two years = HK\$30,000		Total income for two years = HK\$30,000	

*Ending inventory understated by HK\$10,000 in 2022.

ILLUSTRATION 8.15 Effect of Ending Inventory Error on Two Period

If Yei Chen *overstates* ending inventory in 2022, the reverse effect occurs. Inventory, working capital, current ratio, and net income are overstated and cost of goods sold is understated. The effect of the error on net income will be counterbalanced in 2023, but the income statement misstates both years' net income figures.

Purchases and Inventory Misstated

Suppose that Bishop Company does not record as a purchase certain goods that it owns and does not count them in ending inventory. [Illustration 8.16](#) shows the effect on the financial statements (assuming this is a purchase on account).

Statement of Financial Position		Income Statement	
Inventory	Understated	Purchases	Understated
Retained earnings	No effect	Cost of goods sold	No effect
Accounts payable	Understated	Net income	No effect
Working capital	No effect	Inventory (ending)	Understated
Current ratio	Overstated		

ILLUSTRATION 8.16 Financial Statement Effects of Misstated Purchases and Inventory

Omission of goods from purchases and inventory results in an understatement of inventory and accounts payable in the statement of financial position; it also results in an understatement of purchases and ending inventory in the income statement. However, the omission of such goods does not affect net income for the period. Why not? Because Bishop understates both purchases and ending inventory by the same amount—the error is thereby offset in cost of goods sold. Total working capital is unchanged, but the current ratio is overstated because of the omission of equal amounts from inventory and accounts payable.

To illustrate the effect on the current ratio, assume that Bishop *understated* accounts payable and ending inventory by \$40,000. [Illustration 8.17](#) shows the understated and correct data.

Purchases and Ending Inventory Understated		Purchases and Ending Inventory Correct	
Current assets	\$120,000	Current assets	\$160,000
Current liabilities	\$ 40,000	Current liabilities	\$ 80,000
Current ratio	3 to 1	Current ratio	2 to 1

ILLUSTRATION 8.17 Effects of Purchases and Ending Inventory Errors

The understated data indicate a current ratio of 3 to 1, whereas the correct ratio is 2 to 1. Thus, understatement of accounts payable and ending inventory can lead to a “window dressing” of the current ratio. That is, Bishop can make the current ratio appear better than it is.

If Bishop *overstates* both purchases (on account) and ending inventory, then the effects on the statement of financial position are exactly the reverse. The financial statements overstate inventory and accounts payable, and understate the current ratio. The overstatement does not affect cost of goods sold and net

income because the errors offset one another. Similarly, working capital is not affected.

We cannot overemphasize the importance of proper inventory measurement in presenting accurate financial statements. For example, one women's apparel maker had accounting irregularities that wiped out one year's net income and caused a restatement of the prior year's earnings. One reason: It inflated inventory and deflated cost of goods sold. In another case, a company had to restate its income by \$1.7 million because an accountant in the antenna manufacturing division overstated the ending inventory, thereby reducing its cost of sales.

APPENDIX 8A LIFO Cost Flow Assumption

LEARNING OBJECTIVE *5

Describe the LIFO cost flow assumption.

As we discussed in the chapter, under IFRS, LIFO is not permitted for financial reporting purposes. In prohibiting LIFO, the IASB noted that use of LIFO results in inventories being recognized in the statement of financial position at amounts that may bear little relationship to recent cost levels of inventories. While some argued for use of LIFO because it may better match the costs of recently purchased inventory with current prices, the Board concluded that it is not appropriate to allow an approach that results in a measurement of profit or loss for the period that is inconsistent with the measurement of inventories in the statement of financial position. [12] Nonetheless, LIFO is permitted for financial reporting purposes in the United States, it is permitted for tax purposes in some countries, and its use can result in significant tax savings. In this appendix, we provide an expanded discussion of LIFO inventory procedures.

Last-In, First-Out (LIFO)

The **last-in, first-out (LIFO) method** matches the cost of the last goods purchased against revenue. To illustrate, we extend the Call-Mart example introduced in [Illustration 8.7](#). Recall that Call-Mart SpA had the following transactions in its first month of operations.

Date	Purchases	Sold or Issued	Balance
March 2	2,000 @ €4.00		2,000 units

March 15	6,000 @ €4.40		8,000 units
March 19		4,000 units	4,000 units
March 30	2,000 @ €4.75		6,000 units

If Call-Mart uses a periodic inventory system, it assumes that **the cost of the total quantity sold or issued during the month comes from the most recent purchases**. Call-Mart prices the ending inventory by using the total units as a basis of computation and disregards the exact dates of sales or issuances. For example, Call-Mart would assume that the cost of the 4,000 units withdrawn absorbed the 2,000 units purchased on March 30 and 2,000 of the 6,000 units purchased on March 15. [Illustration 8A.1](#) shows how Call-Mart computes the inventory and related cost of goods sold, using the periodic inventory method.

Date of Invoice	No. of Units	Unit Cost	Total Cost
March 2	2,000	€4.00	€ 8,000
March 15	4,000	4.40	17,600
Ending inventory	6,000		€25,600
Goods available for sale			€ 43,900
Deduct: Ending inventory			25,600
Cost of goods sold			€18,300

ILLUSTRATION 8A.1 LIFO Method—Periodic Inventory

If Call-Mart keeps a perpetual inventory record in quantities and euros, use of the LIFO method results in **different ending inventory and cost of goods sold amounts than the amounts calculated under the periodic method**. [Illustration 8A.2](#) shows these differences under the perpetual method.

Date	Purchased	Sold or Issued	Balance
March 2	(2,000 @ €4.00) € 8,000		2,000 @ €4.00 € 8,000
March 15	(6,000 @ 4.40) 26,400		2,000 @ 4.00 } 6,000 @ 4.40 } 34,400
March 19		(4,000 @ €4.40) €17,600	2,000 @ 4.00 } 2,000 @ 4.40 } 16,800
March 30	(2,000 @ 4.75) 9,500		2,000 @ 4.00 } 2,000 @ 4.40 } 2,000 @ 4.75 } 26,300

ILLUSTRATION 8A.2 LIFO Method—Perpetual Inventory

The month-end periodic inventory computation presented in [Illustration 8A.1](#) (inventory €25,600 and cost of goods sold €18,300) shows a different amount than the perpetual inventory computation (inventory €26,300 and cost of goods sold €17,600). The periodic system (with ending inventory determined by a physical count at the end of the month) matches the total withdrawals for the month with the total purchases for the month in applying the last-in, first-out method. In contrast, the perpetual system matches each withdrawal with the immediately preceding purchases. In effect, the periodic computation assumed that Call-Mart included the cost of the goods that it purchased on March 30 in the sale or issue on March 19.

Inventory Valuation Methods—Summary Analysis

With the addition of the LIFO example, we can revisit the summary analysis presented in the chapter, which was based on the following data. Recall that this example assumes periodic inventory procedures.

Beginning cash balance		€ 7,000
Beginning retained earnings		€10,000
Beginning inventory:	4,000 units @ € 3	€12,000
Purchases:	6,000 units @ € 4	€24,000
Sales:	5,000 units @ €12	€60,000
Operating expenses		€10,000
Income tax rate		40%

[Illustration 8A.3](#) shows the comparative results on net income of the use of Average-Cost, FIFO, and LIFO.

	Average-Cost	FIFO	LIFO
Sales	€60,000	€60,000	€60,000
Cost of goods sold	<u>18,000^a</u>	<u>16,000^b</u>	<u>20,000^c</u>
Gross profit	42,000	44,000	40,000
Operating expenses	<u>10,000</u>	<u>10,000</u>	<u>10,000</u>
Income before taxes	32,000	34,000	30,000
Income taxes (40%)	<u>12,800</u>	<u>13,600</u>	<u>12,000</u>
Net income	<u>€19,200</u>	<u>€20,400</u>	<u>€18,000</u>
	^a 4,000 @ €3 = €12,000	^b 4,000 @ €3 = €12,000	^c 5,000 @ €4 = <u>€20,000</u>
	6,000 @ €4 = <u>€24,000</u>	1,000 @ €4 = <u>€ 4,000</u>	
	<u>€36,000</u>	<u>€16,000</u>	
	€36,000 ÷ 10,000 = € 3.60		
	€ 3.60 × 5,000 = <u>€18,000</u>		

ILLUSTRATION 8A.3 Comparative Results of Average-Cost, FIFO, and LIFO Methods

Notice that gross profit and net income are lowest under LIFO, highest under FIFO, and somewhere in the middle under average-cost.

Illustration 8A.4 shows the final balances of selected items at the end of the period.

	Inventory	Gross Profit	Taxes	Net Income	Retained Earnings	Cash
Average-Cost	€18,000 (5,000 × €3.60)	€42,000	€12,800	€19,200	€29,200 (€10,000 + €19,200)	€20,200 ^a
FIFO	€20,000 (5,000 × €4)	€44,000	€13,600	€20,400	€30,400 (€10,000 + €20,400)	€19,400 ^a
LIFO	€16,000 (4,000 × €3) (1,000 × €4)	€40,000	€12,000	€18,400	€28,000 (€10,000 + €18,000)	€21,000 ^a
^a Cash at Year-End	= Beg. Balance	+ Sales	- Purchases	- Operating expenses	-	Taxes
Average-cost— €20,200	= €7,000	+ €60,000	- €24,000	- €10,000	-	€12,800
FIFO— €19,400	= €7,000	+ €60,000	- €24,000	- €10,000	-	€13,600
LIFO— €21,000	= €7,000	+ €60,000	- €24,000	- €10,000	-	€12,600

ILLUSTRATION 8A.4 Balances of Selected Items under Alternative Inventory Valuation Methods

LIFO results in the highest cash balance at year-end (because taxes are lower). This example assumes that prices are rising. The opposite result occurs if prices are declining.

Learning Objectives Review

1 Describe inventory classifications and different inventory systems.

Only one inventory account, Inventory, appears in the financial statements of a merchandising concern. A manufacturer normally has three inventory accounts: Raw Materials, Work in Process, and Finished Goods. Companies

report the cost assigned to goods and materials on hand but not yet placed into production as raw materials inventory. They report the cost of the raw materials on which production has been started but not completed, plus the direct labor cost applied specifically to this material and a ratable share of manufacturing overhead costs, as work in process inventory. Finally, they report the costs identified with the completed but unsold units on hand at the end of the fiscal period as finished goods inventory.

A **perpetual inventory system** maintains a continuous record of inventory changes in the Inventory account. That is, a company records all purchases and sales (issues) of goods directly in the Inventory account as they occur. Under a **periodic inventory system**, companies determine the quantity of inventory on hand only periodically. A company debits a Purchases account, but the Inventory account remains the same. It determines cost of goods sold at the end of the period by subtracting ending inventory from cost of goods available for sale. A company ascertains ending inventory by physical count.

2 Identify the goods and costs included in inventory.

Companies record purchases of inventory when they obtain legal title to the goods (generally when they receive the goods). Shipping terms must be evaluated to determine when legal title passes, and careful consideration must be made for cost of goods sold on consignment and sales with repurchase agreements and high rates of return.

Product costs are those costs that attach to the inventory and are recorded in the Inventory account. Such charges include freight charges on (1) costs of purchase, (2) costs of conversion, and (3) “other costs” incurred in bringing the inventories to the point of sale and in salable condition. **Period costs** are those costs that are indirectly related to the acquisition or production of goods. These changes, such as selling expense and general and administrative expenses, are therefore not included as part of inventory cost.

3 Compare the cost flow assumptions used to account for inventories.

The IASB requires use of the specific identification method in cases where inventories are not ordinarily interchangeable or for goods and services produced or segregated for specific projects. Only in situations where inventory turnover is low, unit price is high, or inventory quantities are small are the specific identification criteria met. In other cases companies use one of two cost flow assumptions. (1) Average-cost prices items in the inventory on the

basis of the average cost of all similar goods available during the period. (2) First-in, first-out (FIFO) assumes that a company uses goods in the order in which it purchases them. The inventory remaining must therefore represent the most recent purchases.

4 Determine the effects of inventory errors on the financial statements.

If the company misstates ending inventory: (1) In the statement of financial position, the inventory and retained earnings will be misstated, which will lead to miscalculation of the working capital and current ratio, and (2) in the income statement, the cost of goods sold and net income will be misstated. If the company misstates purchases (and related accounts payable) and inventory: (1) Statement of financial position, the inventory and accounts payable will be misstated, which will lead to miscalculation of the current ratio, and (2) in the income statement, purchases and ending inventory will be misstated.

***5 Describe the LIFO cost flow assumption.**

The LIFO method assumes that the last items purchased are the first items sold. This method matches the costs of the most recently purchased items with revenues in the period. In times of rising prices, use of the LIFO method results in lower net income and income taxes and higher cash flow.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Mayhew AG has the following inventory, purchases, and sales data for the month of March. The physical inventory count on March 31 shows 500 units on hand.

Inventory:	March 1	200 units @ €4.00	€ 800
Purchases:	March 10	500 units @ €4.50	2,250
	March 20	400 units @ €4.75	1,900

	March 30	300 units @ €5.00	1,500
Sales:	March 15	500 units	
	March 25	400 units	

Instructions

- Under a **periodic inventory system**, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under (1) FIFO and (2) average-cost.
- Under a **perpetual inventory system**, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under (1) FIFO and (2) average-cost.

Solution

- The cost of goods available for sale is €6,450, as follows.

Inventory:	March 1	200	units @ €4.00	€ 800
Purchases:	March 10	500	units @ €4.50	2,250
	March 20	400	units @ €4.75	1,900
	March 30	300	units @ €5.00	1,500
Total:		<u>1,400</u>		<u>€6,450</u>

Under a **periodic inventory system**, the cost of goods sold under each cost flow method is as follows.

- | FIFO Method | | | |
|---------------------------------------|-------|-----------|---------------|
| Ending inventory: | | | |
| Date | Units | Unit Cost | Total Cost |
| March 30 | 300 | €5.00 | €1,500 |
| March 20 | 200 | 4.75 | 950 |
| Cost of goods sold: €6,450 – €2,450 = | | | <u>€4,000</u> |

- | Average-Cost Method | |
|---------------------|---------------------------------------|
| Average unit cost: | €6,450 ÷ 1,400 = €4.607 |
| Ending inventory: | 500 × €4.607 = <u>€2,303.50</u> |
| Cost of goods sold: | €6,450 – €2,303.50 = <u>€4,146.50</u> |

- The cost of goods available for sale is €6,450, as follows.

Inventory:	March 1	200	units @ €4.00	€800
Purchases:	March 10	500	units @ €4.50	2,250
	March 20	400	units @ €4.75	1,900
	March 30	300	units @ €5.00	1,500
Total:		<u>1,400</u>		<u>€6,450</u>

Under a **perpetual inventory system**, the cost of goods sold under each cost flow method is as follows.

1. **FIFO Method**

<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 1			(200 @ €4.00) € 800
March 10	(500 @ €4.50) €2,250		(200 @ €4.00) (500 @ €4.50) €3,050
March 15		(200 @ €4.00) (300 @ €4.50) €2,150	(200 @ €4.50) € 900
March 20	(400 @ €4.75) €1,900		(200 @ €4.50) } (400 @ €4.75) } €2,800
March 25		(200 @ €4.50) (200 @ €4.75) €1,850	(200 @ €4.75) € 950
March 30	(300 @ €5.00) €1,500		(200 @ €4.75) } (300 @ €5.00) } €2,450
	Ending inventory <u>€2,450</u>	Cost of goods sold: €2,150 + €1,850 = <u>€4,000</u>	

2. **Moving-Average Cost Method**

<u>Date</u>	<u>Purchases</u>	<u>Cost of Goods Sold</u>	<u>Balance</u>
March 1			(200 @ €4.00) € 800
March 10	(500 @ €4.50) €2,250		(700 @ €4.357) €3,050
March 15		(500 @ €4.357) € 2,179	(200 @ €4.357) € 871
March 20	(400 @ €4.75) €1,900		(600 @ €4.618) €2,771
March		(400 @ €4.618)	(200 @ € 924

25		€ 1,847	€4.618)	
March 30	(300 @ €5.00) €1,500		(500 @ €4.848)	€2,424
	Ending inventory <u>€2,424</u>	Cost of goods sold: €2,179 + €1,847 = <u>€4,026</u>		

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. In what ways are the inventory accounts of a merchandising company different from those of a manufacturing company?
2. Why should inventories be included in (a) a statement of financial position and (b) the computation of net income?
3. What is the difference between a perpetual inventory and a physical inventory? If a company maintains a perpetual inventory, should its physical inventory at any date be equal to the amount indicated by the perpetual inventory records? Why?
4. Mishima Ltd. indicated in a recent annual report that approximately ¥19 million of merchandise was received on consignment. Should Mishima, Inc. report this amount on its statement of financial position? Explain.
5. What is a product financing arrangement? How should product financing arrangements be reported in the financial statements?
6. Where, if at all, should the following items be classified on a statement of financial position?
 - a. Goods out on approval to customers.
 - b. Goods in transit that were recently purchased f.o.b. destination.
 - c. Land held by a realty firm for sale.
 - d. Raw materials.
 - e. Goods received on consignment.

f. Manufacturing supplies.

7. Yang Specialty Products has a generous return policy. Yang gives customers a 30-day trial period, after which they can return the product for a full refund if not satisfied. Under what conditions can Yang consider the inventory sold when the generous return policy is offered?

8. Holland Home Electronics transfers (sells) inventory to Oslo ASA with right of return within the next 3 months. Advise Holland management on the conditions under which it can consider goods sold under this plan.

9. Define “cost” as applied to the valuation of inventories.

10. Distinguish between product costs and period costs as they relate to inventory.

11. Honda (JPN) is considering alternative methods of accounting for the cash discounts it takes when paying suppliers promptly. One method suggested was to report these discounts as financial income when payments are made. Comment on the propriety of this approach.

12. Wysocki Company has incurred borrowing costs as part of its manufacturing process of its inventory. Should these costs be included in the cost of the inventory? Explain.

13. Biestek Meat-Packing SA historically has experienced a 0.5% spoilage rate associated with production of its Polish sausage line of products. However, due to installation of new meat-grinding equipment, higher than usual spoilage of €45,000 was experienced on the Polish sausage line in a recent month. How should Biestek account for both the usual and increased spoilage in determining the cost of its sausage inventory?

14. Zonker NV purchases 500 units of an item at an invoice cost of €30,000. What is the cost per unit? If the goods are shipped f.o.b. shipping point and the freight bill was €1,500, what is the cost per unit if Zonker pays the freight charges? If these items were bought on 2/10, n/30 terms and the invoice and the freight bill were paid within the 10-day period, what would be the cost per unit?

15. Specific identification is sometimes said to be the ideal method of assigning cost to inventory and to cost of goods sold. Briefly indicate the arguments for and against this method of inventory valuation.

16. FIFO and weighted-average methods are often used instead of specific identification for inventory valuation purposes. Compare these methods with the specific identification method, discussing the theoretical propriety of each method in the determination of income and asset valuation.

17. In the third quarter of 2023, David Beckham, the controller for Swiss Precision Company, discovers an error in ending inventory counts for the December 31, 2022, cutoff. After Beckham reports the error in a management meeting, the president for Swiss argues that this error in the prior year is of no consequence to the 2023 financial statements. How should Beckham respond to the president?

18. At the statement of financial position date, Clarkson Company held title to goods in transit amounting to \$214,000. This amount was omitted from the purchases figure for the year and also from the ending inventory. What is the effect of this omission on the net income for the year as calculated when the books are closed? What is the effect on the company's statement of financial position? Is materiality a factor in determining whether an adjustment for this item should be made?

***19.** As compared with the FIFO method of costing inventories, does the LIFO method result in a larger or smaller net income in a period of rising prices? What is the comparative effect on net income in a period of falling prices?

Brief Exercises

BE8.1 (LO 1) Included in the December 31 trial balance of Rivera A.Ş. are the following assets.

Cash	₺190,000	Work in process	₺200,000
Equipment (net)	1,100,000	Accounts receivable (net)	400,000
Prepaid insurance	41,000	Patents	110,000
Raw materials	335,000	Finished goods	170,000

Prepare the current assets section of the December 31 statement of financial position.

BE8.2 (LO 1) Matlock SE uses a perpetual inventory system. Its beginning inventory consists of 50 units that cost €34 each. During June, the company purchased 150 units at €34 each, returned 6 units for credit, and sold 125 units at €50 each. Journalize the June transactions.

BE8.3 (LO 2) Obihiro Ltd. has the following information related to its inventory of embroidered baseball caps: purchase price, ¥45,000,000; import duties, ¥375,000; interest costs on inventory loan, ¥520,000; and transportation costs, ¥125,000. Determine the cost of the Obihiro inventory.

BE8.4 (LO 3) Jakarta Ltd. uses a periodic inventory system. For June, when the company sold 600 units, the following information is available.

	Units	Unit Cost	Total Cost
June 1 inventory	150	€5	€750
June 15 purchase	600	6	3,600
June 23 purchase	400	8	3,200
	<u>1,150</u>		<u>€7,550</u>

Compute the June 30 inventory and the June cost of goods sold using the average-cost method. (Round unit costs to two decimal points.)

BE8.5 (LO 3) Data for Jakarta Ltd. are presented in BE8.4. Compute the June 30 inventory and the June cost of goods sold using the FIFO method.

BE8.6 (LO 3) Amsterdam Company uses a periodic inventory system. For April, when the company sold 600 units, the following information is available.

	Units	Unit Cost	Total Cost
April 1 inventory	250	\$10	\$ 2,500
April 15 purchase	400	12	4,800
April 23 purchase	350	13	4,550
	<u>1,000</u>		<u>\$11,850</u>

Compute the April 30 inventory and the April cost of goods sold using the average-cost method.

BE8.7 (LO 3) Data for Amsterdam Company are presented in BE8.6. Compute the April 30 inventory and the April cost of goods sold using the FIFO method.

BE8.8 (LO 4) Bienvenu Enterprises reported cost of goods sold for 2022 of \$1,400,000 and retained earnings of \$5,200,000 at December 31, 2022. Bienvenu later discovered that its ending inventories at December 31, 2021 and 2022, were overstated by \$110,000 and \$35,000, respectively. Determine the corrected amounts for 2022 cost of goods sold and December 31, 2022, retained earnings.

BE8.9 (LO 2, 4) Stallman Company took a physical inventory on December 31 and determined that goods costing \$200,000 were on hand. Not included in the physical count were \$25,000 of goods purchased from Pelzer Corporation, f.o.b. shipping point, and \$22,000 of goods sold to Alvarez Company for \$30,000, f.o.b. destination. Both the Pelzer purchase and the Alvarez sale were in transit at year-end. What amount should Stallman report as its December 31 inventory?

***BE8.10 (LO 5)** Data for Amsterdam Company are presented in BE8.6. Compute the April 30 inventory and the April cost of goods sold using the LIFO

method.

Exercises

E8.1 (LO 1, 2) (Inventoriable Costs) Presented below is a list of items that may or may not be reported as inventory in a company's December 31 statement of financial position.

1. Goods sold on an installment basis (bad debts can be reasonably estimated).
2. Goods out on consignment at another company's store.
3. Goods purchased f.o.b. shipping point that are in transit at December 31.
4. Goods purchased f.o.b. destination that are in transit at December 31.
5. Goods sold to another company, for which our company has signed an agreement to repurchase at a set price that covers all costs related to the inventory.
6. Goods sold where large returns are predictable.
7. Goods sold f.o.b. shipping point that are in transit at December 31.
8. Freight charges on goods purchased.
9. Interest costs incurred for inventories that are routinely manufactured.
10. Materials on hand not yet placed into production by a manufacturing firm.
11. Costs incurred to advertise goods held for resale.
12. Office supplies.
13. Raw materials on which a manufacturing firm has started production but which are not completely processed.
14. Factory supplies.
15. Goods held on consignment from another company.
16. Costs identified with units completed by a manufacturing firm but not yet sold.
17. Goods sold f.o.b. destination that are in transit at December 31.
18. Short-term investments in shares and bonds that will be resold in the near future.

Instructions

Indicate which of these items would typically be reported as inventory in the financial statements. If an item should **not** be reported as inventory, indicate how it should be reported in the financial statements.

E8.2 (LO 1, 2) (Inventoriable Costs) In your audit of Garza Company, you find that a physical inventory on December 31, 2022, showed merchandise with a cost of \$441,000 was on hand at that date. You also discover the following items were all excluded from the \$441,000.

1. Merchandise of \$61,000 which is held by Garza on consignment. The consignor is the Bontemps Company.
2. Merchandise costing \$33,000 which was shipped by Garza f.o.b. destination to a customer on December 31, 2022. The customer was expected to receive the merchandise on January 6, 2023.
3. Merchandise costing \$46,000 which was shipped by Garza f.o.b. shipping point to a customer on December 29, 2022. The customer was scheduled to receive the merchandise on January 2, 2023.
4. Merchandise costing \$73,000 shipped by a vendor f.o.b. destination on December 30, 2022, and received by Garza on January 4, 2023.
5. Merchandise costing \$51,000 shipped by a vendor f.o.b. shipping point on December 31, 2022, and received by Garza on January 5, 2023.

Instructions

Based on the above information, calculate the amount that should appear on Garza's statement of financial position at December 31, 2022, for inventory.

E8.3 (LO 1, 2) (Inventoriable Costs) Assume that in an annual audit of Webber AG at December 31, 2022, you find the following transactions near the closing date.

1. A special machine, fabricated to order for a customer, was finished and specifically segregated in the back part of the shipping room on December 31, 2022. The customer was billed on that date and the machine excluded from inventory although it was shipped on January 4, 2023.
2. Merchandise costing €2,800 was received on January 3, 2023, and the related purchase invoice recorded January 5. The invoice showed the shipment was made on December 29, 2022, f.o.b. destination.
3. A packing case containing a product costing €3,400 was standing in the shipping room when the physical inventory was taken. It was not included in the inventory because it was marked "Hold for shipping instructions."

Your investigation revealed that the customer's order was dated December 18, 2022, but that the case was shipped and the customer billed on January 10, 2023. The product was a stock item of your client.

4. Merchandise costing €720 was received on December 28, 2022, and the invoice was not recorded. You located it in the hands of the purchasing agent; it was marked "on consignment."
5. Merchandise received on January 6, 2023, costing €680 was entered in the purchase journal on January 7, 2023. The invoice showed shipment was made f.o.b. supplier's warehouse on December 31, 2022. Because it was not on hand at December 31, it was not included in inventory.

Instructions

Assuming that each of the amounts is material, state whether the merchandise should be included in the client's inventory, and give your reason for your decision on each item.

E8.4 (LO 1, 2) (Inventoriable Costs—Perpetual) Bradford Machine plc maintains a general ledger account for each class of inventory, debiting such accounts for increases during the period and crediting them for decreases. The transactions below relate to the Raw Materials inventory account, which is debited for materials purchased and credited for materials requisitioned for use.

1. An invoice for £8,100, terms f.o.b. destination, was received and entered January 2, 2023. The receiving report shows that the materials were received December 28, 2022.
2. Materials costing £7,300 were returned to the supplier on December 29, 2022, and were shipped f.o.b. shipping point. The return was entered on that date, even though the materials are not expected to reach the supplier's place of business until January 6, 2023.
3. Materials costing £28,000, shipped f.o.b. destination, were not recorded by December 31, 2022, "because they were in a railroad car on the company's siding on that date and had not been unloaded."
4. An invoice for £7,500, terms f.o.b. shipping point, was received and entered December 30, 2022. The receiving report shows that the materials were received January 4, 2023, and the bill of lading shows that they were shipped January 2, 2023.
5. Materials costing £19,800 were received December 30, 2022, but no entry was made for them because "they were ordered with a specified delivery of

no earlier than January 10, 2023.”

Instructions

Prepare correcting general journal entries required at December 31, 2022, assuming that the books have not been closed.

E8.5 (LO 2) (Determining Merchandise Amounts—Periodic) Two or more items are omitted in each of the tabulations of income statement data shown below.

	2021	2022	2023
Sales revenue	£290,000	£ ?	£410,000
Sales returns and allowances	6,000	13,000	?
Net sales	?	347,000	?
Beginning inventory	20,000	32,000	?
Ending inventory	?	?	?
Purchases	?	260,000	298,000
Purchase returns and allowances	5,000	8,000	10,000
Freight-in	8,000	9,000	12,000
Cost of goods sold	238,000	?	303,000
Gross profit on sales	46,000	91,000	97,000

Instructions

Fill in the amounts that are missing.

E8.6 (LO 2) (Purchases Recorded Net) Presented below are transactions related to Guillen Ltd, a company that uses the periodic inventory system.

May 10	Purchased goods billed at £20,000 subject to cash discount terms of 2/10, n/60.
11	Purchased goods billed at £15,000 subject to terms of 1/15, n/30.
19	Paid invoice of May 10.
24	Purchased goods billed at £11,500 subject to cash discount terms of 2/10, n/30.

Instructions

- Prepare general journal entries for the transactions above under the assumption that purchases are to be recorded at net amounts after cash discounts and that discounts lost are to be treated as financial expense.

- b. Assuming no purchase or payment transactions other than those given above, prepare the adjusting entry required on May 31 if financial statements are to be prepared as of that date.

E8.7 (LO 2) (Purchases Recorded, Gross Method) Ohno Industries purchased ¥12,000 of merchandise on February 1, 2022, subject to a trade discount of 10% and with credit terms of 3/15, n/60. It returned ¥3,000 (gross price before trade or cash discount) on February 4. The invoice was paid on February 13. (All amounts in thousands.)

Instructions

- Assuming that Ohno uses the perpetual method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- Assuming that Ohno uses the periodic method for recording merchandise transactions, record the purchase, return, and payment using the gross method.
- At what amount would the purchase on February 1 be recorded if the net method were used?

E8.8 (LO 2, 3) (Periodic versus Perpetual Entries) Chippewas Company sells one product. Presented below is information for January for Chippewas Company.

Jan.	1	Inventory	100 units at \$6 each
	4	Sale	80 units at \$8 each
	11	Purchase	150 units at \$6.50 each
	13	Sale	120 units at \$8.75 each
	20	Purchase	160 units at \$7 each
	27	Sale	100 units at \$9 each

Chippewas uses the FIFO cost flow assumption. All purchases and sales are on account.

Instructions

- Assume Chippewas uses a periodic system. Prepare all necessary journal entries, including the end-of-month closing entry, to record cost of goods sold. A physical count indicates that the ending inventory for January is 110 units.

- b. Compute gross profit using the periodic system.
- c. Assume Chippewas uses a perpetual system. Prepare all necessary journal entries.
- d. Compute gross profit using the perpetual system.

E8.9 (LO 3) (FIFO and Average-Cost Determination) LoBianco Company's record of transactions for the month of April was as follows.

Purchases			Sales		
April	1 (balance on hand)	600 @ \$6.00	April	3	500 @ \$10.00
	4	1,500 @ 6.08		9	1,300 @ 10.00
	8	800 @ 6.40		11	600 @ 11.00
	13	1,200 @ 6.50		23	1,200 @ 11.00
	21	700 @ 6.60		27	900 @ 12.00
	29	500 @ 6.79			<u>4,500</u>
		<u>5,300</u>			

Instructions

(Round unit price averages to four decimal places.)

- a. Assuming that periodic inventory records are kept, compute the inventory at April 30 using (1) FIFO and (2) average-cost.
- b. Assuming that perpetual inventory records are kept in both units and dollars, determine the inventory at April 30 using (1) FIFO and (2) average-cost.
- c. In an inflationary period, which inventory method—FIFO or average-cost—will show the highest net income?

E8.10 (LO 3) (FIFO and Average-Cost Inventory) Esplanade SA was formed on December 1, 2021. The following information is available from Esplanade's inventory records for Product BAP.

	Units	Unit Cost
January 1, 2022 (beginning inventory)	600	R\$ 8.00
Purchases:		
January 5, 2022	1,100	9.00
January 25, 2022	1,300	10.00

February 16, 2022	800	11.00
March 26, 2022	600	12.00

A physical inventory on March 31, 2022, shows 1,500 units on hand.

Instructions

Assuming Esplanade uses a periodic system, prepare schedules to compute the ending inventory at March 31, 2022, under each of the following inventory methods (round to two decimal places).

- Specific identification.
- FIFO.
- Weighted-average.

Under (a), 400 units from the beginning inventory are on hand and 1,100 units from the January 5 purchase are on hand.

E8.11 (LO 3) (Compute FIFO and Average-Cost—Periodic) The following information is related to radios for the Couples Company for the month of July.

Date	Transaction	Units In	Units Cost	Total	Units Sold	Selling Price	Total
July 1	Balance	100	\$4.10	\$ 410			
6	Purchase	800	4.30	3,440			
7	Sale				300	\$7.00	\$ 2,100
10	Sale				300	7.30	2,190
12	Purchase	400	4.51	1,804			
15	Sale				200	7.40	1,480
18	Purchase	300	4.60	1,380			
22	Sale				400	7.40	2,960
25	Purchase	500	4.58	2,290			
30	Sale				200	7.50	1,500
	Totals	<u>2,100</u>		<u>\$9,324</u>	<u>1,400</u>		<u>\$10,230</u>

Instructions

- a. Assuming that the periodic inventory method is used, compute the inventory cost at July 31 under each of the following cost flow assumptions. (Ignore taxes.)
1. FIFO.
 2. Weighted-average.
- b. Answer the following questions.
1. Which of the methods used above will yield the highest figure for gross profit for the income statement? Explain why.
 2. Which of the methods used above will yield the highest figure for ending inventory for the statement of financial position? Explain why.

E8.12 (LO 3) (FIFO and Average-Cost, Income Statement

Presentation) The board of directors of Oksana ASA is considering whether or not it should instruct the accounting department to change from a first-in, first-out (FIFO) basis of pricing inventories to an average-cost basis. The following information is available.

Sales	20,000 units @ €50
Inventory, January 1	6,000 units @ 20
Purchases	6,000 units @ 22
	10,000 units @ 25
	7,000 units @ 30
Inventory, December 31	9,000 units @ ?
Operating expenses	€200,000

Instructions

Prepare a condensed income statement for the year on both bases for comparative purposes (round to two decimal places).

E8.13 (LO 4) (Inventoriable Costs—Error Adjustments) Werth

Company asks you to review its December 31, 2022, inventory values and prepare the necessary adjustments to the books. The following information is given to you.

1. Werth uses the periodic method of recording inventory. A physical count reveals \$234,890 of inventory on hand at December 31, 2022.
2. Not included in the physical count of inventory is \$10,420 of merchandise purchased on December 15 from Browser. This merchandise was shipped

f.o.b. shipping point on December 29 and arrived in January. The invoice arrived and was recorded on December 31.

3. Included in inventory is merchandise sold to Bubbey on December 30, f.o.b. destination. This merchandise was shipped after it was counted. The invoice was prepared and recorded as a sale on account for \$12,800 on December 31. The merchandise cost \$7,350, and Bubbey received it on January 3.
4. Included in inventory was merchandise received from Dudley on December 31 with an invoice price of \$15,630. The merchandise was shipped f.o.b. destination. The invoice, which has not yet arrived, has not been recorded.
5. Not included in inventory is \$8,540 of merchandise purchased from Minsky Industries. This merchandise was received on December 31 after the inventory had been counted. The invoice was received and recorded on December 30.
6. Included in inventory was \$10,438 of inventory held by Werth on consignment from Jackel Industries.
7. Included in inventory is merchandise sold to Sims f.o.b. shipping point. This merchandise was shipped after it was counted. The invoice was prepared and recorded as a sale for \$18,900 on December 31. The cost of this merchandise was \$11,520, and Sims received the merchandise on January 5.
8. Excluded from inventory was a carton labeled “Please accept for credit.” This carton contains merchandise costing \$1,500 which had been sold to a customer for \$2,600. No entry had been made to the books to reflect the return, but none of the returned merchandise seemed damaged.

Instructions

- a. Determine the proper inventory balance for Werth Company at December 31, 2022.
- b. Prepare any correcting entries to adjust inventory and related accounts to their proper amounts at December 31, 2022. Assume the books have not been closed.

E8.14 (LO 4) (Inventory Errors—Periodic) Thomason Company makes the following errors during the current year. (In all cases, assume ending inventory in the following year is correctly stated.)

1. Both ending inventory and purchases and related accounts payable are understated. (Assume this purchase was recorded and paid for in the following year.)
2. Ending inventory is overstated, but purchases and related accounts payable are recorded correctly.
3. Ending inventory is correct, but a purchase on account was not recorded. (Assume this purchase was recorded and paid for in the following year.)

Instructions

Indicate the effect of each of these errors on working capital, current ratio (assume that the current ratio is greater than 1), retained earnings, and net income for the current year and the subsequent year.

E8.15 (LO 4) (Inventory Errors) At December 31, 2022, Dwight AG reported current assets of €390,000 and current liabilities of €200,000. The following items may have been recorded incorrectly. Dwight uses the periodic method.

1. Goods purchased costing €22,000 were shipped f.o.b. shipping point by a supplier on December 28. Dwight received and recorded the invoice on December 29, 2022, but the goods were not included in Dwight's physical count of inventory because they were not received until January 4, 2023.
2. Goods purchased costing €20,000 were shipped f.o.b. destination by a supplier on December 26. Dwight received and recorded the invoice on December 31, but the goods were not included in Dwight's 2022 physical count of inventory because they were not received until January 2, 2023.
3. Goods held on consignment from Kishi Ltd. were included in Dwight's December 31, 2022, physical count of inventory at €13,000.
4. Freight-in of €3,000 was debited to advertising expense on December 28, 2022.

Instructions

- a. Compute the current ratio based on Dwight's statement of financial position.
- b. Recompute the current ratio after corrections are made.
- c. By what amount will income (before taxes) be adjusted up or down as a result of the corrections?

E8.16 (LO 4) (Inventory Errors) The net income per books of Wu Ltd. was determined without knowledge of the following errors.

Year	Net Income per Books	Error in Ending Inventory	
2018	HK\$50,000	Overstated	HK\$ 5,000
2019	52,000	Overstated	9,000
2020	54,000	Understated	11,000
2021	56,000	No error	
2022	58,000	Understated	2,000
2023	60,000	Overstated	10,000

Instructions

Prepare a worksheet to show the adjusted net income figure for each of the 6 years after taking into account the inventory errors.

***E8.17 (LO 3, 5) (FIFO and LIFO—Periodic and Perpetual)** Inventory information for Part 311 of Seminole Corp. discloses the following information for the month of June.

June 1	Balance	300 units @ \$10	June 10	Sold	200 units @ \$24
11	Purchased	800 units @ \$11	15	Sold	500 units @ \$25
20	Purchased	500 units @ \$13	27	Sold	250 units @ \$27

Instructions

- Assuming that the periodic inventory method is used, compute the cost of goods sold and ending inventory under (1) LIFO and (2) FIFO.
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the value of the ending inventory at LIFO?
- Assuming that the perpetual inventory method is used and costs are computed at the time of each withdrawal, what is the gross profit if the inventory is valued at FIFO?
- Why is it stated that LIFO usually produces a lower gross profit than FIFO?

***E8.18 (LO 3, 5) (FIFO, LIFO, and Average-Cost Determination)**

Keyser Company’s record of transactions for the month of April is as follows.

Purchases		Sales	

April	1 (balance on hand)	600 @ \$6.00	April	3	500 @ \$10.00
	4	1,500 @ 6.08		9	1,300 @ 10.00
	8	800 @ 6.40		11	600 @ 11.00
	13	1,200 @ 6.50		23	1,200 @ 11.00
	21	700 @ 6.60		27	900 @ 12.00
	29	500 @ 6.79			<u>4,500</u>
		<u>5,300</u>			

Instructions

- Assuming that periodic inventory records are kept, compute the inventory at April 30 using (1) LIFO and (2) average-cost.
- Assuming that perpetual inventory records are kept in both units and dollars, determine the inventory at April 30 using (1) FIFO and (2) LIFO.
- Compute cost of goods sold assuming a periodic inventory system and inventory priced at FIFO.
- In an inflationary period, which inventory method—FIFO, LIFO, or average-cost—will show the highest net income?

***E8.19 (LO 3, 5) (FIFO, LIFO, Average-Cost Inventory)** Mills Company was formed on December 1, 2021. The following information is available from Mills' inventory records for Product Zone.

	Units	Unit Cost
January 1, 2022 (beginning inventory)	600	\$ 8.00
Purchases:		
January 5, 2022	1,100	9.00
January 25, 2022	1,300	10.00
February 16, 2022	800	11.00
March 26, 2022	600	12.00

A physical inventory on March 31, 2022, shows 1,500 units on hand.

Instructions

Assuming Mills uses a periodic system, prepare schedules to compute the ending inventory at March 31, 2022, under each of the following inventory methods (round to two decimal places).

- a. FIFO.
- b. LIFO.
- c. Weighted-average.

***E8.20 (LO 3, 5) (FIFO and LIFO—Periodic and Perpetual)** The following is a record of Cannondale Company’s transactions for Boston Teapots for the month of May 2022.

May	1	Balance 400 units @ \$20	May	10	Sale 300 units @ \$38
	12	Purchase 600 units @ \$25		20	Sale 590 units @ \$38
	28	Purchase 400 units @ \$30			

Instructions

- a. Assuming that perpetual inventories are **not** maintained and that a physical count at the end of the month shows 510 units on hand, what is the cost of the ending inventory using (1) FIFO and (2) LIFO?
- b. Assuming that perpetual records are maintained and they tie into the general ledger, calculate the ending inventory using (1) FIFO and (2) LIFO.

***E8.21 (LO 3, 5) (FIFO and LIFO, Income Statement Presentation)** The board of directors of Hayward Corporation is considering whether or not it should instruct the accounting department to change from a first-in, first-out (FIFO) basis of pricing inventories to a last-in, first-out (LIFO) basis. The following information is available.

Sales	20,000 units @ \$50
Inventory, January 1	6,000 units @ 20
Purchases	6,000 units @ 22
	10,000 units @ 25
	7,000 units @ 30
Inventory, December 31	9,000 units @ ?
Operating expenses	\$200,000

Instructions

Prepare a condensed income statement for the year on both bases for comparative purposes.

***E8.22 (LO 3, 5) (FIFO and LIFO Effects)** You are the vice president of finance of Mickiewicz Corporation, a retail company that prepared two different schedules of gross margin for the first quarter ended March 31, 2022. These schedules appear below.

	Sales (\$5 per unit)	Cost of Goods Sold	Gross Margin
Schedule 1	\$150,000	\$124,900	\$25,100
Schedule 2	150,000	129,600	20,400

The computation of cost of goods sold in each schedule is based on the following data.

	Units	Cost per Unit	Total Cost
Beginning inventory, January 1	10,000	\$4.00	\$40,000
Purchase, January 10	8,000	4.20	33,600
Purchase, January 30	6,000	4.25	25,500
Purchase, February 11	9,000	4.30	38,700
Purchase, March 17	12,000	4.40	52,800

Peggy Fleming, the president of the company, cannot understand how two different gross margins can be computed from the same set of data. As the vice president of finance, you have explained to Ms. Fleming that the two schedules are based on different assumptions concerning the flow of inventory costs, i.e., FIFO and LIFO. Schedules 1 and 2 were not necessarily prepared in this sequence of cost flow assumptions.

Instructions

Prepare two separate schedules computing cost of goods sold and supporting schedules showing the composition of the ending inventory under both cost flow assumptions (assume periodic system).

***E8.23 (LO 3, 5) (FIFO and LIFO—Periodic)** Tom Brady Shop began operations on January 2, 2022. The following stock record card for footballs was taken from the records at the end of the year.

Date	Voucher	Terms	Units Received	Unit Invoice Cost	Gross Invoice Amount
1/15	10624	Net 30	50	\$20	\$1,000
3/15	11437	1/5, net 30	65	16	1,040
6/20	21332	1/10, net	90	15	1,350

		30			
9/12	27644	1/10, net 30	84	12	1,008
11/24	31269	1/10, net 30	<u>76</u>	11	<u>836</u>
	Totals		<u>365</u>		<u>\$5,234</u>

A physical inventory on December 31, 2022, reveals that 110 footballs were in stock. The bookkeeper informs you that all the discounts were taken. Assume that Tom Brady Shop uses the invoice price less discount for recording purchases.

Instructions

- Compute the December 31, 2022, inventory using the FIFO method. (Round all unit costs to two decimal places.)
- Compute the 2022 cost of goods sold using the LIFO method.
- What method would you recommend to the owner to minimize income taxes in 2022, using the inventory information for footballs as a guide?

Problems

P8.1 (LO 3) Groupwork (Various Inventory Issues) The following independent situations relate to inventory accounting.

- Kim Co. purchased goods with a list price of €175,000, subject to two trade discounts of 20% and 10%, with no cash discounts allowable. How much should Kim Co. record as the cost of these goods?
- Keillor Company's inventory of €1,100,000 at December 31, 2022, was based on a physical count of goods priced at cost and before any year-end adjustments relating to the following items.
 - Goods shipped from a vendor f.o.b. shipping point on December 24, 2022, at an invoice cost of €69,000 to Keillor Company were received on January 4, 2023.
 - The physical count included €29,000 of goods billed to Sakic Corp. f.o.b. shipping point on December 31, 2022. The carrier picked up these goods on January 3, 2023.

What amount should Keillor report as inventory on its statement of financial position?

3. Zimmerman AG had 1,500 units of part M.O. on hand May 1, 2022, costing €21 each. Purchases of part M.O. during May were as follows.

	Units	Unit Cost
May 9	2,000	€22
17	3,500	23
26	1,000	24

A physical count on May 31, 2022, shows 2,000 units of part M.O. on hand. Using the FIFO method, what is the cost of part M.O. inventory at May 31, 2022? Using the average-cost method, what is the inventory cost?

4. Donovan AS, a retail store chain, had the following information in its general ledger for the year 2022.

Merchandise purchased for resale	€909,400
Interest on notes payable to vendors	8,700
Purchase returns	16,500
Freight-in	22,000
Freight-out (delivery expense)	17,100
Cash discounts on purchases	6,800

What is Donovan's total cost of inventory purchased for 2022?

Instructions

Answer each of the preceding questions about inventories, and explain your answers.

P8.2 (LO 1, 2) Groupwork (Inventory Adjustments) Dimitri Company, a manufacturer of small tools, provided the following information from its accounting records for the year ended December 31, 2022.

Inventory at December 31, 2022 (based on physical count of goods in Dimitri's plant, at cost, on December 31, 2022)	\$1,520,000
Accounts payable at December 31, 2022	1,200,000
Net sales (sales less sales returns)	8,150,000

Additional information is as follows.

- Included in the physical count were tools billed to a customer f.o.b. shipping point on December 31, 2022. These tools had a cost of \$31,000

and were billed and recorded at \$40,000. The shipment was on Dimitri's loading dock waiting to be picked up by the common carrier.

2. Goods were in transit from a vendor to Dimitri on December 31, 2022. The invoice cost was \$76,000, and the goods were shipped f.o.b. shipping point on December 29, 2022.
3. Work in process inventory costing \$30,000 was sent to an outside processor for plating on December 30, 2022.
4. Tools returned by customers and held pending inspection in the returned goods area on December 31, 2022, were not included in the physical count. On January 8, 2020, the tools costing \$32,000 were inspected and returned to inventory. Credit memos totaling \$47,000 were issued to the customers on the same date.
5. Tools shipped to a customer f.o.b. destination on December 26, 2022, were in transit at December 31, 2022, and had a cost of \$26,000. Upon notification of receipt by the customer on January 2, 2023, Dimitri issued a sales invoice for \$42,000.
6. Goods, with an invoice cost of \$27,000, received from a vendor at 5:00 p.m. on December 31, 2022, were recorded on a receiving report dated January 2, 2023. The goods were not included in the physical count, but the invoice was included in accounts payable at December 31, 2022.
7. Goods received from a vendor on December 26, 2022, were included in the physical count. However, the related \$56,000 vendor invoice was not included in accounts payable at December 31, 2022, because the accounts payable copy of the receiving report was lost.
8. On January 3, 2023, a monthly freight bill in the amount of \$8,000 was received. The bill specifically related to merchandise purchased in December 2022, one-half of which was still in the inventory at December 31, 2022. The freight charges were not included in either the inventory or in accounts payable at December 31, 2022.

Instructions

Using the following format, prepare a schedule of adjustments as of December 31, 2022, to the initial amounts per Dimitri's accounting records. Show separately the effect, if any, of each of the eight transactions on the December 31, 2022, amounts. If the transactions would have no effect on the initial amount shown, enter NONE.

	Inventory	Accounts Payable	Net Sales

Initial amounts	\$1,520,000	\$1,200,000	\$8,150,000

Adjusted amounts	\$	\$	\$

P8.3 (LO 2) (Purchases Recorded Gross and Net) Some of the transactions of Torres plc during August are listed below. Torres uses the periodic inventory method.

August 10	Purchased merchandise on account, £12,000, terms 2/10, n/30.
13	Returned part of the purchase of August 10, £1,200, and received credit on account.
15	Purchased merchandise on account, £16,000, terms 1/10, n/60.
25	Purchased merchandise on account, £20,000, terms 2/10, n/30.
28	Paid invoice of August 15 in full.

Instructions

- a. Assuming that purchases are recorded at gross amounts and that discounts are to be recorded when taken:
 1. Prepare general journal entries to record the transactions.
 2. Describe how the various items would be shown in the financial statements.
- b. Assuming that purchases are recorded at net amounts and that discounts lost are treated as financial expenses:
 1. Prepare general journal entries to enter the transactions.

2. Prepare the adjusting entry necessary on August 31 if financial statements are to be prepared at that time.
3. Describe how the various items would be shown in the financial statements.

c. Which of the two methods do you prefer and why?

P8.4 (LO 3) (Compute Specific Identification, FIFO, and Average-Cost) Silva SA's record of transactions concerning part X for the month of April was as follows.

Purchases					Sales		
April	1	(balance on hand)	100 @	R\$5.00	April	5	300
	4		400 @	5.10		12	200
	11		300 @	5.30		27	800
	18		200 @	5.35		28	150
	26		600 @	5.60			
	30		200 @	5.80			

Instructions

- a. Compute the inventory at April 30 on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to the nearest cent.)
 1. Specific identification; ending inventory is comprised of 100 units from beginning inventory and 250 units from the April 26 purchase.
 2. First-in, first-out (FIFO).
 3. Average-cost.
- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, what amount would be shown as ending inventory in 1, 2, and 3 above? (Carry average unit costs to four decimal places, and total costs to two decimal places.)

P8.5 (LO 3) (Compute FIFO and Average-Cost) Some of the information found on a detail inventory card for Cheng Ltd. for the first month of operations is as follows (¥ amounts in thousands).

Date	Received		Issued, No. of Units	Balance, No. of Units
	No. of Units	Unit Cost		

January 2	1,200	¥3.00		1,200
7			700	500
10	600	3.20		1,100
13			500	600
18	1,000	3.30	300	1,300
20			1,100	200
23	1,300	3.40		1,500
26			800	700
28	1,600	3.50		2,300
31			1,300	1,000

Instructions

- a. From these data compute the ending inventory on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to two decimal places and ending inventory to the nearest 1,000 yen.)
 1. First-in, first-out (FIFO).
 2. Average-cost.
- b. If the perpetual inventory record is kept in yen, and costs are computed at the time of each withdrawal, would the amounts shown as ending inventory in 1 and 2 above be the same? Explain and compute.

P8.6 (LO 3) Groupwork (Compute FIFO and Average-Cost—Periodic and Perpetual) Ehlo NV is a multiproduct firm. The following is information concerning one of its products, the Hawkeye.

Date	Transaction	Quantity	Price/Cost
1/1	Beginning inventory	1,000	€12
2/4	Purchase	2,000	18
2/20	Sale	2,500	30
4/2	Purchase	3,000	23
11/4	Sale	2,200	33

Instructions

Compute cost of goods sold, assuming Ehlo uses:

- Periodic system, FIFO cost flow.
- Perpetual system, FIFO cost flow.
- Periodic system, weighted-average cost flow.
- Perpetual system, moving-average cost flow.

***P8.7 (LO 3, 5) (Compute FIFO, LIFO, and Average-Cost)** Ronaldo Company's record of transactions concerning part VF5 for the month of September was as follows.

Purchases			Sales	
September 1	(balance on hand)	100 @ \$5.00	September 5	300
4		400 @ 5.10	12	200
11		300 @ 5.30	27	800
18		200 @ 5.35	28	150
26		600 @ 5.60		
30		200 @ 5.80		

Instructions

- Compute the inventory at September 30 on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to the nearest cent.)
 - First-in, first-out (FIFO).
 - Average-cost.
 - Last-in, first-out (LIFO).
- If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, what amount would be shown as ending inventory in 1 and 2 above? (Carry average unit costs to four decimal places.)

***P8.8 (LO 3, 5) (Compute FIFO, LIFO, and Average-Cost)** Some of the information found on a detail inventory card for Slatkin Inc. for the first month of operations is as follows.

Date	Received		Issued, No. of Units	Balance, No. of Units
	No. of Units	Unit Cost		
January 2	1,200	\$3.00		1,200

7			700	500
10	600	3.20		1,100
13			500	600
18	1,000	3.30	300	1,300
20			1,100	200
23	1,300	3.40		1,500
26			800	700
28	1,600	3.50		2,300
31			1,300	1,000

Instructions

- a. From these data compute the ending inventory on each of the following bases. Assume that perpetual inventory records are kept in units only. (Carry unit costs to four decimal places and ending inventory to the nearest dollar.)
1. First-in, first-out (FIFO).
 2. Last-in, first-out (LIFO).
 3. Average-cost.
- b. If the perpetual inventory record is kept in dollars, and costs are computed at the time of each withdrawal, would the amounts shown as ending inventory in 1, 2, and 3 above be the same? Explain and compute.

***P8.9 (LO 3, 5) Groupwork (Compute FIFO, LIFO, and Average-Cost—Periodic and Perpetual)** Tsui Ltd. is a multiproduct firm. Presented below is information concerning one of its products, the Jayhawk.

Date	Transaction	Quantity	Unit Cost
1/1	Beginning inventory	1,000	NT\$12
2/4	Purchase	2,000	18
2/20	Sale	2,500	30
4/2	Purchase	3,000	23
11/4	Sale	2,200	33

Instructions

(Carry unit costs to the nearest cent.)

Compute cost of goods sold, assuming Tsui uses:

- Periodic system, FIFO cost flow.
- Perpetual system, FIFO cost flow.
- Periodic system, LIFO cost flow.
- Perpetual system, LIFO cost flow.
- Periodic system, weighted-average cost flow.
- Perpetual system, moving-average cost flow.

***P8.10 (LO 3, 5) Groupwork (Financial Statement Effects of FIFO and LIFO)** The management of Tritt Company has asked its accounting department to describe the effect upon the company's financial position and its income statements of accounting for inventories on the LIFO rather than the FIFO basis during 2022 and 2023. The accounting department is to assume that the change to LIFO would have been effective on January 1, 2022, and that the initial LIFO base would have been the inventory value on December 31, 2021. Presented below are the company's financial statements and other data for the years 2022 and 2023 when the FIFO method was employed.

	Financial Position as of		
	12/31/21	12/31/22	12/31/23
Inventory	\$120,000	\$140,000	\$176,000
Other assets	160,000	170,000	200,000
Accounts receivable	80,000	100,000	120,000
Cash	90,000	130,000	154,000
Total assets	<u>\$450,000</u>	<u>\$540,000</u>	<u>\$650,000</u>
Share capital—ordinary	\$200,000	\$200,000	\$200,000
Retained earnings	140,000	200,000	260,000
Accounts payable	40,000	60,000	80,000
Other liabilities	70,000	80,000	110,000
Total equity and liabilities	<u>\$450,000</u>	<u>\$540,000</u>	<u>\$650,000</u>
	Income for Years Ended		
	12/31/22	12/31/23	
Sales revenue	<u>\$900,000</u>	<u>\$1,350,000</u>	
Less: Cost of goods sold	505,000	756,000	

Other expenses	205,000	304,000
	710,000	1,060,000
Income before income taxes	190,000	290,000
Income taxes (40%)	76,000	116,000
Net income	<u>\$114,000</u>	<u>\$ 174,000</u>

Other data:

- Inventory on hand at December 31, 2021, consisted of 40,000 units valued at \$3.00 each.
- Sales (all units sold at the same price in a given year):

2022—150,000 units @ \$6.00 each	2023—180,000 units
@ \$7.50 each	
- Purchases (all units purchased at the same price in given year):

2022—150,000 units @ \$3.50 each	2023—180,000 units @
\$4.40 each	
- Income taxes at the effective rate of 40% are paid on December 31 each year.

Instructions

Name the account(s) presented in the financial statements that would have different amounts for 2023 if LIFO rather than FIFO had been used, and state the new amount for each account that is named. Show computations.

Concepts for Analysis

CAS.1 (LO 2) (Inventoriable Costs) You are asked to travel to Vienna, Austria, to observe and verify the inventory of the Vienna branch of one of your clients. You arrive on Thursday, December 30, and find that the inventory procedures have just been started. You spot a railway car on the sidetrack at the unloading door and ask the warehouse superintendent, Buck Rogers, how he plans to inventory the contents of the car. He responds, “We are not going to include the contents in the inventory.”

Later in the day, you ask the bookkeeper for the invoice on the carload and the related freight bill. The invoice lists the various items, prices, and extensions of the goods in the car. You note that the carload was shipped December 24 from Berlin, Germany, f.o.b. Berlin, and that the total invoice price of the goods in the car was €35,300. The freight bill called for a payment of €1,500. Terms

were net 30 days. The bookkeeper affirms the fact that this invoice is to be held for recording in January.

Instructions

- a. Does your client have a liability that should be recorded at December 31? Discuss.
- b. Prepare a journal entry (or entries) if required, to reflect any accounting adjustment required. Assume a perpetual inventory system is used by your client.
- c. For what possible reason(s) might your client wish to postpone recording the transaction?

CA8.2 (LO 2) (Inventoriable Costs) Carlos Beltran, an inventory control specialist, is interested in improving his understanding of the accounting for inventories. Although Carlos understands the more sophisticated computer inventory control systems, he has little knowledge of how inventory cost is determined. In studying the records of Strider Enterprises, which sells normal brand-name goods from its own store and on consignment through Chavez SA, he asks you to answer the following questions.

Instructions

- a. Should Strider Enterprises include in its inventory normal brand-name goods purchased from its suppliers but not yet received if the terms of purchase are f.o.b. shipping point (manufacturer's plant)? Why?
- b. Should Strider Enterprises include freight-in expenditures as an inventory cost? Why?
- c. If Strider Enterprises purchases its goods on terms 2/10, net 30, should the purchases be recorded gross or net? Why?
- d. What are products on consignment? How should they be reported in the financial statements?

CA8.3 (LO 2) (Inventoriable Costs) George Solti, the controller for Garrison Lumber Company, has recently hired you as assistant controller. He wishes to determine your expertise in the area of inventory accounting and therefore asks you to answer the following unrelated questions.

- a. A company is involved in the wholesaling and retailing of automobile tires for foreign cars. Most of the inventory is imported, and it is valued on the company's records at the actual inventory cost plus freight-in. At year-end,

the warehousing costs are prorated over cost of goods sold and ending inventory. Are warehousing costs considered a product cost or a period cost?

- b. A certain portion of a company's "inventory" is composed of obsolete items. Should obsolete items that are not currently consumed in the production of "goods or services to be available for sale" be classified as part of inventory?
- c. A company purchases airplanes for sale to others. However, until they are sold, the company charters and services the planes. What is the proper way to report these airplanes in the company's financial statements?
- d. A company wants to buy coal deposits but does not want the financing for the purchase to be reported on its financial statements. The company therefore establishes a trust to acquire the coal deposits. The company agrees to buy the coal over a certain period of time at specified prices. The trust is able to finance the coal purchase and pay off the loan as it is paid by the company for the minerals. How should this transaction be reported?

CAS.4 (LO 2) (Accounting Treatment of Purchase Discounts) Feng Ltd., a household appliances dealer, purchases its inventories from various suppliers.

Instructions

Feng is considering alternate methods of accounting for the cash discounts it takes when paying its suppliers promptly. From a theoretical standpoint, discuss the acceptability of each of the following methods.

- a. Financial income when payments are made.
- b. Reduction of cost of goods sold for the period when payments are made.
- c. Direct reduction of purchase cost.

CAS.5 (LO 3) Writing (Average-Cost and FIFO) Draft written responses to the following items.

- a. Describe the cost flow assumptions used in average-cost and FIFO methods of inventory valuation.
- b. Distinguish between weighted-average cost and moving-average cost for inventory costing purposes.

- c. Identify the effects on both the statement of financial position and the income statement of using the average-cost method instead of the FIFO method for inventory costing purposes over a substantial time period when purchase prices of inventoriable items are rising. State why these effects take place.

CA8.6 (LO 3) Ethics (Inventory Choices) Wilkens Company uses the average-cost method for inventory costing. The company is having a very good year. In an effort to reduce income in the current year, company president Lenny Wilkens tells the plant accountant to take the unusual step of recommending to the purchasing department to make a large purchase of inventory at year-end. The price of the item to be purchased has nearly doubled during the year, and the item represents a major portion of inventory value.

Instructions

Answer the following questions.

- Identify the major stakeholders. If the plant accountant recommends the purchase, what are the consequences?
- If Wilkens Company were using the FIFO method of inventory costing, would Lenny Wilkens give the same order? Why or why not?

Using Your Judgment

Financial Statement Analysis Cases

Case 1: Lumber Supply ASA

Lumber Supply ASA is a manufacturer of specialty building products. The company, through its partnership in the Trus Joist MacMillan joint venture, develops and manufactures engineered lumber. This product is a high-quality substitute for structural lumber, and uses lower-grade wood and materials formerly considered waste. The company also is majority owner of the Outlook Window Partnership, which is a consortium of three wood and vinyl window manufacturers.

Shown below is Lumber Supply's adapted income statement and information concerning inventories from its statement of financial position.

Lumber Supply ASA	Current Year
Sales revenue	€618,876,000
Cost of goods sold	<u>475,476,000</u>

Gross profit	143,400,000
Selling and administrative expenses	102,112,000
Income from operations	41,288,000
Other expense	24,712,000
Income before income taxes	16,576,000
Income taxes	7,728,000
Net income	€ 8,848,000

Inventories. Inventories are valued at the lower-of-cost-or-net realizable value and include material, labor, and production overhead costs. Inventories consisted of the following:

	Current Year	Prior Year
Finished goods	€27,512,000	€23,830,000
Raw materials and work in progress	34,363,000	33,244,000
	61,875,000	57,074,000
Reduction to average-cost	(5,263,000)	(3,993,000)
	€56,612,000	€53,081,000

The average-cost (AC) method is used for determining the cost of lumber, veneer, Microllam lumber, LSI joists, and open web joists. Approximately 35 percent of total inventories at the end of the current year were valued using the AC method. The first-in, first-out (FIFO) method is used to determine the cost of all other inventories.

Instructions

- How much would income before taxes have been if FIFO costing had been used to value all inventories?
- If the income tax rate is 46.6%, (1) what would the income tax have been if FIFO costing had been used to value all inventories? (2) What is the difference in net income between the two methods? (3) In your opinion, is this difference in net income between the two methods material? Explain.
- Does the use of a different costing system for different types of inventory mean that there is a different physical flow of goods among the different types of inventory? Explain.

Case 2: Noven Pharmaceuticals, Inc.

Noven Pharmaceuticals, Inc. (USA), headquartered in Miami, Florida, describes itself in a recent annual report as follows.

Noven Pharmaceuticals, Inc.

Noven is a place of ideas—a company where scientific excellence and state-of-the-art manufacturing combine to create new answers to human needs. Our transdermal delivery systems speed drugs painlessly and effortlessly into the bloodstream by means of a simple skin patch. This technology has proven applications in estrogen replacement, but at Noven we are developing a variety of systems incorporating bestselling drugs that fight everything from asthma, anxiety and dental pain to cancer, heart disease and neurological illness. Our research portfolio also includes new technologies, such as iontophoresis, in which drugs are delivered through the skin by means of electrical currents, as well as products that could satisfy broad consumer needs, such as our anti-microbial mouthrinse.

Noven also reported in its annual report that its activities to date have consisted of product development efforts, some of which have been independent and some of which have been completed in conjunction with **Rhone-Poulenc Rorer (RPR)** (FRA) and **Ciba-Geigy**, now part of **Novartis** (CHE). The revenues so far have consisted of money received from licensing fees, “milestone” payments (payments made under licensing agreements when certain stages of the development of a certain product have been completed), and interest on its investments. The company expects that it will have significant revenue in the upcoming fiscal year from the launch of its first product, a transdermal estrogen delivery system.

The current assets portion of Noven’s statement of financial position follows.

Cash and cash equivalents	\$12,070,272
Investment securities	23,445,070
Inventory of supplies	1,264,553
Prepaid and other current assets	825,159
Total current assets	<u>\$37,605,054</u>

Inventory of supplies is recorded at the lower-of-cost (first-in, first-out)-or-net realizable value and consists mainly of supplies for research and development.

Instructions

- a. What would you expect the physical flow of goods for a pharmaceutical manufacturer to be most like, FIFO or random (flow of goods does not follow a set pattern)? Explain.

- b. What are some of the factors that Noven should consider as it selects an inventory costing method?
- c. Suppose that Noven had \$49,000 in an inventory of transdermal estrogen delivery patches. These patches are from an initial production run, and will be sold during the coming year. Why do you think that this amount is not shown in a separate inventory account? In which of the accounts shown is the inventory likely to be? At what point will the inventory be transferred to a separate inventory account?

***Case 3: SUPERSTORE**

SUPERSTORE reported that its inventory turnover decreased from 17.1 times in 2022 to 15.8 times in 2023. The following data appear in SUPERSTORE's annual report.

	Feb. 26, 2021	Feb. 25, 2022	Feb. 24, 2023
Total revenues	\$19,543	\$19,864	\$37,406
Cost of sales (using LIFO)	16,681	16,977	29,267
Year-end inventories using FIFO	1,181	1,114	2,927
Year-end inventories using LIFO	1,032	954	2,749

- a. Compute SUPERSTORE's inventory turnovers for 2022 and 2023 using:
 1. Cost of sales and LIFO inventory.
 2. Cost of sales and FIFO inventory.
- b. Some firms calculate inventory turnover using sales rather than cost of goods sold in the numerator. Calculate SUPERSTORE's 2022 and 2023 turnover using:
 1. Sales and LIFO inventory.
 2. Sales and FIFO inventory.
- c. Describe the method that SUPERSTORE appears to use.
- d. State which method you would choose to evaluate SUPERSTORE's performance. Justify your choice.

Accounting, Analysis, and Principles

Englehart Ltd. sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data is available for the month of March.

	Units	Price per Unit	Total
Residential Pumps			
Inventory at Feb. 28	200	£ 400	£ 80,000
Purchases:			
March 10	500	£ 450	£225,000
March 20	400	£ 475	£190,000
March 30	300	£ 500	£150,000
Sales:			
March 15	500	£ 540	£270,000
March 25	400	£ 570	£228,000
Inventory at Mar. 31	500		
Commercial Pumps			
Inventory at Feb. 28	600	£ 800	£480,000
Purchases:			
March 3	600	£ 900	£540,000
March 12	300	£ 950	£285,000
March 21	500	£1,000	£500,000
Sales:			
March 18	900	£1,080	£972,000
March 29	600	£1,140	£684,000
Inventory at Mar. 31	500		

Accounting

- Assuming Englehart uses a periodic inventory system, determine the cost of inventory on hand at March 31 and the cost of goods sold for March under first-in, first-out (FIFO).
- Assume Englehart uses average-cost. Determine the cost of inventory on hand at March 31 and the cost of goods sold for March.

Analysis

- Assume you need to compute a current ratio for Englehart. Which inventory cost flow assumption (FIFO or average-cost) do you think would give you a more meaningful current ratio?

- b. Some of Englehart's competitors use average-cost inventory costing and some use FIFO. How can an analyst compare the results of companies in an industry when some use average-cost and others use FIFO?

Principles

a. Can companies change from one inventory accounting method to another? If a company changes to an inventory accounting method used by most of its competitors, what are the trade-offs in terms of the Conceptual Framework discussed in [Chapter 2](#) of the text?

*b. If a U.S. company decides to adopt IFRS, what inventory cost flow assumption could it choose from?

Research Case

In conducting year-end inventory counts, your audit team is debating the impact of the client's right of return policy both on inventory valuation and revenue recognition. The assistant controller argues that there is no need to worry about the return policies since they have not changed in a while. The audit senior wants a more authoritative answer and has asked you to conduct some research of the authoritative literature before she presses the point with the client.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations if necessary.)

- a. Which statement addresses revenue recognition when right of return exists?
- b. When is this statement important for a company?
- c. Sales with rights of return can ultimately cause inventory to be misstated. Why are returns allowed? Should different industries be able to make different types of return policies?
- d. In what situations would a reasonable estimate of returns be difficult to make?

Notes

- 1 Some companies have developed methods of determining inventories, including statistical sampling, that are sufficiently reliable to make unnecessary an annual physical count of each item of inventory.

- [2](#) As indicated in [Chapter 7](#), Lululemon recognized accounts receivable and sales revenue when it transferred control of its yoga outfit to its customer, Jennifer Burian.
- [3](#) A separate IFRS addresses the accounting for agricultural inventories. [\[4\]](#) According to IFRS, agricultural inventories, such as wheat, oranges, etc., are recorded at their fair value less estimated selling costs at the point of harvest. This measure is deemed to be cost for purposes of applying the IFRS for inventory. [\[5\]](#)
- [4](#) Companies should not record **abnormal** freight, handling costs, and amounts of wasted materials (spoilage) as inventory costs. If the costs associated with the actual level of spoilage or product defects are greater than the costs associated with normal spoilage or defects, the company should charge the excess as an expense in the current period. [\[6\]](#)
- [5](#) The reporting rules related to interest cost capitalization have their greatest impact in accounting for non-current assets. We therefore discuss them in [Chapter 10](#).
- [6](#) The motion picture industry provides a good illustration of the cost allocation problem. Often actors receive a percentage of net income for a given movie or television program. Some actors, however, have alleged that their programs have been extremely profitable to the motion picture studios but that they have received little in the way of profit-sharing. Actors contend that the studios allocate additional costs to successful projects to avoid sharing profits.
- [7](#) IAS 2 indicates that a company should use the same inventory method for all inventories having a similar nature and use. When inventories have a different nature or use, then a different inventory method may be justified. [\[10\]](#)
- [8](#) A method which is used extensively in the United States is the **last-in, first-out (LIFO)** method. Under IFRS, LIFO is not permitted for financial reporting purposes because the IASB states it does not provide a reliable representation of actual inventory flow. [\[11\]](#) [Appendix 8A](#) discusses the basics of the LIFO method. A discussion of special issues related to the LIFO method is available in WileyPLUS.

CHAPTER 9

Inventories: Additional Valuation Issues

LEARNING OBJECTIVES

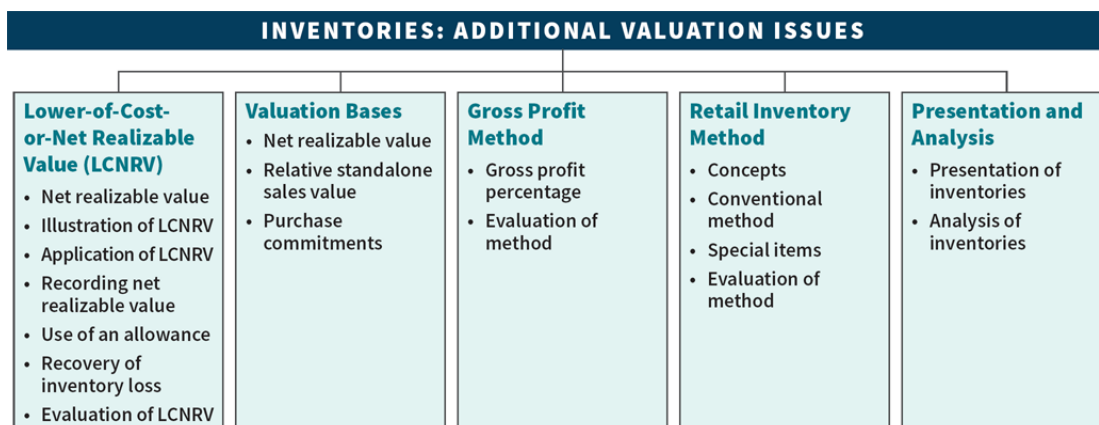

After studying this chapter, you should be able to:

1. Describe and apply the lower-of-cost-or-net realizable value rule.
2. Identify other inventory valuation issues.
3. Determine ending inventory by applying the gross profit method.
4. Determine ending inventory by applying the retail inventory method.
5. Explain how to report and analyze inventory.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 9

As the following opening story indicates, information on inventories helps to predict financial performance—in particular, profits. In this chapter, we discuss some of the valuation and estimation concepts that companies use to develop relevant inventory information. The content and organization of the chapter are as follows.

Not What It Seems to Be

Investors need comparable information about inventory when evaluating a retailer's financial statements. For a complete assessment, investors need to determine what inventory method a retailer is using (e.g., FIFO, average-cost, or a combination of methods) and then adjust the company's financial information to a common method. That is a good start. Subsequently, investors compute relevant metrics about the company such as inventory turnover, number of days sales in inventory, gross profit rate, and liquidity measures such as the current ratio.

These calculations are critical. Inventory is a significant component of working capital, and the gross profit resulting from sales of inventory is often viewed as the most important income component in measuring a retailer’s progress. For example, consider the financial statements of a typical grocery retailer, **Ahold Delhaize** (NLD/BEL), shown in the following table. Inventory comprises over 36 percent of current assets, and gross profit represents 27 percent of sales revenue.

Ahold Delhaize (in millions)			
Consolidated Statement of Financial Position		Consolidated Income Statement	
Current Assets		Sales revenue	€62,791
Other current assets	€ 765	Cost of sales	45,839
Inventories	3,196	Gross profit	€16,952
Receivables	1,759		
Cash and cash equivalents	3,122	Net income	€ 1,793
Total current assets	€8,842		

Analysis can be conducted based on these numbers. However, there are often still questions about the reliability of the information reported in the financial statements. That is, subjective estimates are involved because of the possible impairment of the inventory.

As indicated in the following table, Ahold’s disclosures of its subjective estimates concerning the measurement and valuation of inventory (related to markdowns and inventory losses) could have a significant impact on an investor’s ability to compare inventory levels (and their impact on gross profit) at Ahold over time and relative to other retailers.

Critical Accounting Estimates in Preparation of Financial Statements: Inventory	Judgments and Uncertainties
Inventories are stated at the lower of cost or net realizable value. Cost consists of all costs of purchase, cost of conversion and other costs incurred in bringing the inventories to their location and condition ready for sale, net of vendor allowances attributable to inventories. For certain inventories, cost is approximated using the retail method, in which the sales value of the inventories is reduced by the appropriate percentage of gross margin. The cost of inventories is determined using either the first-in, first-out (FIFO) method or the weighted average cost method, depending on their nature or use.	<p>Our markdown adjustment contains uncertainties because the calculation requires management to make assumptions, forecast consumer demand, and apply judgment regarding inventory aging, the promotional environment, and technological obsolescence.</p> <p>Our inventory loss adjustment contains uncertainties because the calculation requires management to make assumptions and to apply judgment regarding a number of factors, including historical results and current inventory loss trends.</p> <p>Our estimates of returns contain uncertainties because we must use judgment to adjust our previous levels of returns for refunds to our current setting.</p>
Net realizable value is the estimated selling price in the ordinary course of business, less the estimated marketing, distribution and selling expenses.	
Included in the value of inventory is an amount representing the estimated value of inventories that have already been sold that the Company expects to be returned for a refund by customers.	

Thus, inventory balances may not be what they seem, not only due to the cost flow assumptions (e.g., FIFO/weighted-average) you learned about in [Chapter 8](#) but also due to significant markdowns and losses that you will learn about in this chapter.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Lower-of-Cost-or-Net Realizable Value (LCNRV)

LEARNING OBJECTIVE 1

Describe and apply the lower-of-cost-or-net realizable value rule.

Inventories are recorded at their cost. However, if inventory declines in value below its original cost, a major departure from the historical cost principle occurs. Whatever the reason for a decline—obsolescence, price-level changes, or damaged goods—a company should write down the inventory to net realizable value to report this loss. **A company abandons the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost.**

Net Realizable Value

Recall that **cost** is the acquisition price of inventory computed using one of the historical cost-based methods—specific identification, average-cost, or FIFO. The term **net realizable value (NRV)** refers to the net amount that a company expects to realize from the sale of inventory. Specifically, net realizable value is the estimated selling price in the normal course of business less estimated costs to complete and to make a sale. [1] (See the [Authoritative Literature References](#) section near the end of the chapter.)

To illustrate, assume that Mander AG has unfinished inventory with a cost of €950, a sales value of €1,000, estimated cost of completion of €50, and estimated selling costs of €200. Mander's net realizable value is computed as shown in [Illustration 9.1](#).

Inventory value—unfinished		€1,000
Less: Estimated cost of completion	€ 50	
Estimated cost to sell	200	250
Net realizable value		€ 750

ILLUSTRATION 9.1 Computation of Net Realizable Value

Mander reports inventory on its statement of financial position at €750. In its income statement, Mander reports a Loss on Inventory Write-Down of €200 (€950 – €750). A departure from cost is justified because inventories should not be reported at amounts higher than their expected realization from sale or use. In addition, a company like Mander should charge the loss of utility against revenues in the period in which the loss occurs, not in the period of sale.

Companies therefore report their inventories at the **lower-of-cost-or-net realizable value (LCNRV)** at each reporting date. [Illustration 9.2](#) shows how two companies indicate measurement at LCNRV.

Nokia (FIN)

Inventories are stated at the lower of cost or net realizable value. Cost is determined using standard cost, which approximates actual cost on a FIFO basis. Net realizable value is the amount that can be realized from the sale of the inventory in the normal course of business after allowing for the costs of realization. In addition to the cost of materials and direct labor, an appropriate proportion of production overhead is included in the inventory values. An allowance is recorded for excess inventory and obsolescence based on the lower-of-cost-or-net realizable value.

Carrefour Group (FRA)

In accordance with IAS 2 – *Inventories*, goods inventories and the inventories of the property development business (properties under construction) are measured at the lower of cost and net realisable value.

The cost of goods inventories corresponds to the latest purchase price plus all related expenses. This method is appropriate given the rapid inventory turnover, and the resulting values are close to those obtained by the first in-first out (FIFO) method. The cost of goods inventories includes all components of the purchase cost of goods sold (with the exception of exchange gains and losses) and takes into account the rebates and commercial income negotiated with suppliers.

Net realisable value corresponds to the estimated selling price in the ordinary course of business, less the estimated additional costs necessary to make the sale.

ILLUSTRATION 9.2 LCNRV Disclosures

Illustration of LCNRV

As indicated, a company values inventory at LCNRV. A company estimates net realizable value based on the most reliable evidence of the inventories' realizable amounts (expected selling price, expected costs of completion, and expected costs to sell). [2] To illustrate, Jinn-Feng Foods computes its inventory at LCNRV, as shown in [Illustration 9.3](#) (amounts in thousands).

Food	Cost	Net Realizable Value	Final Inventory Value
Spinach	¥ 80,000	¥120,000	¥ 80,000
Carrots	100,000	110,000	100,000
Cut beans	50,000	40,000	40,000
Peas	90,000	72,000	72,000
Mixed vegetables	95,000	92,000	92,000
			<u>¥384,000</u>
Final Inventory Value:			
Spinach	Cost (¥80,000) is selected because it is lower than net realizable value.		
Carrots	Cost (¥100,000) is selected because it is lower than net realizable value.		
Cut beans	Net realizable value (¥40,000) is selected because it is lower than cost.		
Peas	Net realizable value (¥72,000) is selected because it is lower than cost.		
Mixed vegetables	Net realizable value (¥92,000) is selected because it is lower than cost.		

ILLUSTRATION 9.3 Determining Final Inventory Value

As indicated, the final inventory value of ¥384,000 equals the sum of the LCNRV for each of the inventory items. That is, Jinn-Feng applies the LCNRV rule to each individual type of food.

Methods of Applying LCNRV

In the Jinn-Feng Foods illustration, we assumed that the company applied the LCNRV rule to each individual type of food. However, companies may apply the LCNRV rule to a group of similar or related items, or to the total of the inventory. For example, in the textile industry, sometimes it is not possible to determine selling price for each textile individually, and therefore, it may be necessary to perform the net realizable value assessment on all textiles that will be used to produce clothing for a particular season.⁴

If a company follows a similar-or-related-items or total-inventory approach in determining LCNRV, increases in market prices tend to offset decreases in market prices. To illustrate, assume that Jinn-Feng Foods separates its food products into two major groups, frozen and canned, as shown in [Illustration 9.4](#).

	Cost	LCNRV	LCNRV by:		
			Individual Items	Major Groups	Total Inventory
Frozen					
Spinach	¥ 80,000	¥120,000	¥ 80,000		
Carrots	100,000	110,000	100,000		
Cut beans	50,000	40,000	40,000		
Total frozen	230,000	270,000		¥230,000	
Canned					
Peas	90,000	72,000	72,000		
Mixed vegetables	95,000	92,000	92,000		
Total canned	185,000	164,000		164,000	
Total	¥415,000	¥434,000	¥384,000	¥394,000	¥415,000

ILLUSTRATION 9.4 Alternative Applications of LCNRV

If Jinn-Feng applies the LCNRV rule to individual items, the amount of inventory is ¥384,000. If Jinn-Feng applies the rule to major groups, it jumps to ¥394,000. If the company applies LCNRV to the total inventory, it totals ¥415,000. Why this difference? When a company uses a major group or total-inventory approach, net realizable values higher than cost offset net realizable values lower than cost. For Jinn-Feng, using the similar-or-related-items approach partially offsets the high net realizable value for spinach. Using the total-inventory approach totally offsets it.²

In most situations, companies price inventory on an item-by-item basis. In fact, tax rules in some countries require that companies use an individual-item basis barring practical difficulties. In addition, the individual-item approach gives the lowest valuation for statement of financial position purposes. In some cases, a company prices inventory on a total-inventory basis when it offers only one end product (comprised of many different raw materials). If it produces several end products, a company might use a similar-or-related-items approach instead. **Whichever method a company selects, it should apply the method consistently from one period to another.**³

Recording Net Realizable Value Instead of Cost

One of two methods may be used to record the income effect of valuing inventory at net realizable value. One method, referred to as the **cost-of-goods-sold method**, debits cost of goods sold for the write-down of the inventory to net realizable value. As a result, the company does not report a loss in the income statement because the cost of goods sold already includes the amount of the loss (see **Underlying Concepts**). The second method, referred to as the **loss method**, debits a loss account for the write-down of the inventory to net realizable value. We use the following inventory data for Ricardo SpA to illustrate entries under both methods.

Underlying Concepts

The income statement under the cost-of-goods-sold method presentation lacks *representational faithfulness*. That is, the cost-of-goods-sold method does not represent what it purports to represent. However, allowing this presentation illustrates the concept of materiality.

Cost of goods sold (before adjustment to net realizable value)	€108,000
Ending inventory (cost)	82,000
Ending inventory (at net realizable value)	70,000

Illustration 9.5 shows the entries for both the cost-of-goods-sold and loss methods, assuming the use of a perpetual inventory system.

Cost-of-Goods-Sold Method		Loss Method	
To reduce inventory from cost to net realizable value			
Cost of Goods Sold	12,000	Loss Due to Decline of Inventory to Net Realizable Value	12,000
Inventory (€82,000 – €70,000)	12,000	Inventory (€82,000 – €70,000)	12,000

ILLUSTRATION 9.5 Accounting for the Reduction of Inventory to Net Realizable Value—Perpetual Inventory System

The cost-of-goods-sold method buries the loss in the Cost of Goods Sold account. The loss method, by identifying the loss due to the write-down, shows the loss separate from Cost of Goods Sold in the income statement.

Illustration 9.6 contrasts the differing amounts reported in the income statement under the two approaches, using data from the Ricardo example.

IFRS does not specify a particular account to debit for the write-down. We believe the loss method presentation is preferable because it clearly discloses the loss resulting from a decline in inventory net realizable values.

Cost-of-Goods-Sold Method	
Sales revenue	€200,000
Cost of goods sold (after adjustment to net realizable value*)	<u>120,000</u>
Gross profit on sales	<u>€ 80,000</u>
Loss Method	
Sales revenue	€200,000
Cost of goods sold	<u>108,000</u>
Gross profit on sales	92,000
Loss due to decline of inventory to net realizable value	<u>12,000</u>
	<u>€ 80,000</u>
*Cost of goods sold (before adjustment to net realizable value)	€108,000
Difference between inventory at cost and net realizable value (€82,000 – €70,000)	<u>12,000</u>
Cost of goods sold (after adjustment to net realizable value)	<u>€120,000</u>

ILLUSTRATION 9.6 Income Statement Presentation—Cost-of-Goods-Sold and Loss Methods of Reducing Inventory to Net Realizable Value

Use of an Allowance

Instead of crediting the Inventory account for net realizable value adjustments, companies generally use an allowance account, often referred to as Allowance to Reduce Inventory to Net Realizable Value. For example, using an allowance account under the loss method, Ricardo SpA makes the following entry to record the inventory write-down to net realizable value.

Loss Due to Decline of Inventory to Net Realizable Value	12,000	
Allowance to Reduce Inventory to Net Realizable Value		12,000

Use of the allowance account results in reporting both the cost and the net realizable value of the inventory. Ricardo reports inventory in the statement of financial position as shown in [Illustration 9.7](#).

Inventory (at cost)	€82,000
Less: Allowance to reduce inventory to net realizable value	<u>12,000</u>
Inventory at net realizable value	<u>€70,000</u>

ILLUSTRATION 9.7 Presentation of Inventory Using an Allowance Account

The use of the allowance under the cost-of-goods-sold or loss method permits both the income statement and the statement of financial position to reflect inventory measured at €82,000, although the statement of financial position shows a net amount of €70,000. It also keeps subsidiary inventory ledgers and records in correspondence with the control account without changing prices. *For homework purposes, use an allowance account to record net realizable value adjustments, unless instructed otherwise.*

Recovery of Inventory Loss

In periods following the write-down, economic conditions may change such that the net realizable value of inventories previously written down may be *greater* than cost, or there may be clear evidence of an increase in the net realizable value. In this situation, the amount of the write-down is reversed, with the reversal limited to the amount of the original write-down. [4]

Continuing the Ricardo example, assume that in the subsequent period, market conditions change, such that the net realizable value increases to €74,000 (an increase of €4,000). As a result, only €8,000 is needed in the allowance. Ricardo makes the following entry, using the loss method.

Allowance to Reduce Inventory to Net Realizable Value	4,000	
Recovery of Inventory Loss (€74,000 – €70,000)		4,000

The allowance account is then adjusted in subsequent periods, such that inventory is reported at the LCNRV. [Illustration 9.8](#) shows the net realizable value evaluation for Vuko Company and the effect of net realizable value adjustments on income.

Date	Inventory at Cost	Inventory at Net Realizable Value	Amount Required in Allowance Account	Adjustment of Allowance Account Balance	Effect on Net Income
Dec. 31, 2022	₱ 188,000	₱ 176,000	₱ 12,000	₱ 12,000 inc.	Decrease
Dec. 31, 2023	194,000	187,000	7,000	5,000 dec.	Increase
Dec. 31, 2024	173,000	174,000	0	7,000 dec.	Increase
Dec. 31, 2025	182,000	180,000	2,000	2,000 inc.	Decrease

ILLUSTRATION 9.8 Effect on Net Income of Adjusting Inventory to Net Realizable Value

If prices are falling, the company records an additional write-down. If prices are rising, the company records an increase in income. We can think of the net increase as a recovery of a previously recognized loss. Under no circumstances should the inventory be reported at a value above original cost.

Evaluation of the LCNRV Rule

The LCNRV rule suffers from some conceptual deficiencies:

1. A company recognizes decreases in the value of the asset and the charge to expense in the period in which the loss in utility occurs—not in the period of sale. On the other

hand, it recognizes increases in the value of the asset (in excess of original cost) only at the point of sale. This inconsistent treatment can distort income data.

2. Application of the rule results in inconsistency because a company may value the inventory at cost in one year and at net realizable value in the next year.
3. The LCNRV rule values the inventory in the statement of financial position conservatively, but its effect on the income statement may or may not be conservative. Net income for the year in which a company takes the loss is definitely lower. Net income of the subsequent period may be higher than normal if the expected reductions in sales price do not materialize.

Many financial statement users appreciate the LCNRV rule because they at least know that it prevents overstatement of inventory. In addition, recognizing all losses but anticipating no gains generally avoids overstatement of income.

Valuation Bases

LEARNING OBJECTIVE 2

Identify other inventory valuation issues.

Net Realizable Value

For the most part, companies record inventory at LCNRV.⁴ However, there are some situations in which companies depart from the LCNRV rule. Such treatment may be justified in situations when cost is difficult to determine, the items are readily marketable at quoted market prices, and units of product are interchangeable. In this section, we discuss two common situations in which net realizable value is the general rule for valuing inventory:

- Agricultural assets (including biological assets and agricultural produce).
- Commodities held by broker-traders.

Agricultural Inventory

Under IFRS, net realizable value measurement is used for inventory when the inventory is related to agricultural activity. In general, agricultural activity results in two types of agricultural assets: (1) biological assets or (2) agricultural produce at the point of harvest.

[6]

A **biological asset** (classified as a non-current asset) is a living animal or plant, such as sheep, cows, fruit trees, or cotton plants. **Agricultural produce** is the harvested product of a biological asset, such as wool from a sheep, milk from a dairy cow, picked fruit from a fruit tree, or cotton from a cotton plant. The accounting for these assets is as follows.

- Biological assets are measured on initial recognition and at the end of each reporting period at fair value less costs to sell (net realizable value). Companies record a gain or loss due to changes in the net realizable value of biological assets in income when it arises.⁵

- Agricultural produce (which is harvested from biological assets) is measured at fair value less costs to sell (net realizable value) at the point of harvest. Once harvested, the net realizable value of the agricultural produce becomes its cost, and this asset is accounted for similar to other inventories held for sale in the normal course of business.⁶

Illustration of Agricultural Accounting at Net Realizable Value

To illustrate the accounting at net realizable value for agricultural assets, assume that Bancroft Dairy produces milk for sale to local cheese makers. Bancroft begins operations on January 1, 2022, by purchasing 420 milking cows for €460,000. [Illustration 9.9](#) presents Bancroft's information related to the milking cows.

Milking cows		
Carrying value, January 1, 2022 [*]		€460,000
Change in fair value due to growth and price changes	€35,000	
Decrease in fair value due to harvest	<u>(1,200)</u>	
Change in carrying value		<u>33,800</u>
Carrying value, January 31, 2022		€493,800
Milk harvested during January ^{**}		<u>€ 36,000</u>
[*] The carrying value is measured at fair value less costs to sell (net realizable value). The fair value of milking cows is determined based on market prices of livestock of similar age, breed, and genetic merit.		
^{**} Milk is initially measured at its fair value less costs to sell (net realizable value) at the time of milking. The fair value of milk is determined based on market prices in the local area.		

ILLUSTRATION 9.9 Agricultural Assets—Bancroft Dairy

As indicated, the carrying value of the milking cows increased during the month. Part of the change is due to changes in market prices (less costs to sell) for milking cows (see [Underlying Concepts](#)). The change in market price may also be affected by growth—the increase in value as the cows mature and develop increased milking capacity. At the same time, as mature cows are milked, their milking capacity declines (fair value decrease due to harvest).⁷

Underlying Concepts

IFRS uses the terms book value, carrying value, and carrying amount interchangeably.

Bancroft makes the following entry to record the change in carrying value of the milking cows.

Biological Assets (milking cows) (€493,800 – €460,000)	33,800	
Unrealized Holding Gain or Loss—Income		33,800

As a result of this entry, Bancroft's statement of financial position reports Biological Assets (milking cows) as a non-current asset at fair value less costs to sell (net realizable value). In

addition, the unrealized gains and losses are reported as “Other income and expense” on the income statement. In subsequent periods at each reporting date, Bancroft continues to report Biological Assets at net realizable value and records any related unrealized gains or losses in income. Because there is a ready market for the biological assets (milking cows), valuation at net realizable value provides more relevant information about these assets.

In addition to recording the change in the biological assets, Bancroft makes the following summary entry to record the milk harvested for the month of January.

Inventory (milk)	36,000	
Unrealized Holding Gain or Loss—Income		36,000

The milk inventory is recorded at net realizable value at the time it is harvested and Unrealized Holding Gain or Loss—Income is recognized in income. As with the biological assets, net realizable value is considered the most relevant for purposes of valuation at harvest. What happens to the milk inventory that Bancroft records upon harvesting the milk from the cows? Assuming the milk harvested in January was sold to a local cheese maker for €38,500, Bancroft records the sale as follows.

Cash	38,500	
Cost of Goods Sold	36,000	
Inventory (milk)		36,000
Sales Revenue		38,500

Once harvested, the net realizable value of the harvested milk becomes its cost. The milk is accounted for similarly to other inventories held for sale in the normal course of business.

A final note: Some animals or plants may not be considered biological assets but would be classified and accounted for as other types of assets (not at net realizable value). For example, a pet shop may hold an inventory of dogs, purchased from breeders, that it then sells. Because the pet shop is not breeding the dogs, these dogs are not considered biological assets. As a result, the dogs are accounted for as inventory held for sale (at LCNRV).

Commodity Broker-Traders

Commodity broker-traders also generally measure their inventories at fair value less costs to sell (net realizable value), with changes in net realizable value recognized in income in the period of the change. Broker-traders buy or sell commodities (such as harvested corn, wheat, precious metals, and heating oil) for others or on their own account. The primary purpose for holding these inventories is to sell the commodities in the near term and generate a profit from fluctuations in price. Thus, net realizable value is the most relevant measure in this industry because it indicates the amount that the broker-trader will receive from this inventory in the future.

Assessing whether a company is acting in the role of a broker-trader requires judgment. Companies should consider the length of time they are likely to hold the inventory and the extent of additional services related to the commodity. If there are significant additional services, such as distribution, storage, or repackaging, the company is likely not acting as a broker-dealer. Thus, measurement of the commodity inventory at net realizable value is not appropriate. For example, Columbia Coffee Wholesalers buys coffee beans and resells the commodity in the same condition after a short period of time. Accounting for the coffee

inventory at net realizable value appears appropriate. However, if Columbia expands the business to roast the beans and repackage them for resale to local coffee shops, the coffee inventory should be accounted for at LCNRV, similar to other inventory held for sale.⁸

Relative Standalone Sales Value

A special problem arises when a company buys a group of varying units in a single **lump-sum purchase**, also called a **basket purchase**.

To illustrate, assume that Woodland Developers purchases land for \$1 million that it will subdivide into 400 lots. These lots are of different sizes and shapes but can be roughly sorted into three groups graded A, B, and C. As Woodland sells the lots, it apportions the purchase cost of \$1 million among the lots sold and the lots remaining on hand.

Why would Woodland not simply divide the total cost of \$1 million by 400 lots, to get a cost of \$2,500 for each lot? This approach would not recognize that the lots vary in size, shape, and attractiveness. Therefore, to accurately value each unit, the common and most logical practice is to allocate the total among the various units on the basis of their **relative standalone sales value**.

Illustration 9.10 shows the allocation of relative standalone sales value for the Woodland Developers example.

Lots	Number of Lots	Sales Price per Lot	Total Sales Price	Relative Sales Price	Total Cost	Cost Allocated to Lots	Cost per Lot
A	100	\$10,000	\$1,000,000	100/250	\$1,000,000	\$ 400,000	\$4,000
B	100	6,000	600,000	60/250	1,000,000	240,000	2,400
C	200	4,500	900,000	90/250	1,000,000	360,000	1,800
			<u>\$2,500,000</u>			<u>\$1,000,000</u>	

ILLUSTRATION 9.10 Allocation of Costs, Using Relative Standalone Sales Value

Using the amounts given in the “Cost per Lot” column, Woodland can determine the cost of lots sold and the gross profit as shown in **Illustration 9.11**.

Lots	Number of Lots Sold	Cost per Lot	Cost of Lots Sold	Sales	Gross Profit
A	77	\$4,000	\$308,000	\$ 770,000	\$ 462,000
B	80	2,400	192,000	480,000	288,000
C	100	1,800	180,000	450,000	270,000
			<u>\$680,000</u>	<u>\$1,700,000</u>	<u>\$1,020,000</u>

ILLUSTRATION 9.11 Determination of Gross Profit, Using Relative Standalone Sales Value

The ending inventory is therefore \$320,000 (\$1,000,000 – \$680,000).

Woodland also can compute this inventory amount another way. The ratio of cost to selling price for all the lots is \$1 million divided by \$2,500,000, or 40 percent. Accordingly, if the total sales price of lots sold is, say \$1,700,000, then the cost of the lots sold is 40 percent of

\$1,700,000, or \$680,000. The inventory of lots on hand is then \$1 million less \$680,000, or \$320,000.

The petroleum industry widely uses the relative standalone sales value method to value (at cost) the many products and by-products obtained from a barrel of crude oil.

Purchase Commitments—A Special Problem

In many lines of business, a company's survival and continued profitability depend on its having a sufficient stock of merchandise to meet customer demand. Consequently, it is quite common for a company to make **purchase commitments**, which are agreements to buy inventory weeks, months, or even years in advance. Generally, the seller retains title to the merchandise or materials covered in the purchase commitments. Indeed, the goods may exist only as natural resources, such as unplanted seed (in the case of agricultural commodities), or as work-in-process (in the case of a product).⁹

Usually, it is neither necessary nor proper for the buyer to make any entries to reflect commitments for purchases of goods that the seller has not shipped. Ordinary orders, for which the buyer and seller will determine prices at the time of shipment and **which are subject to cancellation**, do not represent either an asset or a liability to the buyer. Therefore, the buyer need not record such purchase commitments or report them in the financial statements.

What happens, though, if a buyer enters into a formal, non-cancelable purchase contract? Even then, the buyer recognizes no asset or liability at the date of inception **because the contract is “executory” in nature**: Neither party has fulfilled its part of the contract. However, if material, the buyer should disclose such contract details in a note to its financial statements. [Illustration 9.12](#) shows an example of a purchase commitment disclosure.

Note 1: Contracts for the purchase of raw materials in 2023 have been executed in the amount of \$600,000. The market price of such raw materials on December 31, 2022, is \$640,000.

[ILLUSTRATION 9.12](#) Disclosure of Purchase Commitment

In the disclosure in [Illustration 9.12](#), the contract price was less than the market price at the statement of financial position date. **If the contract price is greater than the market price and the buyer expects that losses will occur when the purchase is made, the buyer should recognize a liability and corresponding loss in the period during which such declines in market prices take place** (see [Underlying Concepts](#)).¹⁰

Underlying Concepts

Reporting the loss is *conservative*. However, reporting the decline in market price is debatable because no asset is recorded. This area demonstrates the need for good definitions of assets and liabilities.

To illustrate the accounting problem, assume that Apres Paper AG signed timber-cutting contracts with Galling Land Ltd. to be executed in 2023 at a price of €10,000,000. Assume further that the market price of the timber-cutting rights on December 31, 2022, dropped to €7,000,000. Apres would make the following entry on December 31, 2022.

Unrealized Holding Gain or Loss—Income	3,000,000	
Purchase Commitment Liability (€10,000,000 – €7,000,000)		3,000,000

Apres reports this unrealized holding loss in the income statement under “Other income and expense.” And because the contract is to be executed within the next fiscal year, Apres reports the Purchase Commitment Liability (often referred to as a provision) in the current liabilities section on the statement of financial position. When Apres cuts the timber at a cost of €10 million, it would make the following entry.

Purchases (Inventory)	7,000,000	
Purchase Commitment Liability	3,000,000	
Cash		10,000,000

The result of the purchase commitment was that Apres paid €10 million for a contract worth only €7 million. It recorded the loss in the previous period—when the price actually declined.

If Apres can partially or fully recover the contract price before it cuts the timber, it reduces the Purchase Commitment Liability. In that case, it then reports in the period of the price increase a resulting gain for the amount of the partial or full recovery. For example, assume that Galling Land Ltd. permits Apres to reduce its commitment from €10,000,000 to €9,000,000. The entry to record this transaction is as follows.

Purchase Commitment Liability (€10,000,000 – €9,000,000)	1,000,000	
Unrealized Holding Gain or Loss—Income		1,000,000

If the market price at the time Apres cuts the timber is more than €2,000,000 below the contract price, Apres will have to recognize an additional loss in the period of cutting and record the purchase at the LCNRV.

Are purchasers at the mercy of market price declines? Not totally. Purchasers can protect themselves against the possibility of market price declines of goods under contract by hedging. Through **hedging**, the purchaser in the purchase commitment simultaneously enters into a contract in which it agrees to sell in the future the same quantity of the same (or similar) goods at a fixed price. Thus, the company holds a *buy position* in a purchase commitment and a *sell position* in a futures contract in the same commodity. The purpose of the hedge is to offset the price risk of the buy and sell positions. The company will be better off under one contract by approximately (maybe exactly) the same amount by which it is worse off under the other contract.

For example, Apres could have hedged its purchase commitment contract with a futures contract for timber rights of the same amount. In that case, its loss of €3,000,000 on the purchase commitment could have been offset by a €3,000,000 gain on the futures contract.¹¹

Although it sounds relatively easy, accounting for purchase commitments is controversial. Some argue that companies should report purchase commitments as assets and liabilities at the time they sign the contract. Others believe that delaying the recognition to the delivery date is more appropriate. Although the discussion in the Conceptual Framework does not exclude the possibility of recording assets and liabilities for purchase commitments, it contains no definitive conclusion about whether companies should record them. [9]

The Gross Profit Method of Estimating Inventory

LEARNING OBJECTIVE 3

Determine ending inventory by applying the gross profit method.

Companies take a physical inventory to verify the accuracy of the perpetual inventory records or, if no records exist, to arrive at an inventory amount. Sometimes, however, taking a physical inventory is impractical. In such cases, companies use substitute measures to approximate inventory on hand.

One substitute method of verifying or determining the inventory amount is the **gross profit method** (also called the **gross margin method**). Auditors widely use this method in situations where they need only an estimate of the company's inventory (e.g., interim reports). Companies also use this method when fire or other catastrophe destroys either inventory or inventory records. The gross profit method relies on three assumptions:

1. The beginning inventory plus purchases equal total goods to be accounted for.
2. Goods not sold must be on hand.
3. The sales, reduced to cost, deducted from the sum of the opening inventory plus purchases, equal ending inventory.

To illustrate, assume that Cetus SE has a beginning inventory of €60,000 and purchases of €200,000, both at cost. Sales at selling price amount to €280,000. The gross profit on selling price is 30 percent. Cetus applies the gross profit method as shown in [Illustration 9.13](#).

Beginning inventory (at cost)		€ 60,000
Purchases (at cost)		200,000
Goods available (at cost)		260,000
Sales (at selling price)	€280,000	
Less: Gross profit (.30 x €280,000)	84,000	
Sales (at cost)		196,000
Approximate inventory (at cost)		€ 64,000

ILLUSTRATION 9.13 Application of Gross Profit Method

The current period's records contain all the information Cetus needs to compute inventory at cost, except for the gross profit percentage. Cetus determines the gross profit percentage by reviewing company policies or prior period records. In some cases, companies must adjust this percentage if they consider prior periods unrepresentative of the current period.¹²

Computation of Gross Profit Percentage

In most situations, the **gross profit percentage** is stated as a percentage of selling price. The previous illustration, for example, used a 30 percent gross profit on sales. Gross profit on selling price is the common method for quoting the profit for several reasons. (1) Most companies state goods on a retail basis, not a cost basis. (2) A profit quoted on selling price is lower than one based on cost. This lower rate gives a favorable impression to the consumer. (3) The gross profit based on selling price can never exceed 100 percent.¹³

In [Illustration 9.13](#), the gross profit was a given. But how did Cetus derive that figure? To see how to compute a gross profit percentage, assume that an article costs €15 and sells for €20, a gross profit of €5. As shown in the computations in [Illustration 9.14](#), this markup is $\frac{1}{4}$ or 25 percent of retail, and $\frac{1}{3}$ or 33 $\frac{1}{3}$ percent of cost.

$\frac{\text{Markup}}{\text{Retail}} = \frac{\text{€5}}{\text{€20}} = 25\% \text{ at retail}$	$\frac{\text{Markup}}{\text{Cost}} = \frac{\text{€5}}{\text{€15}} = 33\frac{1}{3}\% \text{ on cost}$
---	--

ILLUSTRATION 9.14 Computation of Gross Profit Percentage

Although companies normally compute the gross profit on the basis of selling price, you should understand the basic relationship between markup on cost and markup on selling price. For example, assume that a company marks up a given item by 25 percent on cost. What, then, is the **gross profit on selling price**? To find the answer, assume that the item sells for €1. In this case, the following formula applies.

Cost + Gross profit = Selling price
$C + .25C = SP$
$(1 + .25)C = SP$
$1.25C = \text{€1.00}$
$C = \text{€0.80}$

The gross profit equals €0.20 (€1.00 – €0.80). The rate of gross profit on selling price is therefore 20 percent (€0.20/€1.00).

Conversely, assume that the gross profit on selling price is 20 percent. What is the **markup on cost**? To find the answer, assume that the item sells for €1. Again, the same formula holds:

Cost + Gross profit = Selling price
$C + .20SP = SP$
$C = (1 - .20)SP$
$C = .80SP$
$C = .80(\text{€1.00})$
$C = \text{€0.80}$

As in the previous example, the markup equals €0.20 (€1.00 – €0.80). The markup on cost is 25 percent (€0.20 ÷ €0.80).

[Illustration 9.15](#) presents formulas that retailers use to express these relationships:

$$1. \text{ Gross Profit on Selling Price} = \frac{\text{Percentage Markup on Cost}}{100\% + \text{Percentage Markup on Cost}}$$

$$2. \text{ Percentage Markup on Cost} = \frac{\text{Gross Profit on Selling Price}}{100\% - \text{Percentage Markup on Cost}}$$

ILLUSTRATION 9.15 Formulas Relating to Gross Profit

To understand how to use these formulas, consider their application in the calculations shown in [Illustration 9.16](#).

Gross Profit on Selling Price		Percentage Markup on Cost
Given: 20%	→	$\frac{.20}{1.00 - .20} = 25\%$
Given: 25%	→	$\frac{.25}{1.00 - .25} = 33\frac{1}{3}\%$
$\frac{.25}{1.00 + .25} = 20\%$	←	Given: 25%
$\frac{.50}{1.00 + .50} = 33\frac{1}{3}\%$	←	Given: 50%

ILLUSTRATION 9.16 Application of Gross Profit Formulas

Because selling price exceeds cost, and with the gross profit amount the same for both, **gross profit on selling price will always be less than the related percentage based on cost**. Note that companies do not multiply sales by a cost-based markup percentage. Instead, they must convert the gross profit percentage to a percentage based on selling price.

Evaluation of Gross Profit Method

What are the major disadvantages of the gross profit method? One disadvantage is that **it provides an estimate**. As a result, companies must take a physical inventory to verify the inventory. Second, the gross profit method **uses past percentages** in determining the markup. Although the past often provides answers to the future, a current rate is more appropriate. Note that whenever significant fluctuations occur, companies should adjust the percentage as appropriate. Third, companies must be **careful in applying a blanket gross profit rate**. Frequently, a store or department handles merchandise with widely varying rates of gross profit. In these situations, the company may need to apply the gross profit method by subsections, lines of merchandise, or a similar basis that classifies merchandise according to their respective rates of gross profit. **The gross profit method is normally unacceptable for financial reporting purposes because it provides only an estimate**. IFRS requires a physical inventory as additional verification of the inventory indicated in the records. Note that the gross profit method will follow closely the inventory method used (FIFO or average-cost) because it relies on historical records.

What Do the Numbers Mean?

I'll Trade You

Now that we know how to record a decline in value below cost, you might wonder what managers do with problem inventory that has been written down. Unfortunately, the solution for many companies is either to (a) negotiate with liquidators to get the best price for the inventory, which is typically only 10 to 40 percent of book value, or (b) even worse, ignore it. As one manager remarked: "We'll figure it out later. There are more pressing matters to attend to right now." However, without a good plan to deal with problem inventory, other challenges arise, such as problem inventory taking up space that could be used for newer, more profitable products; storage costs; and waste (inventory that perishes or whose date has expired often simply gets thrown out). Reducing wasted inventory is critical for cost control and profitability. So, what to do?

An increasingly popular approach to managing excess problematic inventory is corporate barter—the exchange of goods and services for problem inventory on a non-cash basis through the use of commercial trade credit. This is how it works. The company with the problem inventory seeks a trading partner that could provide something of value in exchange for the problem inventory. Media services, including TV and radio commercial air time and print advertising space, have long been the barter instrument of choice.

The company with the problem inventory receives advertising and other services—services that are especially valuable for companies with no or limited media budgets. Logistics barter is also common, which includes services such as ocean or air freight, less than truckload (LTL), full truck, intermodal, and drayage. All companies require some form of logistics to do business, and logistics barter can be typically used by companies whose annual sales revenue is as little as \$50 million.

A liquidator may still be involved to sell the problem inventory, but the barter partner usually receives three to four times the cash liquidation value. This is because the liquidator sells the inventory under restrictions, such as limiting redistribution of the assets to certain geographic areas or to certain accounts such as non-competitive accounts or to inappropriate selling environments, such as discount or secondhand outlets. The company that unloads the problem inventory now has a trade credit that can be used to purchase raw materials, capital equipment, or professional services. While a barter transaction cannot help a company avoid the accounting consequences of an inventory impairment, it represents an innovative way to make the best of a bad situation.

Source: Modified from Nicholas Isasi, "Achieving a Higher Value for Problematic Inventory via Corporate Barter," *Accounting Today* (October 21, 2015).

Retail Inventory Method

LEARNING OBJECTIVE 4

Determine ending inventory by applying the retail inventory method.

Accounting for inventory in a retail operation presents several challenges. Retailers with certain types of inventory may use the specific identification method to value their inventories. Such an approach makes sense when a retailer holds significant individual inventory units, such as automobiles, pianos, or fur coats. However, imagine attempting to use such an approach at **Carrefour** (FRA), **Debenhams** (GBR), or **Bloomingdale's** (USA) —high-volume retailers and supermarkets that have many different types of merchandise. It would be extremely difficult to determine the cost of each sale, to enter cost codes on the tickets, to change the codes to reflect declines in value of the merchandise, to allocate costs such as transportation, and so on.

An alternative is to compile the inventories at retail prices. For most retailers, an observable pattern between cost and selling price exists. The retailer can then use a formula to convert retail prices to cost. This method is called the **retail inventory method**. **It requires that the retailer keep a record of (1) the total cost and retail value of goods purchased, (2) the total cost and retail value of the goods available for sale, and (3) the sales for the period.** Use of the retail inventory method is very common. For example, **Carrefour** supermarkets uses the retail inventory method, as do **Walmart** (USA) and **Debenhams** (GBR).

Here is how it works at a company like Debenhams. Beginning with the retail value of the goods available for sale, Debenhams deducts the sales for the period. This calculation determines an estimated inventory (goods on hand) at retail. It next computes the **cost-to-retail ratio** for all goods. The formula for this computation is to divide the total goods available for sale at cost by the total goods available at retail price. Finally, to obtain ending inventory at cost, Debenhams applies the cost-to-retail ratio to the ending inventory valued at retail. **Illustration 9.17** shows the retail inventory method calculations for Debenhams using assumed data.

	Cost	Retail
Beginning inventory	£14,000	£ 20,000
Purchases	63,000	90,000
Goods available for sale	<u>£77,000</u>	110,000
Deduct: Sales		85,000
Ending inventory, at retail		<u>£ 25,000</u>
<p style="text-align: center;">Ratio of cost to retail ($£77,000 \div £110,000$) = 70%</p> <p style="text-align: center;">Ending inventory at cost ($.70 \times £25,000$) = <u>£17,500</u></p>		

ILLUSTRATION 9.17 Retail Inventory Method Calculations

There are different versions of the retail inventory method. These include the **conventional** method (based on LCNRV) and the **cost** method. Regardless of which version a company uses, tax authorities, various retail associations, and the accounting profession all sanction use of the retail inventory method. One of its advantages is that a company like Debenhams can approximate the inventory balance **without a physical count**. However, to avoid a potential overstatement of the inventory, Debenhams makes periodic inventory counts. Such counts are especially important in retail operations where loss due to shoplifting or breakage is common.

The retail inventory method is particularly useful for any type of interim report because such reports usually need a fairly quick and reliable measure of the inventory. Also, insurance adjusters often use this method to estimate losses from fire, flood, or other type of casualty. This method also acts as a **control device** because a company will have to explain any discrepancies between the results of the retail method and a physical count at the end of the year. Finally, the retail method **expedites the physical inventory count** at year-end. The crew taking the physical inventory need record only the retail price of each item. The crew does not need to look up each item's invoice cost, thereby saving time and expense.

Retail-Method Concepts

The amounts shown in the “Retail” column of [Illustration 9.17](#) represent the original retail prices, assuming no price changes. In practice, though, retailers frequently mark up or mark down the prices they charge buyers.

For retailers, the term **markup** means an additional markup of the original retail price. (In another context, such as in the previous discussion of gross profit, we often think of markup on the basis of cost.) **Markup cancellations** are decreases in prices of merchandise that the retailer had marked up above the original retail price.

In a competitive market, retailers often need to use **markdowns**, which are decreases in the original sales prices. Such cuts in sales prices may be necessary due to a decrease in the general level of prices, special sales, soiled or damaged goods, overstocking, and market competition. Markdowns are common in retailing these days. **Markdown cancellations** occur when the markdowns are later offset by increases in the prices of goods that the retailer had marked down—such as after a one-day sale. Neither a markup cancellation nor a markdown cancellation can exceed the original markup or markdown.

To illustrate these concepts, assume that Designer Clothing Store recently purchased 100 dress shirts from Marroway Group. The cost for these shirts was €1,500, or €15 a shirt. Designer Clothing established the selling price on these shirts at €30 a shirt. The shirts were selling quickly, so the manager added a markup of €5 per shirt. This markup made the price too high for customers, and sales slowed. The manager then reduced the price to €32. At this point, we would say that the shirts at Designer Clothing have had a markup of €5 and a markup cancellation of €3.

A month later, the manager marked down the remaining shirts to a sales price of €23. At this point, an additional markup cancellation of €2 has taken place, and a €7 markdown has occurred. If the manager later increases the price of the shirts to €24, a markdown cancellation of €1 would occur.

Retail Inventory Method with Markups and Markdowns—Conventional Method

Retailers use markup and markdown concepts in developing the proper inventory valuation at the end of the accounting period. To obtain the appropriate inventory figures, companies must give proper treatment to markups, markup cancellations, markdowns, and markdown cancellations.

To illustrate the different possibilities, consider the data for In-Fusion SA shown in [Illustration 9.18](#). In-Fusion can calculate its ending inventory at cost under two assumptions, A and B. (We'll explain the reasons for the two later.)

Assumption A: Computes a cost ratio after markups (and markup cancellations) but before markdowns.

Assumption B: Computes a cost ratio after both markups and markdowns (and cancellations).

	Cost		Retail
Beginning inventory	€ 500		€ 1,000
Purchases (net)	20,000		35,000
Markups			3,000
Markup cancellations			1,000
Markdowns			2,500
Markdown cancellations			2,000
Sales (net)			25,000
In-Fusion SA			
	Cost		Retail
Beginning inventory	€ 500		€ 1,000
Purchases (net)	20,000		35,000
Merchandise available for sale	20,500		36,000
Add: Markups		€3,000	
Less: Markup cancellations		1,000	
Net markups			2,000
	20,500		38,000
(A) Cost-to-retail ratio = $\frac{€20,500}{€38,000} = 53.9\%$			
Deduct:			
Markdowns		2,500	
Less: Markdown cancellations		(2,000)	
Net markdowns			500
	€20,500		37,500
(B) Cost-to-retail ratio = $\frac{€20,500}{€37,500} = 54.7\%$			
Deduct: Sales (net)			25,000
Ending inventory, at retail			€12,500

ILLUSTRATION 9.18 Retail Inventory Method with Markups and Markdowns

The computations for In-Fusion are:

Ending Inventory at Retail × Cost Ratio = Value of Ending Inventory

$$\text{Assumption A: } €12,500 \times .539 = €6,737.50$$

$$\text{Assumption B: } \text{€}12,500 \times .547 = \text{€}6,837.50$$

The question becomes: Which assumption and which percentage should In-Fusion use to compute the ending inventory valuation? The answer depends on which retail inventory method In-Fusion chooses.

One approach uses only Assumption A (a cost ratio using markups but not markdowns). It approximates the lower-of-average-cost-or-net realizable value. We will refer to this approach as the **conventional retail inventory method** or the **LCNRV**.

To understand why this method considers only the markups, not the markdowns, in the cost percentage, you must understand how a retail business operates. A markup normally indicates an increase in the sales value of the item. On the other hand, a markdown means a decline in the utility of that item. Therefore, to approximate the LCNRV, we would consider markdowns a current loss and so would not include them in calculating the cost-to-retail ratio. Omitting the markdowns would make the cost-to-retail ratio lower, which leads to an approximate LCNRV.

An example will make the distinction between the two methods clear. Assume In-Fusion purchased two items for €5 apiece; the original sales price was €10 each. One item was subsequently marked down to €2. Assuming no sales for the period, **if markdowns are considered** in the cost-to-retail ratio (Assumption B—the **cost method**), we compute the ending inventory as shown in [Illustration 9.19](#).

Markdowns Included in Cost-to-Retail Ratio		
	Cost	Retail
Purchases	€10	€20
Deduct: Markdowns (€10 – €2)		8
Ending inventory, at retail		€12
$\text{Cost-to-retail ratio} = \frac{\text{€}10}{\text{€}12} = 83.3\%$		
$\text{Ending inventory at cost } (\text{€}12 \times .833) = \text{€}10$		

ILLUSTRATION 9.19 Retail Inventory Method Including Markdowns—Cost Method

This approach (the cost method) reflects an **average cost** of the two items of the commodity without considering the loss on the one item. It values ending inventory at €10.

If markdowns are not considered in the cost-to-retail ratio (Assumption A—the **conventional retail method**), we compute the ending inventory as shown in [Illustration 9.20](#).

Markdowns Not Included in Cost-to-Retail Ratio		
	Cost	Retail
Purchases	€10	€20
$\text{Cost-to-retail ratio} = \frac{€10}{€20} = 50\%$		
Deduct: Markdowns		8
Ending inventory, at retail		€12
$\text{Ending inventory at cost } (€12 \times .50) = €6$		

ILLUSTRATION 9.20 Retail Inventory Method Excluding Markdowns—Conventional Method (LCNRV)

Under this approach (the conventional retail method, in which markdowns are **not considered**), ending inventory would be €6. The inventory valuation of €6 reflects two inventory items, one inventoried at €5 and the other at €1. It reflects the fact that In-Fusion reduced the sales price from €10 to €2, and reduced the cost from €5 to €1.¹⁴

To approximate the LCNRV, In-Fusion must establish the **cost-to-retail ratio**. It does this by dividing the cost of goods available for sale by the sum of the original retail price of these goods plus the net markups. This calculation excludes markdowns and markdown cancellations. [Illustration 9.21](#) shows the basic format for the retail inventory method using the LCNRV approach along with the In-Fusion information.

In-Fusion SA		
	Cost	Retail
Beginning inventory	€ 500	€ 1,000
Purchases (net)	20,000	35,000
Totals	20,500	36,000
Add: Net markups		
Markups		€3,000
Markup cancellations		(1,000)
Totals	€20,500	38,000
Deduct: Net markdowns		
Markdowns		2,500
Markdown cancellations		(2,000)
Sales price of goods available		37,500
Deduct: Sales (net)		25,000
Ending inventory, at retail		€12,500
$\text{Cost-to-retail ratio} = \frac{\text{Cost of goods available}}{\text{Original retail price of goods available, plus net markups}}$ $= \frac{€20,500}{€38,000} = 53.9\%$		
$\text{Ending inventory at LCNRV } (.539 \times €12,500) = \underline{\underline{€6,737.50}}$		

ILLUSTRATION 9.21 Comprehensive Conventional Retail Inventory Method Format

Because an averaging effect occurs, an exact LCNRV inventory valuation is ordinarily not obtained, but an adequate approximation can be achieved. In contrast, adding net markups **and** deducting net markdowns yield **approximate cost**.

Special Items Relating to Retail Method

The retail inventory method becomes more complicated when we consider such items as freight-in, purchase returns and allowances, and purchase discounts. In the retail method, we treat such items as follows.

- **Freight costs** are part of the purchase cost.
- **Purchase returns** are ordinarily considered as a reduction of the price at both cost and retail.
- **Purchase discounts and allowances** usually are considered as a reduction of the cost of purchases.

In short, the treatment for the items affecting the cost column of the retail inventory approach follows the computation for cost of goods available for sale.¹⁵

Note also that **sales returns and allowances** are considered as proper adjustments to gross sales. However, when sales are recorded gross, companies do not recognize **sales discounts**. To adjust for the sales discount account in such a situation would provide an ending inventory figure at retail that would be overvalued.

In addition, a number of special items require careful analysis:

- **Transfers-in** from another department are reported in the same way as purchases from an outside enterprise.
- **Normal shortages** (breakage, damage, theft, shrinkage) should reduce the retail column because these goods are no longer available for sale. Such costs are reflected in the selling price because a certain amount of shortage is considered normal in a retail enterprise. As a result, companies do not consider this amount in computing the cost-to-retail percentage. Rather, to arrive at ending inventory at retail, they show normal shortages as a deduction similar to sales.
- **Abnormal shortages**, on the other hand, are deducted from both the cost and retail columns and reported as a special inventory amount or as a loss. To do otherwise distorts the cost-to-retail ratio and overstates ending inventory.
- **Employee discounts** (given to employees to encourage loyalty and better performance) are deducted from the retail column in the same way as sales. These discounts should not be considered in the cost-to-retail percentage because they do not reflect an overall change in the selling price.¹⁶

[Illustration 9.22](#) shows some of these concepts. The company, Extreme Sport Apparel, determines its inventory using the conventional retail inventory method.

Extreme Sport Apparel		
	Cost	Retail
Beginning inventory	€ 1,000	€ 1,800
Purchases	30,000	60,000
Freight-in	600	—
Purchase returns	<u>(1,500)</u>	<u>(3,000)</u>
Totals	30,100	58,800
Net markups		9,000
Abnormal shortage	<u>(1,200)</u>	<u>(2,000)</u>
Totals	<u>€28,900</u>	65,800
Deduct:		
Net markdowns		1,400
Sales	€36,000	
Sales returns	<u>(900)</u>	35,100
Employee discounts		800
Normal shortage		<u>1,300</u>
Ending inventory, at retail		<u>€27,200</u>
	←—————→	
	$\text{Cost-to-retail ratio} = \frac{€28,900}{€65,800} = 43.9\%$	
	$\text{Ending inventory at LCNRV } (.439 \times €27,200) = \underline{\underline{€11,940.80}}$	

ILLUSTRATION 9.22 Conventional Retail Inventory Method—Special Items Included

Evaluation of Retail Inventory Method

Companies such as **Carrefour** (FRA), **Marks and Spencer** (GBR), and your local department store use the retail inventory method of computing inventory for the following reasons: (1) to permit the computation of net income without a physical count of inventory, (2) as a control measure in determining inventory shortages, (3) in regulating quantities of merchandise on hand, and (4) for insurance information.

One characteristic of the retail inventory method is that it **has an averaging effect on varying rates of gross profit**. This can be problematic when companies apply the method to an entire business, where rates of gross profit vary among departments. There is no allowance for possible distortion of results because of such differences. Companies refine the retail method under such conditions by computing inventory separately by departments, or by classes of merchandise with similar gross profits. In addition, the reliability of this method assumes that the distribution of items in inventory is similar to the “mix” in the total goods available for sale.

Presentation and Analysis

LEARNING OBJECTIVE 5

Explain how to report and analyze inventory.

Presentation of Inventories

Accounting standards require financial statement disclosure of the following items related to inventories:

1. The accounting policies adopted in measuring inventories, including the cost formula used (weighted-average, FIFO).
2. The total carrying amount of inventories and the carrying amount in classifications (common classifications of inventories are merchandise, production supplies, raw materials, work-in-process, and finished goods).
3. The carrying amount of inventories carried at fair value less costs to sell.
4. The amount of inventories recognized as an expense during the period (cost of goods sold).
5. The amount of any write-down of inventories recognized as an expense in the period and the amount of any reversal of write-downs recognized as a reduction of expense in the period.
6. The circumstances or events that led to the reversal of a write-down of inventories.
7. The carrying amount of inventories pledged as security for liabilities, if any.

This information can be disclosed in the statement of financial position or in a separate schedule in the notes. The relative mix of raw materials, work-in-process, and finished goods helps in assessing liquidity and in computing the stage of inventory completion. Significant or unusual financing arrangements relating to inventories may require note disclosure. Examples include transactions with related parties, product financing arrangements, firm purchase commitments, and pledging of inventories as collateral. [10] For example, [Illustration 9.23](#) shows the disclosures from the annual report of **Lectra SA** (FRA).

Lectra SA

Statement of Financial Position at December 31, 2018 (in thousands)

Current Assets

Inventories (Note 12)

€34,326

Accounting Rules and Methods (in part)—INVENTORIES

Inventories of raw materials are valued at the lower of purchase cost (including related costs) and their net realizable value. Finished goods and works-in-progress are valued at the lower of standard industrial cost (adjusted at year-end on an actual cost basis) and their net realizable value. The purchase cost of raw materials and the industrial cost of works-in-progress and finished goods is calculated with the weighted-average cost method. Net realizable value is the estimated selling price in the normal course of business, less the estimated cost of completion or upgrading of the product and unavoidable selling costs. Inventory cost does not include interest expense. A write-down is recorded if the net realizable value is lower than the book value.

NOTE 12 INVENTORIES

Inventories, gross value

Raw materials	€29,976	
Finished goods and works-in-progress	<u>13,354</u>	€43,330

Write-downs

Raw materials	(4,564)	
Finished goods and works-in-progress	<u>(4,440)</u>	(9,004)

Inventories, net value

Raw materials	25,412	
Finished goods and works-in-progress	<u>8,914</u>	
Total		<u>€34,326</u>

- €736,000 of inventory fully written-down was scrapped in the course of 2018 (€902,000 in 2017), thereby diminishing the gross value and write-downs by the same amount.
- Inventory write-downs charged for the year amounted to €2,408,000 (€1,840,000 in 2017).
- Reversals of previous write-downs relating to sales transactions amounted to €684,000 (€804,000 in 2017), booked against the charges for the period.

Description of accounting policies

Inventory classifications

Inventories recognized as expense

Carrying amount at net realizable value

Inventory write-downs, reversals, and related circumstances

ILLUSTRATION 9.23 Disclosure of Inventory Methods

If Lectra changes the method of pricing any of its inventory elements, it must report a change in accounting principle. For example, if Lectra changes its method of accounting for its finished goods from weighted-average to FIFO, it should separately report this change, along with the effect on income, in the current and prior periods (as discussed in [Chapter 22](#)). Changes in accounting principle require an explanatory paragraph in the auditor's report describing the change in method.

As another example of inventory disclosure practices, **Pernod Ricard** (FRA) reported its inventories in its annual report, as shown in [Illustration 9.24](#) (note the "trade practice" followed in classifying some long-cycle inventories among the current assets).

Pernod Ricard

Current assets

Inventories (Note 4.4) €5,305

Note 4.4 Inventories

Inventories are measured at the lowest of either cost (acquisition cost and cost of production, including indirect production overheads) or net realizable value. Net realizable value is the selling price less the estimated costs of completion and sale of the inventories. Most inventories are valued using the weighted average cost method. The cost of long-cycle inventories is calculated using a single method which includes distilling and ageing maturing costs. These inventories are classified in current assets, although a substantial part remains in inventory for more than one year before being sold in order to undergo the ageing process used for certain Wines and Spirits.

The breakdown of inventories and work-in-progress at the balance sheet date is as follows:

In euro millions	Movements in the year					
	Beginning of year	Change in gross value	Change in impairment	Foreign currency gains and losses	Other movements	End of year
Raw materials	132	(4)	—	(3)	(1)	124
Work-in-progress	4,454	142	—	(103)	7	4,500
Goods in inventory	476	(15)	—	(10)	0	451
Finished products	<u>286</u>	<u>(4)</u>	<u>—</u>	<u>(3)</u>	<u>(4)</u>	<u>275</u>
GROSS VALUE	<u>5,348</u>	<u>119</u>	<u>—</u>	<u>(119)</u>	<u>2</u>	<u>5,350</u>
Raw materials	(10)	—	(1)	0	1	(10)
Work-in-progress	(17)	—	5	0	0	(12)
Goods in inventory	(16)	—	3	1	0	(12)
Finished products	<u>(11)</u>	<u>—</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>(11)</u>
IMPAIRMENT	<u>(54)</u>	<u>—</u>	<u>7</u>	<u>1</u>	<u>1</u>	<u>(45)</u>
NET INVENTORIES	<u>5,294</u>	<u>119</u>	<u>7</u>	<u>(118)</u>	<u>3</u>	<u>5,305</u>

Other movements are mostly due to foreign currency gains and losses. At year-end, maturing inventories intended mainly for use in whisky and cognac production accounted for 84% of work-in-progress. Pernod Ricard is not significantly dependent on its suppliers.

ILLUSTRATION 9.24 Disclosure of Trade Practice in Valuing Inventories

As indicated in the prior illustration, companies also disclose inventory revaluations and valuation allowances to arrive at inventory recorded at net realizable value. Thus, for Pernod Ricard, its inventories at cost (or net realizable value) at year-end are €5,305 million.

Analysis of Inventories

The amount of inventory that a company carries can have significant economic consequences. As a result, companies must manage inventories. But, inventory management is a double-edged sword. It requires constant attention. On the one hand, management wants to stock a great variety and quantity of items. Doing so will provide customers with the greatest selection. However, such an inventory policy may incur excessive carrying costs (e.g., investment, storage, insurance, taxes, obsolescence, and damage). On the other hand, low inventory levels lead to stockouts, lost sales, and disgruntled customers.

Using financial ratios helps companies to chart a middle course between these two dangers. Common ratios used in the management and evaluation of inventory levels are inventory turnover and a related measure, average days to sell the inventory.

Inventory Turnover

The **inventory turnover** measures the number of times on average a company sells the inventory during the period. It measures the liquidity of the inventory. To compute inventory turnover, divide the cost of goods sold by the average inventory on hand during the period.

Barring seasonal factors, analysts compute average inventory from beginning and ending inventory balances. For example, in its 2019 annual report, **Tate & Lyle plc** (GBR) reported a beginning inventory of £419 million, an ending inventory of £434 million, and cost of goods sold of £1,621 million for the year. **Illustration 9.25** shows the inventory turnover formula and Tate & Lyle's 2019 ratio computation.

$$\text{Inventory Turnover} = \frac{\text{Cost of Goods Sold}}{\text{Average Inventory}} = \frac{£1,621}{(£419 + £434) \div 2} = 3.80 \text{ times}$$

ILLUSTRATION 9.25 Inventory Turnover

Average Days to Sell Inventory

A variant of the inventory turnover ratio is the **average days to sell inventory**. This measure represents the average number of days' sales for which a company has inventory on hand. For example, the inventory turnover for **Tate & Lyle** of 3.80 times divided into 365 is approximately 96 days.

There are typical levels of inventory in every industry. However, companies that keep their inventory at lower levels with higher turnovers than those of their competitors, while still satisfying customer needs, are generally the most successful.

Learning Objectives Review

1 Describe and apply the lower-of-cost-or-net realizable value rule.

If inventory declines in value below its original cost, for whatever reason, a company should write down the inventory to reflect this loss. The general rule is to abandon the historical cost principle when the future utility (revenue-producing ability) of the asset drops below its original cost.

2 Identify other inventory valuation issues.

Companies value inventory at **net realizable value** when cost is difficult to determine, the items are readily marketable at quoted market prices, and units of product are interchangeable. Three common situations in which net realizable value is the general rule for valuing inventory are (1) agricultural inventory (including biological assets and

agricultural produce), (2) minerals and mineral products, and (3) commodities held by broker-traders.

When a company purchases a group of varying units at a single lump-sum price—a so-called basket purchase—the company may allocate the total purchase price to the individual items on the basis of **relative standalone sales value**.

Accounting for purchase commitments is controversial. Some argue that companies should report purchase commitment contracts as assets and liabilities at the time the contract is signed. Others believe that recognition at the delivery date is most appropriate. If a company has a firm purchase commitment and the price falls below the contract price, a loss should be recognized. IFRS refers to this situation as an onerous contract.

3 Determine ending inventory by applying the gross profit method.

Companies follow these steps to determine ending inventory by the gross profit method. (1) Compute the gross profit percentage on selling price. (2) Compute gross profit by multiplying net sales by the gross profit percentage. (3) Compute cost of goods sold by subtracting gross profit from net sales. (4) Compute ending inventory by subtracting cost of goods sold from total goods available for sale.

4 Determine ending inventory by applying the retail inventory method.

Companies follow these steps to determine ending inventory by the retail method. (1) To estimate inventory at retail, deduct the sales for the period from the retail value of the goods available for sale. (2) To find the cost-to-retail ratio for all goods passing through a department or firm, divide the total goods available for sale at cost by the total goods available at retail. (3) Convert the inventory valued at retail to approximate cost by applying the cost-to-retail ratio.

5 Explain how to report and analyze inventory.

IFRS inventory disclosure requirements are shown with the examples in [Illustrations 9.23](#) and [9.24](#). Accounting standards also require the consistent application of costing methods from one period to another. Common ratios used in the management and evaluation of inventory levels are inventory turnover and average days to sell the inventory.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Norwood Company makes miniature circuit boards that are components of wireless phones and personal organizers. The company has experienced strong growth, and you are especially interested in how well Norwood is managing its inventory balances. You have collected the following information for the current year.

Inventory at the beginning of year	\$ 1,026,000
Inventory at the end of year, before any adjustments	1,007,000
Total cost of goods sold, before any adjustments	11,776,000

The company values inventory at lower-of-cost (using FIFO cost flow assumption)-or-net realizable value and uses the cost-of-goods-sold method.

Instructions

- a. Compute Norwood's inventory turnover before any adjustment.
- b. Recompute the inventory turnover after adjusting Norwood's inventory information for the following items.
 1. During the year, Norwood recorded sales and costs of goods sold on \$22,000 of units shipped to various wholesalers on consignment. At year-end, none of these units have been sold by wholesalers.
 2. Shipping contracts changed 2 months ago from f.o.b. shipping point to f.o.b. destination point. At the end of the year, \$25,000 of products are en route to China and will not arrive until after financial statements are released. Current inventory balances do not reflect this change in policy.
 3. At the end of the year, Norwood determined that a certain section of inventory with an historical cost of \$112,000 has a net realizable value of \$100,800. There is no need to make a lower-of-cost-or-net realizable value adjustment to other inventory.

Solution

$$a. \frac{\$11,776,000}{(\$1,026,000 + \$1,007,000) \div 2} = 11.6 \text{ times}$$

b. Adjustments to ending inventory

Item	Adjustment to Ending Inventory	Explanation
1. Consigned goods	\$22,000	Norwood should count the goods it has consigned in other stores.
2. Goods in transit	\$25,000	Goods officially change hands at the point of destination. Norwood should still show these goods in inventory (not cost of goods sold), until they reach the destination.
3. Lower-of-cost-or-net realizable value	\$(11,200)	(\$112,000 - \$100,800). The correct valuation is \$100,800 since the net realizable value of \$100,800 is less than the original cost.
Adjusted inventory turnover =		$\frac{\$11,740,200^a}{(\$1,026,000 + \$1,042,800)^b \div 2}$

^aCost of goods sold: $\$11,776,000 - \$22,000 - \$25,000 + \$11,200 = \$11,740,200$

^bEnding inventory: $\$1,007,000 + \$22,000 + \$25,000 - \$11,200 = \$1,042,800$

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. Where there is evidence that the utility of inventory goods, as part of their disposal in the ordinary course of business, will be less than cost, what is the proper accounting treatment?
2. Why are inventories valued at the lower-of-cost-or-net realizable value (LCNRV)? What are the arguments against the use of the LCNRV method of valuing inventories?
3. What approaches may be employed in applying the LCNRV procedure? Which approach is normally used and why?
4. In some instances, accounting principles require a departure from valuing inventories at cost alone. Determine the proper unit inventory price in the following cases.

	Cases				
	1	2	3	4	5
Cost	€15.90	€16.10	€15.90	€15.90	€15.90
Sales value	14.80	19.20	15.20	10.40	17.80
Estimated cost to complete	1.50	1.90	1.65	.80	1.00
Estimated cost to sell	.50	.70	.55	.40	.60

5. What method(s) might be used in the accounts to record a loss due to a price decline in the inventories? Discuss.
6. What exceptions might call for inventory valuation at net realizable value?
7. Briefly describe the valuation of (a) biological assets and (b) agricultural produce.
8. Under what circumstances is relative standalone sales value an appropriate basis for determining the price assigned to inventory?
9. At December 31, 2022, Ashley plc has outstanding purchase commitments for purchase of 150,000 gallons, at £6.20 per gallon, of a raw material to be used in its manufacturing process. The company prices its raw material inventory at cost or net realizable value, whichever is lower. Assuming that the market price as of December 31, 2022, is £5.90, how would you treat this situation in the accounts?
10. What are the major uses of the gross profit method?
11. Distinguish between gross profit as a percentage of cost and gross profit as a percentage of sales price. Convert the following gross profit percentages based on cost to gross profit percentages based on sales price: 25% and 33 $\frac{1}{3}$ %. Convert the following gross profit percentages based on sales price to gross profit percentages based on cost: 33 $\frac{1}{3}$ % and 60%.

12. With annual net sales of \$5 million, Adriana Co. maintains a markup of 25% based on cost. Adriana’s expenses average 15% of net sales. What is Adriana’s gross profit and net profit in dollars?

13. A fire destroys all of the merchandise of Assante Company on February 10, 2022. The following is information compiled up to the date of the fire.

Inventory, January 1, 2022	\$ 400,000
Sales to February 10, 2022	1,950,000
Purchases to February 10, 2022	1,140,000
Freight-in to February 10, 2022	60,000
Rate of gross profit on selling price	40%

What is the approximate inventory on February 10, 2022?

14. What conditions must exist for the retail inventory method to provide valid results?

15. The conventional retail inventory method yields results that are essentially the same as those yielded by the LCNRV method. Explain. Prepare an illustration of how the retail inventory method reduces inventory to net realizable value.

16.

a. Determine the ending inventory under the conventional retail method for the furniture department of Mayron Department Stores from the following data (amounts in thousands). (Round to nearest percent.)

	Cost	Retail
Inventory, Jan. 1	¥ 149,000	¥ 283,500
Purchases	1,400,000	2,160,000
Freight-in	70,000	
Markups, net		92,000
Markdowns, net		48,000
Sales		2,175,000

b. If the results of a physical inventory indicated an inventory at retail of ¥295,000, what inferences would you draw?

17. Tesco (GBR) reported inventory in its statement of financial position as follows:

Inventories	£2,430,000,000
-------------	----------------

What additional disclosures might be necessary to present the inventory fairly?

18. Of what significance is inventory turnover to a retail store?

Brief Exercises

BE9.1 (LO 1) Presented below is information related to Rembrandt Inc.’s inventory.

(per unit)	Skis	Boots	Parkas
Historical cost	\$190.00	\$106.00	\$53.00

Selling price	212.00	145.00	73.75
Cost to sell	19.00	8.00	2.50
Cost to complete	32.00	29.00	21.25

Determine the following: (a) the net realizable value for each item, and (b) the carrying value of each item under LCNRV.

BE9.2 (LO 1) Floyd SE has the following four items in its ending inventory.

Item	Cost	Net Realizable Value (NRV)
Jokers	€2,000	€2,100
Penguins	5,000	4,950
Riddlers	4,400	4,625
Scarecrows	3,200	3,830

Determine (a) the LCNRV for each item, and (b) the amount of write-down, if any, using (1) an item-by-item LCNRV evaluation and (2) a total-group LCNRV evaluation.

BE9.3 (LO 1) Kumar SA uses a perpetual inventory system. At January 1, 2022, inventory was R\$214,000,000 at both cost and net realizable value. At December 31, 2022, the inventory was R\$286,000,000 at cost and R\$265,000,000 at net realizable value. Prepare the necessary December 31 entry under (a) the cost-of-goods-sold method and (b) the loss method.

BE9.4 (LO 2) Keyser's Fleece owns a herd of sheep. Keyser shears the sheep on a semiannual basis and then sells the harvested wool into the specialty knitting market. Keyser has the following information related to the shearing sheep at January 1, 2022, and during the first 6 months of 2022.

Shearing sheep	
Carrying value (equal to net realizable value), January 1, 2022	€74,000
Change in fair value due to growth and price changes	4,700
Change in fair value due to harvest	(575)
Wool harvested during the first 6 months (at NRV)	9,000

Prepare the journal entry (or entries) for Keyser's biological asset (shearing sheep) for the first 6 months of 2022.

BE9.5 (LO 2) Refer to the data in BE9.4 for Keyser's Fleece. Prepare the journal entries for (a) the wool harvested in the first 6 months of 2022, and (b) when the wool harvested is sold for €10,500 in July 2022.

BE9.6 (LO 2) Benke Ltd. buys 1,000 computer game CDs from a distributor who is discontinuing those games. The purchase price for the lot is ¥8,000. Benke will group the CDs into three price categories for resale, as indicated below (yen in thousands).

Group	No. of CDs	Price per CD
1	100	¥ 5
2	800	10
3	100	15

Determine the cost per CD for each group, using the relative standalone sales value method.

BE9.7 (LO 2) Kemper Company signed a long-term, non-cancelable purchase commitment with a major supplier to purchase raw materials in 2023 at a cost of \$1,000,000. At December 31, 2022, the raw materials to be purchased have a fair value of \$950,000. Prepare any necessary December 31 entry.

BE9.8 (LO 2) Use the information for Kemper Company from BE9.7. In 2023, Kemper paid \$1,000,000 to obtain the raw materials which were worth \$950,000. Prepare the entry to record the purchase.

BE9.9 (LO 3) Fosbre NV's April 30 inventory was destroyed by fire. January 1 inventory was €150,000, and purchases for January through April totaled €500,000. Sales for the same period were €700,000. Fosbre's normal gross profit percentage is 35% on sales. Using the gross profit method, estimate Fosbre's April 30 inventory that was destroyed by fire.

BE9.10 (LO 4) Boyne Inc. had beginning inventory of \$12,000 at cost and \$20,000 at retail. Net purchases were \$120,000 at cost and \$170,000 at retail. Net markups were \$10,000; net markdowns were \$7,000; and sales were \$147,000. Compute ending inventory at cost using the conventional retail method.

BE9.11 (LO 5) Recently, **Inditex** (ESP) reported ending inventory of €1,581.297 (€1,297.009 the previous year). Cost of sales were €6,486.825 and net sales were €15,946.143 (all amounts in millions). Compute Inditex's inventory turnover and average days to sell inventory.

Exercises

E9.1 (LO 1) (LCNRV) The inventory of Oheto Company on December 31, 2022, consists of the following items.

Part No.	Quantity	Cost per Unit	Net Realizable Value per Unit
110	600	\$95	\$100
111	1,000	60	52
112	500	80	76
113	200	170	180
120	400	205	208
121 ^a	1,600	16	1
122	300	240	235

^aPart No. 121 is obsolete and has a realizable value of \$1 each as scrap.

Instructions

- Determine the inventory as of December 31, 2022, by the LCNRV method, applying this method to each item.
- Determine the inventory by the LCNRV method, applying the method to the total of the inventory.

E9.2 (LO 1) (LCNRV) Riegel Company uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2022, consists of

products D, E, F, G, H, and I. Relevant per-unit data for these products appear below.

	Item D	Item E	Item F	Item G	Item H	Item I
Estimated selling price	€120	€110	€95	€90	€110	€90
Cost	75	80	80	80	50	36
Cost to complete	30	30	25	35	30	30
Selling costs	10	18	10	20	10	20

Instructions

Using the LCNRV rule, determine the proper unit value for statement of financial position reporting purposes at December 31, 2022, for each of the inventory items above.

E9.3 (LO 1) (LCNRV) Sedato Company follows the practice of pricing its inventory at LCNRV, on an individual-item basis.

Item No.	Quantity	Cost per Unit	Estimated Selling Price	Cost to Complete and Sell
1320	1,200	\$3.20	\$4.50	\$1.60
1333	900	2.70	3.40	1.00
1426	800	4.50	5.00	1.40
1437	1,000	3.60	3.20	1.35
1510	700	2.25	3.25	1.40
1522	500	3.00	3.90	0.80
1573	3,000	1.80	2.50	1.20
1626	1,000	4.70	6.00	1.50

Instructions

Using the information above, determine the amount of Sedato Company inventory.

E9.4 (LO 1) (LCNRV—Journal Entries) Dover plc began operations in 2022 and determined its ending inventory at cost and at NRV at December 31, 2022, and December 31, 2023. This information is presented below.

	Cost	Net Realizable Value
12/31/22	£346,000	£322,000
12/31/23	410,000	390,000

Instructions

- Prepare the journal entries required at December 31, 2022, and December 31, 2023, assuming inventory is recorded at LCNRV and a perpetual inventory system using the cost-of-goods-sold method.
- Prepare journal entries required at December 31, 2022, and December 31, 2023, assuming inventory is recorded at cost with a perpetual system. Use the loss method to record any LCNRV.
- Which of the two methods above provides the higher net income in each year?

Eg.5 (LO 1) (LCNRV—Valuation Account) Presented below is information related to Knight Enterprises.

	Jan. 31	Feb. 28	Mar. 31	Apr. 30
Inventory at cost	\$15,000	\$15,100	\$17,000	\$14,000
Inventory at NRV	14,500	12,600	15,600	13,300
Purchases for the month		17,000	24,000	26,500
Sales for the month		29,000	35,000	40,000

Instructions

- From the information, prepare (as far as the data permit) monthly income statements in columnar form for February, March, and April. The inventory is to be shown in the statement at cost; the gain or loss due to NRV market fluctuations is to be shown separately (using a valuation account).
- Prepare the journal entry required to establish the valuation account at January 31 and entries to adjust it monthly thereafter.

Eg.6 (LO 1) (LCNRV—Error Effect) LaGreca SA uses the LCNRV method, on an individual-item basis, in pricing its inventory items. The inventory at December 31, 2022, includes product X. Relevant per-unit data for product X are as follows.

Estimated selling price	€50
Cost	40
Estimated selling expenses	14

There are 1,000 units of product X on hand at December 31, 2022. Product X is incorrectly valued at €38 per unit for reporting purposes. All 1,000 units are sold in 2023.

Instructions

Compute the effect of this error on net income for 2022 and the effect on net income for 2023, and indicate the direction of the misstatement for each year.

Eg.7 (LO 2) (Valuation at Net Realizable Value) Matsumura Dairy began operations on April 1, 2022, with the purchase of 200 milking cows for ¥6,700,000. It has completed the first month of operations and has the following information for its milking cows at the end of April 2022 (yen in thousands).

Milking cows	
Change in fair value due to growth and price changes*	¥(200,000)
Decrease in fair value due to harvest	(12,000)
Milk harvested during April 2022 (at net realizable value)	72,000
*Due to a very high rate of calving in the past month, there is a glut of milking cows on the market.	

Instructions

- Prepare the journal entries for Matsumura's biological asset (milking cows) for the month of April 2022.
- Prepare the journal entry for the milk harvested by Matsumura during April 2022.
- Matsumura sells the milk harvested in April on the local milk exchange and receives ¥74,000. Prepare the summary journal entry to record the sale of the milk.

Eg.8 (LO 2) (Valuation at Net Realizable Value) Mt. Horeb Alpaca Co. has a herd of 150 alpaca. The alpaca are sheared once a quarter to harvest valuable wool that is used in designer sweaters. Mt. Horeb has the following information related to the alpaca herd at July 1, 2022, and during the first quarter of the fiscal year.

Alpaca	
Carrying value (equal to net realizable value), July 1, 2022	\$120,000
Change in fair value due to growth and price changes	7,700
Decrease in fair value due to harvest	(975)
Alpaca wool harvested during the first quarter (at net realizable value)	13,000

Instructions

- Prepare the journal entries for Mt. Horeb's biological asset (Alpaca herd) for the first quarter.
- Prepare the journal entries for the Alpaca wool harvested in the first quarter.
- Prepare the journal entry when the Alpaca wool is sold for \$14,500.
- Briefly discuss the impact on income of the following events related to the alpaca biological asset: (1) a female alpaca gives birth to a baby alpaca, and (2) an older alpaca can only be sheared once every other quarter due to irritation caused by repeated shearing over its life.

Eg.9 (LO 2) (Relative Standalone Sales Value Method) Larsen Realty Ltd. purchased a tract of unimproved land for £55,000. This land was improved and subdivided into building lots at an additional cost of £30,000. These building lots were all of the same size. However, owing to differences in location, the lots were offered for sale at different prices as follows.

Group	No. of Lots	Price per Lot
1	9	£3,000
2	15	4,000
3	19	2,000

Operating expenses for the year allocated to this project total £18,200. Lots unsold at the year-end were as follows.

Group 1	5 lots
Group 2	7 lots
Group 3	2 lots

Instructions

At the end of the fiscal year, Larsen Realty instructs you to arrive at the net income realized on this operation to date.

E9.10 (LO 2) (Relative Standalone Sales Value Method) During 2022, Crawford Furniture purchases a carload of wicker chairs. The manufacturer sells the chairs to Crawford for a lump sum of £60,000 because it is discontinuing manufacturing operations and wishes to dispose of its entire stock. Three types of chairs are included in the carload. The three types and the estimated selling price for each are listed below.

Type	No. of Chairs	Estimated Selling Price Each
Lounge chairs	400	£90
Armchairs	300	80
Straight chairs	800	50

During 2022, Crawford sells 200 lounge chairs, 100 armchairs, and 120 straight chairs.

Instructions

What is the amount of gross profit realized during 2022? What is the amount of inventory of unsold straight chairs on December 31, 2022?

E9.11 (LO 2) (Purchase Commitments) Prater Company has had difficulty obtaining key raw materials for its manufacturing process. The company therefore signed a long-term, non-cancelable purchase commitment with its largest supplier of this raw material on November 30, 2022, at an agreed price of \$400,000. At December 31, 2022, the raw material had declined in price to \$375,000.

Instructions

What entry would you make on December 31, 2022, to recognize these facts?

E9.12 (LO 2) (Purchase Commitments) At December 31, 2022, Volkan AG has outstanding non-cancelable purchase commitments for 40,000 gallons, at €3.00 per gallon, of raw material to be used in its manufacturing process. The company prices its raw material inventory at lower-of-cost-or-net realizable value.

Instructions

- Assuming that the market price as of December 31, 2022, is €3.30, how would this matter be treated in the accounts and statements? Explain.
- Assuming that the market price as of December 31, 2022, is €2.70 instead of €3.30, how would you treat this situation in the accounts and statements?
- Give the entry in January 2023, when the 40,000-gallon shipment is received, assuming that the situation given in (b) above existed at December 31, 2022, and that the market price in January 2023 is €2.70 per gallon. Give an explanation of your treatment.

E9.13 (LO 3) (Gross Profit Method) Each of the following gross profit percentages is expressed in terms of cost.

- 20%.
- 25%.

3. $33\frac{1}{3}\%$.

4. 50%.

Instructions

Indicate the gross profit percentage in terms of sales for each of the above.

E9.14 (LO 3) (Gross Profit Method) Astaire ASA uses the gross profit method to estimate inventory for monthly reporting purposes. Presented below is information for the month of May.

Inventory, May 1	€ 160,000
Purchases (gross)	640,000
Freight-in	30,000
Sales	1,000,000
Sales returns	70,000
Purchase discounts	12,000

Instructions

- Compute the estimated inventory at May 31, assuming that the gross profit is 25% of sales.
- Compute the estimated inventory at May 31, assuming that the gross profit is 25% of cost.

E9.15 (LO 3) (Gross Profit Method) Zidek Corp. requires an estimate of the cost of goods lost by fire on March 9. Merchandise on hand on January 1 was \$38,000. Purchases since January 1 were \$92,000; freight-in, \$3,400; purchase returns and allowances, \$2,400. Sales are made at $33\frac{1}{3}\%$ above cost and totaled \$120,000 to March 9. Goods costing \$10,900 were left undamaged by the fire; remaining goods were destroyed.

Instructions

- Compute the cost of goods destroyed.
- Compute the cost of goods destroyed, assuming that the gross profit is $33\frac{1}{3}\%$ of sales.

E9.16 (LO 3) (Gross Profit Method) Castlevania SA lost most of its inventory in a fire in December just before the year-end physical inventory was taken. The company's books disclosed the following.

Beginning inventory	R\$170,000	Sales	R\$650,000
Purchases for the year	450,000	Sales returns	24,000
Purchase returns	30,000	Rate of gross margin on net sales	30%

Merchandise with a selling price of R\$21,000 remained undamaged after the fire. Damaged merchandise with an original selling price of R\$15,000 had a net realizable value of R\$5,300.

Instructions

Compute the amount of the loss as a result of the fire, assuming that the company had no insurance coverage.

E9.17 (LO 3) (Gross Profit Method) Yao Ming of Rocket Ltd. calls you on July 16 and asks you to prepare a claim for insurance as a result of a theft that took place the night before. You suggest that an inventory be taken immediately. The following data are available (amounts in thousands).

Inventory, July 1	¥ 38,000
Purchases—goods placed in stock July 1–15	90,000
Sales—goods delivered to customers (gross)	116,000
Sales returns—goods returned to stock	4,000

Your client reports that the goods on hand on July 16 cost ¥30,500, but you determine that this figure includes goods of ¥6,000 received on a consignment basis. Your past records show that sales are made at approximately 25% over cost. Rocket’s insurance covers only goods owned.

Instructions

Compute the claim against the insurance company.

E9.18 (LO 3) (Gross Profit Method) Sliver Lumber Company handles three principal lines of merchandise with these varying rates of gross profit on cost.

Lumber	25%
Millwork	30%
Hardware	40%

On August 18, a fire destroyed the office, lumber shed, and a considerable portion of the lumber stacked in the yard. To file a report of loss for insurance purposes, the company must know what the inventories were immediately preceding the fire. No detail or perpetual inventory records of any kind were maintained. The only pertinent information you are able to obtain are the following facts from the general ledger, which was kept in a fireproof vault and escaped destruction.

	Lumber	Millwork	Hardware
Inventory, Jan. 1, 2022	\$ 250,000	\$ 90,000	\$ 45,000
Purchases to Aug. 18, 2022	1,500,000	375,000	160,000
Sales to Aug. 18, 2022	2,050,000	533,000	245,000

Instructions

Submit your estimate of the inventory amounts immediately preceding the fire.

E9.19 (LO 3) (Gross Profit Method) Presented below is information related to Jerrold Ltd. for the current year.

Beginning inventory	£ 600,000	
Purchases	1,500,000	
Total goods available for sale		£2,100,000

Sales		2,300,000
-------	--	-----------

Instructions

Compute the ending inventory, assuming that (a) gross profit is 40% of sales, (b) gross profit is 60% of cost, (c) gross profit is 35% of sales, and (d) gross profit is 25% of cost.

E9.20 (LO 4) (Retail Inventory Method) Presented below is information related to Luzon SA.

	Cost	Retail
Beginning inventory	R\$ 58,000	R\$100,000
Purchases (net)	122,000	200,000
Net markups		20,000
Net markdowns		30,000
Sales		186,000

Instructions

- Compute the ending inventory at retail.
- Compute a cost-to-retail percentage (round to two decimals) under the following conditions.
 - Excluding both markups and markdowns.
 - Excluding markups but including markdowns.
 - Excluding markdowns but including markups.
 - Including both markdowns and markups.
- Which of the methods in (b) above (1, 2, 3, or 4) does the following?
 - Provides the most conservative estimate of ending inventory.
 - Provides an approximation of LCNRV.
 - Is used in the conventional retail method.
- Compute ending inventory at LCNRV (round to nearest dollar).
- Compute cost of goods sold based on (d).
- Compute gross margin based on (d).

E9.21 (LO 4) (Retail Inventory Method) Presented below is information related to Kuchinsky Company.

	Cost	Retail
Beginning inventory	€ 200,000	€ 280,000
Purchases	1,425,000	2,140,000
Markups		95,000
Markup cancellations		15,000
Markdowns		35,000

Markdown cancellations		5,000
Sales		2,250,000

Instructions

Compute the inventory by the conventional retail inventory method.

E9.22 (LO 4) (Retail Inventory Method) The records of Mandy's Boutique report the following data for the month of April.

Sales	£95,000	Purchases (at cost)	£55,000
Sales returns	2,000	Purchases (at sales price)	88,000
Markups	10,000	Purchase returns (at cost)	2,000
Markup cancellations	1,500	Purchase returns (at sales price)	3,000
Markdowns	9,300	Beginning inventory (at cost)	30,000
Markdown cancellations	2,800	Beginning inventory (at sales price)	46,500
Freight on purchases	2,400		

Instructions

Compute the ending inventory by the conventional retail inventory method.

E9.23 (LO 5) (Analysis of Inventories) The financial statements of **AB InBev's** (BEL) 2018 annual report disclosed the following information.

(in millions)	31 December 2018	31 December 2017
Inventories	\$4,234	\$4,119
	Fiscal Year	
	2018	2017
Sales	\$54,619	\$56,444
Cost of sales	20,359	21,386
Net income	5,691	9,183

Instructions

Compute AB InBev's (a) inventory turnover and (b) average days to sell inventory for 2018.

Problems

P9.1 (LO 1) (LCNRV) Remmers SE manufactures desks. Most of the company's desks are standard models and are sold on the basis of catalog prices. At December 31, 2022, the following finished desks appear in the company's inventory.

Finished Desks	A	B	C	D
2022 catalog selling price	€450	€480	€900	€1,050
FIFO cost per inventory list 12/31/22	470	450	830	960
Estimated cost to complete and sell	50	110	260	200
2023 catalog selling price	500	540	900	1,200

The 2022 catalog was in effect through November 2022, and the 2023 catalog is effective as of December 1, 2022. All catalog prices are net of the usual discounts.

Instructions

At what amount should each of the four desks appear in the company's December 31, 2022, inventory, assuming that the company has adopted a lower-of-FIFO-cost-or-net realizable value approach for valuation of inventories on an individual-item basis?

P9.2 (LO 1) Groupwork (LCNRV) Garcia Home Improvement plc installs replacement siding, windows, and louvered glass doors for single-family homes and condominium complexes. The company is in the process of preparing its annual financial statements for the fiscal year ended May 31, 2022. Jim Alcide, controller for Garcia, has gathered the following data concerning inventory.

At May 31, 2022, the balance in Garcia's Raw Materials Inventory account was £408,000, and Allowance to Reduce Inventory to NRV had a credit balance of £27,500. Alcide summarized the relevant inventory cost and market data at May 31, 2022, in the schedule below.

Alcide assigned Patricia Devereaux, an intern from a local college, the task of calculating the amount that should appear on Garcia's May 31, 2022, financial statements for inventory under the LCNRV rule as applied to each item in inventory. Devereaux expressed concern over departing from the historical cost principle.

	Cost	Sales Price	Net Realizable Value
Aluminum siding	£ 70,000	£ 64,000	£ 56,000
Cedar shake siding	86,000	94,000	84,800
Louvered glass doors	112,000	186,400	168,300
Thermal windows	140,000	154,800	140,000
Total	<u>£408,000</u>	<u>£499,200</u>	<u>£449,100</u>

Instructions

- a.
 1. Determine the proper balance in Allowance to Reduce Inventory to Net Realizable Value at May 31, 2022.
 2. For the fiscal year ended May 31, 2022, determine the amount of the gain or loss that would be recorded (using the loss method) due to the change in Allowance to Reduce Inventory to Net Realizable Value.
- b. Explain the rationale for the use of the LCNRV rule as it applies to inventories.

P9.3 (LO 1) (LCNRV—Cost-of-Goods-Sold and Loss) Malone Company determined its ending inventory at cost and at LCNRV at December 31, 2022, December 31, 2023, and December 31, 2024, as shown below.

	Cost	LCNRV
12/31/22	\$650,000	\$650,000
12/31/23	780,000	712,000
12/31/24	905,000	830,000

Instructions

- a. Prepare the journal entries required at December 31, 2023, and at December 31, 2024, assuming that a perpetual inventory system and the cost-of-goods-sold method of adjusting to LCNRV are used.
- b. Prepare the journal entries required at December 31, 2023, and at December 31, 2024, assuming that a perpetual inventory is recorded at cost and reduced to LCNRV using the loss method.

P9.4 (LO 2) (Valuation at Net Realizable Value) Finn Berge realized his lifelong dream of becoming a vineyard owner when he was able to purchase the Hillside Vineyard at an estate auction in August 2022 for €750,000. Finn retained the Hillside name for his new business. The purchase was risky because the growing season was coming to an end, the grapes had to be harvested in the next several weeks, and Finn had limited experience in carrying off a grape harvest.

At the end of the first quarter of operations, Finn felt pretty good about his early results. The first harvest was a success; 300 bushels of grapes were harvested with a value of €30,000 (based on current local commodity prices at the time of harvest). And, given the strong yield from area vineyards during the season, the net realizable value of Finn's vineyard had increased by €15,000 at the end of the quarter. After storing the grapes for a short period of time, Finn was able to sell the entire harvest for €35,000.

Instructions

- a. Prepare the journal entries for the Hillside biological asset (grape vines) for the first quarter of operations (the beginning carrying and net realizable value is €750,000).
- b. Prepare the journal entry for the grapes harvested during the first quarter.
- c. Prepare the journal entry to record the sale of the grapes harvested in the first quarter.
- d. Determine the total effect on income for the quarter related to the Hillside biological asset and agricultural produce.
- e. Looking to the next growing season, Finn is doing some forecasting, based on the following two developments: (1) demand is expected to increase for the type of grapes his vineyard produces and (2) there are new producing vineyards coming on line that will increase the supply of similar grapevines in the market. Briefly discuss how these developments are likely to affect the value of Hillside's biological assets and agricultural produce in the next growing season.

P9.5 (LO 3) (Gross Profit Method) Yu Ltd. lost most of its inventory in a fire in December just before the year-end physical inventory was taken. Company records disclose the following (yen in thousands).

Inventory (beginning)	¥ 80,000	Sales	¥415,000
Purchases	290,000	Sales returns	21,000
Purchase returns	28,000	Gross profit % based on net selling price	35%

Merchandise with a selling price of ¥30,000 remained undamaged after the fire, and damaged merchandise has a residual value of ¥8,150. The company does not carry fire

insurance on its inventory.

Instructions

Prepare a formal labeled schedule computing the fire loss incurred. (Do not use the retail inventory method.)

P9.6 (LO 3) Groupwork (Gross Profit Method) On April 15, 2022, fire damaged the office and warehouse of Stanislaw ASA. The only accounting record saved was the general ledger, from which the trial balance below was prepared.

Stanislaw ASA Trial Balance March 31, 2022		
Cash	€ 20,000	
Accounts receivable	40,000	
Inventory, December 31, 2021	75,000	
Land	35,000	
Equipment	110,000	
Accumulated depreciation—equipment		€ 41,300
Other assets	3,600	
Accounts payable		23,700
Other expense accruals		10,200
Share capital—ordinary		100,000
Retained earnings		52,000
Sales revenue		135,000
Purchases	52,000	
Miscellaneous expenses	26,600	
	<u>€362,200</u>	<u>€362,200</u>

The following data and information have been gathered.

1. The fiscal year of the company ends on December 31.
2. An examination of the April bank statement and canceled checks revealed that checks written during the period April 1–15 totaled €13,000: €5,700 paid to accounts payable as of March 31, €3,400 for April merchandise shipments, and €3,900 paid for other expenses. Deposits during the same period amounted to €12,950, which consisted of receipts on account from customers with the exception of a €950 refund from a vendor for merchandise returned in April.
3. Correspondence with suppliers revealed unrecorded obligations at April 15 of €15,600 for April merchandise shipments, including €2,300 for shipments in transit (f.o.b. shipping point) on that date.
4. Customers acknowledged indebtedness of €46,000 at April 15, 2022. It was also estimated that customers owed another €8,000 that will never be acknowledged or recovered. Of the acknowledged indebtedness, €600 will probably be uncollectible.

5. The companies insuring the inventory agreed that Stanislaw's fire-loss claim should be based on the assumption that the overall gross profit ratio for the past 2 years was in effect during the current year. The company's audited financial statements disclosed this information:

	Year Ended December 31	
	2021	2020
Net sales	€530,000	€390,000
Net purchases	280,000	235,000
Beginning inventory	50,000	66,000
Ending inventory	75,000	50,000

6. Inventory with a cost of €7,000 was salvaged and sold for €3,500. The balance of the inventory was a total loss.

Instructions

Prepare a schedule computing the amount of inventory fire loss. The supporting schedule of the computation of the gross profit should be in good form.

P9.7 (LO 4) (Retail Inventory Method) The records for the Clothing Department of Wei's Discount Store are summarized below for the month of January (HK\$ in thousands).

Inventory, January 1: at retail HK\$25,000; at cost HK\$17,000

Purchases in January: at retail HK\$137,000; at cost HK\$82,500

Freight-in: HK\$7,000

Purchase returns: at retail HK\$3,000; at cost HK\$2,300

Transfers-in from suburban branch: at retail HK\$13,000; at cost HK\$9,200

Net markups: HK\$8,000

Net markdowns: HK\$4,000

Inventory losses due to normal breakage, etc.: at retail HK\$400

Sales at retail: HK\$95,000

Sales returns: HK\$2,400

Instructions

- Compute the inventory for this department as of January 31, at retail prices.
- Compute the ending inventory using lower-of-average-cost-or-net realizable value.

P9.8 (LO 4) (Retail Inventory Method) Presented below is information related to Waveland Inc.

	Cost	Retail
Inventory, 12/31/22	\$250,000	\$ 390,000
Purchases	914,500	1,460,000

Purchase returns	60,000	80,000
Purchase discounts	18,000	—
Gross sales (after employee discounts)	—	1,410,000
Sales returns	—	97,500
Markups	—	120,000
Markup cancellations	—	40,000
Markdowns	—	45,000
Markdown cancellations	—	20,000
Freight-in	42,000	—
Employee discounts granted	—	8,000
Loss from breakage (normal)	—	4,500

Instructions

Assuming that Waveland Inc. uses the conventional retail inventory method, compute the cost of its ending inventory at December 31, 2022.

P9.9 (LO 4) Groupwork (Retail Inventory Method) Fuque Ltd. uses the retail inventory method to estimate ending inventory for its monthly financial statements. The following data pertain to a single department for the month of October 2022.

Inventory, October 1, 2022	
At cost	£ 52,000
At retail	78,000
Purchases (exclusive of freight and returns)	
At cost	272,000
At retail	423,000
Freight-in	16,600
Purchase returns	
At cost	5,600
At retail	8,000
Markups	9,000
Markup cancellations	2,000
Markdowns (net)	3,600
Normal spoilage and breakage	10,000
Sales	390,000

Instructions

- Using the conventional retail method, prepare a schedule computing estimated LCNRV inventory for October 31, 2022.
- A department store using the conventional retail inventory method estimates the cost of its ending inventory as £60,000. An accurate physical count reveals only £47,000 of

inventory at LCNRV. List the factors that may have caused the difference between the computed inventory and the physical count.

P9.10 (LO 1, 2, 5) (Statement and Note Disclosure, LCNRV, and Purchase Commitment) Maddox Specialty Company, a division of Lost World Inc., manufactures three models of gear shift components for bicycles that are sold to bicycle manufacturers, retailers, and catalog outlets. Since beginning operations in 1986, Maddox has used normal absorption costing and has assumed a first-in, first-out cost flow in its perpetual inventory system. The balances of the inventory accounts at the end of Maddox's fiscal year, November 30, 2022, are shown below. The inventories are stated at cost before any year-end adjustments.

Finished goods	\$647,000
Work-in-process	112,500
Raw materials	264,000
Factory supplies	69,000

The following information relates to Maddox's inventory and operations.

- The finished goods inventory consists of the items analyzed below.

	Cost	Net Realizable Value
<u>Down tube shifter</u>		
Standard model	\$ 67,500	\$ 67,000
Click adjustment model	94,500	89,000
Deluxe model	108,000	110,000
Total down tube shifters	<u>270,000</u>	<u>266,000</u>
<u>Bar end shifter</u>		
Standard model	83,000	90,050
Click adjustment model	99,000	97,550
Total bar end shifters	<u>182,000</u>	<u>187,600</u>
<u>Head tube shifter</u>		
Standard model	78,000	77,650
Click adjustment model	117,000	119,300
Total head tube shifters	<u>195,000</u>	<u>196,950</u>
Total finished goods	<u>\$647,000</u>	<u>\$650,550</u>

- One-half of the head tube shifter finished goods inventory is held by catalog outlets on consignment.
- Three-quarters of the bar end shifter finished goods inventory has been pledged as collateral for a bank loan.
- One-half of the raw materials balance represents derailleurs acquired at a contracted price 20% above the current market price. The net realizable value of the rest of the raw materials is \$127,400.
- The net realizable value of the work-in-process inventory is \$108,700.

6. Included in the cost of factory supplies are obsolete items with an historical cost of \$4,200. The net realizable value of the remaining factory supplies is \$65,900.
7. Maddox applies the LCNRV method to each of the three types of shifters in finished goods inventory. For each of the other three inventory accounts, Maddox applies the LCNRV method to the total of each inventory account.
8. Consider all amounts presented above to be material in relation to Maddox's financial statements taken as a whole.

Instructions

- a. Prepare the inventory section of Maddox's statement of financial position as of November 30, 2022, including any required note(s).
- b. Without prejudice to your answer to (a), assume that the net realizable value of Maddox's inventories is less than cost. Explain how this decline would be presented in Maddox's income statement for the fiscal year ended November 30, 2022.
- c. Assume that Maddox has a firm purchase commitment for the same type of derailleur included in the raw materials inventory as of November 30, 2022, and that the purchase commitment is at a contracted price 15% greater than the current market price. These derailleurs are to be delivered to Maddox after November 30, 2022. Discuss the impact, if any, that this purchase commitment would have on Maddox's financial statements prepared for the fiscal year ended November 30, 2022.

P9.11 (LO 1) Writing (LCNRV) Taipai Ltd. follows the practice of valuing its inventory at the LCNRV. The following information is available from the company's inventory records as of December 31, 2022 (amounts in thousands).

Item	Quantity	Unit Cost	Estimated Selling Price/Unit	Completion & Selling Cost/Unit
A	1,100	NT\$7.50	NT\$10.50	NT\$1.50
B	800	8.20	9.40	1.30
C	1,000	5.60	7.20	1.75
D	1,000	3.80	6.30	1.80
E	1,400	6.40	6.70	0.70

Instructions

Jay Shin is an accounting clerk in the accounting department of Taipai Co., and he cannot understand how completion and selling costs affect the determination of net realizable value. Jay is very confused, and he is the one who records inventory purchases and calculates ending inventory. You are the manager of the department and an accountant.

- a. Calculate the LCNRV using the "individual-item" approach.
- b. Show the journal entry he will need to make in order to write down the ending inventory from cost to NRV.
- c. Then, write a memo to Jay explaining what net realizable value is, as well as how it is computed. Use your calculations to aid in your explanation.

Concepts for Analysis

CA9.1 (LO 1) Writing (LCNRV) You have been asked by the financial vice president to develop a short presentation on the LCNRV method for inventory purposes. The financial VP needs to explain this method to the president because it appears that a portion of the company's inventory has declined in value.

Instructions

The financial vice president asks you to answer the following questions.

- a. What is the purpose of the LCNRV method?
- b. What is meant by "net realizable value"?
- c. Do you apply the LCNRV method to each individual item, to a category, or to the total of the inventory? Explain.
- d. What are the potential disadvantages of the LCNRV method?

CA9.2 (LO 1) Ethics (LCNRV) The net realizable value of Lake Corporation's inventory has declined below its cost. Allyn Conan, the controller, wants to use the loss method to write down inventory because it more clearly discloses the decline in the net realizable value and does not distort the cost of goods sold. His supervisor, financial vice president Bill Ortiz, prefers the cost-of-goods-sold method to write down inventory because it does not call attention to the decline in net realizable value.

Instructions

Answer the following questions.

- a. What, if any, is the ethical issue involved?
- b. Is any stakeholder harmed if Bill Ortiz's preference is used?
- c. What should Allyn Conan do?

CA9.3 (LO 1) (LCNRV) Ogala NV purchased a significant amount of raw materials inventory for a new product that it is manufacturing.

Ogala uses the LCNRV rule for these raw materials. The net realizable value of the raw materials is below the original cost.

Ogala uses the FIFO inventory method for these raw materials. In the last 2 years, each purchase has been at a lower price than the previous purchase, and the ending inventory quantity for each period has been higher than the beginning inventory quantity for that period.

Instructions

- a.
 1. At which amount should Ogala's raw materials inventory be reported on the statement of financial position? Why?
 2. In general, why is the LCNRV rule used to report inventory?
- b. What would have been the effect on ending inventory and cost of goods sold had Ogala used the average-cost inventory method instead of the FIFO inventory method for the

raw materials? Why?

CA9.4 (LO 4) Writing (Retail Inventory Method) Saurez Company, your client, manufactures paint. The company's president, Maria Saurez, has decided to open a retail store to sell Saurez paint as well as wallpaper and other supplies that would be purchased from other suppliers. She has asked you for information about the conventional retail method of pricing inventories at the retail store.

Instructions

Prepare a report to the president explaining the retail method of pricing inventories. Your report should include the following points.

- a. Description and accounting features of the method.
- b. The conditions that may distort the results under the method.
- c. A comparison of the advantages of using the retail method with those of using cost methods of inventory pricing.
- d. The accounting theory underlying the treatment of net markdowns and net markups under the method.

CA9.5 (LO 1, 4) (Cost Determination, LCNRV, Retail Method) Olson ASA, a retailer and wholesaler of brand-name household lighting fixtures, purchases its inventories from various suppliers.

Instructions

- a.
 1. What criteria should be used to determine which of Olson's costs are inventoriable?
 2. Are Olson's administrative costs inventoriable? Defend your answer.
- b.
 1. Olson uses the LCNRV rule for its wholesale inventories. What are the theoretical arguments for that rule?
 2. The net realizable value of the inventories is below the original cost. What amount should be used to value the inventories? Why?
- c. Olson calculates the estimated cost of its ending inventories held for sale at retail using the conventional retail inventory method. How would Olson treat the beginning inventories and net markdowns in calculating the cost ratio used to determine its ending inventories? Why?

CA9.6 (LO 2) Ethics (Purchase Commitments) Prophet Company signed a long-term purchase contract to buy timber from the government forest service at \$300 per thousand board feet. Under these terms, Prophet must cut and pay \$6,000,000 for this timber during the next year. Currently, the market governmental price is \$250 per thousand board feet. At this rate, the market price is \$5,000,000. Hu Cho, the controller, wants to recognize the loss in value on the year-end financial statements, but the financial vice president, Rondo Star, argues that the loss is temporary and should be ignored. Cho notes that market price has remained near \$250 for many months, and he sees no sign of significant change.

Instructions

- a. What are the ethical issues, if any?

- b. Is any particular stakeholder harmed by the financial vice president's decision?
- c. What should the controller do?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. How does M&S value its inventories? Which inventory costing method does M&S use as a basis for reporting its inventories?
- b. How does M&S report its inventories in the statement of financial position? In the notes to its financial statements, what descriptions are used to classify its inventories?
- c. What was M&S inventory turnover in 2019? What is its gross profit percentage? Evaluate M&S's inventory turnover and its gross profit percentage.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What is the amount of inventory reported by adidas at December 31, 2018, and by Puma at December 31, 2018? What percent of total assets is invested in inventory by each company?
- b. What inventory costing methods are used by adidas and Puma? How does each company value its inventories?
- c. In the notes, what classifications (description) are used by adidas and Puma to categorize their inventories?
- d. Compute and compare the inventory turnovers and days to sell inventory for adidas and Puma for 2018. Indicate why there might be a significant difference between the two companies.

Financial Statement Analysis Case

Barrick Gold Corporation

Barrick Gold Corporation (CAN) is the world's largest and most profitable gold mining company outside South Africa. Part of the key to Barrick's success has been its ability to maintain cash flow while improving production and increasing its reserves of gold claims. Recently, Barrick has achieved record growth in cash flow, production, and reserves.

The company maintains an aggressive policy of developing previously identified target areas that may contain large amounts of gold ore and that have not been previously developed. Barrick limits their risk by choosing sites that are located in politically stable regions and by their use of internally generated funds, rather than debt, to finance growth.

Barrick's inventories are as follows.

Barrick Gold Corporation	
Inventories (in millions, U.S. dollars)	
Current	
Gold in process	\$133
Mine operating supplies	82
	\$215
Non-current (included in Other assets)	
Ore in stockpiles	\$ 65

Instructions

- Why do you think that there are no finished goods inventories? Why do you think that the raw material (stockpiles of ore) is considered to be a non-current asset?
- Consider that Barrick has no finished goods inventories. What journal entries are made to record a sale?
- Suppose that gold bullion that cost \$1.8 million to produce was sold for \$2.4 million. The journal entry was made to record the sale, but no entry was made to remove the gold from the gold in process inventory. How would this error affect the following?

Statement of Financial Position		Income Statement	
Inventory	?	Cost of goods sold	?
Retained earnings	?	Net income	?
Accounts payable	?		
Working capital	?		
Current ratio	?		

Accounting, Analysis, and Principles

Englehart Company sells two types of pumps. One is large and is for commercial use. The other is smaller and is used in residential swimming pools. The following inventory data are available for the month of March.

	Units	Value per Unit	Total
Residential Pumps			

Inventory at Feb. 28:	200	\$ 400	\$ 80,000
Purchases:			
March 10	500	\$ 450	\$225,000
March 20	400	\$ 475	\$190,000
March 30	300	\$ 500	\$150,000
Sales:			
March 15	500	\$ 540	\$270,000
March 25	400	\$ 570	\$228,000
Inventory at Mar. 31:	500		
Commercial Pumps			
Inventory at Feb. 28:	600	\$ 800	\$480,000
Purchases:			
March 3	600	\$ 900	\$540,000
March 12	300	\$ 950	\$285,000
March 21	500	\$1,000	\$500,000
Sales:			
March 18	900	\$1,080	\$972,000
March 29	600	\$1,140	\$684,000
Inventory at Mar. 31:	500		

In addition to the above information, due to a downturn in the economy that has hit Englehart's commercial customers especially hard, Englehart expects commercial pump prices from March 31 onward to be considerably different (and lower) than at the beginning of and during March. Englehart has developed the following additional information.

	Commercial Pumps	Residential Pumps
Expected selling price (per unit, net of costs to sell)	\$1,050	\$580
Costs to complete	150	30

Englehart uses the FIFO accounting method.

Accounting

- Determine the dollar amount that Englehart should report on its March 31 statement of financial position for inventory. Assume Englehart applies LCNRV at the individual-product level.
- Repeat part (a) but assume Englehart applies LCNRV at the major-group level. Englehart places both commercial and residential pumps into the same (and only) group.

Analysis

Which of the two above approaches (individual-product or major-group level) for applying LCNRV gives the financial statement reader better information?

Principles

Assume that during April, the net realizable value of commercial pumps rebounds to \$1,060. Briefly describe how Englehart's April financial statements changed with respect to its inventory remaining from March 31 under IFRS.

Research Case

Jones Co. is in a technology-intensive industry. Recently, one of its competitors introduced a new product with technology that might render obsolete some of Jones's inventory. The accounting staff wants to follow the appropriate authoritative literature in determining the accounting for this significant market event.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the authoritative literature addressing inventory pricing.

- b. List three types of goods that are classified as inventory. What characteristic will automatically exclude an item from being classified as inventory?
- c. Define “net realizable value” as used in the phrase “lower-of-cost-or-net realizable value.”
- d. Explain when it is acceptable to state inventory above cost and which industries allow this practice.

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the accounting for inventories under IFRS and U.S. GAAP.

In most cases, IFRS and U.S. GAAP related to inventory are the same. The major differences are that IFRS prohibits the use of the LIFO cost flow assumption and records market in the LCNRV differently.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to inventories.

Similarities

- U.S. GAAP and IFRS account for inventory acquisitions at historical cost and evaluate inventory for lower-of-cost-or-net realizable value (market) subsequent to acquisition.
- Who owns the goods—goods in transit, consigned goods, special sales agreements—as well as the costs to include in inventory are essentially accounted for the same under U.S. GAAP and IFRS.

Differences

- U.S. GAAP provides more detailed guidelines in inventory accounting. The requirements for accounting for and reporting inventories are more principles-based under IFRS.
- A major difference between U.S. GAAP and IFRS relates to the LIFO cost flow assumption. U.S. GAAP permits the use of LIFO for inventory valuation. IFRS prohibits its use. FIFO and average-cost are the only two acceptable cost flow assumptions permitted under IFRS. Both sets of standards permit specific identification where appropriate.
- In the lower-of-cost-or-market test for inventory valuation, U.S. GAAP defines market as replacement cost subject to the constraints of net realizable value (the ceiling) and net realizable value less a normal markup (the floor) for inventories accounted for under LIFO or retail methods. IFRS defines market as net realizable value and does not use a ceiling or a floor to determine market.
- Under U.S. GAAP, if inventory is written down under the lower-of-cost-or-market valuation, the new basis is now considered its cost. As a result, the inventory may not be written up back to its original cost in a subsequent period. Under IFRS, the write-down

may be reversed in a subsequent period up to the amount of the previous write-down. Both the write-down and any subsequent reversal should be reported on the income statement.

- IFRS requires both biological assets and agricultural produce at the point of harvest to be reported at net realizable value. U.S. GAAP does not require companies to account for all biological assets in the same way. Furthermore, these assets generally are not reported at net realizable value. Disclosure requirements also differ between the two sets of standards.

About the Numbers

Illustration GAAP 9.1 presents a disclosure under U.S. GAAP related to inventories for **Altria Group, Inc.** (USA), which reflects application of U.S. GAAP to its inventories.

On the Horizon

One convergence issue that will be difficult to resolve relates to the use of the LIFO cost flow assumption. As indicated, IFRS specifically prohibits its use. Conversely, the LIFO cost flow assumption is widely used in the United States because of its favorable tax advantages. In addition, many argue that LIFO from a financial reporting point of view provides a better matching of current costs against revenue and therefore enables companies to compute a more realistic income.

Altria Group, Inc. (USA)	
Current assets (in millions of \$)	
Inventories (Note 2):	
Leaf tobacco	\$ 940
Other raw materials	186
Work-in-process	647
Finished product	558
Total	<u>\$2,331</u>

Note 2: Inventories

The last-in, first-out (“LIFO”) method is used to determine the cost of substantially all tobacco inventories. The cost of the remaining inventories is determined using the first-in, first-out (“FIFO”) and average cost methods. Inventories that are measured using the LIFO method are stated at the lower of cost or market. Inventories that are measured using the FIFO and average cost methods are stated at the lower of cost and net realizable value. **It is a generally recognized industry practice to classify leaf tobacco and wine inventories as current assets, although part of such inventory, because of the duration of the curing and aging process, ordinarily would not be used within one year.**

ILLUSTRATION GAAP 9.1 U.S. GAAP Inventory, Presentation and Disclosure

GAAP Self-Test Questions

1. All of the following are key similarities between U.S. GAAP and IFRS with respect to accounting for inventories **except**:

- a. costs to include in inventories are similar.
- b. LIFO cost flow assumption where appropriate is used by both sets of standards.
- c. fair value valuation of inventories is prohibited by both sets of standards.
- d. guidelines on ownership of goods are similar.

2. All of the following are key differences between U.S. GAAP and IFRS with respect to accounting for inventories **except** the:

- a. definition of the lower-of-cost-or-market test for inventory valuation differs between U.S. GAAP and IFRS.
- b. average-cost method is prohibited under IFRS.
- c. inventory basis determination for write-downs differs between U.S. GAAP and IFRS.
- d. guidelines are more principles-based under IFRS than they are under U.S. GAAP.

3. Starfish Company (a company using U.S. GAAP and the LIFO inventory method) is considering changing to IFRS and the FIFO inventory method. How would a comparison of these methods affect Starfish's financials?

- a. During a period of inflation, working capital would decrease when IFRS and the FIFO inventory method are used as compared to U.S. GAAP and LIFO.
- b. During a period of inflation, the taxes will decrease when IFRS and the FIFO inventory method are used as compared to U.S. GAAP and LIFO.
- c. During a period of inflation, net income would be greater if IFRS and the FIFO inventory method are used as compared to U.S. GAAP and LIFO.
- d. During a period of inflation, the current ratio would decrease when IFRS and the FIFO inventory method are used as compared to U.S. GAAP and LIFO.

4. Assume that Darcy Industries had the following inventory values.

Inventory cost (on December 31, 2022)	\$1,500
Inventory market (on December 31, 2022) amount between ceiling and floor	\$1,280
Inventory net realizable value (on December 31, 2022)	\$1,300

Under U.S. GAAP, what is the inventory carrying value on December 31, 2022?

- a. \$1,500.
- b. \$1,570.
- c. \$1,300.
- d. \$1,280.

5. Under U.S. GAAP, biological assets:

- a. are accounted for the same way as under IFRS.
- b. are all to be accounted for in the same way.

- c. generally are not accounted for at net realizable value.
- d. None of the answer choices is correct.

GAAP Concepts and Application

GAAP9.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for inventories.

GAAP9.2 LaTour SA is based in France and prepares its financial statements in accordance with IFRS. In 2022, it reported cost of goods sold of €578 million and average inventory of €154 million. Briefly discuss how analysis of LaTour's inventory turnover (and comparisons to a company using U.S. GAAP) might be affected by differences in inventory accounting between IFRS and U.S. GAAP.

GAAP9.3 Reed Pentak, a finance major, has been following globalization and made the following observation concerning accounting convergence: "I do not see many obstacles concerning development of a single accounting standard for inventories." Prepare a response to Reed to explain the main obstacle to achieving convergence in the area of inventory accounting.

Answers to GAAP Self-Test Questions

1.b 2.b 3.c 4.d 5.c

Notes

- 1 It may be necessary to write down an entire product line or a group of inventories in a given geographic area that cannot be practicably evaluated separately. However, it is not appropriate to write down an entire class of inventory, such as finished goods or all inventory of a particular industry. [3]
- 2 The rationale for use of the individual-item approach whenever practicable is to avoid realization of unrealized gains, which can arise when applying LCNRV on a similar-or-related-items approach (e.g., unrealized gains on some items offset unrealized losses on other items). In general, IFRS prohibits recognition of unrealized gains in income.
- 3 Materials and other supplies held for use in the production of inventories are not written down below cost if the finished products in which they will be incorporated are expected to be sold at or above cost. However, a decline in the price of materials may indicate that the cost of the finished products exceeds net realizable value. In this situation, the materials are written down to net realizable value.
- 4 Manufacturing companies frequently employ a standardized cost system that both predetermines the unit costs for material, labor, and manufacturing overhead, and values raw materials, work-in-process, and finished goods inventories at their standard costs. Standard costs take into account normal levels of materials and supplies, labor, efficiency, and capacity utilization, and are regularly reviewed and, if necessary, revised in the light of current conditions. For financial reporting purposes, the standard cost method may be used for convenience if the results approximate cost. [5] **Nokia** (FIN) and **Hewlett-Packard** (USA) use standard costs for valuing at least a portion of their inventories.

- 5 A gain may arise on initial recognition of a biological asset, such as when a calf is born. A gain or loss may arise on initial recognition of agricultural produce as a result of harvesting. Losses may arise on initial recognition for agricultural assets because costs to sell are deducted in determining fair value less costs to sell.
- 6 Measurement at fair value or selling price less point of sale costs corresponds to the net realizable value measure in the LCNRV test (selling price less estimated costs to complete and sell) since at harvest, the agricultural product is complete and is ready for sale. [7]
- 7 Changes in fair value arising from growth and harvesting from mature cows can be estimated based on changes in the market prices of the cows in the herd, depending on their age.
- 8 Minerals and mineral products, such as coal or iron ore, may also be measured at net realizable value in accordance with well-established industry practices. In the mining industry, when minerals have been extracted, there is often an assured sale in an active market, or under a forward contract or government guarantee. Because there is negligible risk of failure to sell, measurement at net realizable value is justified. In these contexts, and similar to the accounting for agricultural assets, minerals and mineral products are recorded at net realizable value at the point of extraction, with a gain recorded in the period of extraction. In subsequent periods, changes in value of minerals and mineral products inventory are recognized in profit or loss in the period of the change.
- 9 In a survey of 175 international companies, commitments to purchase goods and services were mentioned 83 times. See P. Walters, *IFRS Accounting Trends and Techniques* (AICPA, 2012).
- 10 Such a contract is deemed to be **onerous**, which is defined as a contract under which the unavoidable costs of satisfying the obligations exceed the economic benefits expected. [8] This concept is discussed in more detail in [Chapter 13](#).
- 11 [Appendix 17A](#) provides a complete discussion of hedging and the use of derivatives such as futures.
- 12 An alternative method of estimating inventory using the gross profit percentage is considered by some to be less complicated than the traditional method. This alternative method uses the standard income statement format as follows. (Assume the same data as in the Cetus example above.)

Relationships			Solution	
Sales revenue		€280,000		€280,000
Cost of sales				
Beginning inventory	€ 60,000		€ 60,000	
Purchases	200,000		200,000	
Goods available for sale	260,000		260,000	
Ending inventory	(3) ?		(3) 64,000 Est.	
Cost of goods sold		(2) ?		(2) 196,000 Est.
Gross profit on sales (30%)		(1) ?		(1) 84,000 Est.

Compute the unknowns as follows: first the gross profit amount, then cost of goods sold, and finally the ending inventory, as shown below.

(1) $€280,000 \times .30 = €84,000$ (gross profit on sales).

(2) $€280,000 - €84,000 = €196,000$ (cost of goods sold).

(3) $€260,000 - €196,000 = €64,000$ (ending inventory).

- 13** The terms *gross margin percentage*, *rate of gross profit*, and *percentage markup* are synonymous, although companies more commonly use *markup* in reference to cost and gross profit in reference to sales.
- 14** This figure is not really net realizable value, but it is net realizable value less the normal margin that is allowed. In other words, the sales price of the goods written down is €2, but subtracting a normal margin of 50 percent ($€5 \text{ cost} \div €10 \text{ price}$), the figure becomes €1. To the extent the profit margin approximates expected costs to complete and sell an item, this measure approximates net realizable value.
- 15** When the purchase allowance is not reflected by a reduction in the selling price, no adjustment is made to the retail column.
- 16** Note that if employee sales are recorded gross, no adjustment is necessary for employee discounts in the retail column.

CHAPTER 10

Acquisition and Disposition of Property, Plant, and Equipment

LEARNING OBJECTIVES

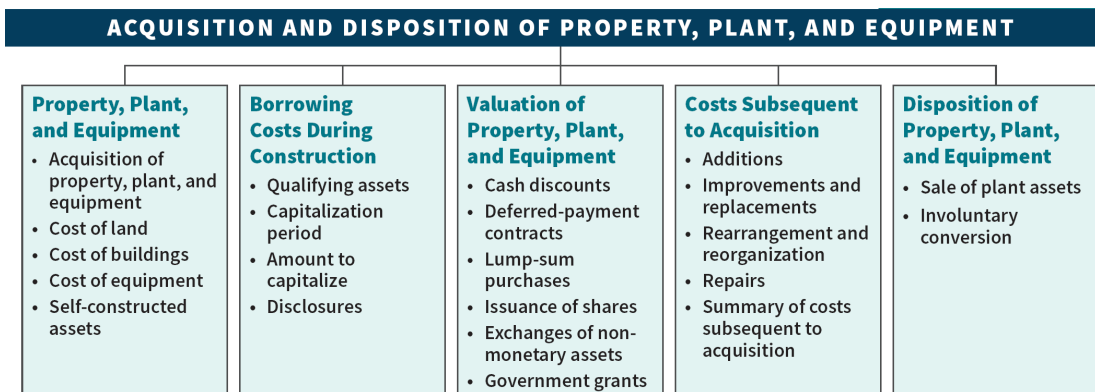

After studying this chapter, you should be able to:

1. Identify property, plant, and equipment and its related costs.
2. Discuss the accounting problems associated with the capitalization of borrowing costs.
3. Explain accounting issues related to acquiring and valuing plant assets.
4. Describe the accounting treatment for costs subsequent to acquisition.
5. Describe the accounting treatment for the disposal of property, plant, and equipment.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 10

As we indicate in the following opening story, market watchers monitor carefully capital expenditures on property, plant, and equipment. In this chapter, we discuss the proper accounting for the acquisition, use, and disposition of property, plant, and equipment. The content and organization of the chapter are as follows. (Note that *Global Accounting Insights* related to property, plant, and equipment is presented in [Chapter 11](#).)

Watch Your Spending

Investments in long-lived assets, such as property, plant, and equipment, are important elements in many companies' statements of financial position. Along with research and development, these investments are the driving force for many companies in generating cash flows. Property, plant, and equipment information reported on a company's statement of financial position directly affects such items as total assets, depreciation expense, cash flows, and net income. As a result, companies are careful regarding their spending level for capital expenditures (capex).

Determining the proper level of capital expenditures in many companies is challenging. Expenditures that are too much or too little run the risk of decreasing cash flows, losing competitive position, and diminishing pricing power. The recession in Europe, the financial crisis in 2008 and its lingering effects, and China's reduced level of spending are now slowing down the growth in capital expenditures. Western Europe, Latin America, and the Asian-Pacific countries are all showing signs of capital expenditure fatigue. The adjacent graph shows that global capital expenditures are highly variable and tend to follow the trends in revenue and EBITDA growth.

Even in good times, the issues related to capital expenditures are complex. The following areas and subsequent questions have led to many sleepless nights for company managers:

1. Spending volume—how much should be spent?
2. Capital allocation—what should it be spent on?
3. Project execution—how does spending transform into real returns?

Answers to these questions are not easy, and failure to answer them correctly can lead to loss of profitability. It also follows that these issues are of extreme interest to users of financial statements. As mentioned previously, too much or too little capital spending by companies can lead to decreased cash flows, loss of competitive position, and diminished pricing power. Relationships between capital-expenditures-to-sales and capital-expenditures-to-depreciation, as well as free cash flow, provide insight into the underlying financial flexibility of a company.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Property, Plant, and Equipment

LEARNING OBJECTIVE 1

Identify property, plant, and equipment and its related costs.

Companies like **Hon Hai Precision** (TWN), **Tata Steel** (IND), and **Royal Dutch Shell** (GBR and NLD) use assets of a durable nature. Such assets are called **property, plant, and equipment**. Other terms commonly used are **plant assets** and **fixed assets**. We use these terms interchangeably. Property, plant, and equipment is defined as tangible assets that are held for use in production or supply of goods and services, for rentals to others, or for administrative purposes; they are expected to be used during more than one period. [\[1\]](#) (See the [Authoritative Literature References](#) section near the end of the chapter.) Property, plant, and equipment therefore includes land, building structures (offices, factories, warehouses), and equipment (machinery, furniture, tools). The major characteristics of property, plant, and equipment are as follows.

1. **They are acquired for use in operations and not for resale.** Only assets used in normal business operations are classified as property, plant, and equipment. For example, an idle building is more appropriately classified separately as an investment. Property, plant, and equipment held for possible price appreciation are classified as investments. In addition, property, plant, and equipment held for sale or disposal are separately classified and reported on the statement of financial position. Land developers or subdividers classify land as inventory.

2. **They are long-term in nature and usually depreciated.** Property, plant, and equipment yield services over a number of years. Companies allocate the cost of the investment in these assets to future periods through periodic depreciation charges. The exception is land, which is depreciated only if a material decrease in value occurs, such as a loss in fertility of agricultural land because of poor crop rotation, drought, or soil erosion.
3. **They possess physical substance.** Property, plant, and equipment are tangible assets characterized by physical existence or substance. This differentiates them from intangible assets, such as patents or copyrights. Unlike raw material, however, property, plant, and equipment do not physically become part of a product held for resale.

Acquisition of Property, Plant, and Equipment

Most companies use historical cost as the basis for valuing property, plant, and equipment (see [Underlying Concepts](#)). **Historical cost** measures the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition necessary for its intended use.

Underlying Concepts

Fair value is relevant to inventory but less so for property, plant, and equipment which, consistent with the going concern assumption, are held for use in the business, not for sale like inventory.

Companies recognize property, plant, and equipment when the cost of the asset can be **measured reliably** and it is probable that the company will **obtain future economic benefits**. [2] For example, when **Starbucks** (USA) purchases coffee makers for its operations, these costs are reported as assets because they can be reliably measured and benefit future periods. However, when Starbucks makes ordinary repairs to its coffee machines, it expenses these costs because the primary period benefited is only the current period.

In general, companies report the following costs as part of property, plant, and equipment. [3]¹

1. Purchase price, including import duties and non-refundable purchase taxes, less trade discounts and rebates. For example, **British Airways** (GBR) indicates that aircraft are stated at the fair value of the consideration given after offsetting manufacturing credits.
2. Costs attributable to bringing the asset to the location and condition necessary for it to be used in a manner intended by the company. For example, when **Skanska AB** (SWE) purchases heavy machinery from **Caterpillar** (USA), it capitalizes the costs of purchase, including delivery costs.²

Companies value property, plant, and equipment in subsequent periods using either the cost method or fair value (revaluation) method. Companies can apply the cost or fair value method to all the items of property, plant, and equipment or to a single class or classes of property, plant, and equipment. For example, a company may value land (one class of asset) after acquisition using the revaluation accounting method and, at the same time, value buildings and equipment (other classes of assets) at cost.

Most companies use the cost method—it is less expensive to use because the cost of an appraiser is not needed. In addition, the revaluation (fair value) method generally leads to higher asset values, which means that companies report higher depreciation expense and lower net income. This chapter discusses the cost method; we illustrate the (fair value) revaluation method in [Chapter 11](#).

Cost of Land

All expenditures made to acquire land and ready it for use are considered part of the land cost. Thus, when **Auchan** (FRA) or **ÆON** (JPN) purchases land on which to build a new store, land costs typically include (1) the purchase price; (2) closing costs, such as title to the land, attorney's fees, and recording fees; (3) costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing; (4) assumption of any liens, mortgages, or encumbrances on the property; and (5) any additional land improvements that have an indefinite life.

For example, when ÆON purchases land for the purpose of constructing a building, it considers all costs incurred up to the excavation for the new building as land costs. **Removal of old buildings—clearing, grading, and filling—is a land cost because these activities are necessary to get the land in condition for its intended purpose.** ÆON treats any proceeds from getting the land ready for its intended use, such as salvage receipts on the demolition of an old building or the sale of cleared timber, as **reductions in the price of the land**.

In some cases, when ÆON purchases land, it may assume certain obligations on the land, such as back taxes or liens. In such situations, the cost of the land is the cash paid for it, plus the encumbrances. In other words, if the purchase price of the land is ¥50,000,000 cash but ÆON assumes accrued property taxes of ¥5,000,000 and liens of ¥10,000,000, its land cost is ¥65,000,000.

ÆON also might incur **special assessments** for local improvements, such as pavements, street lights, sewers, and drainage systems. It should charge these costs to the Land account because they are relatively permanent in nature. That is, after installation, they are maintained by the local government. In addition, ÆON should charge any permanent improvements it makes, such as landscaping, to the Land account. It records separately any **improvements with limited lives**, such as private driveways, walks, fences, and parking lots, to the **Land Improvements** account. These costs are depreciated over their estimated lives.

Generally, land is part of property, plant, and equipment. However, if the major purpose of acquiring and holding land is speculative, a company more appropriately classifies the land as an **investment**. If a real estate concern holds the land for resale, it should classify the land as **inventory**.

In cases where land is held as an investment, what accounting treatment should be given for taxes, insurance, and other direct costs incurred while holding the land? Many believe these costs should be capitalized. The reason: They are not generating revenue from the investment at this time. Companies generally use this approach except when the asset is currently producing revenue (such as rental property).

Cost of Buildings

The cost of buildings should include all expenditures related directly to their acquisition or construction. These costs include (1) materials, labor, and overhead costs incurred during construction, and (2) professional fees and building permits. Generally, companies contract others to construct their buildings. Companies consider all costs incurred, from excavation to completion, as part of the building costs.

But how should companies account for an old building that is on the site of a newly proposed building? Is the cost of removal of the old building a cost of the land or a cost of the new building? Recall that **if a company purchases land with an old building on it, then the cost of demolition less its residual value is a cost of getting the land ready for its intended use and relates to the land rather than to the new building.** In other words, all costs of getting an asset ready for its intended use are costs of that asset.

It follows that any costs that are not directly attributable to getting the building ready for its intended use should not be capitalized. For example, start-up costs, such as promotional costs related to the building's opening or operating losses incurred initially due to low sales, should not be capitalized. Also, general administrative expenses (such as the cost of the finance department) should not be allocated to the cost of the building.

Cost of Equipment

The term "equipment" in accounting includes delivery equipment, office equipment, machinery, furniture and fixtures, furnishings, factory equipment, and similar fixed assets. The cost of such assets includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembling and installation costs, and costs of conducting trial runs. Costs thus include all expenditures incurred in acquiring the equipment and preparing it for use.

Self-Constructed Assets

Occasionally, companies construct their own assets. Determining the cost of such machinery and other fixed assets can be a problem. Without a purchase price or contract price, the company must allocate costs and expenses to arrive at the cost of the **self-constructed asset**. Materials and direct labor used in construction pose no problem. A company can trace these costs directly to work and material orders related to the fixed assets constructed.

However, the assignment of indirect costs of manufacturing creates special problems. These indirect costs, called **overhead** or burden, include power, heat, light, insurance, property taxes on factory buildings and equipment, factory supervisory labor, depreciation of fixed assets, and supplies.

Companies can handle overhead in one of two ways:

1. **Assign no fixed overhead to the cost of the constructed asset.** The major argument for this treatment is that overhead is generally fixed in nature. As a result, this approach assumes that the company will have the same costs regardless of whether or not it constructs the asset. Therefore, to charge a portion of the overhead costs to the equipment will normally reduce current expenses and consequently overstate income of the current period. However, the company would assign to the cost of the constructed asset variable overhead costs that increase as a result of the construction.
2. **Assign a portion of all overhead to the construction process.** This approach, called a **full-costing approach**, assumes that costs attach to all products and assets manufactured or constructed. Under this approach, a company assigns a portion of all overhead to the construction process, as it would to normal production. Advocates say that failure to allocate overhead costs understates the initial cost of the asset and results in an inaccurate future allocation.

Companies should assign to the asset **a pro rata portion** of the fixed overhead to determine its cost. Companies use this treatment extensively because many believe that it results in a better matching of costs with revenues. Abnormal amounts of wasted material, labor, or other resources should not be added to the cost of the asset. [4]

If the allocated overhead results in recording construction costs in excess of the costs that an outside independent producer would charge, the company should record the excess overhead as a period loss rather than capitalize it. This avoids capitalizing the asset at more than its fair value. Under no circumstances should a company record a “profit on self-construction.”

Borrowing Costs During Construction

LEARNING OBJECTIVE 2

Discuss the accounting problems associated with the capitalization of borrowing costs.

The proper accounting for **borrowing costs**³ has been a long-standing controversy. Three approaches have been suggested to account for the interest incurred in financing the construction of property, plant, and equipment:

- 1. Capitalize no borrowing costs during construction.** Under this approach, interest is considered a cost of financing and not a cost of construction. Some contend that if a company had used equity financing rather than debt, it would not incur this cost. The major argument against this approach is that the use of cash, whatever its source, has an associated implicit interest cost, which should not be ignored.
- 2. Charge construction with all borrowing costs of funds employed, whether identifiable or not.** This method maintains that the cost of construction should include the cost of financing, whether by cash, debt, or equity. Its advocates say that all costs necessary to get an asset ready for its intended use, including borrowing costs, are part of the asset's cost. Interest, whether actual or imputed, is a cost, just as are labor and materials. A major criticism of this approach is that imputing the cost of equity capital is subjective and outside the framework of an historical cost system.
- 3. Capitalize only the actual borrowing costs incurred during construction.** This approach agrees in part with the logic of the second approach—that interest is just as much a cost as are labor and materials. But, this approach capitalizes only borrowing costs incurred through debt financing. (That is, it does not try to determine the cost of equity financing.) Under this approach, a company that uses debt financing will have an asset of higher cost than a company that uses equity financing. Some consider this approach unsatisfactory because they believe the cost of an asset should be the same whether it is financed with cash, debt, or equity.

Illustration 10.1 shows how a company might add borrowing costs (if any) to the cost of the asset under the three capitalization approaches.

ILLUSTRATION 10.1 Capitalization of Borrowing Costs

IFRS requires the third approach—capitalizing actual interest (with modifications) (see **Underlying Concepts**). This method follows the concept that the historical cost of acquiring an asset includes all costs (including borrowing costs) incurred to bring the asset to the condition and location necessary for its intended use. The rationale for this approach is that during construction, the asset is not generating revenues. Therefore, a company should defer (capitalize) borrowing costs. Once construction is complete, a company can utilize the asset in its operations. At this point, the company should report borrowing as an expense in the determination of net income. It follows that the company should expense any borrowing cost incurred in purchasing an asset that is ready for its intended use. [6]

Underlying Concepts

The objective of capitalizing borrowing costs is to obtain a measure of acquisition cost that reflects a company's total investment in the asset and to charge that cost to future periods benefitted.

To implement the capitalization approach for borrowing costs, companies consider three items:

1. Qualifying assets.
2. Capitalization period.
3. Amount to capitalize.

Qualifying Assets

To qualify for the capitalization of borrowing costs, assets must require a substantial period of time to get them ready for their intended use or sale. A company capitalizes borrowing costs starting at the beginning of the capitalization period (described in the next section). Capitalization continues until the company substantially readies the asset for its intended use.

Assets that qualify for borrowing cost capitalization include assets under construction for a company's own use (including buildings, plants, and large machinery) and assets intended for sale or lease that require a substantial period of time to produce (e.g., ships or real estate developments).⁴

Examples of assets that do not qualify for interest capitalization are (1) assets that are in use or ready for their intended use, and (2) inventories that are produced over a short period of time.

Capitalization Period

The **capitalization period** is the period of time during which a company capitalizes borrowing costs. It begins with the presence of three conditions:

1. Expenditures for the asset are being incurred.
2. Activities that are necessary to get the asset ready for its intended use or sale are in progress.
3. Borrowing cost is being incurred.

Capitalization **continues as long as these three conditions are present**. The capitalization period ends when the asset is substantially complete and ready for its intended use.

Amount to Capitalize

The amount of borrowing cost to be capitalized varies depending on whether there is **specific debt** that has been incurred to fund the project or whether the project is being funded from the **general debt** obligations of the company.

When the project is funded by specific debt, the amount capitalized is the actual borrowing costs incurred during the capitalization period offset by any investment income on temporary investments of funds made available from the borrowings. To illustrate the issues related to the capitalization of borrowing costs funded by specific debt, assume that on November 1, 2021, Shalla Company contracted Pfeifer Construction Co. to construct a building for \$1,400,000 on land costing \$100,000 (purchased from the contractor and included in the first payment). Shalla made the following payments to the construction company during 2022.

January 1	March 1	May 1	December 31	Total
\$210,000	\$300,000	\$540,000	\$450,000	\$1,500,000

Pfeifer Construction completed the building, ready for occupancy, on December 31, 2022. Shalla had a 15 percent, three-year, \$1,500,000, note to finance purchase of land and construction of the building, dated December 31, 2021, with interest payable annually on December 31. During 2021, a portion of the proceeds from the

borrowing that had not yet been expended in the project were invested and earned \$60,000 in interest income.

The project began on January 1 and was completed on December 31, so the capitalization period was the full year of 2022. The amount of borrowing costs to be capitalized for 2022 would be computed as shown in [Illustration 10.2](#).

Borrowing costs ($\$1,500,000 \times .15$)	\$225,000
Investment income	<u>60,000</u>
Borrowing costs to be capitalized	<u>\$165,000</u>

ILLUSTRATION 10.2 Total Borrowing Costs

Shalla would make the following entries during the year.

January 1		
Land	100,000	
Buildings (or Construction in Process)	110,000	
Cash		210,000
March 1		
Buildings	300,000	
Cash		300,000
May 1		
Buildings	540,000	
Cash		540,000
December 31		
Buildings	450,000	
Cash		450,000
Buildings (Capitalized Borrowing Cost)	225,000	
Cash		225,000
Cash	60,000	
Buildings (Capitalized Borrowing Cost)		60,000

When the project is funded by general debt, some additional calculations and steps are included in the process. To illustrate, assume the same facts as the previous illustration, but, instead of any specific debt, the project is funded by the general debt of the company. Assume that Shalla had the following two debt obligations outstanding during 2022:

1. 10 percent, \$1,000,000, 5-year note payable, dated December 31, 2018, with interest payable annually on December 31.

2. 12 percent, \$1,500,000, 10-year bonds issued December 31, 2017, with interest payable annually on December 31.

When a project is funded by general debt, the company will need to determine the **average carrying amount** of the project during the period. This can be computed as shown in [Illustration 10.3](#).

Expenditures			
Date	Amount	Capitalization Period*	Average Carrying Amount
January 1	\$ 210,000	12/12	\$210,000
March 1	300,000	10/12	250,000
May 1	540,000	8/12	360,000
December 31	450,000	0/12	0
Totals	<u>\$1,500,000</u>		<u>\$820,000</u>

* The capitalization period is the number of months between when the expenditure is made and the end of the year or the end of the project, whichever occurs first.

ILLUSTRATION 10.3 Average Carrying Amount Calculations

The second amount that is needed when borrowing costs from general debt are being used, and there is more than one general debt obligation, is the weighted-average borrowing cost. This amount is called the **capitalization rate** and is computed as follows.

$$[.10 \times (\$1,000,000 \div \$2,500,000)] + [.12 \times (\$1,500,000 \div \$2,500,000)] = 11.2\%$$

By combining these two amounts, the amount of borrowing cost available for capitalization is now computed.

$$\$820,000 \times .112 = \$91,840$$

The final step when the borrowing cost of general debt is used is to apply the constraint **that the amount capitalized cannot exceed the actual borrowing costs incurred during the period**. In 2022, total borrowing costs were \$280,000 [\$(1,000,000 \times .10) + (\$1,500,000 \times .12)]. The amount capitalized will be lower of actual, or the amount computed by multiplying the average carrying amount by the capitalization rate. In this case, Shalla will capitalize \$91,840.

All of the other entries presented above would be the same except for the interest entries on December 31, which would be as follows.

December 31		
Buildings (Capitalized Borrowing Cost)	91,840	
Interest Expense (\$280,000 – \$91,840)	188,160	

Cash	280,000
------	---------

The final possibility is that the project is funded by a blend of specific debt and general debt. To illustrate this case, assume that Shalla has the following debt outstanding during 2022.

Specific Construction Debt

1. 15 percent, \$750,000, 3-year note to finance purchase of land and construction of the building, dated December 31, 2021, with interest payable annually on December 31. Idle funds from this borrowing were invested during early 2022 and earned \$40,000 in investment income.

Other Debt

2. 10 percent, \$500,000, 5-year note payable, dated December 31, 2018, with interest payable annually on December 31.
3. 12 percent, \$1,500,000, 10-year bonds issued December 31, 2017, with interest payable annually on December 31.

In this case, the expenditures are first allocated to the specific debt to the extent possible. Then, the remainder of the expenditures are allocated to the general debt, as shown in [Illustration 10.4](#).

Date	Expenditure	Amount Allocated to Specific Borrowings	Amount Allocated to General Borrowings	Capitalization Period	Average Carrying Amount
January 1	\$ 210,000	\$210,000	\$ 0		
March 1	300,000	300,000	0		
May 1	540,000	240,000	300,000	8/12	\$200,000
December 31	450,000	0	450,000	0/12	0
Totals	<u>\$1,500,000</u>	<u>\$750,000</u>	<u>\$750,000</u>		<u>\$200,000</u>

ILLUSTRATION 10.4 Allocation of Expenditures

The borrowing costs of the specific debt for this project is \$72,500 based on the borrowing costs of \$112,500 ($\$1,500,000 \times .15$) less the investment income of \$40,000.

The capitalization rate on the general debt is 11.5 percent $\{[(.10 \times \$500,000 \div \$2,000,000)] + [.12 \times (\$1,500,000 \div \$2,000,000)]\}$. This results in a potential amount of borrowing costs to be capitalized of \$23,000 ($\$200,000 \times .115$). Since this amount is lower than the actual borrowing costs of the general debt of \$230,000 $[(\$500,000 \times .10) + (\$1,500,000 \times .12)]$, \$23,000 will be capitalized

from the general borrowings. The total amount to be capitalized is shown in [Illustration 10.5](#).

Interest costs from specific debt	\$112,500
Investment income from specific debt funds	(40,000)
Interest costs from general debt	23,000
Total borrowing costs capitalized for 2022	<u>\$ 95,500</u>

ILLUSTRATION 10.5 Summary of Borrowing Costs

At December 31, the following entry would be made:

December 31		
Buildings (Capitalized Borrowing Cost) (\$112,500 + \$23,000)	135,500	
Interest Expense (\$230,000 – \$23,000)	207,000	
Cash (\$112,500 + \$230,000)		342,500
Cash	40,000	
Buildings (Capitalized Borrowing Cost)		40,000

Disclosures

For each period, an entity will disclose both the amount of borrowing costs capitalized during the period and the capitalization rate used to determine the amount of borrowing costs eligible for capitalization. [Illustration 10.6](#) provides an example from the financial statements of **Royal Dutch Shell** (GBR and NLD).

Royal Dutch Shell

6 INTEREST EXPENSE

(\$ million)	2018	2017	2016
Interest incurred and similar charges	\$3,550	\$3,448	\$2,732
Less: interest capitalized	(876)	(622)	(725)
Other net losses on fair value hedges of debt	169	114	4
Accretion expense	902	1,102	1,192
Total	<u>\$3,745</u>	<u>\$4,042</u>	<u>\$3,303</u>

The rate applied in determining the amount of interest capitalized in 2018 was 4% (2017: 3%; 2016: 3%).

ILLUSTRATION 10.6 Borrowing Costs Disclosure

Valuation of Property, Plant, and Equipment

LEARNING OBJECTIVE 3

Explain accounting issues related to acquiring and valuing plant assets.

As with other assets, **companies should record property, plant, and equipment at the fair value of what they give up or at the fair value of the asset received, whichever is more clearly evident.** However, the process of asset acquisition sometimes obscures fair value. For example, if a company buys land and buildings together for one price, how does it determine separate values for the land and buildings? We examine these types of accounting problems in the following sections.

Cash Discounts

When a company purchases plant assets subject to cash discounts for prompt payment, how should it report the discount? If it takes the discount, the company should consider the discount as a reduction in the purchase price of the asset. But should the company reduce the asset cost even if it does not take the discount?

Two points of view exist on this question. One approach considers the discount—whether taken or not—as a reduction in the cost of the asset. The rationale for this approach is that the real cost of the asset is the cash or cash equivalent price of the

asset. In addition, some argue that the terms of cash discounts are so attractive that failure to take them indicates management error or inefficiency.

With respect to the second approach, its proponents argue that failure to take the discount should not always be considered a loss. The terms may be unfavorable, or it might not be prudent for the company to take the discount. At present, companies use both methods, though most prefer the former method. *(For homework purposes, treat the discount, whether taken or not, as a reduction in the cost of the asset.)*

Deferred-Payment Contracts

Companies frequently purchase plant assets on long-term credit contracts, using notes, mortgages, bonds, or equipment obligations. **To properly reflect cost, companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties at the date of the transaction.**

For example, Greathouse Company purchases an asset today in exchange for a \$10,000 zero-interest-bearing note payable four years from now. The company would not record the asset at \$10,000. Instead, the present value of the \$10,000 note establishes the exchange price of the transaction (the purchase price of the asset). Assuming an appropriate interest rate of 9 percent at which to discount this single payment of \$10,000 due four years from now, Greathouse records this asset at \$7,084.30 ($\$10,000 \times .70843$). [See [Table 6.2](#) for the present value of a single sum, $PV = \$10,000 (PVF_{4,9\%})$.]

When no interest rate is stated or if the specified rate is unreasonable, the company imputes an appropriate interest rate. The objective is to approximate the interest rate that the buyer and seller would negotiate at arm's length in a similar borrowing transaction. In imputing an interest rate, companies consider such factors as the borrower's credit rating, the amount and maturity date of the note, and prevailing interest rates. **The company uses the cash exchange price of the asset acquired (if determinable) as the basis for recording the asset and measuring the interest element.**

To illustrate, Sutter AG purchases a specially built robot spray painter for its production line. The company issues a €100,000, five-year, zero-interest-bearing note to Wrigley Robotics for the new equipment. The prevailing market rate of interest for obligations of this nature is 10 percent. Sutter is to pay off the note in five €20,000 installments, made at the end of each year. Sutter cannot readily determine the fair value of this specially built robot. Therefore, Sutter approximates the robot's value by establishing the fair value (present value) of the note. Entries for the date of purchase and dates of payments, plus computation of the present value of the note, are as follows.

Date of Purchase		
Equipment	75,816*	
Notes Payable		75,816

*Present value of note	= €20,000 ($PVF-OA_{5,10\%}$)
	= €20,000 (3.79079); Table 6.4
	= €75,816

End of First Year		
Interest Expense	7,582	
Notes Payable	12,418	
Cash		20,000

Interest expense in the first year under the effective-interest approach is €7,582 ($€75,816 \times .10$). The entry at the end of the second year to record interest and principal payment is as follows.

End of Second Year		
Interest Expense	6,340	
Notes Payable	13,660	
Cash		20,000

Interest expense in the second year under the effective-interest approach is €6,340 [$(€75,816 - €12,418) \times .10$].

If Sutter did not impute an interest rate for the deferred-payment contract, it would record the asset at an amount greater than its fair value. In addition, Sutter would understate interest expense in the income statement for all periods involved.

Lump-Sum Purchases

A common challenge in valuing fixed assets arises when a company purchases a group of assets at a single **lump-sum price**. When this occurs, the company allocates the total cost among the various assets on the basis of their relative fair values. The assumption is that costs will vary in direct proportion to fair value. This is the same principle that companies apply to allocate a lump-sum cost among different inventory items.

To determine fair value, a company should use valuation techniques that are appropriate in the circumstances. In some cases, a single valuation technique will be appropriate. In other cases, multiple valuation approaches might have to be used.⁵

To illustrate, Norduct Homes, Inc. decides to purchase several assets of a small heating concern, Comfort Heating, for \$80,000. Comfort Heating is in the process of liquidation. Its assets sold are as follows.

	Book Value	Fair Value
Inventory	\$30,000	\$ 25,000
Land	20,000	25,000
Building	35,000	50,000
	<u>\$85,000</u>	<u>\$100,000</u>

Norduct Homes allocates the \$80,000 purchase price on the basis of the relative fair values (assuming specific identification of costs is impracticable), shown in [Illustration 10.7](#).

Inventory	$\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$
Land	$\frac{\$25,000}{\$100,000} \times \$80,000 = \$20,000$
Building	$\frac{\$50,000}{\$100,000} \times \$80,000 = \$40,000$

ILLUSTRATION 10.7 Allocation of Purchase Price—Relative Fair Value Basis

Issuance of Shares

When companies acquire property by issuing securities, such as ordinary shares, the par or stated value of such shares fails to properly measure the property cost. If trading of the shares is active, **the market price of the shares issued is a fair indication of the cost of the property acquired. The shares are a good measure of the current cash equivalent price.**

For example, Upgrade Living Co. decides to purchase some adjacent land for expansion of its carpeting and cabinet operation. In lieu of paying cash for the land, the company issues to Deedland Company 5,000 ordinary shares (par value \$10) that have a market price of \$12 per share. Upgrade Living Co. records the following entry.

Land (5,000 × \$12)	60,000	
Share Capital—Ordinary		50,000
Share Premium—Ordinary		10,000

If the company cannot determine the fair value of the ordinary shares exchanged (based on a market price), it may estimate the fair value of the property. It then uses the value of the property as the basis for recording the asset and issuance of the ordinary shares.

Exchanges of Non-Monetary Assets

The proper accounting for exchanges of non-monetary assets, such as property, plant, and equipment, is controversial.⁶ Some argue that companies should account for these types of exchanges based on the fair value of the asset given up or the fair value of the asset received, with a gain or loss recognized. Others believe that they should account for exchanges based on the recorded amount (book value) of the asset given up, with no gain or loss recognized. Still others favor an approach that recognizes losses in all cases but defers gains in special situations.

Ordinarily, companies account for the exchange of **non-monetary assets** on the basis of **the fair value of the asset given up or the fair value of the asset received, whichever is clearly more evident.** [7] Thus, companies **should recognize immediately** any gains or losses on the exchange. The rationale for immediate recognition is that most transactions have **commercial substance**, and therefore gains and losses should be recognized.

Meaning of Commercial Substance

As indicated above, fair value is the basis for measuring an asset acquired in a non-monetary exchange if the transaction has commercial substance. An exchange has **commercial substance** if the future cash flows change as a result of the transaction. That is, if the two parties' economic positions change, the transaction has commercial substance.

For example, Andrew Co. exchanges some of its equipment for land held by Roddick Inc. It is likely that the timing and amount of the cash flows arising for the land will differ significantly from the cash flows arising from the equipment. As a result, both Andrew Co. and Roddick Inc. are in different economic positions. Therefore, the exchange has commercial substance, and the companies recognize a gain or loss on the exchange.

What if companies exchange similar assets, such as one truck for another truck? Even in an exchange of similar assets, a change in the economic position of the company can result. For example, let's say the useful life of the truck received is significantly longer than that of the truck given up. The cash flows for the trucks can differ significantly. As a result, the transaction has commercial substance, and the company should use fair value as a basis for measuring the asset received in the exchange.

However, it is possible to exchange similar assets but not have a significant difference in cash flows. That is, the company is in the same economic position as

before the exchange. In that case, the company generally defers gains and losses on the exchange.

As we will see in the following examples, use of fair value generally results in recognizing a gain or loss at the time of the exchange. Consequently, companies must determine if the transaction has commercial substance. To make this determination, they must carefully evaluate the cash flow characteristics of the assets exchanged.⁷

Illustration 10.8 summarizes asset exchange situations and the related accounting.

	Type of Exchange	Accounting Guidance
	Exchange has commercial substance.	Recognize gains and losses immediately.
	Exchange lacks commercial substance.	Defer gains and losses.

ILLUSTRATION 10.8 Accounting for Exchanges

As [Illustration 10.8](#) indicates, the accounting for gains and losses depends on whether the exchange has commercial substance. If the exchange has commercial substance, the company recognizes the gains and losses immediately. However, if the exchange lacks commercial substance, it defers recognition of gains and losses.

To illustrate the accounting for these different types of transactions, we examine various loss and gain exchange situations.

Exchanges—Loss Situation (Has Commercial Substance)

When a company exchanges non-monetary assets and a loss results, the company recognizes the loss if the exchange has commercial substance. The rationale: Companies should not value assets at more than their cash equivalent price. If the loss were deferred, assets would be overstated.

For example, Information Processing SA trades its used machine for a new model at Jerrod Business Solutions NV. The exchange has commercial substance. The used machine has a book value of €8,000 (original cost €12,000 less €4,000 accumulated depreciation) and a fair value of €6,000. The new model lists for €16,000. Jerrod gives Information Processing a trade-in allowance of €9,000 for the used machine. Information Processing computes the cost of the new asset as shown in [Illustration 10.9](#).

List price of new machine	€16,000
Less: Trade-in allowance for used machine	9,000
Cash payment due	7,000
Fair value of used machine	6,000
Cost of new machine	€13,000

ILLUSTRATION 10.9 Computation of Cost of New Machine

Information Processing records this transaction as follows.

Equipment	13,000	
Accumulated Depreciation—Equipment	4,000	
Loss on Disposal of Equipment	2,000	
Equipment		12,000
Cash		7,000

Illustration 10.10 shows the verification of the loss on the disposal of the used machine.

Fair value of used machine	€6,000
Less: Book value of used machine	8,000
Loss on disposal of used machine	€2,000

ILLUSTRATION 10.10 Computation of Loss on Disposal of Used Machine

Why did Information Processing not use the trade-in allowance or the book value of the old asset as a basis for the new equipment? The company did not use the trade-in allowance because it included a price concession (similar to a price discount). Few individuals pay list price for a new car or other new equipment. Dealers such as Jerrod often inflate trade-in allowances on the used car or equipment so that actual selling prices fall below list prices. To record the asset at list price would state it at an amount in excess of its cash equivalent price because of the new asset's inflated list price. Similarly, use of book value in this situation would overstate the value of the new machine by €2,000.⁸

Exchanges—Gain Situation (Has Commercial Substance)

Now let's consider the situation in which a non-monetary exchange has commercial substance and a gain is realized. In such a case, a company usually records the cost of a non-monetary asset acquired in exchange for another non-monetary asset at the **fair value of the asset given up**, and immediately

recognizes a gain. The company should use the **fair value of the asset received** only if it is more clearly evident than the fair value of the asset given up.

To illustrate, Interstate Transportation Company exchanged a number of used trucks plus cash for a semi-truck. The used trucks have a combined book value of \$42,000 (cost \$64,000 less \$22,000 accumulated depreciation). Interstate’s purchasing agent, experienced in the secondhand market, indicates that the used trucks have a fair value of \$49,000. In addition to the trucks, Interstate must pay \$11,000 cash for the semi-truck. Interstate computes the cost of the semi-truck as shown in [Illustration 10.11](#).

Fair value of trucks exchanged	€49,000
Cash paid	11,000
Cost of semi-truck	€60,000

ILLUSTRATION 10.11 Computation of Semi-Truck Cost

Interstate records the exchange transaction as follows.

Trucks (semi)	60,000	
Accumulated Depreciation—Trucks	22,000	
Trucks (used)		64,000
Gain on Disposal of Trucks		7,000
Cash		11,000

The gain is the difference between the fair value of the used trucks and their book value. [Illustration 10.12](#) presents the verification of the computation.

Fair value of used trucks		\$49,000
Cost of used trucks	\$64,000	
Less: Accumulated depreciation	22,000	
Less: Book value of used trucks		42,000
Gain on disposal of used trucks		\$ 7,000

ILLUSTRATION 10.12 Computation of Gain on Disposal of Used Trucks

In this case, Interstate is in a different economic position, and therefore the transaction has commercial substance. Thus, it **recognizes a gain**.

Lacks Commercial Substance

We now assume that the Interstate Transportation Company exchange lacks commercial substance. That is, the economic position of Interstate did not change significantly as a result of this exchange. In this case, Interstate defers the gain of

\$7,000 and reduces the basis of the semi-truck. **Illustration 10.13** shows two different but acceptable computations to illustrate this reduction.

Fair value of semi-truck	\$60,000		Book value of used trucks	\$42,000
Less: Gain deferred	7,000	OR	Plus: Cash paid	11,000
Basis of semi-truck	\$53,000		Basis of semi-truck	\$53,000

ILLUSTRATION 10.13 Basis of Semi-Truck—Fair Value vs. Book Value

Interstate records this transaction as follows.

Trucks (semi)	53,000	
Accumulated Depreciation—Trucks	22,000	
Trucks (used)		64,000
Cash		11,000

If the exchange lacks commercial substance, the company recognizes the gain (reflected in the basis of the semi-truck) when it later sells the semi-truck, not at the time of the exchange.

Illustration 10.14 presents in summary form the accounting requirements for recognizing gains and losses on exchanges of non-monetary assets.

Compute the total gain or loss on the transaction. This amount is equal to the difference between the fair value of the asset given up and the book value of the asset given up.

- (a) If the exchange has commercial substance, recognize the entire gain or loss.
- (b) If the exchange lacks commercial substance, no gain or loss is recognized.

ILLUSTRATION 10.14 Summary of Gain and Loss Recognition on Exchanges of Non-Monetary Assets

Companies disclose in their financial statements non-monetary exchanges during a period. Such disclosure indicates the nature of the transaction(s), the method of accounting for the assets exchanged, and gains or losses recognized on the exchanges.

Government Grants

Many companies receive government grants. **Government grants** are assistance received from a government in the form of transfers of resources to a company in return for past or future compliance with certain conditions relating to the operating activities of the company.⁹ For example, **AB InBev NV** (BEL) received government grants related to fiscal incentives given by certain Brazilian states,

based on the company's operations and investments in these states. **Danisco A/S** (DEN) notes that it receives government grants for such items as research, development, and carbon-dioxide (CO₂) allowances and investments.

In other words, a government grant is often some type of asset (such as cash; securities; property, plant, and equipment; or use of facilities) provided as a subsidy to a company. A government grant also occurs when debt is forgiven or borrowings are provided to the company at a below-market interest rate. The major accounting issues with government grants are to determine the proper method of accounting for these transfers on the company's books and how they should be presented in the financial statements.

Accounting Approaches

When companies acquire an asset such as property, plant, and equipment through a government grant, a strict cost concept dictates that the valuation of the asset should be zero. However, a departure from the historical cost principle seems justified because the only costs incurred (legal fees and other relatively minor expenditures) are not a reasonable basis of accounting for the assets acquired. To record nothing is to ignore the economic realities of an increase in wealth and assets. Therefore, most companies use the **fair value of the asset** to establish its value on the books.

What, then, is the proper accounting for the credit related to the government grant when the fair value of the asset is used?¹⁰ Two approaches are suggested—the capital (equity) approach and the income approach. Supporters of the equity approach believe the credit should go directly to equity because often no repayment of the grant is expected. In addition, these grants are an incentive by the government—they are not earned as part of normal operations and should not offset expenses of operations on the income statement.

Supporters of the **income approach** disagree—they believe that the credit should be reported as revenue in the income statement. Government grants should not go directly to equity because the government is not a shareholder. In addition, most government grants have conditions attached to them which likely affect future expenses. They should, therefore, be reported as grant revenue (or deferred grant revenue) and matched with the associated expenses that will occur in the future as a result of the grant.

IFRS requires the income approach. The general rule is that grants should be recognized in income on a systematic basis that matches them with the related costs that they are intended to compensate. [8] This is accomplished in one of two ways for an asset such as property, plant, and equipment:

1. Recording the grant as deferred grant revenue, which is recognized as income on a systematic basis over the useful life of the asset, or

2. Deducting the grant from the carrying amount of the assets received from the grant, in which case the grant is recognized in income as a reduction of depreciation expense.

To illustrate application of the income approach, consider the following three examples.

Example 1: Grant for Lab Equipment

Spectrum AG received a €500,000 subsidy from the government to purchase lab equipment on January 2, 2022. The lab equipment costs €2,000,000, has a useful life of five years, and is depreciated on the straight-line basis. As indicated, Spectrum can record this grant in one of two ways. (1) Credit Deferred Grant Revenue for the subsidy and amortize the deferred grant revenue over the five-year period. (2) Credit the lab equipment for the subsidy and depreciate this amount over the five-year period.

If Spectrum chooses to record deferred revenue of €500,000, it amortizes this amount over the five-year period to income (€100,000 per year). The effects on the financial statements at December 31, 2022, are shown in [Illustration 10.15](#).

Statement of Financial Position		
Non-current assets		
Equipment	€2,000,000	
Less: Accumulated depreciation	<u>400,000</u>	€1,600,000
Non-current liabilities		
Deferred grant revenue	€ 300,000	
Current liabilities		
Deferred grant revenue	100,000	
Income Statement		
Grant revenue for the year	€ 100,000	
Depreciation expense for the year	<u>400,000</u>	
Net income (loss) effect	€ (300,000)	

ILLUSTRATION 10.15 Government Grant Recorded as Deferred Revenue

If Spectrum chooses to reduce the cost of the lab equipment, Spectrum reports the equipment at €1,500,000 (€2,000,000 – €500,000) and depreciates this amount over the five-year period. The effects on the financial statements at December 31, 2022, are shown in [Illustration 10.16](#).

Statement of Financial Position		
Non-current assets		
Equipment	€1,500,000	
Less: Accumulated depreciation	<u>300,000</u>	€1,200,000
Income Statement		
Depreciation expense for the year		€ 300,000

ILLUSTRATION 10.16 Government Grant Adjusted to Asset

The amount of net expense is the same for both situations (€300,000), but the presentation on the financial statements is different.¹¹

Example 2: Grant for Past Losses

Flyaway Airlines has incurred substantial operating losses over the last five years. The company now has little liquidity remaining and is considering bankruptcy. The City of Plentiville does not want to lose airline service and feels it has some responsibility related to the airlines losses. It therefore agrees to provide a cash grant of \$1,000,000 to the airline to pay off its creditors so that it may continue service. Because the grant is given to pay amounts owed to creditors for past losses, Flyaway Airlines should record the income in the period it is received. The entry to record this grant is as follows.

Cash	1,000,000	
Grant Revenue		1,000,000

If the conditions of the grant indicate that Flyaway must satisfy some future obligations related to this grant, then it is appropriate to credit Deferred Grant Revenue and amortize it over the appropriate periods in the future.

Example 3: Grant for Borrowing Costs

The City of Puerto Aloa is encouraging the high-tech firm TechSmart to move its plant to Puerto Aloa. The city has agreed to provide an interest-free loan of \$10,000,000, with the loan payable at the end of 10 years, provided that TechSmart will employ at least 50 percent of its workforce from the community of Puerto Aloa over the next 10 years. TechSmart's incremental borrowing rate is 9 percent. Therefore, the present value of the future loan payable (\$10,000,000) is \$6,499,300 ($\$10,000,000 \times .64993_{i=9\%, n=5}$). The entry to record the borrowing is as follows.

Cash	6,499,300	
Notes Payable		6,499,300

In addition, using the deferred revenue approach, the company records the grant as follows.

Cash	3,500,700	
Deferred Grant Revenue		3,500,700

TechSmart then uses the effective-interest rate to determine interest expense of \$584,937 ($0.09 \times \$6,499,300$) in the first year. The company also decreases Deferred Grant Revenue and increases Grant Revenue for \$584,937. As a result, the net expense related to the borrowing is zero in each year.

Unfortunately, the accounting for government grants is still somewhat unsettled. Companies are permitted to record grants at nominal values or at fair value. In addition, they may record grants to property, plant, and equipment either as a reduction of the asset or to deferred grant revenue. The key to these situations is to provide disclosures that highlight the accounting approaches. Presented below are examples of how grants are disclosed in the notes to the financial statements.

A company that adopted the deferred income approach is **PetroChina Company Limited** (CHN), as shown in [Illustration 10.17](#).

Note 4: Government grants

Government grants are non-reciprocal transfers of monetary or non-monetary assets from the government to the Group except for capital contributions from the government in the capacity as an investor in the Group.

A government grant is recognised when there is reasonable assurance that the grant will be received and that the Group will comply with the conditions attaching to the grant.

If a government grant is in the form of a transfer of a monetary asset, it is measured at the amount received or receivable. If a government grant is in the form of a transfer of a non-monetary asset, it is measured at fair value.

Government grants related to assets are grants whose primary condition is that the Group qualifying for them should purchase, construct or otherwise acquire long-term assets. Government grants related to income are grants other than those related to assets. A government grant related to an asset is recognised initially as deferred income and amortised to profit or loss in a reasonable and systematic manner within the useful life of the relevant assets. A grant that compensates the Group for expenses or losses to be incurred in the future is recognised initially as deferred income, and recognised in profit or loss or released to relevant cost in the period in which the expenses or losses are recognised. A grant that compensates the Group for expenses or losses already incurred is recognised to profit or loss or released to related cost immediately.

ILLUSTRATION 10.17 Deferred Income Disclosure

Daimler AG (DEU) is an example of a company adopting a policy of deducting grants related to assets from the cost of the assets, as shown in **Illustration 10.18**.

Daimler AG

Note 1: Government grants

Government grants related to assets are deducted from the carrying amount of the asset and are recognized in earnings over the life of a depreciable asset as a reduced depreciation expense. Government grants which compensate the Group for expenses are recognized as other operating income in the same period as the expenses themselves.

ILLUSTRATION 10.18 Reduction of Asset Disclosure

When a company **contributes** a non-monetary asset, it should record the amount of the donation as an expense at the fair value of the donated asset. If a difference exists between the fair value of the asset and its book value, the company should recognize a gain or loss. To illustrate, Kline Industries donates land to the City of São Paulo, Brazil for a city park. The land cost R\$80,000 and has a fair value of R\$110,000. Kline Industries records this donation as follows.

Contribution Expense	110,000	
Land		80,000
Gain on Disposal of Land		30,000

The gain on disposal should be reported in the “Other income and expense” section of the income statement, not as revenue.

Costs Subsequent to Acquisition

LEARNING OBJECTIVE 4

Describe the accounting treatment for costs subsequent to acquisition.

After installing plant assets and readying them for use, a company incurs additional costs that range from ordinary repairs to significant additions. The major problem is allocating these costs to the proper time periods.

In determining how costs should be allocated subsequent to acquisition, companies follow the same criteria used to determine the initial cost of property, plant, and equipment. That is, they recognize costs subsequent to acquisition as an asset when the costs can be measured reliably and it is probable that the company will obtain future economic benefits (see **Underlying Concepts**). Evidence of future

economic benefit would include increases in (1) useful life, (2) quantity of product produced, and (3) quality of product produced.

Underlying Concepts

Expensing long-lived wastebaskets is an application of the materiality concept.

Generally, companies incur four types of major expenditures relative to existing assets.

Major Types of Expenditures

Additions. Increase or extension of existing assets.

Improvements and Replacements. Substitution of a better or similar asset for an existing one.

Rearrangement and Reorganization. Movement of assets from one location to another.

Repairs. Expenditures that maintain assets in condition for operation.

Additions

Additions should present no major accounting problems. By definition, **companies capitalize any addition to plant assets because a new asset is created.** For example, the addition of a wing to a hospital, or of an air conditioning system to an office, increases the service potential of that facility. Companies should capitalize such expenditures and record them in future periods when revenues are recognized.

One problem that arises in this area is the accounting for any changes related to the existing structure as a result of the addition. Is the cost incurred to tear down an old wall, to make room for the addition, a cost of the addition or an expense or loss of the period? The answer is that it depends on the original intent. If the company had anticipated building an addition later, then this cost of removal is a proper cost of the addition. But if the company had not anticipated this development, it should properly report the removal as a loss in the current period on the basis of inefficient planning. Conceptually, the company should remove the cost of the old wall and related depreciation and record a loss. It should then add the cost of the new wall to the cost of the building. In these situations, it is sometimes impracticable to determine a reasonable carrying amount for the old wall. Companies therefore assume the old asset to have a zero carrying amount and simply add the cost of the replacement to the overall cost.

Improvements and Replacements

Companies substitute one asset for another through **improvements** and **replacements**. What is the difference between an improvement and a replacement? An **improvement (betterment)** is the substitution of a **better asset** for the one currently used (say, a concrete floor for a wooden floor). A **replacement**, on the other hand, is the substitution of a **similar asset** (a wooden floor for a wooden floor).

Many times, improvements and replacements result from a general policy to modernize or rehabilitate an older building or piece of equipment. The problem is differentiating these types of expenditures from normal repairs. Does the expenditure increase the **future service potential** of the asset? Or does it merely **maintain the existing level** of service? Frequently, the answer is not clear-cut. Good judgment is required to correctly classify these expenditures.

If the expenditure increases the future service potential of the asset, a company should capitalize it. The company should simply remove the cost of the old asset and related depreciation and recognize a loss, if any. It should then add the cost of the new substituted asset.

To illustrate, Instinct Enterprises decides to replace the pipes in its plumbing system. A plumber suggests that the company use plastic tubing in place of the cast iron pipes and copper tubing. The old pipe and tubing have a book value of £15,000 (cost of £150,000 less accumulated depreciation of £135,000), and a residual value of £1,000. The plastic tubing system costs £125,000. If Instinct pays £124,000 for the new tubing after exchanging the old tubing, it makes the following entry.

Equipment (plumbing system)	125,000	
Accumulated Depreciation—Equipment	135,000	
Loss on Disposal of Equipment	14,000	
Equipment (plumbing system)		150,000
Cash (£125,000 – £1,000)		124,000

One issue in any substitution is computing the cost and accumulated depreciation of the old asset. Fortunately, IFRS requires each significant component of an asset to be identified and its depreciation base to be determined and depreciated separately. This approach is referred to as component depreciation accounting. To illustrate, Hanoi Ltd. has a tractor that it purchased at a cost of £50,000. The following chart lists the tractor’s individual components, and each component’s useful life (all residual values are zero).

	Cost	Useful Life	Depreciation per Year
Tires	£ 6,000	2 years	£3,000
Transmission	10,000	5 years	2,000
Truck	34,000	10 years	3,400

Companies should keep accounting records based on the components of the asset. If the company does not have this information, estimation methods generally can provide a reasonable answer.

Rearrangement and Reorganization

As indicated earlier, a company may incur **rearrangement** or **reorganization costs** for some of its assets. The question is whether the costs incurred in this rearrangement or reorganization are capitalized or expensed. IFRS indicates that the recognition of costs ceases once the asset is in the location and condition necessary to begin operations as management intended. As a result, the costs of reorganizing or rearranging existing property, plant, and equipment are not capitalized but are expensed as incurred.

Repairs

Ordinary Repairs

A company makes **ordinary repairs** to maintain plant assets in operating condition. It charges ordinary repairs to an expense account in the period incurred on the basis that **it is the primary period benefited**. Maintenance charges that occur regularly include replacing minor parts, lubricating and adjusting equipment, repainting, and cleaning. A company treats these as ordinary operating expenses.

It is often difficult to distinguish a repair from an improvement or replacement. The major consideration is whether the expenditure benefits more than one year or one operating cycle, whichever is longer. If a **major repair** (such as an overhaul) occurs, several periods will benefit. A company should generally handle this cost as an improvement or replacement.

Major Repairs

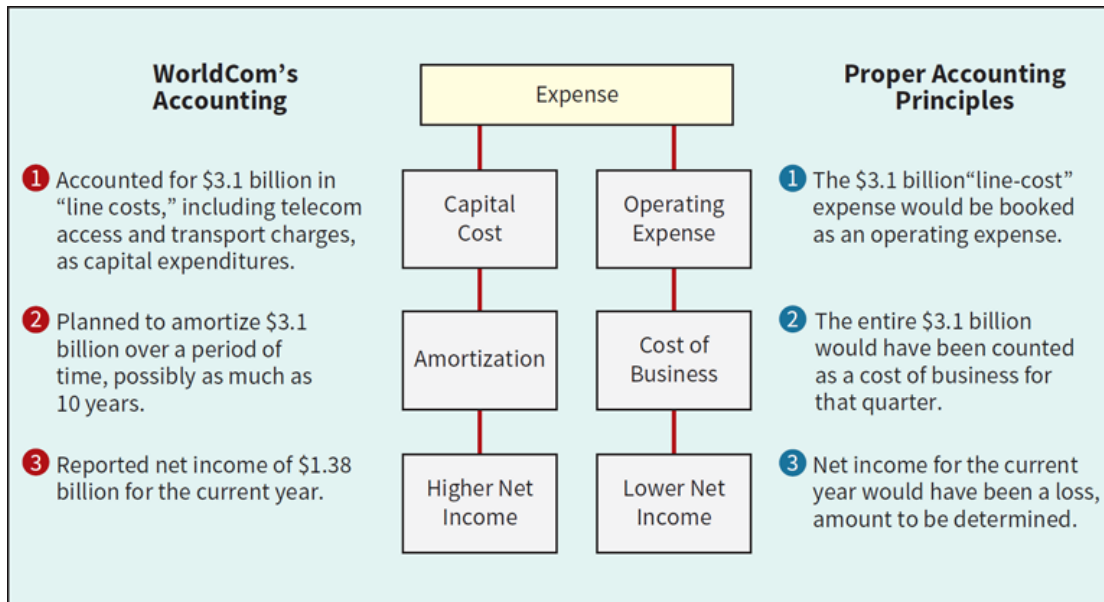

Some companies, such as airlines **Ryanair** (IRL) and **Lufthansa** (DEU), or shipping companies, such as **A.P. Møller—Maersk** (DEN) and **CMA CGM Group** (FRA), have substantial overhaul costs related to their airplanes or ships. For example, assume the Shipaway Company has just purchased a new ship for \$200 million. The useful life of the ship is 20 years, but every four years it must be dry-docked and a major overhaul done. It is estimated that the overhaul will cost \$4 million. The \$4 million should be accounted for as a separate component of the cost of the ship (using component depreciation) and depreciated over four years. At the time of the major overhaul, the cost and related depreciation to date should be eliminated and replaced with the new cost incurred for the overhaul.

What Do the Numbers Mean?

Disconnected

It all started with a check of the books by an internal auditor for **WorldCom Inc.** (USA). The telecom giant's newly installed chief executive had asked for a financial review, and the auditor was spot-checking records of capital expenditures. She found the company was using an unorthodox technique to account for one of its biggest expenses: charges paid to local telephone networks to complete long-distance calls.

Instead of recording these charges as operating expenses, WorldCom recorded a significant portion as capital expenditures. The maneuver was worth hundreds of millions of dollars to WorldCom's bottom line. It effectively turned a loss for all of one year and the first quarter of the next year into a profit. The following illustration compares WorldCom's accounting to that under proper accounting principles. Soon after this discovery, WorldCom filed for bankruptcy.

Source: Adapted from Jared Sandberg, Deborah Solomon, and Rebecca Blumenstein, "Inside WorldCom's Unearthing of a Vast Accounting Scandal," *Wall Street Journal* (June 27, 2002), p. A1; and C. Cooper, *Extraordinary Circumstances: The Journey of a Corporate Whistle Blower* (New York: John Wiley & Sons, 2008).

Summary of Costs Subsequent to Acquisition

Illustration 10.19, summarizes the accounting treatment for various costs incurred subsequent to the acquisition of capitalized assets.

Type of Expenditure	Normal Accounting Treatment
Additions	Capitalize cost of addition to asset account.
Improvements and replacements	Remove cost of and accumulated depreciation on old asset, recognizing any gain or loss. Capitalize cost of improvement/replacement.
Rearrangement and reorganization	Expense costs of rearrangement and reorganization costs as expense.
Repairs	(a) Ordinary: Expense cost of repairs when incurred. (b) Major: Remove cost and accumulated depreciation of old asset, recognizing any gain or loss. Capitalize cost of major repair.

ILLUSTRATION 10.19 Summary of Costs Subsequent to Acquisition of Property, Plant, and Equipment

Disposition of Property, Plant, and Equipment

LEARNING OBJECTIVE 5

Describe the accounting treatment for the disposal of property, plant, and equipment.

A company, like **Nokia** (FIN), may retire plant assets voluntarily or dispose of them by sale, exchange, involuntary conversion, or abandonment. Regardless of the type of disposal, depreciation must be taken up to the date of disposition. Then, Nokia should remove all accounts related to the retired asset. Generally, the book value of the specific plant asset does not equal its disposal value. As a result, a gain or loss develops. The reason: Depreciation is an estimate of cost allocation and not a process of valuation. **The gain or loss is really a correction of net income** for the years during which Nokia used the fixed asset.

Nokia should report gains or losses on the disposal of plant assets in the income statement along with other items from customary business activities. However, if Nokia sold, abandoned, spun off, or otherwise disposed of the “operations of a component of a business,” then it should report the results separately in the discontinued operations section of the income statement. As discussed in [Chapter 4](#), Nokia should report any gain or loss from disposal of a business component with the related results of discontinued operations.

Sale of Plant Assets

Companies record depreciation for the period of time between the date of the last depreciation entry and the date of sale. To illustrate, assume that Barret Group recorded depreciation on a machine costing €18,000 for nine years at the rate of €1,200 per year. If it sells the machine in the middle of the tenth year for €7,000, Barret records depreciation to the date of sale as:

Depreciation Expense ($€1,200 \times \frac{1}{2}$)	600	
Accumulated Depreciation—Machinery		600

The entry for the sale of the asset then is:

Cash	7,000	
Accumulated Depreciation—Machinery $[(€1,200 \times 9) + €600]$	11,400	
Machinery		18,000
Gain on Disposal of Machinery		400

The book value of the machinery at the time of the sale is €6,600 ($€18,000 - €11,400$). Because the machinery sold for €7,000, the amount of the gain on the sale is €400 ($€7,000 - €6,600$).

Involuntary Conversion

Sometimes, an asset's service is terminated through some type of **involuntary conversion**, such as fire, flood, theft, or condemnation. In some cases, companies may recover all or some of the amount lost through insurance contracts or payments from government agencies. The proper accounting for these events is accomplished in two stages. First, the loss associated with the involuntary conversion is recorded. Then, usually at a later date once the amount of the recovery has been established, the company will record a gain or revenue from the insurance proceeds or other recovery. The rationale for separating the two events is that, in most cases, both the potential and the amount of the recovery are not known at the time of the loss.¹² To record this amount at that time would result in a contingent asset, which is prohibited by IFRS. [9]

To illustrate, Camel Transport had a manufacturing plant located on company property that stood directly in the path of a tornado. As a result of the tornado, which occurred on May 16, 2022, the plant was completely destroyed. Camel was eventually able to reach a settlement with its insurance company for the full fair value of the plant. The settlement was reached on March 18, 2023. At the time of the tornado, the building had a carrying value of \$3,500,000 (original cost of \$6,000,000 less accumulated depreciation of \$2,500,000). The amount of the settlement with this insurance company was \$5,000,000. Camel made the following entries.

May 16, 2022		
Loss from Tornado	\$3,500,000	
Accumulated Depreciation—Buildings	2,500,000	
Buildings		6,000,000
March 18, 2023		
Cash	5,000,000	
Gain from Insurance Settlement		5,000,000

Learning Objectives Review

1 Identify property, plant, and equipment and its related costs.

Property, plant, and equipment (1) are acquired for use in operations and not for resale, (2) are long-term in nature and usually subject to depreciation, and (3) possess physical substance. The costs included in **initial valuation of property, plant, and equipment** are as follows.

Cost of land: Includes all expenditures made to acquire land and to ready it for use. Land costs typically include (1) the purchase price; (2) closing costs, such as title to the land, attorney's fees, and recording fees; (3) costs incurred in getting the land in condition for its intended use, such as grading, filling, draining, and clearing; (4) assumption of any liens, mortgages, or encumbrances on the property; and (5) any additional land improvements that have an indefinite life.

Cost of buildings: Includes all expenditures related directly to their acquisition or construction. These costs include (1) materials, labor, and overhead costs incurred during construction, and (2) professional fees and building permits.

Cost of equipment: Includes the purchase price, freight and handling charges incurred, insurance on the equipment while in transit, cost of special foundations if required, assembling and installation costs, and costs of conducting trial runs.

Self-constructed assets: Indirect costs of manufacturing create special problems because companies cannot easily trace these costs directly to work and material orders related to the constructed assets. Companies might handle these costs in one of two ways: (1) assign no fixed overhead to the cost of the constructed asset, or (2) assign a portion of all overhead to the construction process. Companies should use the second method.

2 Discuss the accounting problems associated with the capitalization of borrowing costs.

Only actual borrowing costs (with modifications) should be capitalized. The rationale for this approach is that during construction, the asset is not generating revenue and therefore companies should defer (capitalize) borrowing cost. Once construction is completed, the asset is ready for its intended use and revenues can be earned. Any borrowing cost incurred in purchasing an asset that is ready for its intended use should be expensed.

3 Explain accounting issues related to acquiring and valuing plant assets.

The following issues relate to acquiring and valuing plant assets. (1) *Cash discounts*: Whether taken or not, they are generally considered a reduction in the cost of the asset; the real cost of the asset is the cash or cash equivalent price of the asset. (2) *Deferred-payment contracts*: Companies account for assets purchased on long-term credit contracts at the present value of the consideration exchanged between the contracting parties. (3) *Lump-sum purchase*: Allocate the total cost among the various assets on the basis of their relative fair values. (4) *Issuance of shares*: If the shares are actively traded, the market price of the shares issued is a fair indication of the cost of the property acquired. If the market price of the ordinary shares exchanged is not determinable, establish the fair value of the property and use it as the basis for recording the asset and issuance of the ordinary shares. (5) *Exchanges of non-monetary assets*. The accounting for exchanges of non-monetary assets depends on whether the exchange has commercial substance. See [Illustrations 10.8](#) and [10.14](#) for summaries of how to account for exchanges. (6) *Grants*: Record at the fair value of the asset received, and credit deferred revenue or the appropriate asset in most cases.

4 Describe the accounting treatment for costs subsequent to acquisition.

[Illustration 10.19](#) summarizes how to account for costs subsequent to acquisition.

5 Describe the accounting treatment for the disposal of property, plant, and equipment.

Regardless of the time of disposal, companies take depreciation up to the date of disposition and then remove all accounts related to the retired asset. Gains or losses on the retirement of plant assets are shown in the income statement along with other items that arise from customary business activities. Gains or losses on involuntary conversions are reported in “Other income and expense.”

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Columbia SA, which manufactures machine tools, had the following transactions related to plant assets in 2022.

Asset A: On June 2, 2022, Columbia purchased a stamping machine at a retail price of €12,000. Columbia paid 6% sales tax on this purchase. Columbia paid a contractor €2,800 for a specially wired platform for the machine, to ensure non-interrupted power to the machine. Columbia estimates the machine will have a 4-year useful life, with a residual value of €2,000 at the end of 4 years. The machine was put into use on July 1, 2022.

Asset B: On January 1, 2022, Columbia signed a fixed-price contract for construction of a warehouse facility at a cost of €1,000,000. It was estimated that the project will be completed by December 31, 2022. On March 1, 2022, to finance the construction cost, Columbia borrowed €1,000,000 payable April 1, 2023, plus interest at the rate of 10%. During 2022, Columbia made deposit and progress payments totaling €750,000 under the contract. The excess borrowed funds were invested in short-term securities, from which Columbia realized investment revenue of €13,000. The warehouse was completed on December 31, 2022, at which time Columbia made the final payment to the contractor. Columbia estimates the warehouse will have a 25-year useful life, with a residual value of €20,000.

Columbia uses straight-line depreciation and employs the “half-year” convention in accounting for partial-year depreciation. (Under this straight-line approach, a half-year of depreciation is recorded in the first and last year of the asset’s useful life.) Columbia’s fiscal year ends on December 31.

Instructions

- At what amount should Columbia record the acquisition cost of the machine?
- What amount of borrowing cost should Columbia include in the cost of the warehouse?
- On July 1, 2024, Columbia decides to outsource its stamping operation to Medek Group. As part of this plan, Columbia sells the machine (and the platform) to Medek for €7,000. What is the impact of this disposal on Columbia’s 2024 income before taxes?

Solution

- Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Columbia, this is:

--	--

Price	€12,000
Tax (€12,000 × .06)	720
Platform	2,800
Total	<u>€15,520</u>

b. Interest expense on specific borrowings (€1,000,000 × .10 × $\frac{9}{12}$)	€75,000
Interest revenue from excess funds	(13,000)
Borrowing cost capitalized	<u>€62,000</u>

c. The income effect is a gain or loss, determined by comparing the book value of the asset to the disposal value:

Cost	€15,520
Less: Accumulated depreciation (€1,690 + €3,380 + €1,690)	<u>6,760*</u>
Book value of machine and platform	8,760
Less: Cash received for machine and platform	<u>7,000</u>
Loss before income taxes	<u>€ 1,760</u>

*Depreciable base: €15,520 – €2,000 = €13,520. Depreciation expense: €13,520 ÷ 4 = €3,380 per year.

2022: 1/2 year (€3,380 × .50)	€1,690
2023: full year	3,380
2024: 1/2 year	<u>1,690</u>
Total	<u>€6,760</u>

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Questions

1. What are the major characteristics of plant assets?
2. Name the items, in addition to the amount paid to the former owner or contractor, that may properly be included as part of the acquisition cost of the following plant assets.
 - a. Land.
 - b. Machinery and equipment.
 - c. Buildings.

3. Indicate where the following items would be shown on a statement of financial position.

- a. A lien that was attached to the land when purchased.
- b. Landscaping costs to ready land for use.
- c. Attorney's fees and recording fees related to purchasing land.
- d. Variable overhead related to construction of machinery.
- e. A parking lot servicing employees in the building.
- f. Cost of temporary building for workers during construction of building.
- g. Interest expense on bonds payable incurred during construction of a building.
- h. Assessments for sidewalks that are maintained by the city.
- i. The cost of demolishing an old building that was on the land when purchased.

4. Two positions have normally been taken with respect to the recording of fixed manufacturing overhead as an element of the cost of plant assets constructed by a company for its own use:

- a. It should be excluded completely.
- b. It should be included at the same rate as is charged to normal operations.

What are the circumstances or rationale that support or deny the application of these methods?

5. The Buildings account of Postera SpA includes the following items that were used in determining the basis for depreciating the cost of a building.

- a. Promotion expenses.
- b. Architect's fees.
- c. Interest during construction.
- d. Interest revenue on investments held to fund construction of a building.
- e. First-year operating losses related to the building.

Do you agree with these charges? If not, how would you deal with each of these items in the company's books and in its annual financial statements?

6. Cruz Company has purchased two tracts of land. One tract will be the site of its new manufacturing plant, while the other is being purchased with the hope that it will be sold in the next year at a profit. How should these two tracts of land be reported in the statement of financial position?

7. One financial accounting issue encountered when a company constructs its own plant is whether the borrowing cost to finance construction should be capitalized and then amortized over the life of the assets constructed. What is the justification for capitalizing such interest?

8. Provide examples of assets that do not qualify for capitalization of borrowing costs.

9. What interest rates should be used in determining the amount of borrowing cost to be capitalized? How should the amount of borrowing cost to be capitalized be determined?

10. How should the amount of borrowing cost capitalized be disclosed in the notes to the financial statements? How should interest revenue from temporarily invested excess funds borrowed to finance the construction of assets be accounted for?

11. Discuss the basic accounting problem that arises in handling each of the following situations.

- a. Assets purchased by issuance of ordinary shares.
- b. Acquisition of plant assets by grant.
- c. Purchase of a plant asset subject to a cash discount.
- d. Assets purchased on a long-term credit basis.
- e. A group of assets acquired for a lump sum.
- f. An asset traded in or exchanged for another asset.

12. Magilke Industries acquired equipment this year to be used in its operations. The equipment was delivered by the suppliers, installed by Magilke, and placed into operation. Some of it was purchased for cash with discounts available for prompt payment. Some of it was purchased under long-term payment plans for which the interest charges approximated prevailing rates. What costs should Magilke capitalize for the new equipment purchased this year? Explain.

13. Ocampo SA purchased for €2,200,000 property that included both land and a building to be used in operations. The seller's book value was €300,000 for the land and €900,000 for the building. By appraisal, the fair value was estimated to be €500,000 for the land and €2,000,000 for the building. At what amount should Ocampo record the land and the building?

14. Pueblo Co. acquires machinery by paying \$10,000 cash and signing a \$5,000, 2-year, zero-interest-bearing note payable. The note has a present value of \$4,208, and Pueblo purchased a similar machine last month for \$13,500. At what cost should the new equipment be recorded?

15. Stan Ott is evaluating two recent transactions involving exchanges of equipment. In one case, the exchange has commercial substance. In the second situation, the exchange lacks commercial substance. Explain to Stan the differences in accounting for these two situations.

16. Crowe AG purchased a heavy-duty truck on July 1, 2019, for €30,000. It was estimated that it would have a useful life of 10 years and then would have a residual value of €6,000. The company uses the straight-line method of depreciation. It was traded on August 1, 2023, for a similar truck costing €42,000; €16,000 was allowed as trade-in value (also fair value) on the old truck and €26,000 was paid in cash. A comparison of expected cash flows for the trucks indicates the exchange has commercial substance. What is the entry to record the exchange?

17. Ito Ltd. receives a local government grant to help defray the cost of its plant facilities. The grant is provided to encourage Ito to move its operations to a certain area. Explain how the grant might be reported.

18. Once equipment has been installed and placed in operation, subsequent expenditures relating to this equipment are frequently thought of as repairs or general maintenance and, hence, chargeable to operations in the period in which the expenditure is made. Actually, determination of whether such an expenditure should be charged to operations or capitalized involves a much more careful analysis of the character of the expenditure. What are the factors that should be considered in making such a decision?

19. What accounting treatment is normally given to the following items in accounting for plant assets?

- a. Additions.
- b. Major repairs.
- c. Improvements.
- d. Replacements.

20. New machinery, which replaced a number of employees, was installed and put in operation in the last month of the fiscal year. The employees had been dismissed after payment of an extra month's wages, and this amount was added to the cost of the machinery. Discuss the propriety of the charge. If it was improper, describe the proper treatment.

21. To what extent do you consider the following items to be proper costs of property, plant, and equipment? Give reasons for your opinions.

- a. Overhead of a business that builds its own equipment.
- b. Cash discounts on purchases of equipment.

- c. Borrowing costs during construction of a building.
- d. Profit on self-construction.
- e. Freight on equipment returned before installation, for replacement by other equipment of greater capacity.
- f. Cost of moving machinery to a new location.
- g. Cost of plywood partitions erected as part of the remodeling of the office.
- h. Replastering of a section of the building.
- i. Cost of a new motor for one of the trucks.

22. Neville Enterprises has a number of fully depreciated assets that are still being used in the main operations of the business. Because the assets are fully depreciated, the president of the company decides not to show them on the statement of financial position or disclose this information in the notes. Evaluate this procedure.

23. What are the general rules for how gains or losses on disposal of plant assets should be reported in income?

Brief Exercises

BE10.1 (LO 1) Previn Brothers Inc. purchased land at a price of \$27,000. Closing costs were \$1,400. An old building was removed at a cost of \$10,200. What amount should be recorded as the cost of the land?

BE10.2 (LO 2) Zhang Ltd. is constructing a building. Construction began on February 1 and was completed on December 31. Expenditures were HK\$1,800,000 on March 1, HK\$1,200,000 on June 1, and HK\$3,000,000 on December 31. Compute Zhang's average carrying amount for borrowing cost capitalization purposes.

BE10.3 (LO 2) Zhang Ltd. (see [BE10.2](#)) had outstanding all year a 10%, 5-year HK\$4,000,000 note payable and an 11%, 4-year HK\$3,500,000 note payable. Compute the capitalization rate used for borrowing cost capitalization purposes.

BE10.4 (LO 2) Using the information from [BE10.2](#) and [BE10.3](#), determine the amount of borrowing cost that Zhang Ltd. would capitalize.

BE10.5 (LO 3) Chopra plc purchased a truck by issuing an £80,000, 4-year, zero-interest-bearing note to Equinox Inc. The market rate of interest for obligations of this nature is 10%. Prepare the journal entry to record the purchase of this truck.

BE10.6 (LO 3) Mohave Inc. purchased land, building, and equipment from Laguna Corporation for a cash payment of \$315,000. The estimated fair values of the assets are land \$60,000, building \$220,000, and equipment \$80,000. At what amounts should each of the three assets be recorded?

BE10.7 (LO 3) Fielder Company obtained land by issuing 2,000 shares of its \$10 par value ordinary shares. The land was recently appraised at \$85,000. The ordinary shares are actively traded at \$40 per share. Prepare the journal entry to record the acquisition of the land.

BE10.8 (LO 3) Navajo ASA traded a used truck (cost €20,000, accumulated depreciation €18,000) for a small computer worth €3,300. Navajo also paid €500 in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE10.9 (LO 3) Use the information for Navajo ASA from [BE10.8](#). Prepare the journal entry to record the exchange, assuming the exchange lacks commercial substance.

BE10.10 (LO 3) Mehta SE traded a used welding machine (cost €9,000, accumulated depreciation €3,000) for office equipment with an estimated fair value of €5,000. Mehta also paid €3,000 cash in the transaction. Prepare the journal entry to record the exchange. (The exchange has commercial substance.)

BE10.11 (LO 3) Cheng SE traded a used truck for a new truck. The used truck cost \$30,000 and has accumulated depreciation of \$27,000. The new truck is worth \$37,000. Cheng also made a cash payment of \$36,000. Prepare Cheng's entry to record the exchange. (The exchange lacks commercial substance.)

BE10.12 (LO 3) Slaton Ltd. traded a used truck for a new truck. The used truck cost £20,000 and has accumulated depreciation of £17,000. The new truck is worth £35,000. Slaton also made a cash payment of £33,000. Prepare Slaton's entry to record the exchange. (The exchange has commercial substance.)

BE10.13 (LO 4) Indicate which of the following costs should be expensed when incurred.

- a. €13,000 paid to rearrange and reorganize machinery.
- b. €200,000 paid for addition to building.
- c. €200 paid for tune-up and oil change on a delivery truck.
- d. €7,000 paid to replace a wooden floor with a concrete floor.
- e. €2,000 paid for a major overhaul on a truck.

BE10.14 (LO 3) In 2022, Sato Ltd. received a grant for ¥2 million to defray the cost of purchasing research equipment for its manufacturing facility. The total cost of the equipment is ¥10 million. Prepare the journal entry to record this transaction if Sato uses (a) the deferred revenue approach, and (b) the reduction of asset approach.

BE10.15 (LO 5) Ottawa Corporation owns machinery that cost \$20,000 when purchased on July 1, 2019. Depreciation has been recorded at a rate of \$2,400 per

year, resulting in a balance in accumulated depreciation of \$8,400 at December 31, 2022. The machinery is sold on September 1, 2023, for \$10,500. Prepare journal entries to (a) update depreciation for 2023 and (b) record the sale.

BE10.16 (LO 5) Use the information presented for Ottawa Corporation in [BE10.15](#), but assume the machinery is sold for \$5,200 instead of \$10,500. Prepare journal entries to (a) update depreciation for 2023 and (b) record the sale.

Exercises

E10.1 (LO 1, 2) (Acquisition Costs of Realty) The expenditures and receipts below are related to land, land improvements, and buildings acquired for use in a business. The receipts are enclosed in parentheses.

a.	Money borrowed to pay building contractor (signed a note)	€(275,000)
b.	Payment for construction from note proceeds	275,000
c.	Cost of land fill and clearing	10,000
d.	Delinquent real estate taxes on property assumed by purchaser	7,000
e.	Premium on 6-month insurance policy during construction	6,000
f.	Refund of 1-month insurance premium because construction completed early	(1,000)
g.	Architect's fee on building	25,000
h.	Cost of real estate purchased as a plant site (land €200,000 and building €50,000)	250,000
i.	Commission fee paid to real estate agency	9,000
j.	Installation of fences around property	4,000
k.	Cost of razing and removing building	11,000
l.	Proceeds from residual value of demolished building	(5,000)
m.	Borrowing costs incurred during construction on money borrowed for construction	13,000
n.	Cost of parking lots and driveways	19,000
o.	Cost of trees and shrubbery planted (permanent in nature)	14,000
p.	Excavation costs for new building	3,000

Instructions

Identify each item by letter and list the items in columnar form, using the headings shown below. All receipt amounts should be reported in parentheses. For any amounts entered in the Other Accounts column, also indicate the account title.

Item	Land	Land Improvements	Buildings	Other Accounts
------	------	-------------------	-----------	----------------

E10.2 (LO 1, 2) (Acquisition Costs of Realty) Pollachek Co. purchased land as a factory site for \$450,000. The process of tearing down two old buildings on the site and constructing the factory required 6 months. The company paid \$42,000 to raze the old buildings and sold salvaged lumber and brick for \$6,300. Legal fees of \$1,850 were paid for title investigation and drawing the purchase contract. Pollachek paid \$2,200 to an engineering firm for a land survey, and \$65,000 for drawing the factory plans. The land survey had to be made before definitive plans could be drawn. Title insurance on the property cost \$1,500, and a liability insurance premium paid during construction was \$900. The contractor's charge for construction was \$2,740,000. The company paid the contractor in two installments: \$1,200,000 at the end of 3 months and \$1,540,000 upon completion. Borrowing costs of \$170,000 were incurred to finance the construction.

Instructions

Determine the cost of the land and the cost of the building as they should be recorded on the books of Pollachek Co. Assume that the land survey was for the building.

E10.3 (LO 1) (Acquisition Costs of Trucks) Haddad Corporation operates a retail computer store. To improve delivery services to customers, the company purchases four new trucks on April 1, 2022. The terms of acquisition for each truck are described below.

1. Truck #1 has a list price of \$15,000 and is acquired for a cash payment of \$13,900.
2. Truck #2 has a list price of \$20,000 and is acquired for a down payment of \$2,000 cash and a zero-interest-bearing note with a face amount of \$18,000. The note is due April 1, 2023. Haddad would normally have to pay interest at a rate of 10% for such a borrowing, and the dealership has an incremental borrowing rate of 8%.
3. Truck #3 has a list price of \$16,000. It is acquired in exchange for a computer system that Haddad carries in inventory. The computer system cost \$12,000 and is normally sold by Haddad for \$15,200. Haddad uses a perpetual inventory system.
4. Truck #4 has a list price of \$14,000. It is acquired in exchange for 1,000 ordinary shares in Haddad Corporation. The shares have a par value per share of \$10 and a market price of \$13 per share.

Instructions

Prepare the appropriate journal entries for the foregoing transactions for Haddad Corporation. (Round computations to the nearest dollar.)

E10.4 (LO 1, 2) (Purchase and Self-Constructed Cost of Assets) Dane ASA both purchases and constructs various equipment it uses in its operations. The following items for two different types of equipment were recorded in random order during the calendar year 2022.

Purchase	
Cash paid for equipment, including sales tax of €5,000	€105,000
Freight and insurance cost while in transit	2,000
Cost of moving equipment into place at factory	3,100
Wage cost for technicians to test equipment	6,000
Insurance premium paid during first year of operation on this equipment	1,500
Special plumbing fixtures required for new equipment	8,000
Repair cost incurred in first year of operations related to this equipment	1,300
Construction	
Material and purchased parts (gross cost €200,000; failed to take 1% cash discount)	€200,000
Imputed interest on funds used during construction (share financing)	14,000
Labor costs	190,000
Allocated overhead costs (fixed—€20,000; variable—€30,000)	50,000
Profit on self-construction	30,000
Cost of installing equipment	4,400

Instructions

Compute the total cost for each of these two types of equipment. If an item is not capitalized as a cost of the equipment, indicate how it should be reported.

E10.5 (LO 1, 2) (Treatment of Various Costs) Allegro Supply plc, a newly formed company, incurred the following expenditures related to Land, Buildings, and Equipment.

Abstract company's fee for title search		£ 520
Architect's fees		3,170
Cash paid for land and dilapidated building thereon		92,000
Removal of old building	£20,000	
Less: Residual value	5,500	14,500
Interest on short-term loans during construction		7,400

Excavation before construction for basement		19,000
Equipment purchased (subject to 2% cash discount, which was not taken)		65,000
Freight on equipment purchased		1,340
Storage charges on equipment, necessitated by non-completion of building when equipment was delivered		2,180
New building constructed (building construction took 6 months from date of purchase of land and old building)		485,000
Assessment by city for drainage project		1,600
Hauling charges for delivery of equipment from storage to new building		620
Installation of equipment		2,000
Trees, shrubs, and other landscaping after completion of building (permanent in nature)		5,400

Instructions

Determine the amounts that should be debited to Land, Buildings, and Equipment. Indicate how any costs not debited to these accounts should be recorded.

E10.6 (LO 1, 2, 3) (Correction of Improper Cost Entries) Plant acquisitions for selected companies are presented as follows.

1. Natchez Industries Inc. acquired land, buildings, and equipment from a bankrupt company, Vivace Co., for a lump-sum price of \$680,000. At the time of purchase, Vivace's assets had the following book and appraisal values.

	Book Values	Appraisal Values
Land	\$200,000	\$150,000
Buildings	230,000	350,000
Equipment	300,000	300,000

To be conservative, the company decided to take the lower of the two values for each asset acquired. The following entry was made.

Land	150,000	
Buildings	230,000	
Equipment	300,000	
Cash		680,000

2. Arawak Enterprises purchased store equipment by making a \$2,000 cash down payment and signing a 1-year, \$23,000, 10% note payable. The purchase was

recorded as follows.

Equipment	27,300	
Cash		2,000
Notes Payable		23,000
Interest Payable		2,300

3. Ace Company purchased office equipment for \$20,000, terms 2/10, n/30. Because the company intended to take the discount, it made no entry until it paid for the acquisition. The entry was:

Equipment	20,000	
Cash		19,600
Purchase Discounts		400

4. Paunee Inc. recently received at zero cost a building from the Village of Cardassia as an inducement to locate its business in the village. The appraised value of the building is \$270,000. The company made no entry to record the building because it had no cost basis.
5. Mohegan Company built a warehouse for \$600,000. It could have purchased the building for \$740,000. The controller made the following entry.

Buildings	740,000	
Cash		600,000
Profit on Construction		140,000

Instructions

Prepare the entry that should have been made at the date of each acquisition.

E10.7 (LO 2) (Capitalization of Borrowing Costs) McPherson Furniture started construction of a combination office and warehouse building for its own use at an estimated cost of €5,000,000 on January 1, 2022. McPherson expected to complete the building by December 31, 2022. McPherson has the following debt obligations outstanding during the construction period.

Construction loan—12% interest, payable semiannually, issued December 31, 2021	€2,000,000
Short-term loan—10% interest, payable monthly, and principal payable at maturity on May 30, 2023	1,600,000
Long-term loan—11% interest, payable on January 1 of each year. Principal payable on January 1, 2026	1,000,000

Instructions

(Carry all computations to two decimal places.)

- a. Assume that McPherson completed the office and warehouse building on December 31, 2022, as planned at a total cost of €5,200,000. The following expenditures were made during the period for this project: January 1, €1,000,000; April 1, €1,500,000; July 1, €2,000,000; and October 1, €700,000. Excess funds from the construction loans were invested during the period and earned €20,000 of investment income. Compute the amount of borrowing costs to be capitalized for this project.
- b. Compute the depreciation expense for the year ended December 31, 2023. McPherson elected to depreciate the building on a straight-line basis and determined that the asset has a useful life of 30 years and a residual value of €300,000.

E10.8 (LO 2) (Capitalization of Borrowing Costs) On December 31, 2021, Tsang Group borrowed HK\$3,000,000 at 12% payable annually to finance the construction of a new building. In 2022, the company made the following expenditures related to this building: March 1, HK\$360,000; June 1, HK\$600,000; July 1, HK\$1,500,000; and December 1, HK\$1,200,000. Additional information is provided as follows.

1. Other debt outstanding

10-year, 11% bond, December 31, 2015, interest payable annually	HK\$4,000,000
6-year, 10% note, dated December 31, 2019, interest payable annually	HK\$1,600,000

2. March 1, 2022, expenditure included land costs of HK\$150,000
3. Interest revenue earned in 2022 on funds related to specific borrowing HK\$49,000

Instructions

- a. Determine the amount of borrowing cost to be capitalized in 2022 in relation to the construction of the building.
- b. Prepare the journal entry to record the capitalization of borrowing costs and the recognition of interest expense, if any, at December 31, 2022.

E10.9 (LO 2) (Capitalization of Borrowing Costs) On July 31, 2022, Bismarck Company engaged Duval Tooling Company to construct a special-purpose piece of factory machinery. Construction began immediately and was completed on November 1, 2022. To help finance construction, on July 31 Bismarck issued a \$400,000, 3-year, 12% note payable at Wellington National Bank, on which interest is payable each July 31. On July 31, \$300,000 of the proceeds of the note was paid to Duval. The remainder of the proceeds was temporarily invested in short-term

marketable securities (trading securities) at 10% until November 1. On November 1, Bismarck made a final \$100,000 payment to Duval.

Instructions

- a. Calculate the interest expense, interest revenue, and total borrowing cost to be capitalized during 2022. (Round all computations to the nearest dollar.)
- b. Prepare the journal entries needed on the books of Bismarck Company at each of the following dates.
 - 1. July 31, 2022.
 - 2. November 1, 2022.
 - 3. December 31, 2022.

E10.10 (LO 2) (Capitalization of Borrowing Costs) The following two situations involve the capitalization of borrowing costs.

Situation I: On January 1, 2022, Columbia Outfitters signed a fixed-price contract to have Builder Associates construct a major plant facility at a cost of R\$4,000,000. It was estimated that it would take 3 years to complete the project. Also on January 1, 2022, to finance the construction cost, Columbia borrowed R\$4,000,000 payable in 10 annual installments of R\$400,000, plus interest at the rate of 10%. During 2022, Columbia made deposit and progress payments totaling R\$1,500,000 under the contract. The excess borrowed funds were invested in short-term securities, from which Columbia realized investment income of R\$50,000.

Instructions

What amount should Columbia report as capitalized borrowing cost at December 31, 2022?

Situation II: During 2022, Evander SA constructed and manufactured certain assets and incurred the following borrowing costs in connection with those activities.

	Borrowing Costs Incurred
Warehouse constructed for Evander’s own use	R\$30,000
Special-order machine for sale to unrelated customer, produced according to customer’s specifications	9,000
Inventories routinely manufactured, produced on a repetitive basis	8,000

All of these assets required an extended period of time for completion.

Instructions

Assuming the effect of borrowing cost capitalization is material, what is the total amount of borrowing cost to be capitalized?

E10.11 (LO 3) (Entries for Equipment Acquisitions) Song Engineering purchased conveyor equipment with a list price of ₩15,000. Presented below are three independent cases related to the equipment (amounts in thousands).

- a. Song paid cash for the equipment 8 days after the purchase. The vendor's credit terms are 2/10, n/30. Assume that equipment purchases are initially recorded gross.
- b. Song traded in equipment with a book value of ₩2,000 (initial cost ₩8,000), and paid ₩14,200 in cash one month after the purchase. The old equipment could have been sold for ₩400 at the date of trade. (The exchange has commercial substance.)
- c. Song gave the vendor a ₩16,200, zero-interest-bearing note for the equipment on the date of purchase. The note was due in 1 year and was paid on time. Assume that the effective-interest rate in the market was 9%.

Instructions

Prepare the general journal entries required to record the acquisition and payment in each of the independent cases above. (Round to the nearest won.)

E10.12 (LO 1, 3) (Entries for Asset Acquisition, Including Self-Construction) Below are transactions related to Impala Company.

- a. The City of Pebble Beach gives the company 5 acres of land as a plant site. The fair value of this land is determined to be \$81,000.
- b. 14,000 ordinary shares with a par value of \$50 per share are issued in exchange for land and buildings. The property has been appraised at a fair value of \$810,000, of which \$180,000 has been allocated to land and \$630,000 to buildings. The shares of Impala Company are not listed on any exchange, but a block of 100 shares was sold by a shareholder 12 months ago at \$65 per share, and a block of 200 shares was sold by another shareholder 18 months ago at \$58 per share.
- c. No entry has been made to remove from the accounts for Materials, Direct Labor, and Overhead the amounts properly chargeable to plant asset accounts for machinery constructed during the year. The following information is given relative to costs of the machinery constructed.

Materials used	\$12,500
Factory supplies used	900
Direct labor incurred	16,000

Additional overhead (over regular) caused by construction of machinery, excluding factory supplies used	2,700
Fixed overhead rate applied to regular manufacturing operations	60% of direct labor cost
Cost of similar machinery if it had been purchased from outside suppliers	44,000

Instructions

Prepare journal entries on the books of Impala Company to record these transactions.

E10.13 (LO 1, 3) (Entries for Acquisition of Assets) The following information is related to Rommel Group.

- On July 6, Rommel acquired the plant assets of Studebaker SE, which had discontinued operations. The appraised value of the property is:

Land	€ 400,000
Building	1,200,000
Machinery	800,000
Total	<u>€2,400,000</u>

Rommel gave 12,500 shares of its €100 par value ordinary shares in exchange. The shares had a market price of €180 per share on the date of the purchase of the property.

- Rommel expended the following amounts in cash between July 6 and December 15, the date when it first occupied the building.

Repairs to building	€105,000
Construction of bases for machinery to be installed later	135,000
Driveways and parking lots	122,000
Remodeling of office space in building, including new partitions and walls	161,000
Special assessment by city on land	18,000

- On December 20, the company paid cash for machinery, €280,000, subject to a 2% cash discount, and freight on machinery of €10,500.

Instructions

Prepare entries on the books of Rommel for these transactions.

E10.14 (LO 3) (Purchase of Equipment with Zero-Interest-Bearing Debt) Sterling Inc. has decided to purchase equipment from Central Industries on

January 2, 2022, to expand its production capacity to meet customers' demand for its product. Sterling issues a \$900,000, 5-year, zero-interest-bearing note to Central for the new equipment when the prevailing market rate of interest for obligations of this nature is 12%. The company will pay off the note in five \$180,000 installments due at the end of each year over the life of the note.

Instructions

- a. Prepare the journal entry or entries at the date of purchase. (Round to nearest dollar in all computations.)
- b. Prepare the journal entry or entries at the end of the first year to record the payment and interest, assuming that the company employs the effective-interest method.
- c. Prepare the journal entry or entries at the end of the second year to record the payment and interest.
- d. Assuming that the equipment had a 10-year life and no residual value, prepare the journal entry necessary to record depreciation in the first year. (Straight-line depreciation is employed.)

E10.15 (LO 3) (Purchase of Computer with Zero-Interest-Bearing Debt)

Windsor plc purchased a computer on December 31, 2021, for £130,000, paying £30,000 down and agreeing to pay the balance in five equal installments of £20,000 payable each December 31 beginning in 2022. An assumed interest rate of 10% is implicit in the purchase price.

Instructions

- a. Prepare the journal entry or entries at the date of purchase. (Round to two decimal places.)
- b. Prepare the journal entry or entries at December 31, 2022, to record the payment and interest (effective-interest method employed).
- c. Prepare the journal entry or entries at December 31, 2023, to record the payment and interest (effective-interest method employed).

E10.16 (LO 2, 3) Groupwork (Asset Acquisition) Logan Industries purchased the following assets and constructed a building as well. All this was done during the current year.

Assets 1 and 2: These assets were purchased at a lump sum for €104,000 cash. The following information was gathered.

Description	Initial Cost on Seller's Books	Depreciation to Date on Seller's Books	Book Value on Seller's Books	Appraised Value
Machinery	€100,000	€50,000	€50,000	€90,000

Equipment	60,000	10,000	50,000	30,000
-----------	--------	--------	--------	--------

Asset 3: This machine was acquired by making a €10,000 down payment and issuing a €30,000, 2-year, zero-interest-bearing note. The note is to be paid off in two €15,000 installments made at the end of the first and second years. It was estimated that the asset could have been purchased outright for €35,900.

Asset 4: This machinery was acquired by trading in used machinery. (The exchange lacks commercial substance.) Facts concerning the trade-in are as follows.

Cost of machinery traded	€100,000
Accumulated depreciation to date of sale	36,000
Fair value of machinery traded	80,000
Cash received	10,000
Fair value of machinery acquired	70,000

Asset 5: Equipment was acquired by issuing 100 shares of €8 par value ordinary shares. The shares have a market price of €11 per share.

Construction of Building: A building was constructed on land with a cost of €180,000. Construction began on February 1 and was completed on November 1. The payments to the contractor were as follows.

Date	Payment
2/1	€120,000
6/1	360,000
9/1	480,000
11/1	100,000

To finance construction of the building, a €600,000, 12% construction loan was taken out on February 1. The loan was repaid on November 1. The firm had €200,000 of other outstanding debt during the year at a borrowing rate of 8%.

Instructions

Record the acquisition of each of these assets. Interest expense for the year has been recorded.

E10.17 (LO 3) (Non-Monetary Exchange) Alatorre SpA, which manufactures shoes, hired a recent college graduate to work in its accounting department. On the first day of work, the accountant was assigned to total a batch of invoices with the use of an adding machine. Before long, the accountant, who had never before seen such a machine, broke it. Alatorre gave the machine plus €320 to Mills Business Machine AG (dealer) in exchange for a new machine. Assume the following information about the machines.

	Alatorre SpA (Old Machine)	Mills AG (New Machine)
Machine cost	€290	€270
Accumulated depreciation	140	–0–
Fair value	85	405

Instructions

For each company, prepare the necessary journal entry to record the exchange. (The exchange has commercial substance.)

E10.18 (LO 3) (Non-Monetary Exchange) Montgomery Ltd. purchased an electric wax melter on April 30, 2023, by trading in its old gas model and paying the balance in cash. The following data relate to the purchase.

List price of new melter	£15,800
Cash paid	10,000
Cost of old melter (5-year life, £700 residual value)	12,700
Accumulated depreciation (old melter—straight-line)	7,200
Fair value of old melter	5,200

Instructions

Prepare the journal entry or entries necessary to record this exchange, assuming that the exchange (a) has commercial substance, and (b) lacks commercial substance. Montgomery's year ends on December 31, and depreciation has been recorded through December 31, 2022.

E10.19 (LO 3) (Non-Monetary Exchange) Santana SA exchanged equipment used in its manufacturing operations plus R\$2,000 in cash for similar equipment used in the operations of Delaware Co. The following information pertains to the exchange.

	Santana SA	Delaware Co.
Equipment (cost)	R\$28,000	R\$28,000
Accumulated depreciation	19,000	10,000
Fair value of equipment	13,500	15,500
Cash given up	2,000	

Instructions

- Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange lacks commercial substance.

- b. Prepare the journal entries to record the exchange on the books of both companies. Assume that the exchange has commercial substance.

E10.20 (LO 3) (Non-Monetary Exchange) Yintang Group has negotiated the purchase of a new piece of automatic equipment at a price of HK\$7,000 plus trade-in, f.o.b. factory. Yintang paid HK\$7,000 cash and traded in used equipment. The used equipment had originally cost HK\$62,000; it had a book value of HK\$42,000 and a secondhand fair value of HK\$45,800, as indicated by recent transactions involving similar equipment. Freight and installation charges for the new equipment required a cash payment of HK\$1,100.

Instructions

- a. Prepare the general journal entry to record this transaction, assuming that the exchange has commercial substance.
- b. Assuming the same facts as in (a) except that fair value information for the assets exchanged is not determinable, prepare the general journal entry to record this transaction.

E10.21 (LO 3) (Government Grants) Rialto Group received a £100,000 grant from the government to acquire £500,000 of delivery equipment on January 2, 2022. The delivery equipment has a useful life of 5 years. Rialto uses the straight-line method of depreciation. The delivery equipment has a zero residual value.

Instructions

- a. If Rialto Group reports the grant as a reduction of the asset, answer the following questions.
1. What is the carrying amount of the delivery equipment on the statement of financial position at December 31, 2022?
 2. What is the amount of depreciation expense related to the delivery equipment in 2023?
 3. What is the amount of grant revenue reported in 2022 on the income statement?
- b. If Rialto Group reports the grant as deferred grant revenue, answer the following questions.
1. What is the balance in the deferred grant revenue account at December 31, 2022?
 2. What is the amount of depreciation expense related to the delivery equipment in 2023?
 3. What is the amount of grant revenue reported in 2022 on the income statement?

E10.22 (LO 3) (Government Grants) Yilmaz SA is provided a grant by the local government to purchase land for a building site. The grant is a zero-interest-bearing note for 5 years. The note is issued on January 2, 2022, for €5 million payable on January 2, 2027. Yilmaz’s incremental borrowing rate is 6%. The land is not purchased until July 15, 2022.

Instructions

- a. Prepare the journal entry or entries to record the grant and note payable on January 2, 2022.
- b. Determine the amount of interest expense and grant revenue to be reported on December 31, 2022.

E10.23 (LO 4) Groupwork (Analysis of Subsequent Expenditures) Accardo Resources Group has been in its plant facility for 15 years. Although the plant is quite functional, numerous repair costs are incurred to maintain it in sound working order. The company’s plant asset book value is currently R\$800,000, as indicated below.

Original cost	R\$1,200,000
Less: Accumulated depreciation	400,000
Book value	<u>R\$ 800,000</u>

During the current year, the following improvements were made to the plant facility.

- a. Because of increased demands for its product, the company increased its plant capacity by building a new addition at a cost of R\$270,000.
- b. The entire plant was repainted at a cost of R\$23,000.
- c. The original roof was an asbestos cement slate. For safety purposes, it was removed and replaced with a wood shingle roof at a cost of R\$61,000. Book value of the old roof was R\$41,000.
- d. The electrical system was updated at a cost of R\$12,000. The cost of the old electrical system was not known. It is estimated that the useful life of the building will not change as a result of this updating.
- e. A series of major repairs were made at a cost of R\$75,000 because parts of the wood structure were rotting. The cost of the old wood structure was not known. These extensive repairs are estimated to increase the useful life of the building. The company believes the R\$75,000 is representative of the cost of parts for the wood structure at the date of purchase.

Instructions

Indicate how each of these transactions would be recorded in the accounting records.

E10.24 (LO 4) (Analysis of Subsequent Expenditures) The following transactions occurred during 2023. Assume that depreciation of 10% per year is charged on all machinery and 5% per year on buildings, on a straight-line basis, with no estimated residual value. Depreciation is charged for a full year on all fixed assets acquired during the year, and no depreciation is charged on fixed assets disposed of during the year.

Jan. 30	A building that cost \$112,000 in 2006 is torn down to make room for a new building. The wrecking contractor was paid \$5,100 and was permitted to keep all materials salvaged.
Mar. 10	Machinery that was purchased in 2016 for \$16,000 is sold for \$2,900 cash, f.o.b. purchaser's plant. Freight of \$300 is paid on the sale of this machinery.
Mar. 20	A gear breaks on a machine that cost \$9,000 in 2018. The gear is replaced at a cost of \$3,000. The replacement does not extend the useful life of the machine.
May 18	A special base installed for a machine in 2017 when the machine was purchased has to be replaced at a cost of \$5,500 because of defective workmanship on the original base. The cost of the machinery was \$14,200 in 2017. The cost of the base was \$4,000, and this amount was charged to the Machinery account in 2017.
June 23	One of the buildings is repainted at a cost of \$6,900. It had not been painted since it was constructed in 2019.

Instructions

Prepare general journal entries for the transactions. (Round to the nearest dollar.)

E10.25 (LO 4) (Analysis of Subsequent Expenditures) Plant assets often require expenditures subsequent to acquisition. It is important that they be accounted for properly. Any errors will affect both the statements of financial position and income statements for a number of years.

Instructions

For each of the following items, indicate whether the expenditure should be capitalized (C) or expensed (E) in the period incurred.

a.	Improvement.
b.	Replacement of a minor broken part on a machine.
c.	Expenditure that increases the useful life of an existing asset.

d.	Expenditure that increases the efficiency and effectiveness of a productive asset but does not increase its residual value.
e.	Expenditure that increases the efficiency and effectiveness of a productive asset and increases the asset's residual value.
f.	Ordinary repairs.
g.	Improvement to a machine that increased its fair value and its production capacity by 30% without extending the machine's useful life.
i.	Expenditure that increases the quality of the output of the productive asset.

E10.26 (LO 5) (Entries for Disposition of Assets) On December 31, 2022, Mitsui Ltd. has a machine with a book value of ¥940,000. The original cost and related accumulated depreciation at this date are as follows (all amounts in thousands).

Machine	¥1,300,000
Less: Accumulated depreciation	<u>360,000</u>
Book value	<u>¥ 940,000</u>

Depreciation is computed at ¥72,000 per year on a straight-line basis.

Instructions

Presented below is a set of independent situations. For each independent situation, indicate the journal entry to be made to record the transaction. Make sure that depreciation entries are made to update the book value of the machine prior to its disposal.

- A fire completely destroys the machine on August 31, 2020. An insurance settlement of ¥630,000 was received for this casualty. The insurance company confirmed on September 30 that the claim would be covered and that the amount of the settlement (¥630,000) would be paid on October 15.
- On April 1, 2020, Mitsui sold the machine for ¥1,040,000 to Avanti Company.
- On July 31, 2020, the company donated this machine to the Mountain King City Council. The fair value of the machine at the time of the donation was estimated to be ¥1,100,000.

E10.27 (LO 5) (Disposition of Assets) On January 1, 2022, Pavlova Company received a notice from the government that a new highway was being built and that land and a building owned by the company were going to be claimed in the process.

The company employed an appraiser and estimated that the land had a fair value of \$114,000 and the building had a fair value of \$385,000. On April 30, 2022, after some negotiations, Pavlova received a condemnation award of \$520,000 cash as compensation for the forced sale of the company's land and building. The land and building cost \$120,000 and \$600,000, respectively, when they were acquired. On January 1, 2022, the accumulated depreciation relating to the building amounted to \$208,000. On April 30, the accumulated depreciation relating to the building was \$210,000. On August 1, 2022, Pavlova purchased a piece of replacement property for cash. The new land cost \$90,000, and the new building cost \$380,000.

Instructions

Prepare the journal entries to record the transactions on January 1, April 30, and August 1, 2022.

Problems

P10.1 (LO1, 2) (Classification of Acquisition and Other Asset Costs) At December 31, 2021, certain accounts included in the property, plant, and equipment section of Reagan Ltd.'s statement of financial position had the following balances.

Land	£230,000
Buildings	890,000
Leasehold improvements	660,000
Machinery and equipment	875,000

During 2022, the following transactions occurred.

1. Land site number 621 was acquired for £850,000. In addition, to acquire the land Reagan paid a £51,000 commission to a real estate agent. Costs of £35,000 were incurred to clear the land. During the course of clearing the land, timber and gravel were recovered and sold for £13,000.
2. A second tract of land (site number 622) with a building was acquired for £420,000. The closing statement indicated that the land value was £300,000 and the building value was £120,000. Shortly after acquisition, the building was demolished at a cost of £41,000. A new building was constructed for £330,000 plus the following costs.

Excavation fees	£38,000
Architectural design fees	11,000
Building permit fee	2,500
Imputed interest on funds used during construction (share financing)	8,500

The building was completed and occupied on September 30, 2022.

3. A third tract of land (site number 623) was acquired for £650,000 and was put on the market for resale.
4. During December 2022, costs of £89,000 were incurred to improve leased office space. The related lease will terminate on December 31, 2024, and is not expected to be renewed. (*Hint: Leasehold improvements should be handled in the same manner as land improvements.*)
5. A group of new machines was purchased under a royalty agreement that provides for payment of royalties based on units of production for the machines. The invoice price of the machines was £87,000, freight costs were £3,300, installation costs were £2,400, and royalty payments for 2022 were £17,500.

Instructions

- a. Prepare a detailed analysis of the changes in each of the following statement of financial position accounts for 2022.

Land	Leasehold improvements
Buildings	Machinery and equipment

Disregard the related accumulated depreciation accounts.

- b. List the items that were not used to determine the answer to (a) above, and indicate where, or if, these items should be included in Reagan's financial statements.

P10.2 (LO 1, 5) (Classification of Acquisition Costs) Selected accounts included in the property, plant, and equipment section of Lobo Corporation's statement of financial position at December 31, 2021, had the following balances.

Land	\$ 300,000
Land improvements	140,000
Buildings	1,100,000
Equipment	960,000

During 2022, the following transactions occurred.

1. A tract of land was acquired for \$150,000 as a potential future building site.
2. A plant facility consisting of land and building was acquired from Mendota Company in exchange for 20,000 shares of Lobo's ordinary shares. On the acquisition date, Lobo's shares had a closing market price of \$37 per share on a national exchange. The plant facility was carried on Mendota's books at \$110,000 for land and \$320,000 for the building at the exchange date. Current

appraised values for the land and building, respectively, are \$230,000 and \$690,000.

3. Items of equipment were purchased at a total cost of \$400,000. Additional costs were incurred as follows.

Freight and unloading	\$13,000
Sales taxes	20,000
Installation	26,000

4. Expenditures totaling \$95,000 were made for new parking lots, streets, and sidewalks at the company's various plant locations. These expenditures had an estimated useful life of 15 years.
5. Equipment costing \$80,000 on January 1, 2014, was scrapped on June 30, 2022. Straight-line depreciation has been recorded on the basis of a 10-year life with no residual values.
6. Equipment was sold for \$20,000 on July 1, 2022. Original cost of the equipment was \$44,000 on January 1, 2019, and it was depreciated on the straight-line basis over an estimated useful life of 7 years and a residual value of \$2,000.

Instructions

- a. Prepare a detailed analysis of the changes in each of the following statement of financial position accounts for 2022.

Land	Buildings
Land improvements	Equipment

(Hint: Disregard the related accumulated depreciation accounts.)

- b. List the items that were not used to determine the answer to (a), showing the pertinent amounts and supporting computations in good form for each item. In addition, indicate where, or if, these items should be included in Lobo's financial statements.

P10.3 (LO1, 3) (Classification of Land and Building Costs) Spitfire SE started as a company on January 2, 2023, but was unable to begin manufacturing activities until July 1, 2023, because new factory facilities were not completed until that date.

The Land and Buildings account reported the following items during 2023.

Jan. 31	Land and building	€160,000
Feb. 28	Cost of removal of building	9,800
May 1	Partial payment of new construction	60,000

May 1	Legal fees paid	3,770
June 1	Second payment on new construction	40,000
June 1	Insurance premium	2,280
June 1	Special tax assessment	4,000
June 30	General expenses	36,300
July 1	Final payment on new construction	30,000
Dec. 31	Asset write-up	53,800
		<u>399,950</u>
Dec. 31	Depreciation—2023 at 1%	4,000
Dec. 31, 2023	Account balance	<u>€395,950</u>

The following additional information is to be considered.

- To acquire land and building, the company paid €80,000 cash and 800 shares of its 8% preference shares, par value €100 per share. The shares trade in an active market at €117 per share.
- Cost of removal of old buildings amounted to €9,800, and the demolition company retained all materials of the building.
- Legal fees covered the following.

Cost of organization	€ 610
Examination of title covering purchase of land	1,300
Legal work in connection with construction contract	1,860
	<u>€3,770</u>

- Insurance premium covered the building for a 2-year term beginning May 1, 2023.
- The special tax assessment covered street improvements that are permanent in nature.
- General expenses covered the following for the period from January 2, 2023, to June 30, 2023.

President's salary	€32,100
Plant superintendent's salary—supervision of new building	4,200
	<u>€36,300</u>

- Because of a general increase in construction costs after entering into the building contract, the board of directors increased the value of the building €53,800, believing that such an increase was justified to reflect the current market at the time the building was completed. Retained earnings was credited for this amount.

8. Depreciation for 2023—1% of asset value (1% of €400,000, or €4,000).

Instructions

- a. Prepare entries to reflect correct land, buildings, and depreciation accounts at December 31, 2023.
- b. Show the proper presentation of land, buildings, and depreciation on the statement of financial position at December 31, 2023.

P10.4 (LO 1, 3, 5) Groupwork (Dispositions, Including Condemnation, Demolition, and Trade-In) Presented below is a schedule of property dispositions for Hollerith Co.

Schedule of Property Dispositions					
	Cost	Accumulated Depreciation	Cash Proceeds	Fair Value	Nature of Disposition
Land	\$40,000	—	\$31,000	\$31,000	Condemnation
Building	15,000	—	3,600	—	Demolition
Warehouse	70,000	\$16,000	74,000	74,000	Destruction by fire
Machine	8,000	2,800	900	7,200	Trade-in
Furniture	10,000	7,850	—	3,100	Contribution
Automobile	9,000	3,460	2,960	2,960	Sale

The following additional information is available.

Land: On February 15, a condemnation award was received as consideration for unimproved land held primarily as an investment. On March 31, another parcel of unimproved land to be held as an investment was purchased at a cost of \$35,000. The company had been made aware that the government was going to exercise its right of eminent domain in the previous year and had written down the land to its estimated fair value of \$25,000 on December 31.

Building: On April 2, land and building were purchased at a total cost of \$75,000, of which 20% was allocated to the building on the company books. The real estate was acquired with the intention of demolishing the building, and this was accomplished during the month of November. Cash proceeds received in November represent the net proceeds from demolition of the building.

Warehouse: On June 30, the warehouse was destroyed by fire. The insurance company agreed to cover the claim and disbursed the \$74,000 on July 31. The warehouse was purchased January 2, 2016, and had depreciated \$16,000. On December 27, the insurance proceeds and other funds were used to purchase a replacement warehouse at a cost of \$90,000.

Machine: On December 26, the machine was exchanged for another machine having a fair value of \$6,300 and cash of \$900 was received. (The exchange lacks commercial substance.)

Furniture: On August 15, furniture was contributed to a qualified charitable organization. No other contributions were made or pledged during the year.

Automobile: On November 3, the automobile was sold to Jared Winger, a shareholder.

Instructions

Indicate how these items would be reported on the income statement of Hollerith Co.

P10.5 (LO1, 2) (Classification of Costs and Capitalization of Borrowing Costs) On January 1, 2022, Blair Corporation purchased for \$500,000 a tract of land (site number 101) with a building. Blair paid a real estate broker's commission of \$36,000, legal fees of \$6,000, and title guarantee insurance of \$18,000. The closing statement indicated that the land value was \$500,000 and the building value was \$100,000. Shortly after acquisition, the building was razed at a cost of \$54,000.

Blair entered into a \$3,000,000 fixed-price contract with Slatkin Builders, Inc. on March 1, 2022, for the construction of an office building on land site number 101. The building was completed and occupied on September 30, 2023. Additional construction costs were incurred as follows.

Plans, specifications, and blueprints	\$21,000
---------------------------------------	----------

Architects' fees for design and supervision	82,000
---	--------

The building is estimated to have a 40-year life from date of completion and will be depreciated using the 150% declining-balance method.

To finance construction costs, Blair borrowed \$3,000,000 at a 10% annual interest rate on March 1, 2022. Blair will pay interest only over the life of the loan, with the principal payable at the end of 10 years when the loan matures. Excess funds from the construction loan were invested to earn a return. During 2022, these funds earned interest revenue of \$135,000. During 2023, the funds earned interest revenue of \$45,000.

Instructions

- Prepare a schedule that discloses the individual costs making up the balance in the Land account in respect of land site number 101 as of September 30, 2023.
- Prepare a schedule that discloses the individual costs that should be capitalized in the Buildings account as of September 30, 2023. Show supporting computations in good form.

P10.6 (LO 2) (Borrowing Costs) Cho Landscaping began construction of a new plant on December 1, 2022 (all amounts in thousands). On this date, the company purchased a parcel of land for ¥139,000 in cash. In addition, it paid ¥2,000 in surveying costs and ¥4,000 for a title insurance policy. An old dwelling on the premises was demolished at a cost of ¥3,000, with ¥1,000 being received from the sale of materials.

Architectural plans were also formalized on December 1, 2022, when the architect was paid ¥30,000. The necessary building permits costing ¥3,000 were obtained from the city and paid for on December 1 as well. The excavation work began during the first week in December with payments made to the contractor in 2023 as follows.

Date of Payment	Amount of Payment
March 1	¥240,000
May 1	330,000
July 1	60,000

The building was completed on July 1, 2023.

To finance construction of this plant, Cho borrowed ¥600,000 from the bank on December 1, 2022. Cho had no other borrowings. The ¥600,000 was a 10-year loan bearing interest at 8%. Excess funds from the loan were invested during 2022 and earned ¥2,000. During 2023, the excess funds from the loan earned ¥1,000.

Instructions

Compute the balance in each of the following accounts at December 31, 2022, and December 31, 2023. (Round amounts to the nearest 1,000 yen.)

- a. Land.
- b. Buildings.
- c. Interest Expense.

P10.7 (LO 2) Groupwork (Capitalization of Borrowing Costs) Laserwords A.S. is a book distributor that had been operating in its original facility since 1985. The increase in certification programs and continuing education requirements in several professions has contributed to an annual growth rate of 15% for Laserwords since 2017. Laserwords' original facility became obsolete by early 2022 because of the increased sales volume and the fact that Laserwords now carries CDs in addition to books.

On June 1, 2022, Laserwords contracted with Black Construction to have a new building constructed for ₺4,000,000 on land owned by Laserwords. The payments made by Laserwords to Black Construction are shown in the schedule below.

Date	Amount
July 30, 2022	₺ 900,000
January 30, 2023	1,500,000
May 30, 2023	1,600,000
Total payments	<u>₺4,000,000</u>

Construction was completed, and the building was ready for occupancy on May 27, 2023. Laserwords had no new borrowings directly associated with the new building but had the following debt outstanding at May 31, 2023, the end of its fiscal year.

10%, 5-year note payable of ₺2,000,000, dated April 1, 2019, with interest payable annually on April 1.

12%, 10-year bond issue of ₺3,000,000 sold at par on June 30, 2015, with interest payable annually on June 30.

The new building qualifies for capitalization of borrowing costs. The effect of capitalizing the interest on the new building, compared with the effect of expensing the interest, is material.

Instructions

- a. Compute the average carrying amount on Laserwords' new building during the capitalization period.
- b. Compute the borrowing cost to be capitalized on Laserwords' new building.

c. Some borrowing costs of Laserwords Inc. are capitalized for the year ended May 31, 2023.

1. Identify the items relating to borrowing costs that must be disclosed in Laserwords' financial statements.
2. Compute the amount of each of the items that must be disclosed.

P10.8 (LO 3) (Non-Monetary Exchanges) Holyfield SA wishes to exchange a machine used in its operations. Holyfield has received the following offers from other companies in the industry.

1. Dorsett Company offered to exchange a similar machine plus €23,000. (The exchange has commercial substance for both parties.)
2. Winston Company offered to exchange a similar machine. (The exchange lacks commercial substance for both parties.)
3. Liston Company offered to exchange a similar machine but wanted €3,000 in addition to Holyfield's machine. (The exchange has commercial substance for both parties.)
4. In addition, Holyfield contacted Greeley Group, a dealer in machines. To obtain a new machine, Holyfield must pay €93,000 in addition to trading in its old machine. (The exchange has commercial substance.)

	Holyfield	Dorsett	Winston	Liston	Greeley
Machine cost	€160,000	€120,000	€152,000	€160,000	€130,000
Accumulated depreciation	60,000	45,000	71,000	75,000	—0—
Fair value	92,000	69,000	92,000	95,000	185,000

Instructions

For each of the four independent situations, prepare the journal entries to record the exchange on the books of each company.

P10.9 (LO 3) (Non-Monetary Exchanges) On August 1, Hyde Ltd. exchanged productive assets with Wiggins Ltd. Hyde's asset is referred to below as Asset A, and Wiggins' is referred to as Asset B. The following facts pertain to these assets.

	Asset A	Asset B
Original cost	£96,000	£110,000
Accumulated depreciation (to date of exchange)	40,000	47,000
Fair value at date of exchange	60,000	75,000
Cash paid by Hyde Ltd.	15,000	
Cash received by Wiggins Ltd.		15,000

Instructions

- Assuming that the exchange of Assets A and B has commercial substance, record the exchange for both Hyde Ltd. and Wiggins Ltd.
- Assuming that the exchange of Assets A and B lacks commercial substance, record the exchange for both Hyde Ltd. and Wiggins Ltd.

P10.10 (LO 3) (Non-Monetary Exchanges) During the current year, Marshall Construction trades an old crane that has a book value of €90,000 (original cost €140,000 less accumulated depreciation €50,000) for a new crane from Brigham Manufacturing. The new crane cost Brigham €165,000 to manufacture and is classified as inventory. The following information is also available.

	Marshall Const.	Brigham Mfg.
Fair value of old crane	€ 82,000	
Fair value of new crane		€200,000
Cash paid	118,000	
Cash received		118,000

Instructions

- Assuming that this exchange is considered to have commercial substance, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming that this exchange lacks commercial substance for Marshall, prepare the journal entries on the books of Marshall Construction.
- Assuming the same facts as those in (a) except that the fair value of the old crane is €98,000 and the cash paid is €102,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.
- Assuming the same facts as those in (b) except that the fair value of the old crane is €97,000 and the cash paid €103,000, prepare the journal entries on the books of (1) Marshall Construction and (2) Brigham Manufacturing.

P10.11 (LO 1, 3, 5) (Purchases by Deferred Payment, Lump-Sum, and Non-Monetary Exchanges) Kang Ltd., a manufacturer of ballet shoes, is experiencing a period of sustained growth. In an effort to expand its production capacity to meet the increased demand for its product, the company recently made several acquisitions of plant and equipment. Rob Joffrey, newly hired in the position of fixed-asset accountant, requested that Danny Nolte, Kang's controller, review the following transactions.

Transaction 1: On June 1, 2022, Kang Ltd. purchased equipment from Wyandot Group. Kang issued a HK\$28,000, 4-year, zero-interest-bearing note to Wyandot

for the new equipment. Kang will pay off the note in four equal installments due at the end of each of the next 4 years. At the date of the transaction, the prevailing market rate of interest for obligations of this nature was 10%. Freight costs of HK\$425 and installation costs of HK\$500 were incurred in completing this transaction. The appropriate factors for the time value of money at a 10% rate of interest are given below.

Future value of HK\$1 for 4 periods	1.46
Future value of an ordinary annuity for 4 periods	4.64
Present value of HK\$1 for 4 periods	0.68
Present value of an ordinary annuity for 4 periods	3.17

Transaction 2: On December 1, 2022, Kang Ltd. purchased several assets of Yakima Shoes, a small shoe manufacturer whose owner was retiring. The purchase amounted to HK\$220,000 and included the assets listed below. Kang engaged the services of Tennyson Appraisal, an independent appraiser, to determine the fair values of the assets which are also presented below.

	Yakima Book Value	Fair Value
Inventory	HK\$ 60,000	HK\$ 50,000
Land	40,000	80,000
Buildings	70,000	120,000
	<u>HK\$170,000</u>	<u>HK\$250,000</u>

During its fiscal year ended May 31, 2023, Kang incurred HK\$8,000 for interest expense in connection with the financing of these assets.

Transaction 3: On March 1, 2023, Kang Ltd. exchanged a number of used trucks plus cash for vacant land adjacent to its plant site. (The exchange has commercial substance.) Kang intends to use the land for a parking lot. The trucks had a combined book value of HK\$35,000, as Kang had recorded HK\$20,000 of accumulated depreciation against these assets. Kang’s purchasing agent, who has had previous dealings in the secondhand market, indicated that the trucks had a fair value of HK\$46,000 at the time of the transaction. In addition to the trucks, Kang paid HK\$19,000 cash for the land.

Instructions

- a. Plant assets such as land, buildings, and equipment receive special accounting treatment. Describe the major characteristics of these assets that differentiate them from other types of assets.
- b. For each of the three transactions described above, determine the value at which Kang Ltd. should record the acquired assets. Support your calculations with an explanation of the underlying rationale.

- c. The books of Kang Ltd. show the following additional transactions for the fiscal year ended May 31, 2023.
1. Acquisition of a building for speculative purposes.
 2. Purchase of a 2-year insurance policy covering plant equipment.
 3. Purchase of the rights for the exclusive use of a process used in the manufacture of ballet shoes.

For each of these transactions, indicate whether the asset should be classified as a plant asset. If it is a plant asset, explain why it is. If it is not a plant asset, explain why not, and identify the proper classification.

Concepts for Analysis

CA10.1 (LO 1, 4, 5) Writing (Acquisition, Improvements, and Sale of Realty) Tonkawa Group purchased land for use as its company headquarters. A small factory that was on the land when it was purchased was torn down before construction of the office building began. Furthermore, a substantial amount of rock blasting and removal had to be done before construction of the building foundation began. Because the office building was set back on the land far from the public road, Tonkawa Group had the contractor construct a paved road that led from the public road to the parking lot of the office building.

Three years after the office building was occupied, Tonkawa Group added four stories to the office building. The four stories had an estimated useful life of 5 years more than the remaining estimated useful life of the original office building.

Ten years later, the land and building were sold at an amount more than their net book value, and Tonkawa had a new office building constructed at another site for use as its new company headquarters.

Instructions

- a. Which of the expenditures above should be capitalized? How should each be depreciated or amortized? Discuss the rationale for your answers.
- b. How would the sale of the land and building be accounted for? Include in your answer an explanation of how to determine the net book value at the date of sale. Discuss the rationale for your answer.

CA10.2 (LO 1) (Accounting for Self-Constructed Assets) Troopers Medical Labs began operations 5 years ago producing stetrics, a new type of instrument it hoped to sell to doctors, dentists, and hospitals. The demand for stetrics far exceeded initial expectations, and the company was unable to produce enough to meet demand.

The company was manufacturing its product on equipment that it built at the start of its operations. To meet demand, more efficient equipment was needed. The company decided to design and build the equipment because the equipment currently available on the market was unsuitable for producing stetrics.

In 2022, a section of the plant was devoted to development of the new equipment and a special staff was hired. Within 6 months, a machine developed at a cost of €714,000 increased production dramatically and reduced labor costs substantially. Elated by the success of the new machine, the company built three more machines of the same type at a cost of €441,000 each.

Instructions

- a. In general, what costs should be capitalized for self-constructed equipment?
- b. Discuss the propriety of including in the capitalized cost of self-constructed assets:
 1. The increase in overhead caused by the self-construction of fixed assets.
 2. A proportionate share of overhead on the same basis as that applied to goods manufactured for sale.
- c. Discuss the proper accounting treatment of the €273,000 (€714,000 – €441,000) by which the cost of the first machine exceeded the cost of the subsequent machines. This additional cost should not be considered a research and development cost.

CA10.3 (LO 2) (Capitalization of Borrowing Costs) Langer Airline is converting from piston-type planes to jets. Delivery time for the jets is 3 years, during which time substantial progress payments must be made. The multimillion-dollar cost of the planes cannot be financed from working capital; Langer must borrow funds for the payments.

Because of high interest rates and the large sum to be borrowed, management estimates that borrowing costs in the second year of the period will be equal to one-third of income before interest and taxes, and one-half of such income in the third year.

After conversion, Langer's passenger-carrying capacity will be doubled with no increase in the number of planes, although the investment in planes will be substantially increased. The jet planes have a 7-year service life.

Instructions

Give your recommendation concerning the proper accounting for interest during the conversion period. Support your recommendation with reasons and suggested accounting treatment. (Disregard income tax implications.)

CA10.4 (LO 2) Writing (Capitalization of Borrowing Costs) Vang Magazine Group started construction of a warehouse building for its own use at an estimated cost of ¥5,000,000 on January 1, 2021, and completed the building on December 31, 2021 (all amounts in thousands). During the construction period, Vang has the following debt obligations outstanding.

Construction loan—12% interest, payable semiannually, issued December 31, 2020	¥2,000,000
Short-term loan—10% interest, payable monthly, and principal payable at maturity, on May 30, 2022	1,400,000
Long-term loan—11% interest, payable on January 1 of each year. Principal payable on January 1, 2024	1,000,000

Total cost amounted to ¥5,200,000. Payments were made during the year as follows.

Date	Amount
January 1, 2022	¥1,500,000
March 1, 2022	1,250,000
September 1, 2022	1,250,000
December 1, 2022	1,200,000
Total	<u>¥5,200,000</u>

Jane Edo, the president of the company, has been shown the costs associated with this construction project and capitalized on the statement of financial position. She is bothered by the “borrowing cost.” She argues that, first, all the interest is unavoidable—no one lends money without expecting to be compensated for it. Second, why can’t the company use all the interest on all the loans when computing the capitalized borrowing cost? Finally, why can’t her company capitalize all the annual interest that accrued over the period of construction?

Instructions

You are the manager of accounting for the company. In a memo dated January 15, 2023, explain what borrowing cost is, how you computed it (being especially careful to explain why you used the interest rates that you did), and why the company cannot capitalize all its interest for the year. Attach a schedule supporting any computations that you use.

CA10.5 (LO 3) Writing (Non-Monetary Exchanges) You have two clients who are considering trading machinery with each other. Although the machines are different from each other, you believe that an assessment of expected cash flows on the exchanged assets will indicate the exchange lacks commercial substance. Your

clients would prefer that the exchange be deemed to have commercial substance, to allow them to record gains. Here are the facts:

	Client A	Client B
Original cost	£100,000	£150,000
Accumulated depreciation	40,000	80,000
Fair value	80,000	100,000
Cash received (paid)	(20,000)	20,000

Instructions

- Record the trade-in on Client A's books assuming the exchange has commercial substance.
- Record the trade-in on Client A's books assuming the exchange lacks commercial substance.
- Write a memo to the controller of Company A indicating and explaining the specific financial impact on current and future statements of treating the exchange as having versus lacking commercial substance.
- Record the entry on Client B's books assuming the exchange has commercial substance.
- Record the entry on Client B's books assuming the exchange lacks commercial substance.
- Write a memo to the controller of Company B indicating and explaining the specific financial impact on current and future statements of treating the exchange as having versus lacking commercial substance.

CA10.6 (LO 1) (Costs of Acquisition) The invoice price of a machine is €50,000. Various other costs relating to the acquisition and installation of the machine, including transportation, electrical wiring, special base, and so on, amount to €7,500. The machine has an estimated life of 10 years, with no residual value at the end of that period.

The owner of the business suggests that the incidental costs of €7,500 be charged to expense immediately for the following reasons.

- If the machine should be sold, these costs cannot be recovered in the sales price.
- The inclusion of the €7,500 in the machinery account on the books will not necessarily result in a closer approximation of the market price of this asset over the years because of the possibility of changing demand and supply levels.
- Charging the €7,500 to expense immediately will reduce income taxes.

Instructions

Discuss each of the points raised by the owner of the business.

CA10.7 (LO 1) Ethics (Cost of Land vs. Building—Ethics) Tones Company purchased a warehouse in a downtown district where land values are rapidly increasing. Gerald Carter, controller, and Wilma Ankara, financial vice president, are trying to allocate the cost of the purchase between the land and the building. Noting that depreciation can be taken only on the building, Carter favors placing a very high proportion of the cost on the warehouse itself, thus reducing taxable income and income taxes. Ankara, his supervisor, argues that the allocation should recognize the increasing value of the land, regardless of the depreciation potential of the warehouse. Besides, she says, net income is negatively impacted by additional depreciation and will cause the company's share price to go down.

Instructions

Answer the following questions.

- a. What stakeholder interests are in conflict?
- b. What ethical issues does Carter face?
- c. How should these costs be allocated?

Using Your Judgment

Financial Statement Analysis Case

Unilever Group

Unilever Group (GBR and NLD) is a leading international company in the nutrition, hygiene, and personal-care product lines. Information related to Unilever's property, plant, and equipment in its 2018 annual report is shown in the notes to the financial statements as follows.

10. Property, Plant and Equipment

Property, plant and equipment is measured at cost including eligible borrowing costs less depreciation and accumulated impairment losses. Depreciation is provided on a straight-line basis over the expected average useful lives of the assets. Residual values are reviewed at least annually. Estimated useful lives by major class of assets are as follows:

<ul style="list-style-type: none">• Freehold buildings [no depreciation on freehold land]	40 years

• Leasehold land and buildings	40 years [or life of lease if less]
• Plant and equipment	2–20 years

Property, plant and equipment is subject to review for impairment if triggering events or circumstances indicate that this is necessary. If an indication of impairment exists, the asset or cash generating unit recoverable amount is estimated and any impairment loss is charged to the income statement as it arises.

Movements during 2018	€ million Land and buildings	€ million Plant and equipment	€ million Total
Cost			
1 January 2018	4,462	14,936	19,398
Hyperinflation restatement to 1 January 2018	37	182	219
Acquisitions of group companies	11	31	42
Additions	249	1,091	1,340

Net increase/(decrease) in cash and cash equivalents	(151)
Cash and cash equivalents at the beginning of the year	3,169

Instructions

- What was the carrying value of land, buildings, and equipment at the end of 2018?
- Does Unilever use a conservative or liberal method to depreciate its property, plant, and equipment?
- What were the actual interest expense and preference dividends paid by the company in 2018?
- What is Unilever's free cash flow? From the information provided, comment on Unilever's financial flexibility.

Accounting, Analysis, and Principles

Durler Company purchased equipment on January 2, 2018, for \$112,000. The equipment had an estimated useful life of 5 years, with an estimated residual value

of \$12,000. Durler uses straight-line depreciation on all assets. On January 2, 2022, Durler exchanged this equipment, plus \$12,000 in cash, for newer equipment. The old equipment has a fair value of \$50,000.

Accounting

Prepare the journal entry to record the exchange on the books of Durler Company. Assume that the exchange has commercial substance.

Analysis

How will this exchange affect comparisons of the return on assets ratio for Durler in the year of the exchange compared to prior years?

Principles

How does the concept of commercial substance affect the accounting and analysis of this exchange?

Research Case

Your client is in the planning phase for a major plant expansion, which will involve the construction of a new warehouse. The assistant controller does not believe that interest cost can be included in the cost of the warehouse because it is a financing expense. Others on the planning team believe that some interest cost can be included in the cost of the warehouse, but no one could identify the specific authoritative guidance for this issue. Your supervisor asks you to research this issue.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Is it permissible to capitalize interest (borrowing costs) into the cost of assets? Provide authoritative support for your answer.
- b. What are the objectives for capitalizing borrowing costs?
- c. Discuss which assets qualify for capitalization.
- d. Is there a limit to the amount of interest that may be capitalized in a period?
- e. If capitalization of borrowing costs is allowed, what disclosures are required?

Notes

1 Materiality considerations are important in considering items to capitalize.

Assume, for example, that Broom Ltd. has spare parts on hand to service any breakdowns in its equipment. Unless the spare parts either separately or in combination are material in amount, expenditures related to spare parts are expensed as incurred even though they provide future benefit.

2 Companies also recognize estimates of dismantling, removing, and site restoration if the company has an obligation that it incurs on acquisition of the asset. For example, **BP** (GBR) indicates that liabilities for decommissioning costs are recognized when the group has an obligation to dismantle or remove a

facility or an item of plant and restore the site on which it is located. A corresponding item of property, plant, and equipment of an amount equivalent to the provision is also created. We discuss the recognition and measurement of these assets and related obligations in [Chapter 13](#).

- 3 Borrowing costs include interest and other costs incurred in connection with borrowing funds. It also includes foreign currency exchange gains and losses related to borrowing in other currencies. [5]
- 4 Also included for borrowing cost capitalization are intangible assets and bearer plants.
- 5 The valuation approaches that should be used are the market, income, or cost approach, or a combination of these approaches. The *market approach* uses observable prices and other relevant information generated by market transactions involving comparable assets. The *income approach* uses valuation techniques to convert future amounts (for example, cash flows or earnings) to a single present value amount (discounted). The *cost approach* is based on the amount that currently would be required to replace the service capacity of an asset (often referred to as current replacement cost).
- 6 Non-monetary assets are items whose price in terms of the monetary unit may change over time. Monetary assets—cash and short- or long-term accounts and notes receivable—are fixed in terms of units of currency by contract or otherwise.
- 7 The determination of the commercial substance of a transaction requires significant judgment. In determining whether future cash flows change, it is necessary to do one of two things: (1) Determine whether the risk, timing, and amount of cash flows arising for the asset received differ from the cash flows associated with the outbound asset; or (2) evaluate whether cash flows are affected with the exchange versus without the exchange. Also, note that if companies cannot determine fair values of the assets exchanged, they should use the carrying value of the asset given up in accounting for the exchange.
- 8 Recognize that for Jerrod (the dealer), the asset given up in the exchange is considered inventory. As a result, Jerrod records a sale and related cost of goods sold. The used machine received by Jerrod is recorded at fair value.
- 9 Recognize that there is a distinction between government grants and government assistance. Government assistance can take many forms, such as providing advice related to technical legal or product issues or being a supplier for the company's goods or services. Government grants are a special part of government assistance where financial resources are provided to the company. In rare situations, a company may receive a donation (gift). The accounting for grants and donations is essentially the same. IFRS does provide an option of

recording property, plant, and equipment at zero cost although this practice is rarely followed.

- [10](#) Using either approach, a question arises about when the amount should be recognized. *IAS 20* says the amount should be recognized when you have “reasonable assurance” that the condition will be satisfied.
- [11](#) Both approaches have deficiencies. Reducing the cost of the asset for the grant means that the lab equipment’s cost on the statement of financial position may be considered understated. Recording the deferred grant revenue on the credit side of the statement of financial position is problematic as many believe it is not a liability nor is it equity.
- [12](#) *IAS 37* permits the recognition of the gain at the point in time when the amount is “virtually certain.” If there is a signed agreement between the insurance company and the company before the cash is received, a receivable could be recognized.

CHAPTER 11

Depreciation, Impairments, and Depletion

LEARNING OBJECTIVES

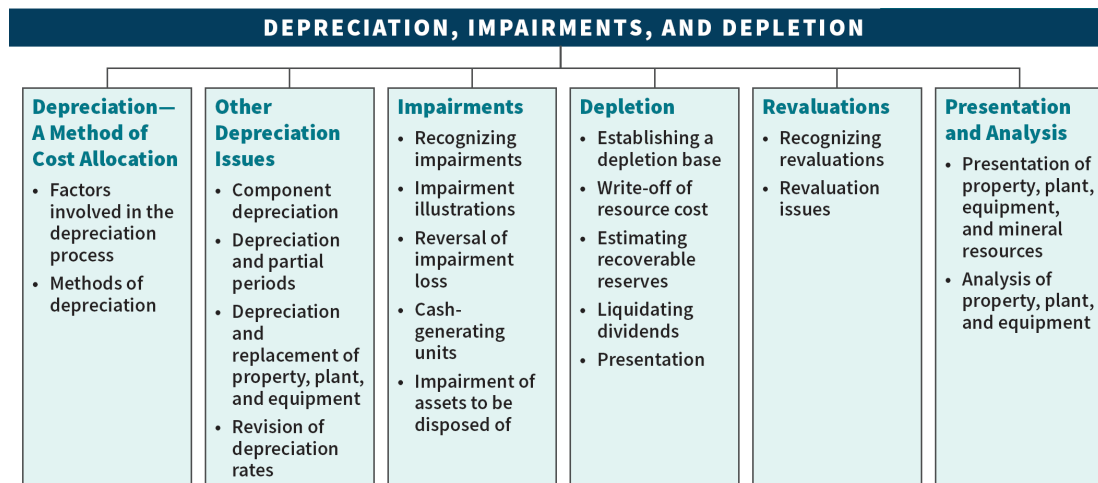

After studying this chapter, you should be able to:

1. Describe depreciation concepts and methods of depreciation.
2. Identify other depreciation issues.
3. Explain the accounting issues related to asset impairment.
4. Discuss the accounting procedures for depletion of mineral resources.
5. Apply the accounting for revaluations.
6. Demonstrate how to report and analyze property, plant, equipment, and mineral resources.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

PREVIEW OF CHAPTER 11

As noted in the following opening story, many companies, such as **LG Electronics** (KOR), are affected by impairment rules. These rules recognize that when economic conditions deteriorate, companies may need to write off an asset's cost to indicate the decline in its usefulness. The purpose of this chapter is to examine the depreciation process and the methods of writing off the cost of property, plant, equipment, and mineral resources. The content and organization of the chapter are as follows.

Here Come the Write-Offs

Most people love it when a new technology comes along that makes their lives easier and more efficient. As a result, technology companies are in constant competition to come up with the latest, best consumer technology that will allow them to increase revenues and market share.

The downside of this competition is that companies often have invested substantially in creating the infrastructure to produce the latest and best technology. However, when a new technology does emerge, the companies often find themselves with substantial remaining investments in the property, plant, and equipment associated with the previous generation of technology.

This kind of rapid, and often unexpected, change can give rise to impairment losses. An impairment loss occurs when the carrying value of the property, plant, and equipment is greater than the current value of the same assets. We discuss in this chapter how the current value is determined, but for now we will simply highlight what happens when this occurs.

For example, the InnoTek Division at **LG Electronics** (KOR) had recently invested substantially in the design and manufacturing of products related to pet safety, including in-ground pet fencing. During the year, the company had experienced decreasing demand for its products related to competition and a general slowing in the economy. As a result, the company recorded a ₩5,054 million impairment loss allocated to machinery and tools.

Sony Corporation (JPN) found itself in a similar situation during the same period. The company recorded a ¥19.2 billion impairment loss related to its Semiconductor segment for the property, plant, and equipment used to produce high-function camera modules that had been sold to mobile phone manufacturers that were being discontinued.

Lastly, consider **Husqvarna Group** (SWE), which manufactures outdoor power products. In the most recent period, the company reported kr444 million in impairment losses for its property, plant, and equipment due to obsolescence in some of its manufacturing facilities. This amount was almost half as large as its depreciation expense of kr946 million for the same period.

Here are some of the questions that will need to be addressed regarding possible impairments.

1. How often should a company test for impairment?
2. What are key impairment indicators?
3. What types of disclosures are necessary for impairments?
4. What is the process that companies use to match their cash flows to the asset that is potentially impaired?

Assessing whether a company has impaired assets is difficult. On the technical side, assumptions on cash flows must be reasonable, supportable, and cross-checked to ensure the final answer reconciles to external market data. And in discounting future cash flows, companies must determine the appropriate discount rate.

In addition to the technical accounting issues, the environment can change quickly. Reduced spending by consumers, lack of confidence in global economic decisions, and higher volatility in both share and commodity markets are factors to consider. Nevertheless, for investors and creditors to have assurance that the amounts reported on the statement of financial position for property, plant, and equipment are relevant and representationally faithful, appropriate impairment charges must be reported on a timely basis.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Depreciation—A Method of Cost Allocation

LEARNING OBJECTIVE 1

Describe depreciation concepts and methods of depreciation.

Most individuals at one time or another purchase and trade in an automobile. The automobile dealer and the buyer typically discuss what the trade-in value of the old car is. Also, they may talk about what the trade-in value of the new car will be in several years. In both cases, a decline in value is considered to be an example of depreciation.

To accountants, however, depreciation is not a matter of valuation. Rather, **depreciation is the systematic allocation of the depreciable amount of an asset to expense over its useful life.** [1] (See the [Authoritative Literature References](#) section near the end of the chapter.) For example, a company like **Enhance Electronics Co., Ltd.** (TWN) does not depreciate assets on the basis of a decline in their fair value. Instead, it depreciates through systematic charges to expense.

This approach is employed because the value of the asset may fluctuate between the time the asset is purchased and the time it is sold or junked. Attempts to measure these interim value changes have not been well received because values are difficult to measure objectively. Therefore, Enhance Electronics charges the asset's cost to depreciation expense over its estimated life. It makes no attempt to value the asset at fair value between acquisition and disposition. Companies use the cost allocation approach because it matches costs with revenues and because fluctuations in fair value are uncertain and difficult to measure.

When companies write off the cost of long-lived assets over a number of periods, they typically use the term **depreciation**. They use the term **depletion** to describe the reduction in the cost of mineral resources (such as oil, gas, and coal) over a period of time. The expiration of intangible assets, such as patents or copyrights, is called **amortization** (discussed in [Chapter 12](#)).

Factors Involved in the Depreciation Process

Before establishing a pattern of charges to revenue, a company must answer three basic questions:

1. What depreciable base is to be used for the asset?
2. What is the asset's useful life?
3. What method of cost apportionment is best for this asset?

The answers to these questions involve combining several estimates into one single figure. Note the calculations assume perfect knowledge of the future, which is never attainable.

Depreciable Base for the Asset

The base established for depreciation is a function of two factors: the original cost and residual value. We discussed historical cost in [Chapter 10](#). **Residual value** (often referred to as **salvage value**) is the estimated amount that a company will receive when it sells the asset or removes it from service.¹ It is the amount to which a company writes down or depreciates the asset during its useful life. As [Illustration 11.1](#) shows, if an asset has a cost of €10,000 and a residual value of €1,000, its **depreciable base** is €9,000.

Original cost	€10,000
Less: Residual value	1,000
Depreciable base	€ 9,000

ILLUSTRATION 11.1 Computation of Depreciable Base

From a practical standpoint, companies often assign a zero residual value. Some long-lived assets, however, have substantial residual values.

Estimation of Service Lives

The service life of an asset often differs from its physical life. A piece of machinery may be physically capable of producing a given product for many years beyond its service life. But a company may not use the equipment for all that time because the cost of manufacturing the product in later years may be too high.

Companies retire assets for two reasons: **physical factors** (such as casualty or expiration of physical life) and **economic factors** (obsolescence). Physical factors are the wear and tear, decay, and casualties that make it difficult for the asset to perform indefinitely. These physical factors set the outside limit for the service life of an asset.

We can classify the economic or functional factors into three categories:

1. **Inadequacy** results when an asset ceases to be useful to a company because the demands of the firm have changed. An example would be the need for a larger building to handle increased production. Although the old building may still be sound, it may have become inadequate for the company's purpose.

2. **Supersession** is the replacement of one asset with another more efficient and economical asset. Examples would be the replacement of the mainframe computer with a PC network, or the replacement of the Boeing 767 airplane with the Boeing 787.
3. **Obsolescence** is the catchall for situations not involving inadequacy and supersession.

Because the distinction between these categories appears artificial, it is probably best to consider economic factors collectively instead of trying to make distinctions that are not clear-cut.

To illustrate the concepts of physical and economic factors, consider a new nuclear power plant. Which is more important in determining the useful life of a nuclear power plant—physical factors or economic factors? The limiting factors seem to be (1) ecological considerations, (2) competition from other power sources, and (3) safety concerns. Physical life does not appear to be the primary factor affecting useful life. Although the plant's physical life may be far from over, the plant may become obsolete in 10 years.

For a house, physical factors undoubtedly are more important than the economic or functional factors relative to useful life. Whenever the physical nature of the asset primarily determines useful life, maintenance plays an extremely vital role. The better the maintenance, the longer the life of the asset.²

Most companies estimate the useful life of an asset based on their past experiences with the same or similar assets. Others use sophisticated statistical methods to establish a useful life for accounting purposes. And, in some cases, companies select arbitrary service lives. In highly industrial economies, where research and innovation are so prominent, technological factors have as much effect on service lives of tangible plant assets as do physical factors, if not more.

Methods of Depreciation

The third factor involved in the depreciation process is the **method** of cost apportionment. The profession requires that the depreciation method employed be “systematic and rational.” To be systematic and rational, the depreciation method should reflect the pattern in which the asset's future economic benefits are expected to be consumed by the company (see [Underlying Concepts](#)). [3] Companies may use a number of depreciation methods, as follows.

Underlying Concepts

Depreciation attempts to allocate the cost of an asset to the periods that benefit from the use of that asset.

1. Activity method (units of use or production).
2. Straight-line method.
3. Diminishing (accelerated)-charge methods:

- a. Sum-of-the-years'-digits.
- b. Declining-balance method.³

To illustrate these depreciation methods, assume that Stanley Coal Mines recently purchased an additional crane for hoisting purposes. [Illustration 11.2](#) contains the pertinent data concerning this purchase.

Cost of crane	\$500,000
Estimated useful life	5 years
Estimated residual value	\$ 50,000
Productive life in hours	30,000 hours

ILLUSTRATION 11.2 Data Used to Illustrate Depreciation Methods

Activity Method

The **activity method** (also called the **variable-charge** or **units-of-production approach**) assumes that depreciation is **a function of use or productivity, instead of the passage of time**. A company considers the life of the asset in terms of either the **output** it provides (units it produces) or an **input** measure such as the number of hours it works. Conceptually, the proper cost association relies on output instead of hours used, but often the output is not easily measurable. In such cases, an input measure such as machine hours is a more appropriate method of measuring the dollar amount of depreciation charges for a given accounting period.

The crane poses no particular depreciation problem. Stanley can measure the usage (hours) relatively easily. If Stanley uses the crane for 4,000 hours the first year, the depreciation charge is as shown in [Illustration 11.3](#).

$\frac{(\text{Cost} - \text{Residual Value}) \times \text{Hours This Year}}{\text{Total Estimated Hours}} = \text{Depreciation Charge}$
$\frac{(\$500,000 - \$50,000) \times 4,000}{30,000} = \$60,000$

ILLUSTRATION 11.3 Depreciation Calculation, Activity Method—Crane Example

The major limitation of this method is that it is inappropriate in situations in which depreciation is a function of time instead of activity. For example, a building steadily deteriorates due to the elements (time) regardless of its use. In addition, where economic or functional factors affect an asset, independent of its use, the activity method loses much of its significance. For example, if a company is expanding rapidly, a particular building may soon become obsolete for its intended purposes. In both cases, activity is irrelevant. Another problem in using an activity method is the difficulty of estimating units of output or service hours received.

In cases where loss of services results from activity or productivity, the activity method matches costs and revenues the best. Companies that prefer low depreciation during

periods of low productivity, and high depreciation during high productivity, either adopt or switch to an activity method. In this way, a plant running at 40 percent of capacity generates 60 percent lower depreciation charges.

Straight-Line Method

The **straight-line method** considers depreciation as a **function of time rather than as a function of usage**. Companies widely use this method because of its simplicity. The straight-line procedure is often the most conceptually appropriate, too (see **Underlying Concepts**). When creeping obsolescence is the primary reason for a limited service life, the decline in usefulness may be constant from period to period. Stanley computes the depreciation charge for the crane as shown in **Illustration 11.4**.

Underlying Concepts

If benefits flow on a “straight-line” basis, then justification exists for matching the cost of the asset on a straight-line basis with these benefits.

$\frac{\text{Cost} - \text{Residual Value}}{\text{Estimated Service Life}} = \text{Depreciation Charge}$
$\frac{\$500,000 - \$50,000}{5} = \$90,000$

ILLUSTRATION 11.4 Depreciation Calculation, Straight-Line Method—Crane Example

The major objection to the straight-line method is that it rests on two tenuous assumptions: (1) the asset’s economic usefulness is the same each year, and (2) the maintenance and repair expense is essentially the same each period.

One additional problem that occurs in using the straight-line method—as well as some others—is that distortions in the rate of return analysis (income ÷ assets) develop. **Illustration 11.5** indicates how the rate of return increases, given constant revenue flows, because the asset’s book value decreases.

Year	Depreciation Expense	Undepreciated Asset Balance (Book Value)	Income (After Depreciation Expense)	Rate of Return (Income ÷ Assets)
0		\$500,000		
1	\$90,000	410,000	\$100,000	24.4%
2	90,000	320,000	100,000	31.2%
3	90,000	230,000	100,000	43.5%
4	90,000	140,000	100,000	71.4%
5	90,000	50,000	100,000	200.0%

ILLUSTRATION 11.5 Depreciation and Rate of Return Analysis—Crane Example

Diminishing-Charge Methods

The **diminishing-charge methods** provide for a higher depreciation cost in the earlier years and lower charges in later periods. Because these methods allow for higher early-year charges than in the straight-line method, they are often called **accelerated depreciation methods**.

What is the main justification for this approach? The rationale is that companies should charge more depreciation in earlier years because the asset is most productive in its earlier years (see **Underlying Concepts**). Furthermore, the accelerated methods provide a constant cost because the depreciation charge is lower in the later periods, at the time when the maintenance and repair costs are often higher. Generally, companies use one of two diminishing-charge methods: the sum-of-the-years'-digits method or the declining-balance method.

Underlying Concepts

The expense recognition concept often does not justify a constant charge to income. If the benefits from the asset decline as the asset ages, then a diminishing charge to income better matches cost to benefits.

Sum-of-the-Years'-Digits

The **sum-of-the-years'-digits method** results in a decreasing depreciation charge based on a decreasing fraction of depreciable cost (original cost less residual value). Each fraction uses the sum of the years as a denominator ($5 + 4 + 3 + 2 + 1 = 15$). The numerator is the number of years of estimated life remaining as of the beginning of the year. In this method, the numerator decreases year by year, and the denominator remains constant ($\frac{5}{15}$, $\frac{4}{15}$, $\frac{3}{15}$, $\frac{2}{15}$, and $\frac{1}{15}$). At the end of the asset's useful life, the balance remaining should equal the residual value. **Illustration 11.6** shows this method of computation.⁴

Year	Depreciable Base	Remaining Life in Years	Depreciation Fraction	Depreciation Expense	Book Value, End of Year
1	\$450,000	5	$\frac{5}{15}$	\$150,000	\$350,000
2	450,000	4	$\frac{4}{15}$	120,000	230,000
3	450,000	3	$\frac{3}{15}$	90,000	140,000
4	450,000	2	$\frac{2}{15}$	60,000	80,000
5	450,000	1	$\frac{1}{15}$	30,000	50,000 ^a
		<u>15</u>	<u>$\frac{15}{15}$</u>	<u>\$450,000</u>	

^aResidual value.

ILLUSTRATION 11.6 Sum-of-the-Years'-Digits Depreciation Schedule—Crane Example

Declining-Balance Method

The **declining-balance method** (often referred to as the **reducing-balance method**) utilizes a depreciation rate (expressed as a percentage) that is some multiple of the straight-line rate. For example, the double-declining rate for a 10-year asset is 20 percent (double the straight-line rate, which is $\frac{1}{10}$, or 10 percent). Companies apply the constant rate to the declining book value each year.

Unlike other methods, the declining-balance method **does not deduct the residual value** in computing the depreciable base. The declining-balance rate is multiplied by the book value of the asset at the beginning of each period. Since the depreciation charge reduces the book value of the asset each period, applying the constant-declining-balance rate to a successively lower book value results in lower depreciation charges each year. This process continues until the book value of the asset equals its estimated residual value. At that time, the company discontinues depreciation.

Companies use various multiples in practice. For example, the **double-declining-balance method** depreciates assets at twice (200 percent) the straight-line rate. **Illustration 11.7** shows Stanley's depreciation charges if using the double-declining approach.

Year	Book Value of Asset First of Year	Rate on Declining Balance ^a	Depreciation Expense	Balance Accumulated Depreciation	Book Value, End of Year
1	\$500,000	40%	\$200,000	\$200,000	\$300,000
2	300,000	40%	120,000	320,000	180,000
3	180,000	40%	72,000	392,000	108,000
4	108,000	40%	43,200	435,200	64,800
5	64,800	40%	14,800 ^b	450,000	50,000

^aBased on twice the straight-line rate of 20% ($\$90,000 \div \$450,000 = .20$; $.20 \times 2 = .40$, or 40%).

^bLimited to \$14,800 because book value should not be less than residual value.

ILLUSTRATION 11.7 Double-Declining Depreciation Schedule—Crane Example

Companies often switch from the declining-balance method to the straight-line method near the end of the asset's useful life to ensure that they depreciate the asset only to its residual value.⁵

Other Depreciation Issues

LEARNING OBJECTIVE 2

Identify other depreciation issues.

Component Depreciation

As indicated in [Chapter 10](#), companies are required to use **component depreciation**. IFRS requires that each part of an item of property, plant, and equipment that is significant to the total cost of the asset must be depreciated separately. Companies therefore have to exercise judgment to determine the proper allocations to the components. As an example, when a company like **Nokia** (FIN) purchases a building, it must determine how the various building components (e.g., the foundation, structure, roof, heating and cooling system, and elevators) should be segregated and depreciated.

To illustrate the accounting for component depreciation, assume that EuroAsia Airlines purchases an airplane for €100,000,000 on January 1, 2023. The airplane has a useful life of 20 years and a residual value of €0. EuroAsia uses the straight-line method of depreciation for all its airplanes. EuroAsia identifies the following components, amounts, and useful lives, as shown in [Illustration 11.8](#).

Components	Component Amount	Component Useful Life
Airframe	€60,000,000	20 years
Engine components	32,000,000	8 years
Other components	8,000,000	5 years

ILLUSTRATION 11.8 Airplane Components

[Illustration 11.9](#) shows the computation of depreciation expense for EuroAsia for 2023.

Components	Component Amount	÷ Useful Life	= Component Depreciation
Airframe	€ 60,000,000	20	€3,000,000
Engine components	32,000,000	8	4,000,000
Other components	8,000,000	5	1,600,000
Total	€100,000,000		€8,600,000

ILLUSTRATION 11.9 Computation of Component Depreciation

As indicated, EuroAsia records depreciation expense of €8,600,000 in 2023 as follows.

Depreciation Expense	8,600,000	
Accumulated Depreciation—Equipment		8,600,000

On the statement of financial position at the end of 2023, EuroAsia reports the airplane as a single amount. The presentation is shown in [Illustration 11.10](#).

Non-current assets	
Airplane	€100,000,000
Less: Accumulated depreciation—airplane	8,600,000
	€ 91,400,000

ILLUSTRATION 11.10 Presentation of Carrying Amount of Airplane

In many situations, a company may not have a good understanding of the cost of the individual components purchased. In that case, the cost of individual components should be estimated based on reference to current market prices (if available), discussion with experts in valuation, or use of other reasonable approaches.

Depreciation and Partial Periods

Companies seldom purchase plant assets on the first day of a fiscal period or dispose of them on the last day of a fiscal period. A practical question is: How much depreciation should a company charge for the partial periods involved?

In computing depreciation expense for partial periods, companies must determine the depreciation expense for the full year and then prorate this depreciation expense between the two periods involved. This process should continue throughout the useful life of the asset.

Assume, for example, that Steeltex Ltd. purchases an automated drill machine with a five-year life for £45,000 (no residual value) on June 10, 2022. The company's fiscal year ends December 31. Steeltex therefore charges depreciation for only six and two-third months during that year. The total depreciation for a full year (assuming straight-line depreciation) is £9,000 (£45,000 ÷ 5). The depreciation for the first, partial year is therefore:

$$\frac{6\frac{2}{3}}{12} \times £9,000 = £5,000$$

The partial-period calculation is relatively simple when Steeltex uses straight-line depreciation. But how is partial-period depreciation handled when it uses an accelerated method such as sum-of-the-years'-digits or double-declining-balance? As an illustration, assume that Steeltex purchased another machine for £10,000 on July 1, 2022, with an estimated useful life of five years and no residual value. [Illustration 11.11](#) shows the depreciation figures for 2022, 2023, and 2024.

	<u>Sum-of-the-Years'-Digits</u>	<u>Double-Declining-Balance</u>
1st full year	$(\frac{5}{15} \times \text{£}10,000) = \text{£}3,333.33$	$(.40 \times \text{£}10,000) = \text{£}4,000$
2nd full year	$(\frac{4}{15} \times 10,000) = 2,666.67$	$(.40 \times 6,000) = 2,400$
3rd full year	$(\frac{3}{15} \times 10,000) = 2,000.00$	$(.40 \times 3,600) = 1,440$
Depreciation from July 1, 2022, to December 31, 2022		
	$\frac{6}{12} \times \text{£}3,333.33 = \underline{\underline{\text{£}1,666.67}}$	$\frac{6}{12} \times \text{£}4,000 = \underline{\underline{\text{£}2,000}}$
Depreciation for 2023		
	$\frac{6}{12} \times \text{£}3,333.33 = \text{£}1,666.67$	$\frac{6}{12} \times \text{£}4,000 = \text{£}2,000$
	$\frac{6}{12} \times 2,666.67 = \underline{1,333.33}$	$\frac{6}{12} \times 2,400 = \underline{1,200}$
	<u><u>£3,000.00</u></u>	<u><u>£3,200</u></u>
		or $(\text{£}10,000 - \text{£}2,000) \times .40 = \underline{\underline{\text{£}3,200}}$
Depreciation for 2024		
	$\frac{6}{12} \times \text{£}2,666.67 = \text{£}1,333.33$	$\frac{6}{12} \times \text{£}2,400 = \text{£}1,200$
	$\frac{6}{12} \times 2,000.00 = \underline{1,000.00}$	$\frac{6}{12} \times 1,440 = \underline{720}$
	<u><u>£2,333.33</u></u>	<u><u>£1,920</u></u>
		or $(\text{£}10,000 - \text{£}5,200) \times 0.40 = \underline{\underline{\text{£}1,920}}$

ILLUSTRATION 11.11 Calculation of Partial-Period Depreciation, Two Methods

Sometimes a company like Steeltex modifies the process of allocating costs to a partial period to handle acquisitions and disposals of plant assets more simply. One variation is to take no depreciation in the year of acquisition and a full year's depreciation in the year of disposal. Other variations charge one-half year's depreciation both in the year of acquisition and in the year of disposal (referred to as the **half-year convention**), or charge a full year in the year of acquisition and none in the year of disposal.

In fact, Steeltex may adopt any one of these several fractional-year policies in allocating cost to the first and last years of an asset's life so long as it applies the method consistently. However, **unless otherwise stipulated, companies normally compute depreciation on the basis of the nearest full month.**

Illustration 11.12 shows depreciation allocated under five different fractional-year policies using the straight-line method on the £45,000 automated drill machine purchased by Steeltex on June 10, 2022, discussed earlier.

Machine Cost = £45,000	Depreciation Allocated per Period Over 5-Year Life*					
Fractional-Year Policy	2022	2023	2024	2025	2026	2027
1. Nearest fraction of a year.	£5,000 ^a	£9,000	£9,000	£9,000	£9,000	£4,000 ^b
2. Nearest full month.	5,250 ^c	9,000	9,000	9,000	9,000	3,750 ^d
3. Half year in period of acquisition and disposal.	4,500	9,000	9,000	9,000	9,000	4,500
4. Full year in period of acquisition, none in period of disposal.	9,000	9,000	9,000	9,000	9,000	–0–
5. None in period of acquisition, full year in period of disposal.	–0–	9,000	9,000	9,000	9,000	9,000

^a $6.667/12 \times £9,000$
^b $5.333/12 \times £9,000$
^c $7/12 \times £9,000$
^d $5/12 \times £9,000$
 *Rounded to nearest pound.

ILLUSTRATION 11.12 Fractional-Year Depreciation Policies

Depreciation and Replacement of Property, Plant, and Equipment

A common misconception about depreciation is that it provides funds for the replacement of property, plant, and equipment. Depreciation is like other expenses in that it reduces net income. It differs, though, in that **it does not involve a current cash outflow**.

To illustrate why depreciation does not provide funds for replacement of plant assets, assume that a business starts operating with plant assets of \$500,000 that have a useful life of five years. The company's statement of financial position at the beginning of the period is:

Plant assets \$500,000	Equity \$500,000
------------------------	------------------

If we assume that the company earns no revenue over the five years, the income statements are:

	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	\$ –0–	\$ –0–	\$ –0–	\$ –0–	\$ –0–
Depreciation	(100,000)	(100,000)	(100,000)	(100,000)	(100,000)
Loss	\$(100,000)	\$(100,000)	\$(100,000)	\$(100,000)	\$(100,000)

Total depreciation of the plant assets over the five years is \$500,000. The statement of financial position at the end of the five years therefore is:

Plant asset \$ –0–	Equity \$ –0–
--------------------	---------------

This extreme example illustrates that depreciation **in no way** provides funds for the replacement of assets. **The funds for the replacement of the assets come from the revenues** (generated through use of the asset). Without the revenues, no income materializes and no cash inflow results.

Revision of Depreciation Rates

When purchasing a plant asset, companies carefully determine depreciation rates based on past experience with similar assets and other pertinent information. However, the provisions for depreciation are only estimates. As a result, IFRS requires that companies review the estimates for residual value and service life annually and revise them if needed. [4] Unexpected physical deterioration or unforeseen obsolescence may decrease the estimated useful life of the asset. Improved maintenance procedures, revision of operating procedures, or similar developments may prolong the life of the asset beyond the expected period.⁶

For example, assume that **Nestlé** (CHE) purchased machinery with an original cost of CHF90,000. It estimates a 20-year life with no residual value. However, during year 11, Nestlé estimates that it will use the machine for an additional 20 years. Its total life, therefore, will be 30 years instead of 20. Depreciation has been recorded at the rate of $\frac{1}{20}$ of CHF90,000, or CHF4,500 per year by the straight-line method. On the basis of a 30-year life, Nestlé should have recorded depreciation as $\frac{1}{30}$ of CHF90,000, or CHF3,000 per year. It has therefore overstated depreciation, and understated net income, by CHF1,500 for each of the past 10 years, or a total amount of CHF15,000. **Illustration 11.13** shows this computation.

	Per Year	For 10 Years
Depreciation charged per books ($\frac{1}{20} \times \text{CHF}90,000$)	CHF4,500	CHF45,000
Depreciation based on a 30-year life ($\frac{1}{30} \times \text{CHF}90,000$)	(3,000)	(30,000)
Excess depreciation charged	CHF1,500	CHF15,000

ILLUSTRATION 11.13 Computation of Accumulated Difference Due to Revisions

Nestlé should report this change in estimate in the current and prospective periods. It should not make any changes in previously reported results. And it does not adjust opening balances nor attempt to “catch up” for prior periods. The reason? Changes in estimates are a continual and inherent part of any estimation process. Continual restatement of prior periods would occur for revisions of estimates unless handled prospectively. Therefore, no entry is made at the time the change in estimate occurs. Charges for depreciation in subsequent periods (assuming use of the straight-line method) are determined by **dividing the remaining book value less any residual value by the remaining estimated life** (see **Illustration 11.14**).

Machinery	CHF90,000
Less: Accumulated depreciation	45,000
Book value of machinery at end of 10th year	CHF45,000
Depreciation (future periods) = CHF45,000 book value ÷ 20 years remaining life = CHF2,250	

ILLUSTRATION 11.14 Computing Depreciation after Revision of Estimated Life

The entry to record depreciation for each of the remaining 20 years is:

Depreciation Expense	2,250	
Accumulated Depreciation—Machinery		2,250

What Do the Numbers Mean?

Depreciation Choices

The amount of depreciation expense recorded depends on both the depreciation method used and estimates of service lives and residual values of the assets. Differences in these choices and estimates can significantly impact a company’s reported results and can make it difficult to compare the depreciation numbers of different companies.

For example, **Veolia Environment** (FRA) provided information regarding useful lives of its assets in the note to its financial statements, as shown to the right.

With the information provided, an analyst determines the impact of these management choices and judgments on the amount of depreciation expense for classes of property, plant, and equipment.

7.3 Property, Plant, and Equipment

Property, plant, and equipment are recorded at historical acquisition cost to the Group, less accumulated depreciation and any accumulated impairment losses.

Property, plant, and equipment are recorded by component, with each component depreciated over its useful life.

Useful lives are as follows:

	Range of Useful Lives in Number of Years*
Buildings	20 to 50
Technical systems	7 to 35
Vehicles	3 to 25
Other plant and equipment	3 to 12

*The range of useful lives is due to the diversity of property, plant, and equipment concerned.

Impairments

LEARNING OBJECTIVE 3

Explain the accounting issues related to asset impairment.

The general accounting standard of **lower-of-cost-or-net realizable value for inventories does not apply to property, plant, and equipment**. Even when property, plant, and equipment has suffered partial obsolescence, accountants have been reluctant to reduce the asset's carrying amount. Why? Because, unlike inventories, it is difficult to arrive at a fair value for property, plant, and equipment that is not somewhat subjective and arbitrary.

For example, **Falconbridge Ltd. Nickel Mines** (CAN) had to decide whether to write off all or a part of its property, plant, and equipment in a nickel-mining operation in the Dominican Republic. The project had been incurring losses because nickel prices were low and operating costs were high. Only if nickel prices increased by approximately 33 percent would the project be reasonably profitable. Whether a write-off was appropriate depended on the future price of nickel. Even if the company decided to write off the asset, how much should be written off?

Recognizing Impairments

As discussed in the opening story, rapid change is common in the electronics and computer industries. When these changes occur, companies in these industries may need to write off or write down their long-lived assets. These write-offs are referred to as **impairments**.

A long-lived tangible asset is impaired when a company is not able to recover the asset's carrying amount either through using it or by selling it. To determine whether an asset is impaired, **companies annually review the asset for indicators of impairments**—that is, a decline in the asset's cash-generating ability through use or sale. This review should consider internal sources (e.g., adverse changes in performance) and external sources (e.g., adverse changes in the business or regulatory environment) of information. **If impairment indicators are present, then an impairment test must be conducted.** This test compares the asset's recoverable amount with its carrying amount (see **Underlying Concepts**). If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded. [5]

Underlying Concepts

IFRS uses the terms carrying value, carrying amount, and book value interchangeably.

Recoverable amount is defined as the higher of fair value less costs to sell or value-in-use. **Fair value less costs to sell** means what the asset could be sold for after deducting costs of disposal. **Value-in-use** is the present value of net cash flows expected from the

future use and eventual sale of the asset at the end of its useful life. [Illustration 11.15](#) highlights the nature of the impairment test.

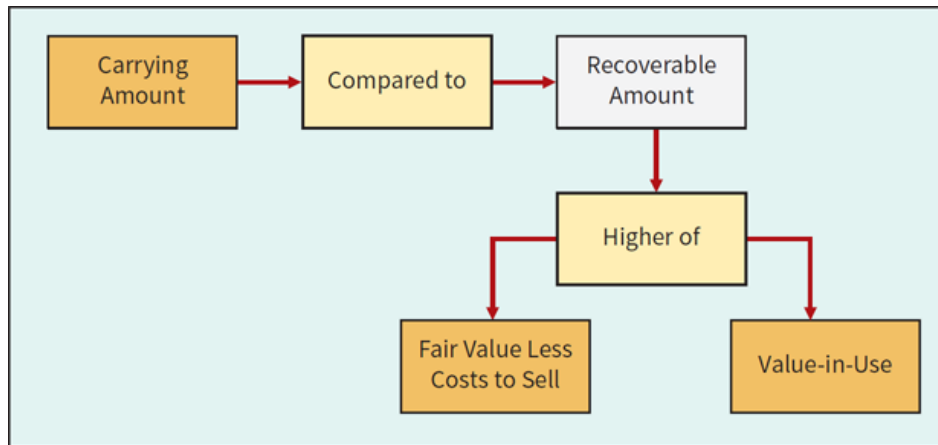

ILLUSTRATION 11.15 Impairment Test

If either the fair value less costs to sell or value-in-use is higher than the carrying amount, there is no impairment. If both the fair value less costs to sell and value-in-use are lower than the carrying amount, a loss on impairment occurs.

Example: No Impairment

Assume that Cruz SA performs an impairment test for its equipment. The carrying amount of Cruz’s equipment is €200,000, its fair value less costs to sell is €180,000, and its value-in-use is €205,000. In this case, the value-in-use of Cruz’s equipment is higher than its carrying amount of €200,000. As a result, there is no impairment.⁷

Example: Impairment

Assume the same information for Cruz SA above except that the value-in-use of Cruz’s equipment is €175,000 rather than €205,000. Cruz measures the impairment loss as the difference between the carrying amount of €200,000 and the higher of fair value less costs to sell (€180,000) or value-in-use (€175,000). Cruz therefore uses the fair value less cost of disposal to record an impairment loss of €20,000 (€200,000 – €180,000).

Cruz makes the following entry to record the impairment loss.

Loss on Impairment	20,000	
Accumulated Depreciation—Equipment		20,000

The Loss on Impairment is reported in the income statement in the “Other income and expense” section. The company then either credits Equipment or Accumulated Depreciation—Equipment to reduce the carrying amount of the equipment for the impairment. *For purposes of homework, credit Accumulated Depreciation when recording an impairment for a depreciable asset.*

Impairment Illustrations

Additional examples of impairment follow.

Case 1: At December 31, 2023, Hanoi Ltd. has equipment with a cost of VND26,000,000, and accumulated depreciation of VND12,000,000, after the current year's depreciation has been recorded. The equipment has a total useful life of four years with a residual value of VND2,000,000. The following information relates to this equipment.

1. The equipment's carrying amount at December 31, 2023, is VND14,000,000 (VND26,000,000 – VND12,000,000).
2. Hanoi uses straight-line depreciation. Hanoi's depreciation was VND6,000,000 [(VND26,000,000 – VND2,000,000) ÷ 4] for 2023 and has been recorded.
3. Hanoi has determined that the recoverable amount for this asset at December 31, 2023, is VND11,000,000.
4. The remaining useful life of the equipment after December 31, 2023, is two years. Hanoi records the impairment on its equipment at December 31, 2023, as follows.

Loss on Impairment (VND14,000,000 – VND11,000,000)	3,000,000	
Accumulated Depreciation—Equipment		3,000,000

Following the recognition of the impairment loss in 2023, the carrying amount of the equipment is now VND11,000,000 (VND14,000,000 – VND3,000,000). For 2024, Hanoi determines that the equipment's total useful life has not changed (thus, the equipment's remaining useful life is still two years). However, the estimated residual value of the equipment is now zero. Hanoi continues to use straight-line depreciation and makes the following journal entry to record depreciation for 2024.

Depreciation Expense (VND11,000,000 ÷ 2)	5,500,000	
Accumulated Depreciation—Equipment		5,500,000

Hanoi records depreciation in the periods following the impairment using the carrying amount of the asset adjusted for the impairment. Hanoi then evaluates whether the equipment was further impaired at the end of 2024. For example, the carrying amount of Hanoi's equipment at December 31, 2024, is VND5,500,000 (VND26,000,000 – VND12,000,000 – VND3,000,000 – VND5,500,000). If Hanoi determines that the recoverable amount at December 31, 2024, is lower than VND5,500,000, then an additional impairment loss is recorded.

Case 2

At the end of 2022, Verma Company tests a machine for impairment. The machine has a carrying amount of \$200,000. It has an estimated remaining useful life of five years. Because of the unique nature of the machine, there is little market-related information on which to base a recoverable amount based on fair value. As a result, Verma determines that the machine's recoverable amount (i.e., the higher of value-in-use and fair value less costs to sell) should be based on value-in-use.

To determine value-in-use, Verma develops an estimate of net future cash flows based on internal company cash budgets (and reflecting cash inflows from the machine and estimated costs necessary to maintain the machine in its current condition). [7] Verma

uses a discount rate of 8 percent, which should be a pretax rate that approximates Verma's cost of borrowing.⁸ Verma's analysis indicates that its future cash flows will be \$40,000 each year for five years, and it will receive a residual value of \$10,000 at the end of the five years. It is assumed that all cash flows occur at the end of the year. The computation of the value-in-use for Verma's machine is shown in [Illustration 11.16](#).

Present value of 5 annual payments of \$40,000 ($\$40,000 \times 3.99271$, Table 6.4)	\$159,708.40
Present value of residual value of \$10,000 ($\$10,000 \times .68058$, Table 6.1)	6,805.80
Value-in-use related to machine	\$166,514.20

ILLUSTRATION 11.16 Value-in-Use Computation

The computation of the impairment loss on the machine at the end of 2022 is shown in [Illustration 11.17](#).

Carrying amount of machine before impairment loss	\$200,000.00
Recoverable amount of machine	166,514.20
Loss on impairment	\$ 33,485.80

ILLUSTRATION 11.17 Impairment Loss Calculation Based on Value-in-Use

The company therefore records an impairment loss at December 31, 2022, as follows.

Loss on Impairment	33,485.80	
Accumulated Depreciation—Machinery		33,485.80

The carrying amount of the machine after recording the loss is \$166,514.20.

Reversal of Impairment Loss

After recording the impairment loss, the recoverable amount becomes the basis of the impaired asset. What happens if a review in a future year indicates that the asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed.

To illustrate, assume that Tan Group purchases equipment on January 1, 2022, for HK\$300,000, with a useful life of three years and no residual value. Its depreciation and related carrying amount over the three years is as follows.

Year	Depreciation Expense	Carrying Amount
2022	HK\$100,000 ($\text{HK\$}300,000 \div 3$)	HK\$200,000
2023	HK\$100,000 ($\text{HK\$}300,000 \div 3$)	HK\$100,000
2024	HK\$100,000 ($\text{HK\$}300,000 \div 3$)	0

At December 31, 2022, Tan determines it has an impairment loss of HK\$20,000 and therefore makes the following entry.

Loss on Impairment	20,000	

Accumulated Depreciation—Equipment	20,000
------------------------------------	--------

Tan’s depreciation expense and related carrying amount after the impairment is as indicated below.

Year	Depreciation Expense	Carrying Amount
2023	HK\$90,000 (HK\$180,000 ÷ 2)	HK\$90,000
2024	HK\$90,000 (HK\$180,000 ÷ 2)	0

At the end of 2023, Tan determines that the recoverable amount of the equipment is HK\$96,000, which is greater than its carrying amount of HK\$90,000. In this case, Tan reverses a portion of the previously recognized impairment loss with the following entry.

Accumulated Depreciation—Equipment	6,000	
Recovery of Impairment Loss		6,000

The recovery of the impairment loss is reported in the “Other income and expense” section of the income statement. The carrying amount of Tan’s equipment is now HK\$96,000 (HK\$90,000 + HK\$6,000) at December 31, 2023.

The general rule related to reversals of impairments is as follows. The amount of the recovery of the loss is limited to the carrying amount that would result if the impairment had not occurred. For example, the carrying amount of Tan’s equipment at the end of 2023 would be HK\$100,000, assuming no impairment. The HK\$6,000 recovery is therefore permitted because Tan’s carrying amount on the equipment is now only HK\$96,000. However, any recovery above HK\$10,000 is not permitted. The reason is that any recovery above HK\$10,000 results in Tan carrying the asset at a value above its historical cost.

Cash-Generating Units

In some cases, it may not be possible to assess a single asset for impairment because the single asset generates cash flows only in combination with other assets. In that case, companies should identify the smallest group of assets that can be identified that generates cash flows independently of the cash flows from other assets. Such a group is called a **cash-generating unit (CGU)**.

For example, Santos SpA is reviewing its plant assets for indicators of impairment. However, it is finding that identifying cash flows for individual assets is very cumbersome and inaccurate because the cash flows related to a group of assets are interdependent. This situation can arise if Santos has one operating unit (machining division) that manufactures products that are transferred to another Santos business unit (packing division), which then markets the products to end customers. Because the cash flows to the assets in the machining division are dependent on the cash flows in the packing division, Santos should evaluate both divisions together as a cash-generating unit in its impairment assessments.

Impairment of Assets to Be Disposed Of

What happens if a company intends to dispose of the impaired asset, instead of holding it for use? Recently, **Kroger** (USA) recorded an impairment loss of \$54 million on property, plant, and equipment it no longer needed due to store closures. In this case, Kroger reports the impaired asset at the **lower-of-cost-or-net realizable value** (fair value less costs to sell). Because Kroger intends to dispose of the assets in a short period of time, it uses net realizable value in order to provide a better measure of the net cash flows that it will receive from these assets.

Kroger does not depreciate or amortize assets held for disposal during the period it holds them. The rationale is that depreciation is inconsistent with both the notion of assets to be disposed of, and with the use of the lower-of-cost-or-net realizable value. In other words, **assets held for disposal are like inventory; companies should report them at the lower-of-cost-or-net realizable value.**

Because Kroger will recover assets held for disposal through sale rather than through operations, it continually revalues them. Each period, the assets are reported at the lower-of-cost-or-net realizable value. Thus, **Kroger can write up or down an asset held for disposal in future periods, as long as the carrying amount after the write-up never exceeds the carrying amount of the asset before the impairment.** Companies should report losses or gains related to these impaired assets as part of **operating income** in “Other income and expense.”

Illustration 11.18 summarizes the key concepts in accounting for impairments.

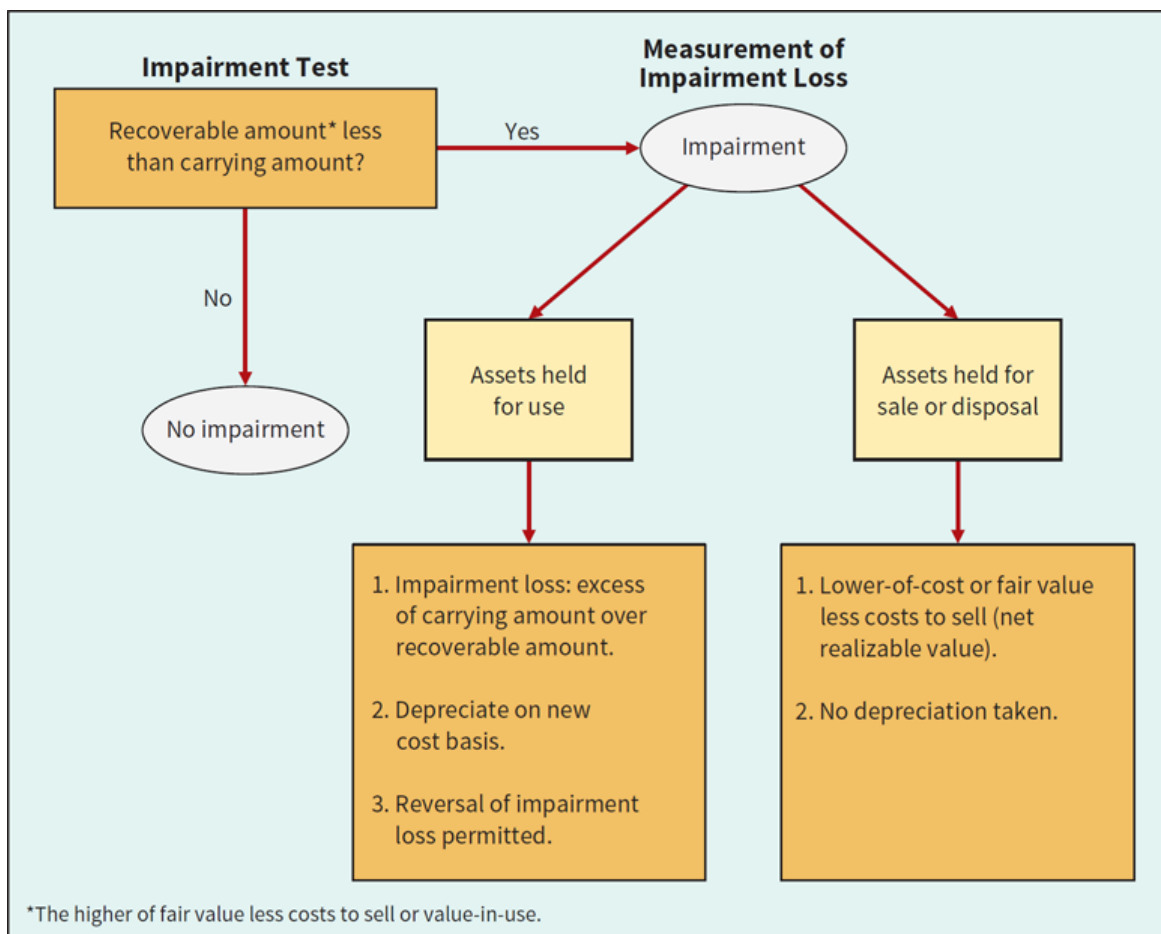

ILLUSTRATION 11.18 Graphic of Accounting for Impairments

Depletion

LEARNING OBJECTIVE 4

Discuss the accounting procedures for depletion of mineral resources.

Natural resources, often called wasting assets, include petroleum, minerals, and timberlands. Natural resources can be further subdivided into two categories: (1) biological assets such as timberlands, and (2) mineral resources such as oil, gas, and mineral mining. The accounting and reporting requirements for biological assets such as timberlands use a fair value approach and are discussed in [Chapter 9](#). Here, we focus on **mineral resources**, which have two main features: (1) the complete removal (consumption) of the asset, and (2) replacement of the asset only by an act of nature.

Unlike plant and equipment, mineral resources are consumed physically over the period of use and do not maintain their physical characteristics. Still, the accounting problems associated with these resources are similar to those encountered with property, plant, and equipment. The questions to be answered are:

1. How do companies establish the cost basis for write-off?
2. What pattern of allocation should companies employ?

Recall that the accounting profession uses the term **depletion** for the process of allocating the cost of mineral resources to expense.

Establishing a Depletion Base

How do we determine the depletion base for mineral resources? For example, a company like **Total SA** (FRA) makes sizable expenditures to find mineral resources. And, for every successful discovery, there are many failures. Furthermore, the company often encounters long delays between the time it incurs costs and the time it obtains the benefits from the extracted resources. As a result, a company in the extractive industries, like Total SA, frequently adopts a conservative policy in accounting for the expenditures related to finding and extracting mineral resources.

Computation of the depletion base involves properly accounting for three types of expenditures:

1. Pre-exploratory costs.
2. Exploratory and evaluation costs.
3. Development costs.

Pre-Exploratory Costs

Pre-exploratory expenditures are costs incurred before the company has obtained the legal rights to explore a specific area. For example, **Royal Dutch Shell** (GBR and NLD) may perform seismic testing of possible oil-drilling sites before incurring any substantial costs of exploration. These costs (often referred to as prospecting costs) are generally considered speculative in nature and are expensed as incurred.

Exploratory and Evaluation (E&E) Costs

Examples of some types of **exploratory and evaluation (E&E) costs** are as follows.

- Acquisition of rights to explore.
- Topographical, geological, geochemical, and geophysical studies.
- Exploratory drilling.
- Sampling.
- Activities in relation to evaluating the technical feasibility and commercial viability of extracting a mineral resource.

Companies have a choice regarding E&E costs. They can either write off these costs as incurred or capitalize these costs pending evaluation. IFRS therefore provides companies with flexibility as how to account for E&E costs at inception. [9]

The reason for the flexibility is that the accounting for these types of expenditures is controversial. To illustrate, assume that Royal Dutch Shell is exploring for oil and

determines that the area of exploration has oil reserves. It therefore drills a well to determine the amount of the reserves. Unfortunately, the well drilled results in a dry hole; that is, no reserves are found. Shell then drills more wells and finds some oil reserves, but some others are dry holes. The question is: Should the cost of the dry holes be capitalized? Or should only the cost of the wells that find reserves be capitalized?

Those who hold the **full-cost concept** (full capitalization) argue that the cost of drilling a dry hole is a cost needed to find the commercially profitable wells. Others believe that companies should capitalize only the costs of the successful wells. This is the **successful-efforts concept**. Its proponents believe that the only relevant measure for a project is the cost directly related to that project, and that companies should report any remaining costs as period charges. In addition, they argue that an unsuccessful company will end up capitalizing many costs that will make it, over a short period of time, show no less income than does one that is successful.

Development Costs

Once technical feasibility and commercial viability of production are demonstrated, E&E assets are reclassified as development costs. Generally, the development phase occurs when the company has determined that it has a reasonable level of mineral resources in the ground so that production will be profitable. At this time, any E&E assets recognized as assets are subsequently tested for impairment, to ensure that these assets are not carried at an amount above their recoverable amount.

Companies divide **development costs** into two parts: (1) tangible equipment costs and (2) intangible development costs. Tangible equipment costs include all of the transportation and other heavy equipment needed to extract the resource and get it ready for market. Because companies can move the heavy equipment from one extracting site to another, companies **do not normally include tangible equipment costs in the depletion base**. Instead, they use separate depreciation charges to allocate the costs of such equipment. However, some tangible assets (e.g., a drilling rig foundation) cannot be moved. Companies depreciate these assets over their useful life or the life of the resource, whichever is shorter.

Intangible development costs, on the other hand, are such items as drilling costs, tunnels, shafts, and wells. These costs have no tangible characteristics but are needed for the production of the mineral resource. **Intangible development costs are considered part of the depletion base.**

Companies sometimes incur substantial costs to restore property to its natural state after extraction has occurred. These are **restoration costs**. Companies consider **restoration costs part of the depletion base**. The amount included in the depletion base is the fair value of the obligation to restore the property after extraction. A more complete discussion of the accounting for restoration costs and related liabilities (sometimes referred to as environmental liability provisions) is provided in [Chapter 13](#). Similar to other long-lived assets, companies deduct from the depletion base any residual value to be received on the property.

Write-Off of Resource Cost

Once the company establishes the depletion base, the next problem is determining how to allocate the cost of the mineral resource to accounting periods.

Normally, companies compute depletion (often referred to as **cost depletion**) using a **units-of-production method** (an activity approach). Thus, depletion is a function of the number of units extracted during the period. In this approach, the total cost of the mineral resource less residual value is divided by the number of units estimated to be in the resource deposit, to obtain a **cost per unit of product**. To compute depletion, the cost per unit is then multiplied by the number of units extracted.

For example, MaCledé SA acquired the right to use 1,000 acres of land in South Africa to mine for silver. The lease cost is €50,000, and the related exploration costs on the property are €100,000. Intangible development costs incurred in opening the mine are €850,000. Total costs related to the mine before the first ounce of silver is extracted are, therefore, €1,000,000. MaCledé estimates that the mine will provide approximately 100,000 ounces of silver. **Illustration 11.19**, shows computation of the depletion cost per unit (depletion rate).

$\frac{\text{Total Cost} - \text{Residual Value}}{\text{Total Estimated Units Available}} = \text{Depletion Cost per Unit}$
$\frac{€1,000,000}{100,000} = €10 \text{ per ounce}$

ILLUSTRATION 11.19 Computation of Depletion Rate

If MaCledé extracts 25,000 ounces in the first year, then the depletion for the year is €250,000 (25,000 ounces × €10). It records the depletion as follows.

Inventory	250,000	
Accumulated Depletion		250,000

MaCledé debits Inventory for the total depletion for the year and credits Accumulated Depletion to reduce the carrying amount of the mineral resource. MaCledé credits Inventory when it sells the inventory. The amount not sold remains in inventory and is reported in the current assets section of the statement of financial position.

Sometimes companies do not use an Accumulated Depletion account. In that case, the credit goes directly to the mineral resources asset account. MaCledé’s statement of financial position would present the cost of the mineral resource and the amount of accumulated depletion entered to date as shown in **Illustration 11.20**.

Silver mine (at cost)	€1,000,000	
Less: Accumulated depletion	250,000	€750,000

ILLUSTRATION 11.20 Statement of Financial Position Presentation of Mineral Resource

In the income statement, the depletion cost related to the inventory sold is part of the cost of goods sold.

MaClede may also depreciate on a units-of-production basis the tangible equipment used in extracting the silver. This approach is appropriate if it can directly assign the estimated lives of the equipment to one given resource deposit. If MaClede uses the equipment on more than one job, other cost allocation methods such as straight-line or accelerated depreciation methods would be more appropriate.

Estimating Recoverable Reserves

Sometimes companies need to change the estimate of recoverable reserves. They do so either because they have new information or because more sophisticated production processes are available. Mineral resources such as oil and gas deposits and some rare metals present the greatest challenges. Estimates of these reserves are in large measure merely “knowledgeable guesses.”⁹

This problem is the **same as accounting for changes in estimates for the useful lives of plant and equipment**. The procedure is to **revise the depletion rate on a prospective basis**: A company divides the remaining cost by the new estimate of the recoverable reserves. This approach has much merit because the required estimates are so uncertain.

Liquidating Dividends

A company often owns as its only major asset a property from which it intends to extract mineral resources. If the company does not expect to purchase additional properties, it may gradually distribute to shareholders their capital investments by paying **liquidating dividends**, which are dividends greater than the amount of accumulated net income.

The major accounting problem is to distinguish between dividends that are a return of capital and those that are not. Because the dividend is a return of the investor’s original contribution, the company issuing a liquidating dividend should debit Share Premium—Ordinary for that portion related to the original investment, instead of debiting Retained Earnings.

To illustrate, at year-end, Callahan Mining had a retained earnings balance of £1,650,000, accumulated depletion on mineral properties of £2,100,000, and share premium of £5,435,493. Callahan’s board declared a dividend of £3 per share on the 1,000,000 shares outstanding. It records the £3,000,000 cash dividend as follows.

Retained Earnings	1,650,000	
Share Premium—Ordinary	1,350,000	
Cash		3,000,000

Callahan must inform shareholders that the £3 dividend per share represents a £1.65 (£1,650,000 ÷ 1,000,000 shares) per share return on investment and a £1.35 (£1,350,000 ÷ 1,000,000 shares) per share liquidating dividend.

Presentation on the Financial Statements

Companies should disclose the following related to E&E expenditures.

1. The accounting policies for exploration and evaluation expenditures, including the recognition of E&E assets.
2. The amounts of assets, liabilities, income and expense, and operating cash flow arising from the exploration for and evaluation of mineral resources.

The financial statement excerpts for **Tullow Oil plc** (GBR) in [Illustration 11.21](#) highlight the nature of these disclosures.

Tullow Oil plc

(in millions)

Income Statement	
Exploration costs written off	\$ 295.2
Statement of Financial Position	
Intangible exploration and evaluation assets	\$1,898.6
Statement of Cash Flows	
Purchase of intangible exploration and evaluation of assets	\$ 202.1

Accounting Policies

(k) Exploration, evaluation, and production assets

The Group adopts the successful efforts method of accounting for exploration and appraisal costs. All license acquisition, exploration, and evaluation costs are initially capitalized in cost centers by well, field, or exploration area, as appropriate. Directly attributable administration costs and interest payable are capitalized insofar as they relate to specific development activities. Pre-license costs are expensed in the period in which they are incurred. These costs are then written off as exploration costs in the Income Statement unless commercial reserves have been established or the determination process has not been completed and there are no indications of impairment. All field development costs are capitalized as property, plant, and equipment. Property, plant, and equipment related to production activities are amortized in accordance with the Group's depletion and amortization accounting policy.

(m) Depletion and amortization—discovery fields

All expenditure carried within each field is amortized from the commencement of production on a unit of production basis, which is the ratio of oil and gas production in the period to the estimated quantities of commercial reserves at the end of the period plus the production in the period, generally on a field-by-field basis. Costs used in the unit of production calculation comprise the net book value of capitalized costs plus the estimated future field development costs. Changes in the estimates of commercial reserves or future field development costs are dealt with prospectively.

(n) Impairment of property, plant and equipment

Where there has been a change in economic conditions that indicates a possible impairment in a discovery field, the recoverability of the net book value relating to that field is assessed by comparison with the estimated discounted cash flows based on management's expectations of future oil and gas prices and future costs.

ILLUSTRATION 11.21 Reporting of Exploration Costs

Revaluations

LEARNING OBJECTIVE 5

Apply the accounting for revaluations.

Up to this point, we have assumed that companies use the historical cost principle to value long-lived tangible assets after acquisition. However, companies have a choice: They may value these assets at cost or at fair value. [10]

Recognizing Revaluations

Network Rail (GBR) is an example of a company that elected to use fair values to account for assets in its railroad network. Its use of fair value led to an increase of £4,289 million to its long-lived tangible assets. When companies choose to report at fair value their long-lived tangible assets subsequent to acquisition, they account for the change in the fair value by adjusting the appropriate asset account and establishing an unrealized gain on the revalued long-lived tangible asset. This unrealized gain is often referred to as **revaluation surplus**.

Revaluation—Land

To illustrate revaluation of land, assume that **Siemens Group** (DEU) purchased land for €1,000,000 on January 5, 2022. The company elects to use revaluation accounting for the land in subsequent periods. At December 31, 2022, the land's fair value is €1,200,000. The entry to record the land at fair value is as follows.

Land	200,000	
Unrealized Gain on Revaluation—Land		200,000

The land is reported on the statement of financial position at €1,200,000, and the Unrealized Gain on Revaluation—Land increases other comprehensive income in the statement of comprehensive income. In addition, if this is the only revaluation adjustment to date, the statement of financial position reports accumulated other comprehensive income of €200,000.

Revaluation—Depreciable Assets

To illustrate the accounting for revaluations of depreciable assets, assume that **Lenovo Group** (CHN) purchases equipment for ¥500,000 on January 2, 2022. The equipment has a useful life of five years, is depreciated using the straight-line method of depreciation, and has a residual value of zero. Lenovo chooses to revalue its equipment to fair value over the life of the equipment. Lenovo records depreciation expense of ¥100,000 ($¥500,000 \div 5$) at December 31, 2022, as follows.

December 31, 2022		
Depreciation Expense	100,000	
Accumulated Depreciation—Equipment		100,000
(To record depreciation expense in 2022)		

After this entry, Lenovo’s equipment has a carrying amount of ¥400,000 (¥500,000 – ¥100,000). Lenovo receives an independent appraisal for the fair value of equipment at December 31, 2022, which is ¥460,000. To report the equipment at fair value, Lenovo does the following.

1. Reduces the Accumulated Depreciation—Equipment account to zero.
2. Reduces the Equipment account by ¥40,000—it then is reported at its fair value of ¥460,000.
3. Records Unrealized Gain on Revaluation—Equipment for the difference between the fair value and carrying amount of the equipment, or ¥60,000 (¥460,000 – ¥400,000). The entry to record this revaluation at December 31, 2022, is as follows.

December 31, 2022		
Accumulated Depreciation—Equipment	100,000	
Equipment		40,000
Unrealized Gain on Revaluation—Equipment		60,000
(To adjust the equipment to fair value and record revaluation increase)		

The equipment is now reported at its fair value of ¥460,000 (¥500,000 – ¥40,000).¹⁰ The increase in the fair value of ¥60,000 is reported on the statement of comprehensive income as other comprehensive income. In addition, the ending balance is reported in accumulated other comprehensive income on the statement of financial position in the equity section.

Illustration 11.22 shows the presentation of revaluation elements.

Statement of Comprehensive Income	
Other comprehensive income	
Unrealized gain on revaluation—equipment	¥ 60,000
Statement of Financial Position	
Non-current assets	
Equipment (¥500,000 – ¥40,000)	¥460,000
Accumulated depreciation—equipment (¥100,000 – ¥100,000)	–0–
Carrying amount	¥460,000
Equity	
Accumulated other comprehensive income	¥ 60,000

ILLUSTRATION 11.22 Financial Statement Presentation—Revaluations

As indicated, at December 31, 2022, the carrying amount of the equipment is now ¥460,000. Lenovo reports depreciation expense of ¥100,000 in the income statement and an Unrealized Gain on Revaluation—Equipment of ¥60,000 in “Other comprehensive

income.” Assuming no change in the useful life of the equipment, depreciation in 2022 is ¥115,000 (¥460,000 ÷ 4).

In summary, a revaluation increase generally goes to equity. A revaluation decrease is reported as an expense (as an impairment loss), unless it offsets previously recorded revaluation increases. If the revaluation increase offsets a revaluation decrease that went to expense, then the increase is reported in income. **Under no circumstances can the Accumulated Other Comprehensive Income account related to revaluations have a negative balance.**

Revaluation Issues

The use of revaluation accounting is not an “all or nothing” proposition. That is, a company can select to value only one class of assets, say buildings, and not revalue other assets such as land or equipment. However, if a company selects only buildings, revaluation applies to all assets in that class of assets. A class of assets is a grouping of items that have a similar nature and use in a company’s operations. For example, a company such as **Siemens** (DEU) may have the following classes of assets: land, equipment, and buildings. If Siemens chooses to fair value its land class, it must fair value all land. It cannot selectively apply revaluation accounting to certain parcels of land within the class and report them at fair value and keep the remainder at historical cost. To permit such “cherry-picking” not only leads to a misleading mixture of historical cost and fair value, but also permits a company to maximize its fair value through selective revaluation.

Companies using revaluation accounting must also make every effort to keep the assets’ values up to date. Assets that are experiencing rapid price changes must be revalued on an annual basis. Otherwise, less frequent revaluation is acceptable. The fair value of items of property, plant, and equipment is usually determined by appraisal. [Appendix 11A](#) illustrates the accounting for revaluations in more detail both for land and depreciable assets.

What Do the Numbers Mean?

To Revalue or Not

Most companies do not use revaluation accounting. A major reason is the substantial and continuing costs associated with appraisals to determine fair value. In addition, the gains associated with revaluations above historical cost are not reported in net income but instead go directly to equity. On the other hand, losses associated with revaluations below historical cost decrease net income. In addition, for depreciable assets, the higher depreciation charges related to the revalued assets also reduce net income.

However, in the hospitality or hotel industry, it is fairly common to encounter the use of revaluation accounting. For example, consider **Hotel Royal Limited** (SGP), which owns the Hotel Royal in Singapore as well as manages and invests in hotel properties in Malaysia and New Zealand. In its annual report, the company provided the following description of its accounting policies related to property, plant, and equipment:

Property, plant and equipment are stated at cost less accumulated depreciation and any accumulated impairment losses except for freehold land on which certain hotels are sited, which are stated at revalued amounts. Revaluations of freehold hotel land is performed with sufficient regularity such that the carrying amounts do not differ materially from those which would be determined using fair values at the end of the reporting period.

During the most recent period, the company reported total assets of S\$807,393,000. Of the total amount, property, plant, and equipment was S\$647,679,000, or 80 percent of total assets. In the footnotes for the period the company reported that freehold land, which was reported at a fair value of S\$502,556,000, had a cost of S\$73,100,000. The difference in these two amounts (S\$429,456,000) is over one-half of the total assets of the company. Said another way, if the company did not use the revaluation method, it would have underreported its assets by over 100 percent.

In industries and settings such as this, the added cost of revaluation accounting really does make sense!

Presentation and Analysis

LEARNING OBJECTIVE 6

Demonstrate how to report and analyze property, plant, equipment, and mineral resources.

Presentation of Property, Plant, Equipment, and Mineral Resources

A company should disclose the basis of valuation—usually historical cost—for property, plant, equipment, and mineral resources along with pledges, liens, and other commitments related to these assets. It should not offset any liability secured by property, plant, equipment, and mineral resources against these assets. Instead, this obligation should be reported in the liabilities section. The company should segregate property, plant, and equipment not currently employed as producing assets in the business (such as idle facilities or land held as an investment) from assets used in operations.

When depreciating assets, a company credits a valuation account, normally called Accumulated Depreciation. Using an accumulated depreciation account permits the user of the financial statements to see the original cost of the asset and the amount of depreciation that the company charged to expense in past years.

When depleting mineral resources, some companies use an accumulated depletion account. Many, however, simply credit the mineral resource account directly. The rationale for this approach is that the mineral resources are physically consumed, making direct reduction of the cost of the mineral resources appropriate.

Illustration 11.23 provides the reporting of property, plant, and equipment by **Nestlé Group** (CHE) in a recent annual report. Nestlé presents condensed statement of financial position data, supplemented with detail amounts and accounting policies provided in the notes to the financial statements.

Nestlé Group

(in millions of CHF)

Non-current assets

Property, plant, and equipment	26,837
--------------------------------	--------

Note 1 Accounting Policies

Property, plant, and equipment

Property, plant, and equipment are shown in the balance sheet at their historical cost. Depreciation is provided on components that have homogeneous useful lives by using the straight-line method so as to depreciate the initial cost down to the residual value over the estimated useful lives. The residual values are 30% on head offices and nil for all other asset types. The useful lives are as follows:

Buildings	20–40 years
Machinery and equipment	10–25 years
Tools, furniture, information technology, and sundry equipment	3–10 years
Vehicles	3–8 years

Land is not depreciated.

Useful lives, components, and residual amounts are reviewed annually. Such a review takes into consideration the nature of the assets, their intended use including but not limited to the closure of facilities, and the evolution of the technology and competitive pressures that may lead to technical obsolescence.

Depreciation of property, plant, and equipment is allocated to the appropriate headings of expenses by function in the income statement.

Borrowing costs incurred during the course of construction are capitalized if the assets under construction are significant and if their construction requires a substantial period to complete (typically more than one year). The capitalization rate is determined on the basis of the short-term borrowing rate for the period of construction. Premiums capitalized for leasehold land or buildings are amortized over the length of the lease. Government grants are recognized in accordance with the deferral method, whereby the grant is set up as deferred income which is released to the income statement over the useful life of the related assets. Grants that are not related to assets are credited to the income statement when they are received.

Gross value	Land and Buildings	Machinery and Equipment	Tools, Furniture, and Other Equipment	Vehicles	Total
At 1 January	17,841	31,103	8,013	615	57,572
Currency retranslations	(617)	(980)	(160)	(5)	(1,762)

Disposals	(135)	(592)	(466)	(88)	(1,281)
Reclassified (to)/from held for sale	(387)	(260)	(85)	(2)	(734)
Modification of the scope of consolidation	20	9	(15)	—	14
At 31 December	17,747	31,293	8,069	560	57,669
Accumulated depreciation and impairments					
At 1 January	(6,124)	(17,642)	(5,721)	(419)	(29,906)
Currency retranslations	225	499	162	1	887
Depreciation	(484)	(1,581)	(742)	(51)	(2,858)
Impairments	(138)	(269)	(18)	(7)	(432)
Disposals	74	536	438	75	1,123
Reclassified (to)/from held for sale	159	102	50	1	312
Modification of the scope of consolidation	10	21	10	1	42
At 31 December	(6,278)	(18,334)	(5,821)	(399)	(30,832)
Net at 31 December	11,469	12,959	2,248	161	26,837

At December 31, property, plant and equipment include CHF1,528 million of assets under construction. Net property, plant, and equipment of CHF208 million are pledged as security for financial liabilities.

Impairment

Impairment of property, plant, and equipment arises mainly from the plans to optimise industrial manufacturing capacities by closing or selling inefficient production facilities.

Commitments for expenditure

At December 31, the Group was committed to expenditure amounting to CHF797 million.

ILLUSTRATION 11.23 Disclosures for Property, Plant, and Equipment

Analysis of Property, Plant, and Equipment

Analysts evaluate assets relative to activity (turnover) and profitability.

Asset Turnover

How efficiently a company uses its assets to generate sales is measured by the **asset turnover**. This ratio divides net sales by average total assets for the period. The resulting

number is the dollars of sales produced by each dollar invested in assets. To illustrate, we use the following data from **Siemens Group**'s (DEU) 2018 annual report.

 Siemens Group (in millions)	
Net sales	€ 83,044
Total assets, 9/30/18	138,915
Total assets, 9/30/17	136,111
Net income	6,120

Illustration 11.24 shows computation of the asset turnover.

Asset Turnover	=	$\frac{\text{Net Sales}}{\text{Average Total Assets}}$
	=	$\frac{€83,044}{(€138,915 + €136,111) \div 2}$
	=	0.60

ILLUSTRATION 11.24 Asset Turnover

The asset turnover shows that Siemens generated sales of €0.60 per euro of assets in the year ended September 30, 2018.

Asset turnovers vary considerably among industries. For example, a large utility like **Ameren** (USA) has a ratio of 0.32 times. A large grocery chain like **Morrisons** (GBR) has a ratio of 1.86 times. Thus, in comparing performance among companies based on the asset turnover, you need to consider the ratio within the context of the industry in which a company operates.

Profit Margin on Sales

Another measure for analyzing the use of property, plant, and equipment is the **profit margin on sales** (return on sales). Calculated as net income divided by net sales, this profitability ratio does not, by itself, answer the question of how profitably a company uses its assets. But by relating the profit margin on sales to the asset turnover during a period of time, we can ascertain how profitably the company used assets during that period of time in a measure of the return on assets. Using the Siemens data, we compute the profit margin on sales and the return on assets as shown in **Illustration 11.25**.

Profit Margin on Sales	$= \frac{\text{Net Income}}{\text{Net Sales}}$
	$= \frac{€6,120}{€83,044}$
	$= 7.4\%$
Return on Assets = Profit Margin on Sales × Asset Turnover	
	$= .074 \times 0.60$
	$= 4.4\%$

ILLUSTRATION 11.25 Profit Margin on Sales

Return on Assets

The rate of return a company achieves through use of its assets is the **return on assets (ROA)**. Rather than using the profit margin on sales, we can compute it directly by dividing net income by average total assets. Using Siemens' data, we compute the ratio as shown in Illustration 11.26.

Return on Assets	$= \frac{\text{Net Income}}{\text{Average Total Assets}}$
	$= \frac{€6,120}{(€138,915 + €136,111) \div 2}$
	$= 4.4\%$

ILLUSTRATION 11.26 Return on Assets

The 4.4 percent rate of return computed in this manner equals the 4.4 percent rate computed by multiplying the profit margin on sales by the asset turnover. The return on assets measures profitability well because it combines the effects of profit margin and asset turnover.

APPENDIX 11A

Revaluation of Property, Plant, and Equipment

LEARNING OBJECTIVE *7

Illustrate revaluation accounting procedures.

As indicated in Chapter 11, companies can use revaluation accounting subsequent to acquisition. When companies choose to report at fair value their long-lived tangible assets subsequent to acquisition, they account for the change in the fair value by adjusting the appropriate asset account and recording an unrealized gain on the revalued long-lived

tangible asset. This unrealized gain is often referred to as revaluation surplus and reported as part of other comprehensive income.

The general rules for revaluation accounting are as follows.

1. When a company revalues its long-lived tangible assets above historical cost, it reports an unrealized gain that increases other comprehensive income. Thus, the unrealized gain bypasses net income, increases other comprehensive income, and increases accumulated other comprehensive income.
2. If a company experiences a loss on impairment (decrease of value below historical cost), the loss reduces net income and retained earnings. Thus, gains on revaluation increase equity but not net income, whereas losses decrease net income and retained earnings (and therefore equity).
3. If a revaluation increase reverses a decrease that was previously reported as an impairment loss, a company credits the revaluation increase to net income using the account Recovery of Impairment Loss up to the amount of the prior loss. Any additional valuation increase above historical cost increases other comprehensive income and is credited to Unrealized Gain on Revaluation.
4. If a revaluation decrease reverses an increase that was reported as an unrealized gain, a company first reduces other comprehensive income by eliminating the unrealized gain. Any additional valuation decrease reduces net income and is reported as a loss on impairment.

In the following two sections, we explain revaluation procedures for land and depreciable assets in a multiple-year setting.

Revaluation of Land

Revaluation—2022: Valuation Increase

To illustrate the accounting for a revaluation, assume that **Unilever Group** (GBR and NLD) purchased land on January 1, 2022, that cost €400,000. Unilever decides to report the land at fair value in subsequent periods. At December 31, 2022, an appraisal of the land indicates that its fair value is €520,000. Unilever makes the following entry to record the increase in fair value.

December 31, 2022		
Land	120,000	
Unrealized Gain on Revaluation—Land (€520,000 – €400,000)		120,000
(To recognize increase in land value)		

Illustration 11A.1 provides a summary of the revaluation adjustments for Unilever in 2022.

Date	Item	Land Fair Value	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€400,000	€0	€ 0
Dec. 31, 2022	Revaluation	120,000	0	120,000
Dec. 31, 2022	Ending balance	520,000	0	120,000

ILLUSTRATION 11A.1 Summary of Revaluation—2022

The land is now reported at its fair value of €520,000. The increase in the fair value of €120,000 is reported on the statement of comprehensive income as other comprehensive income. In addition, the ending balance in Unrealized Gain on Revaluation—Land is reported as accumulated other comprehensive income in the statement of financial position in the equity section.

Revaluation—2023: Decrease Below Historical Cost

What happens if the land's fair value at December 31, 2023, is €380,000, a decrease of €140,000 (€520,000 – €380,000)? In this case, the land's fair value is below its historical cost. Therefore, Unilever debits Unrealized Gain on Revaluation—Land for €120,000 to eliminate its balance. In addition, Unilever reports a Loss on Impairment of €20,000 (€400,000 – €380,000), reducing net income. Unilever makes the following entry to record the decrease in fair value of the land.

December 31, 2023		
Unrealized Gain on Revaluation—Land	120,000	
Loss on Impairment	20,000	
Land (€520,000 – €380,000)		140,000
(To record decrease in value of land below historical cost)		

Illustration 11A.2 provides a summary of the revaluation adjustments for Unilever in 2023.

Date	Item	Land Fair Value	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€400,000	€ 0	€ 0
Dec. 31, 2022	Revaluation	120,000	0	120,000
Dec. 31, 2022	Ending balance	520,000	0	120,000
Jan. 1, 2023	Beginning balance	€520,000	€ 0	€120,000
Dec. 31, 2023	Revaluation	(140,000)	(20,000)	(120,000)
Dec. 31, 2023	Ending balance	380,000	(20,000)	0

ILLUSTRATION 11A.2 Summary of Revaluation—2023

The decrease to Unrealized Gain on Revaluation—Land of €120,000 reduces other comprehensive income, which then reduces the balance in accumulated other comprehensive income. The Loss on Impairment of €20,000 reduces net income and retained earnings. In this case, Unilever had a revaluation decrease which first reverses any increases that Unilever reported in prior periods as an unrealized gain. Any additional amount is reported as an impairment loss. **Under no circumstances can the revaluation decrease reduce accumulated other comprehensive income below zero.**

Revaluation—2024: Recovery of Impairment Loss

At December 31, 2024, Unilever’s land value increases to €415,000, an increase of €35,000 (€415,000 – €380,000). In this case, the Loss on Impairment of €20,000 is reversed and the remaining increase of €15,000 is reported in other comprehensive income. Unilever makes the following entry to record this transaction.

December 31, 2024		
Land	35,000	
Unrealized Gain on Revaluation—Land		15,000
Recovery of Impairment Loss		20,000
(Revaluation of land, recovery of impairment loss)		

Illustration 11A.3 provides a summary of the revaluation adjustments for Unilever in 2024.

Date	Item	Land Fair Value	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€ 400,000	€ 0	€ 0
Dec. 31, 2022	Revaluation	120,000	0	120,000
Dec. 31, 2022	Ending balance	520,000	0	120,000
Jan. 1, 2023	Beginning balance	€ 520,000	€ 0	€120,000
Dec. 31, 2023	Revaluation	(140,000)	(20,000)	(120,000)
Dec. 31, 2023	Ending balance	380,000	(20,000)	0
Jan. 1, 2024	Beginning balance	€ 380,000	€(20,000)	€ 0
Dec. 31, 2024	Revaluation	35,000	20,000	15,000
Dec. 31, 2024	Ending balance	415,000	0	15,000

ILLUSTRATION 11A.3 Summary of Revaluation—2024

The recovery of the impairment loss of €20,000 increases income (and retained earnings) only to the extent that it reverses previously recorded impairment losses.

On January 2, 2025, Unilever sells the land for €415,000. Unilever makes the following entry to record this transaction.

January 2, 2025		
Cash	415,000	
Land		415,000
(To record sale of land)		

In this case, Unilever does not record a gain or loss because the carrying amount of the land is the same as its fair value. At this time, since the land is sold, Unilever will transfer Accumulated Other Comprehensive Income (AOCI) to Retained Earnings. The entry to record the transfer is as follows.

January 2, 2025		
Accumulated Other Comprehensive Income	15,000	
Retained Earnings		15,000
(To eliminate the remaining balance in AOCI)		

The purpose of this transfer is to eliminate the unrealized gain on the land that was sold. It should be noted that transfers from Accumulated Other Comprehensive Income cannot increase net income. This last entry illustrates why revaluation accounting is not popular. Even though the land has appreciated in value by €15,000, Unilever is not able to recognize this gain in net income over the periods that it held the land.

Revaluation of Depreciable Assets

To illustrate the accounting for revaluations using depreciable assets, assume that **Nokia** (FIN) purchases equipment for €1,000,000 on January 2, 2022. The equipment has a useful life of five years, is depreciated using the straight-line method of depreciation, and its residual value is zero.

Revaluation—2022: Valuation Increase

Nokia chooses to revalue its equipment to fair value over the life of equipment. Nokia records depreciation expense of €200,000 ($€1,000,000 \div 5$) as follows.

December 31, 2022		
Depreciation Expense	200,000	
Accumulated Depreciation—Equipment		200,000
(To record depreciation expense at December 31, 2022)		

After this entry, Nokia's equipment has a carrying amount of €800,000 ($€1,000,000 - €200,000$). Nokia employs an independent appraiser, who determines that the fair value of equipment at December 31, 2022, is €950,000. To report the equipment at fair value, Nokia does the following.

1. Reduces the Accumulated Depreciation—Equipment account to zero.
2. Reduces the Equipment account by €50,000—it then is reported at its fair value of €950,000.
3. Records an Unrealized Gain on Revaluation—Equipment for the difference between the fair value and carrying amount of the equipment, or €150,000 ($€950,000 - €800,000$). The entry to record this revaluation at December 31, 2022, is as follows.

December 31, 2022		
Accumulated Depreciation—Equipment	200,000	
Equipment		50,000
Unrealized Gain on Revaluation—Equipment		150,000
(To adjust the equipment to fair value and record unrealized gain)		

Illustration 11A.4 provides a summary of the revaluation adjustments for Nokia in 2022.

Date	Item	Equipment Fair Value	Accumulated Depreciation	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€1,000,000			€ 0
Dec. 31, 2022	Depreciation		€ 200,000	€(200,000)	
Dec. 31, 2022	Revaluation	(50,000)	(200,000)		150,000
Dec. 31, 2022	Ending balance	950,000	0	(200,000)	150,000

ILLUSTRATION 11A.4 Revaluation Summary—2022

Following these revaluation adjustments, the carrying amount of the asset is now €950,000. Nokia reports depreciation expense of €200,000 in the income statement and Unrealized Gain on Revaluation—Equipment of €150,000 in other comprehensive income. This unrealized gain increases accumulated other comprehensive income (reported on the statement of financial position in the equity section).

Revaluation—2023: Decrease Below Historical Cost

Assuming no change in the useful life of the equipment, depreciation expense for Nokia in 2023 is €237,500 ($€950,000 \div 4$), and the entry to record depreciation expense is as follows.

December 31, 2023		
Depreciation Expense	237,500	
Accumulated Depreciation—Equipment		237,500
(To record depreciation expense at December 31, 2023)		

Under IFRS, Nokia may transfer from AOCI the difference between depreciation based on the revalued carrying amount of the equipment and depreciation based on the asset's original cost to retained earnings. Depreciation based on the original cost was €200,000 ($€1,000,000 \div 5$) and on fair value is €237,500, or a difference of €37,500 ($€237,500 - €200,000$). The entry to record this transfer is as follows.

December 31, 2023		
Accumulated Other Comprehensive Income	37,500	
Retained Earnings		37,500
(To record transfer from AOCI to Retained Earnings)		

At this point, before revaluation in 2023, Nokia has the following amounts related to its equipment.

Equipment	€950,000
-----------	----------

Less: Accumulated depreciation—equipment	237,500
Carrying amount	<u>€712,500</u>
Accumulated other comprehensive income	€112,500 (€150,000 – €37,500) ¹¹

Nokia determines through appraisal that the equipment now has a fair value of €570,000. To report the equipment at fair value, Nokia does the following.

1. Reduces the Accumulated Depreciation—Equipment account of €237,500 to zero.
2. Reduces the Equipment account by €380,000 (€950,000 – €570,000)—it then is reported at its fair value of €570,000.
3. Reduces Unrealized Gain on Revaluation—Equipment by €112,500, to offset the balance in the unrealized gain account (related to the revaluation in 2022).
4. Records a loss on impairment of €30,000.

The entry to record this transaction is as follows.

Accumulated Depreciation—Equipment	237,500	
Loss on Impairment	30,000	
Unrealized Gain on Revaluation—Equipment	112,500	
Equipment		380,000
(To adjust the equipment to fair value and record impairment loss)		

Illustration 11A.5 provides a summary of the revaluation adjustments for Nokia in 2023.

Date	Item	Equipment Fair Value	Accumulated Depreciation	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€1,000,000			€ 0
Dec. 31, 2022	Depreciation		€200,000	€(200,000)	
Dec. 31, 2022	Revaluation	(50,000)	(200,000)		150,000
Dec. 31, 2022	Ending balance	950,000	0	(200,000)	150,000
Jan. 1, 2023	Beginning balance	€ 950,000	€ 0	€(200,000)	€150,000
Dec. 31, 2023	Depreciation		237,500	(237,500)	
Dec. 31, 2023	Transfer from AOCI			37,500	(37,500)
Dec. 31, 2023	Revaluation	(380,000)	(237,500)	(30,000)	(112,500)
Dec. 31, 2023	Ending balance	570,000	0	(430,000)	0

ILLUSTRATION 11A.5 Revaluation Summary—2023

Following the revaluation entry, the carrying amount of the equipment is now €570,000. Nokia reports depreciation expense of €237,500 and an impairment loss of €30,000 in the income statement (which reduces retained earnings).¹² Nokia reports the reversal of the previously recorded unrealized gain by recording the transfer to retained earnings of €37,500 and the entry to Unrealized Gain on Revaluation—Equipment of €112,500. These two entries reduce the balance in AOCI to zero.

Revaluation—2024: Recovery of Impairment Loss

Assuming no change in the useful life of the equipment, depreciation expense for Nokia in 2024 is €190,000 ($€570,000 \div 3$), and the entry to record depreciation expense is as follows.

December 31, 2024		
Depreciation Expense	190,000	
Accumulated Depreciation—Equipment		190,000
(To record depreciation expense)		

Nokia transfers the difference between depreciation based on the revalued carrying amount of the equipment and depreciation based on the asset's original cost from AOCI to retained earnings. Depreciation based on the original cost was €200,000 ($€1,000,000 \div 5$) and on fair value is €190,000, or a difference of €10,000 ($€200,000 - €190,000$). The entry to record this transfer is as follows.

December 31, 2024		
Retained Earnings	10,000	
Accumulated Other Comprehensive Income		10,000
(To record transfer from AOCI to Retained Earnings)		

At this point, before revaluation in 2024, Nokia has the following amounts related to its equipment.

Equipment	€570,000
Less: Accumulated depreciation—equipment	190,000
Carrying amount	<u>€380,000</u>
Accumulated other comprehensive income	<u>€ 10,000</u>

Nokia determines through appraisal that the equipment now has a fair value of €450,000. To report the equipment at fair value, Nokia does the following.

1. Reduces the Accumulated Depreciation—Equipment account of €190,000 to zero.
2. Reduces the Equipment account by €120,000 ($€570,000 - €450,000$)—it then is reported at its fair value of €450,000.
3. Records an Unrealized Gain on Revaluation—Equipment for €40,000.
4. Records a Recovery of Impairment Loss of €30,000.

The entry to record this transaction is as follows.

December 31, 2024		
Accumulated Depreciation—Equipment	190,000	
Unrealized Gain on Revaluation—Equipment		40,000
Equipment		120,000
Recovery of Impairment Loss		30,000
(To adjust the equipment to fair value and record impairment loss recovery)		

[**Illustration 11A.6**](#) provides a summary of the revaluation adjustments for Nokia in 2024.

Date	Item	Equipment Fair Value	Accumulated Depreciation	Retained Earnings	Accumulated Other Comprehensive Income (AOCI)
Jan. 1, 2022	Beginning balance	€1,000,000			€ 0
Dec. 31, 2022	Depreciation		€200,000	€(200,000)	
Dec. 31, 2022	Revaluation	(50,000)	(200,000)		150,000
Dec. 31, 2022	Ending balance	950,000	0	(200,000)	150,000
Jan. 1, 2023	Beginning balance	€ 950,000	€ 0	€(200,000)	€150,000
Dec. 31, 2023	Depreciation		237,500	(237,500)	
Dec. 31, 2023	Transfer from AOCI			37,500	(37,500)
Dec. 31, 2023	Revaluation	(380,000)	(237,500)	(30,000)	(112,500)
Dec. 31, 2023	Ending balance	570,000	0	(430,000)	0
Jan. 1, 2024	Beginning balance	€ 570,000	€ 0	€(430,000)	€ 0
Dec. 31, 2024	Depreciation		190,000	(190,000)	
Dec. 31, 2024	Transfer from AOCI			(10,000)	10,000
Dec. 31, 2024	Revaluation	(120,000)	(190,000)	30,000	40,000
Dec. 31, 2024	Ending balance	450,000	0	(600,000)	50,000

ILLUSTRATION 11A.6 Revaluation Summary—2024

Following the revaluation entry, the carrying amount of the equipment is now €450,000. Nokia reports depreciation expense of €190,000 and an impairment loss recovery of €30,000 in the income statement. Nokia records €40,000 to Unrealized Gain on Revaluation—Equipment, which increases AOCI to €50,000.

On January 2, 2025, Nokia sells the equipment for €450,000. Nokia makes the following entry to record this transaction.

January 2, 2025		
Cash	450,000	
Equipment		450,000
(To record sale of equipment)		

Nokia does not record a gain or loss because the carrying amount of the equipment is the same as its fair value. Nokia transfers the remaining balance in Accumulated Other Comprehensive Income to Retained Earnings because the equipment has been sold. The entry to record this transaction is as follows.

January 2, 2025		
Accumulated Other Comprehensive Income	50,000	
Retained Earnings		50,000
(To eliminate the remaining balance in AOCI)		

The transfer from Accumulated Other Comprehensive Income does not increase net income. Even though the equipment has appreciated in value by €50,000, the company does not recognize this gain in net income over the periods that Nokia held the equipment.

Learning Objectives Review

1 Describe depreciation concepts and methods of depreciation.

Depreciation allocates the cost of tangible assets to expense in a systematic and rational manner to those periods expected to benefit from the use of the asset. Three factors involved in the depreciation process are (1) determining the depreciable base for the asset, (2) estimating service lives, and (3) selecting a method of cost apportionment (depreciation).

Methods of depreciation are as follows.

1. *Activity method*: Assumes that depreciation is a function of use or productivity instead of the passage of time. The life of the asset is considered in terms of either the output it provides, or an input measure such as the number of hours it works.
2. *Straight-line method*: Considers depreciation a function of time instead of a function of usage. The straight-line procedure is often the most conceptually appropriate when

the decline in usefulness is constant from period to period.

3. *Decreasing-charge methods*: Provide for a higher depreciation cost in the earlier years and lower charges in later periods. The main justification for this approach is that the asset is the most productive in its early years.

2 Identify other depreciation issues.

IFRS requirements for other depreciation issues are as follows:

- *Component depreciation*: Each part of an item of property, plant, and equipment that is significant to the total cost of the asset must be depreciated separately.
- *Partial periods*: In computing depreciation expense for partial periods, companies must determine depreciation expense for the full year and then prorate this depreciation expense between the two periods.
- *Replacement of property, plant, and equipment*: Depreciation does not provide funds for the replacement of property, plant, and equipment. It is simply a non-cash expense.
- *Revision of depreciation rates*: Companies report a change in estimate in the current and prospective period. It does not adjust opening balances nor attempt to “catch up” for prior periods.

3 Explain the accounting issues related to asset impairment.

The process to determine an impairment loss is as follows. (1) Review events and changes in circumstances for indicators of impairment. (2) If impairment indicators are present, an impairment test must be conducted. The impairment test compares the asset's recoverable amount (the higher of fair value less costs to sell or value-in-use) with its carrying amount. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded.

After a company records an impairment loss, the reduced carrying amount of the long-lived asset is its new cost basis. Impairment losses may be reversed as long as the write-up is never to an amount greater than the carrying amount before impairment. If the company expects to dispose of the asset, it should report the impaired asset at the lower-of-cost-or-net realizable value. Assets held for disposal are not depreciated.

4 Discuss the accounting procedures for depletion of mineral resources.

To account for depletion of mineral resources, companies (1) establish the depletion base and (2) write off resource cost. Three types of costs are considered in establishing the depletion base: (a) pre-exploratory costs, (b) exploration and evaluation costs, and (c) development costs. To write off resource cost, companies normally compute depletion using the units-of-production method. Thus, depletion is a function of the number of units withdrawn during the period. To obtain a cost per unit of product, the total cost of

the mineral resource less residual value is divided by the number of units estimated to be in the resource deposit. To compute depletion, this cost per unit is multiplied by the number of units withdrawn.

5 Apply the accounting for revaluations.

Under IFRS, companies may choose to value long-lived assets at cost or at fair value. When companies choose to report their long-lived tangible assets at fair value subsequent to acquisition, they account for the change in the fair value by adjusting the appropriate asset account and by recording an unrealized gain on the revalued long-lived tangible asset, which is recorded in other comprehensive income.

6 Demonstrate how to report and analyze property, plant, equipment, and mineral resources.

The basis of valuation for property, plant, and equipment and for mineral resources should be disclosed along with pledges, liens, and other commitments related to these assets. Companies should not offset any liability secured by property, plant, and equipment or by mineral resources against these assets, but should report it in the liabilities section. When depreciating assets, credit a valuation account normally called Accumulated Depreciation. When depleting assets, use an accumulated depletion account, or credit the depletion directly to the mineral resource account. Analysis may be performed to evaluate the asset turnover, profit margin on sales, and return on assets.

***7 Illustrate revaluation accounting procedures.**

The general rules for revaluation accounting are as follows. (1) Companies record unrealized gains in other comprehensive income (the unrealized gain bypasses net income). (2) Companies record losses on impairment (decrease of value below historical cost) in net income. Thus, gains on revaluation increase equity but not net income, whereas losses decrease equity and net income. (3) If a revaluation increase reverses a decrease that was reported as an impairment loss, a company credits the revaluation increase in net income; any additional valuation increase beyond the recovery is credited to other comprehensive income.

Enhanced Review and Practice

Go online for multiple-choice questions with solutions, review exercises with solutions, and a full glossary of all key terms.

Practice Problem

Norwel SA manufactures miniature circuit boards used in smartphones. On June 5, 2022, Norwel purchased a circuit board stamping machine at a retail price of €24,000. Norwel paid 5% sales tax on this purchase and hired a contractor to build a specially

wired platform for the machine for €1,800, to meet safety requirements. Norwel estimates the machine will have a 5-year useful life, with a residual value of €2,000 at the end of 5 years. Norwel uses straight-line depreciation and employs the “half-year” convention in accounting for partial-year depreciation. Norwel’s fiscal year ends on December 31.

Instructions

- At what amount should Norwel record the acquisition cost of the machine?
- How much depreciation expense should Norwel record in 2022 and in 2023?
- At what amount will the machine be reported in Norwel’s statement of financial position at December 31, 2023?
- During 2024, Norwel’s circuit board business is experiencing significant competition from companies with more advanced low-heat circuit boards. As a result, at June 30, 2024, Norwel conducts an impairment evaluation of the stamping machine purchased in 2022. Norwel determines that value-in-use for the machine is estimated to be €13,000 and the fair value of the machine less costs to sell, based on prices in the resale market, to be €13,400. Prepare the journal entry to record an impairment, if any, on the stamping machine.

Solution

- Historical cost is measured by the cash or cash equivalent price of obtaining the asset and bringing it to the location and condition for its intended use. For Norwel, this is:

Price	€24,000
Tax ($€24,000 \times .05$)	1,200
Platform	1,800
Total	<u>€27,000</u>

- Depreciable base: $€27,000 - €2,000 = €25,000$

Depreciation expense: $€25,000 \div 5 = €5,000$ per year

2022: $\frac{1}{2}$ year = $€5,000 \times .50 = €2,500$
2023: full year = €5,000

- The amount reported on the December 31, 2023, statement of financial position is the cost of the asset less accumulated depreciation:

Machinery	€27,000
Less: Accumulated depreciation	<u>7,500</u>
Book value	<u>€19,500</u>

- The recoverable amount is €13,400 (which is the greater of value in use and fair value less costs to sell). Norwel will record an impairment, based on comparison of

the recoverable amount of the machine and platform to the book value. The entry is as follows.

Loss on Impairment (€17,000* – €13,400)	3,600	
Accumulated Depreciation—Machinery		3,600

*Cost	€27,000
Less: Accumulated depreciation	
(€2,500 + €5,000 + €2,500)	<u>10,000</u>
Book value of machine and platform	<u>€17,000</u>

Exercises, Problems, Problem Solution Walkthrough Videos, Data Analytics Activities, and many more assessment tools and resources are available for practice in Wiley's online courseware.

Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

Questions

1. Distinguish among depreciation, depletion, and amortization.
2. Identify the factors that are relevant in determining the annual depreciation charge, and explain whether these factors are determined objectively or whether they are based on judgment.
3. Some believe that accounting depreciation measures the decline in the value of property, plant, and equipment. Do you agree? Explain.
4. Explain how estimation of service lives can result in unrealistically high valuations of property, plant, and equipment.
5. The plant manager of a manufacturing firm suggested in a conference of the company's executives that accountants should speed up depreciation on the machinery in the finishing department because improvements were rapidly making those machines obsolete, and a depreciation fund big enough to cover their replacement was needed. Discuss the accounting concept of depreciation and the effect on a business concern of the depreciation recorded for plant assets, paying particular attention to the issues raised by the plant manager.
6. For what reasons are plant assets retired? Define inadequacy, supersession, and obsolescence.
7. What basic questions must be answered before the amount of the depreciation charge can be computed?
8. Workman Group purchased a machine on January 2, 2022, for €800,000. The machine has an estimated useful life of 5 years and a residual value of €100,000. Depreciation was computed by the 150% declining-balance method. What is the amount of accumulated depreciation at December 31, 2023?

- 9.** Silverman Company purchased machinery for \$162,000 on January 1, 2022. It is estimated that the machinery will have a useful life of 20 years, residual value of \$15,000, production of 84,000 units, and working hours of 42,000. During 2022, the company uses the machinery for 14,300 hours, and the machinery produces 20,000 units. Compute depreciation under the straight-line, units-of-output, working hours, sum-of-the-years'-digits, and double-declining-balance methods.
- 10.** What are the major factors considered in determining what depreciation method to use?
- 11.** What is component depreciation?
- 12.** A building that was purchased December 31, 1998, for £2,500,000 was originally estimated to have a life of 50 years with no residual value at the end of that time. Depreciation has been recorded through 2022. During 2023, an examination of the building by an engineering firm discloses that its estimated useful life is 15 years after 2022. What should be the amount of depreciation for 2023?
- 13.** Charlie Parker, president of Spinners Company, has recently noted that depreciation increases cash provided by operations and therefore depreciation is a good source of funds. Do you agree? Discuss.
- 14.** Andrea Shen purchased a computer for €8,000 on July 1, 2022. She intends to depreciate it over 4 years using the double-declining-balance method. Residual value is €1,000. Compute depreciation for 2023.
- 15.** Walkin Inc. is considering the write-down of its long-term plant because of a lack of profitability. Explain to the management of Walkin how to determine whether a write-down is permitted.
- 16.** Last year, Wyeth Company recorded an impairment on an asset held for use. Recent appraisals indicate that the asset has increased in value. Should Wyeth record this recovery in value?
- 17.** Toro SA has equipment with a carrying amount of €700,000. The value-in-use of the equipment is €705,000, and its fair value less cost of disposal is €590,000. The equipment is expected to be used in operations in the future. What amount (if any) should Toro report as an impairment to its equipment?
- 18.** Explain how gains or losses on impaired assets should be reported in income.
- 19.** It has been suggested that plant and equipment could be replaced more quickly if depreciation rates for income tax and accounting purposes were substantially increased. As a result, business operations would receive the benefit of more modern and more efficient plant facilities. Discuss the merits of this proposition.
- 20.** List (a) the similarities and (b) the differences in the accounting treatments of depreciation and cost depletion.
- 21.** Describe cost depletion.
- 22.** Explain the difference between exploration and development costs as used in the extractive industries.

- 23.** In the extractive industries, businesses may pay dividends in excess of net income. What is the maximum permissible? How can this practice be justified?
- 24.** Shumway Oil uses successful-efforts accounting for its exploration and evaluation costs but also provides full-cost results as well. Under full-cost results, Shumway Oil would have reported retained earnings of \$42 million and net income of \$4 million. Under successful-efforts accounting, retained earnings were \$29 million and net income was \$3 million. Explain the difference between full-costing and successful-efforts accounting.
- 25.** Tanaka Ltd. has land that cost ¥15,000,000. Its fair value on December 31, 2022, is ¥20,000,000. Tanaka chooses the revaluation model to report its land. Explain how the land and its related valuation should be reported.
- 26.** Why might a company choose not to use revaluation accounting?
- 27. Vodafone** (GBR) reported net income of £2.8 billion, net sales of £42 billion, and average total assets of £140 billion. What is Vodafone's asset turnover? What is Vodafone's return on assets?
- *28.** Mandive Corp., in accordance with IFRS, applies revaluation accounting to plant assets with a carrying amount of \$400,000, a useful life of 4 years, and no residual value. At the end of year 1, independent appraisers determine that the asset has a fair value of \$360,000. Prepare the entries to record this revaluation and depreciation, assuming straight-line depreciation.

Brief Exercises

- BE11.1 (LO 1)** Fernandez Corporation purchased a truck at the beginning of 2022 for \$50,000. The truck is estimated to have a residual value of \$2,000 and a useful life of 160,000 miles. It was driven 23,000 miles in 2022 and 31,000 miles in 2023. Compute depreciation expense for 2022 and 2023.
- BE11.2 (LO 1, 2)** Lockard SE purchased machinery on January 1, 2022, for €80,000. The machinery is estimated to have a residual value of €8,000 after a useful life of 8 years. (a) Compute 2022 depreciation expense using the straight-line method. (b) Compute 2022 depreciation expense using the straight-line method, assuming the machinery was purchased on September 1, 2022.
- BE11.3 (LO 1, 2)** Use the information for Lockard SE given in BE11.2. (a) Compute 2022 depreciation expense using the sum-of-the-years'-digits method. (b) Compute 2022 depreciation expense using the sum-of-the-years'-digits method, assuming the machinery was purchased on April 1, 2022.
- BE11.4 (LO 1, 2)** Use the information for Lockard SE given in BE11.2. (a) Compute 2022 depreciation expense using the double-declining-balance method. (b) Compute 2022 depreciation expense using the double-declining-balance method, assuming the machinery was purchased on October 1, 2022.
- BE11.5 (LO 1)** Cominsky Company purchased a machine on July 1, 2023, for \$28,000. Cominsky paid \$200 in title fees and county property tax of \$125 on the machine. In addition, Cominsky paid \$500 shipping charges for delivery, and \$475 was paid to a local contractor to build and wire a platform for the machine on the plant floor. The machine

has an estimated useful life of 6 years with a residual value of \$3,000. Determine the depreciable base of Cominsky's new machine. Cominsky uses straight-line depreciation.

BE11.6 (LO 2) Ortiz SA purchased a piece of equipment that cost R\$202,000 on January 1, 2022. The equipment has the following components.

Component	Cost	Residual Value	Estimated Useful Life
A	R\$70,000	R\$7,000	10 years
B	50,000	5,000	5 years
C	82,000	4,000	12 years

Compute the depreciation expense for this equipment at December 31, 2022.

BE11.7 (LO 1, 2) Holt plc purchased a computer for £8,000 on January 1, 2021. Straight-line depreciation is used, based on a 5-year life and a £1,000 residual value. In 2023, the estimates are revised. Holt now feels the computer will be used until December 31, 2024, when it can be sold for £500. Compute the 2023 depreciation.

BE11.8 (LO 1, 2) Tan Chin Ltd. purchases a building for HK\$11,300,000 on January 2, 2022. An engineer's report shows that of the total purchase price, HK\$11,000,000 should be allocated to the building (with a 40-year life, no residual value), HK\$150,000 to 15-year property, and HK\$150,000 to 5-year property. Compute depreciation expense for 2022 using component depreciation.

BE11.9 (LO 3) Jurassic Company owns machinery that cost \$900,000 and has accumulated depreciation of \$380,000. The present value of expected future net cash flows from the use of the asset are expected to be \$500,000. The fair value less cost of disposal of the equipment is \$400,000. Prepare the journal entry, if any, to record the impairment loss.

BE11.10 (LO 4) Everly Corporation acquires a coal mine at a cost of \$400,000. Intangible development costs total \$100,000. After extraction has occurred, Everly must restore the property (estimated fair value of the obligation is \$80,000), after which it can be sold for \$160,000. Everly estimates that 4,000 tons of coal can be extracted. If 700 tons are extracted the first year, prepare the journal entry to record depletion.

***BE11.11 (LO 5, 7)** Obihiro Group has equipment with an original cost of ¥500,000,000 and related accumulated depreciation of ¥100,000,000 on December 31, 2022. The fair value of the equipment at December 31, 2022, is ¥650,000,000. The equipment has a useful life of 4 years remaining after December 31, 2022, with no residual value. Obihiro uses the straight-line method of depreciation. Prepare the entry to (a) record the revaluation of the equipment on December 31, 2022, and (b) record depreciation on the equipment at December 31, 2023.

BE11.12 (LO 6) In its annual report, **Campbell Soup Company** (USA) reports beginning-of-the-year total assets of \$7,745 million, end-of-the-year total assets of \$6,445 million, total sales of \$7,867 million, and net income of \$854 million. Compute Campbell's (a) asset turnover and (b) profit margin on sales. (c) Compute Campbell's return on assets using (1) asset turnover and profit margin and (2) net income.

Exercises

E11.1 (LO 1) (Depreciation Computations—SL, SYD, DDB) Lansbury Ltd. purchases equipment on January 1, year 1, at a cost of £518,000. The asset is expected to have a service life of 12 years and a residual value of £50,000.

Instructions

- a. Compute the amount of depreciation for each of years 1 through 3 using the straight-line depreciation method.
- b. Compute the amount of depreciation for each of years 1 through 3 using the sum-of-the-years'-digits method.
- c. Compute the amount of depreciation for each of years 1 through 3 using the double-declining-balance method. (In performing your calculations, round constant percentage to the nearest one-hundredth of a point and round answers to the nearest pound.)

E11.2 (LO 1) (Depreciation—Conceptual Understanding) Hasselback Company acquired a plant asset at the beginning of year 1. The asset has an estimated service life of 5 years. An employee has prepared depreciation schedules for this asset using three different methods to compare the results of using one method with the results of using other methods. You are to assume that the following schedules have been correctly prepared for this asset using (1) the straight-line method, (2) the sum-of-the-years'-digits method, and (3) the double-declining-balance method.

Year	Straight-Line	Sum-of-the-Years'-Digits	Double-Declining-Balance
1	\$9,000	\$15,000	\$20,000
2	9,000	12,000	12,000
3	9,000	9,000	7,200
4	9,000	6,000	4,320
5	9,000	3,000	1,480
Total	<u>\$45,000</u>	<u>\$45,000</u>	<u>\$45,000</u>

Instructions

Answer the following questions.

- a. What is the cost of the asset being depreciated?
- b. What amount, if any, was used in the depreciation calculations for the residual value for this asset?
- c. Which method will produce the highest charge to income in year 1?
- d. Which method will produce the highest charge to income in year 4?
- e. Which method will produce the highest book value for the asset at the end of year 3?
- f. If the asset is sold at the end of year 3, which method would yield the highest gain (or lowest loss) on disposal of the asset?

E11.3 (LO 1, 2) (Depreciation Computations—SYD, DDB—Partial Periods)

Cosby AG purchased a new plant asset on April 1, 2022, at a cost of €774,000. It was estimated to have a service life of 20 years and a residual value of €60,000. Cosby's accounting period is the calendar year.

Instructions

- a. Compute the depreciation for this asset for 2022 and 2023 using the sum-of-the-years'-digits method.
- b. Compute the depreciation for this asset for 2022 and 2023 using the double-declining-balance method.

E11.4 (LO 1, 2) (Depreciation Computations—Five Methods) Wenner Furnace Corp. purchased machinery for \$279,000 on May 1, 2022. It is estimated that it will have a useful life of 10 years, residual value of \$15,000, production of 240,000 units, and working hours of 25,000. During 2023, Wenner Corp. uses the machinery for 2,650 hours, and the machinery produces 25,500 units.

Instructions

From the information given, compute the depreciation charge for 2023 under each of the following methods. (Round to the nearest dollar.)

- a. Straight-line.
- b. Units-of-output.
- c. Working hours.
- d. Sum-of-the-years'-digits.
- e. Double-declining-balance.

E11.5 (LO 1, 2) (Depreciation Computations—Four Methods) Maserati SpA purchased a new machine for its assembly process on August 1, 2022. The cost of this machine was €150,000. The company estimated that the machine would have a residual value of €24,000 at the end of its service life. Its life is estimated at 5 years, and its working hours are estimated at 21,000 hours. Year-end is December 31.

Instructions

Compute the depreciation expense under the following methods. Each of the following should be considered unrelated.

- a. Straight-line depreciation for 2022.
- b. Activity method for 2023, assuming that machine usage was 800 hours.
- c. Sum-of-the-years'-digits for 2023.
- d. Double-declining-balance for 2023.

E11.6 (LO 1, 2) (Depreciation Computations—Five Methods, Partial Periods)

Agazzi Company purchased equipment for \$304,000 on October 1, 2022. It is estimated

that the equipment will have a useful life of 8 years and a residual value of \$16,000. Estimated production is 40,000 units, and estimated working hours are 20,000. During 2022, Agazzi uses the equipment for 525 hours, and the equipment produces 1,000 units.

Instructions

Compute depreciation expense under each of the following methods. Agazzi is on a calendar-year basis ending December 31.

- Straight-line method for 2022.
- Activity method (units of output) for 2022.
- Activity method (working hours) for 2022.
- Sum-of-the-years'-digits method for 2024.
- Double-declining-balance method for 2023.

E11.7 (LO 1, 2) (Different Methods of Depreciation) Jeeter Industries presents you with the following information.

Description	Date Purchased	Cost	Residual Value	Life in Years	Depreciation Method	Accumulated Depreciation to 12/31/22	Depreciation for 2023
Machine A	2/12/21	\$159,000	\$16,000	10	(a)	\$37,700	(b)
Machine B	8/15/20	(c)	21,000	5	SL	29,000	(d)
Machine C	7/21/19	88,000	28,500	8	DDB	(e)	(f)
Machine D	10/12/(g)	219,000	69,000	5	SYD	70,000	(h)

Instructions

Complete the table for the year ended December 31, 2023. The company depreciates all assets using the half-year convention.

E11.8 (LO 1, 2) (Depreciation Computation—Replacement, Non-Monetary Exchange) Goldman SA bought a machine on June 1, 2020, for €31,800, f.o.b. the place of manufacture. Freight to the point where it was set up was €200, and €500 was expended to install it. The machine's useful life was estimated at 10 years, with a residual value of €2,500. On June 1, 2021, an essential part of the machine is replaced, at a cost of €2,700, with one designed to reduce the cost of operating the machine. The book value of the old part is estimated to be €900.

On June 1, 2024, the company buys a new machine of greater capacity for €35,000, delivered, trading in the old machine, which has a fair value and trade-in allowance of €20,000. To prepare the old machine for removal from the plant cost €75, and expenditures to install the new one were €1,500. It is estimated that the new machine has a useful life of 10 years, with a residual value of €4,000 at the end of that time. The exchange has commercial substance.

Instructions

Assuming that depreciation is to be computed on the straight-line basis, compute the annual depreciation on the new equipment that should be provided for the fiscal year beginning June 1, 2024.

E11.9 (LO1, 2) (Component Depreciation) Morrow Manufacturing has equipment that is comprised of five components (amounts in thousands).

Component	Cost	Estimated Residual	Estimated Life (in years)
A	¥40,500	¥5,500	10
B	33,600	4,800	9
C	36,000	3,600	8
D	19,000	1,500	7
E	23,500	2,500	6

Instructions

- Prepare the adjusting entry necessary at the end of the year to record depreciation for the year. Assume that Morrow uses straight-line depreciation.
- Prepare the entry to record the replacement of component B for cash of ¥40,000. It was used for 6 years.

E11.10 (LO1) (Depreciation Computations, SYD) Pippen A.S. purchased a piece of equipment at the beginning of 2019. The equipment cost ₺502,000. It has an estimated service life of 8 years and an expected residual value of ₺70,000. The sum-of-the-years'-digits method of depreciation is being used. Someone has already correctly prepared a depreciation schedule for this asset. This schedule shows that ₺60,000 will be depreciated for a particular calendar year.

Instructions

Show calculations to determine for what particular year the depreciation amount for this asset will be ₺60,000.

E11.11 (LO1, 2) (Depreciation—Change in Estimate) Machinery purchased for \$52,000 by Carver Co. in 2018 was originally estimated to have a life of 8 years with a residual value of \$4,000 at the end of that time. Depreciation has been entered for 5 years on this basis. In 2023, it is determined that the total estimated life should be 10 years with a residual value of \$4,500 at the end of that time. Assume straight-line depreciation.

Instructions

- Prepare the entry to correct the prior years' depreciation, if necessary.
- Prepare the entry to record depreciation for 2023.

E11.12 (LO1, 2) (Depreciation Computation—Addition, Change in Estimate) In 1995, Abraham AS completed the construction of a building at a cost of €1,900,000 and first occupied it in January 1996. It was estimated that the building would have a useful life of 40 years and a residual value of €60,000 at the end of that time.

Early in 2006, an addition to the building was constructed at a cost of €470,000. At that time it was estimated that the remaining life of the building would be, as originally estimated, an additional 30 years, and that the addition would have a life of 30 years and a residual value of €20,000.

In 2024, it is determined that the probable life of the building and addition will extend to the end of 2055, or 20 years beyond the original estimate.

Instructions

- a. Using the straight-line method, compute the annual depreciation that would have been charged from 1996 through 2005.
- b. Compute the annual depreciation that would have been charged from 2006 through 2023.
- c. Prepare the entry, if necessary, to adjust the account balances because of the revision of the estimated life in 2024.
- d. Compute the annual depreciation to be charged beginning with 2024.

E11.13 (LO 1, 2) (Depreciation—Replacement, Change in Estimate) Peloton Company constructed a building at a cost of \$2,400,000 and occupied it beginning in January 2003. It was estimated at that time that its life would be 40 years, with no residual value.

In January 2023, a new roof was installed at a cost of \$300,000, and it was estimated then that the building would have a useful life of 25 years from that date. The cost of the old roof was \$180,000.

Instructions

- a. What amount of depreciation should have been charged annually from the years 2003 to 2022? (Assume straight-line depreciation.)
- b. What entry should be made in 2023 to record the replacement of the roof?
- c. Prepare the entry in January 2023 to record the revision in the estimated life of the building, if necessary.
- d. What amount of depreciation should be charged for the year 2023?

E11.14 (LO 1, 2) (Error Analysis and Depreciation, SL and SYD) Kawasaki Ltd. shows the following entries in its Equipment account for 2023. All amounts (in yen, in thousands) are based on historical cost.

Equipment					
Jan. 1	Balance	133,000	June 30	Cost of equipment sold (purchased prior to 2023)	
Aug. 10	Purchases	32,000			
12	Freight on equipment purchased	700			23,000

25	Installation costs	2,500		
Nov. 10	Repairs	500		

Instructions

- a. Prepare any correcting entries necessary.
- b. Assuming that depreciation is to be charged for a full year on the ending balance in the asset account, compute the proper depreciation charge for 2023 under each of the methods listed below. Assume an estimated life of 10 years, with no residual value. The machinery included in the January 1, 2023, balance was purchased in 2021.
 1. Straight-line.
 2. Sum-of-the-years'-digits.

E11.15 (LO 1, 2) (Depreciation for Fractional Periods) On March 10, 2024, No Doubt Company sells equipment that it purchased for \$240,000 on August 20, 2017. It was originally estimated that the equipment would have a life of 12 years and a residual value of \$21,000 at the end of that time, and depreciation has been computed on that basis. The company uses the straight-line method of depreciation.

Instructions

- a. Compute the depreciation charge on this equipment for 2017 and 2024, as well as the total charge for the period from 2018 to 2023, inclusive, under each of the six following assumptions with respect to partial periods.
 1. Depreciation is computed for the exact period of time during which the asset is owned. (Use 365 days for the base.)
 2. Depreciation is computed for the full year on the January 1 balance in the asset account.
 3. Depreciation is computed for the full year on the December 31 balance in the asset account.
 4. Depreciation for one-half year is charged on plant assets acquired or disposed of during the year.
 5. Depreciation is computed on additions from the beginning of the month following acquisition and on disposals to the beginning of the month following disposal.
 6. Depreciation is computed for a full period on all assets in use for over one-half year, and no depreciation is charged on assets in use for less than one-half year.
- b. Briefly evaluate the methods above, considering them from the point of view of basic accounting theory as well as simplicity of application.

E11.16 (LO 2) (Component Depreciation) Brazil Group purchases a tractor at a cost of €50,000 on January 2, 2022. Individual components of the tractor and useful lives are as follows (zero residual value).

	Cost	Useful Lives
Tires	€ 6,000	2 years
Transmission	10,000	5 years
Tractor	34,000	10 years

Instructions

- Compute depreciation expense for 2022, assuming Brazil Group depreciates the tractor as a single unit.
- Compute depreciation expense for 2022, assuming Brazil Group uses component depreciation.
- Why might a company want to use component depreciation to depreciate its assets?

E11.17 (LO 2) (Component Depreciation) Presented below are the components related to an office block that Veenman NV is considering purchasing for €10,000,000.

Component	Useful Life	Value
Land	Indefinite life	€3,000,000
Building structure	60-year life	4,200,000
Building engineering	30-year life	2,100,000
Building external works	30-year life	700,000

Instructions

- Compute depreciation expense for 2022, assuming that Veenman uses component depreciation (zero residual value).
- Assume that the building engineering was replaced in 20 years at a cost of €2,300,000. Prepare the entry to record the replacement of the old component with the new component.

E11.18 (LO 3) (Impairment) Presented below is information related to equipment owned by Pujols SpA at December 31, 2022.

Cost	€9,000,000
Accumulated depreciation to date	1,000,000
Value-in-use	7,000,000
Fair value less cost of disposal	4,400,000

Assume that Pujols will continue to use this asset in the future. As of December 31, 2022, the equipment has a remaining useful life of 4 years.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2022.
- Prepare the journal entry to record depreciation expense for 2023.

- c. The recoverable amount of the equipment at December 31, 2023, is €6,000,000. Prepare the journal entry (if any) necessary to record this increase.

E11.19 (LO 3) (Impairment) Assume the same information as E11.18, except that Pujols intends to dispose of the equipment in the coming year.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2022.
- Prepare the journal entry (if any) to record depreciation expense for 2023.
- The asset was not sold by December 31, 2023. The fair value of the equipment on that date is €5,100,000. Prepare the journal entry (if any) necessary to record this increase. It is expected that the cost of disposal is €20,000.

E11.20 (LO 3) (Impairment) The management of Sprague Inc. was discussing whether certain equipment should be written off as a charge to current operations because of obsolescence. This equipment has a cost of \$900,000 with depreciation to date of \$400,000 as of December 31, 2022. On December 31, 2022, management projected the present value of future net cash flows from this equipment to be \$300,000 and its fair value less cost of disposal to be \$280,000. The company intends to use this equipment in the future. The remaining useful life of the equipment is 4 years.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2022.
- Where should the gain or loss (if any) on the write-down be reported in the income statement?
- At December 31, 2023, the equipment's recoverable amount is \$270,000. Prepare the journal entry (if any).
- What accounting issues did management face in accounting for this impairment?

E11.21 (LO 4) (Depletion Computations—Oil) Federer Drilling has leased property on which oil has been discovered. Wells on this property produced 18,000 barrels of oil during the past year that sold at an average sales price of €65 per barrel. Total oil resources of this property are estimated to be 250,000 barrels.

The lease provided for an outright payment of €600,000 to the lessor (owner) before drilling could be commenced and an annual rental of €31,500. A premium of 5% of the sales price of every barrel of oil removed is to be paid annually to the lessor. In addition, Federer (lessee) is to clean up all the waste and debris from drilling and to bear the costs of reconditioning the land for farming when the wells are abandoned. The estimated fair value, at the time of the lease, of this clean-up and reconditioning is €30,000.

Instructions

From the provisions of the lease agreement, compute the cost per barrel for the past year, exclusive of operating costs, to Federer Drilling.

E11.22 (LO 4) (Depletion Computations—Mining) Henrik Mining purchased land on February 1, 2022, at a cost of €1,250,000. It estimated that a total of 60,000 tons of mineral was available for mining. After it has removed all the mineral resources, the company will be required to restore the property to its previous state because of strict environmental protection laws. It estimates the fair value of this restoration obligation at €90,000. It believes it will be able to sell the property afterwards for €100,000. It incurred developmental costs of €200,000 before it was able to do any mining. In 2022, resources removed totaled 30,000 tons. The company sold 24,000 tons.

Instructions

Compute the following information for 2022.

- a. Per unit mineral cost.
- b. Total mineral cost of December 31, 2022, inventory.
- c. Total mineral cost in cost of goods sold at December 31, 2022.

E11.23 (LO 4) (Depletion Computations—Minerals) At the beginning of 2022, Callaway Company acquired a mine for \$850,000. Of this amount, \$100,000 was ascribed to the land value and the remaining portion to the minerals in the mine. Surveys conducted by geologists have indicated that approximately 12,000,000 units of the ore appear to be in the mine. Callaway incurred \$170,000 of development costs associated with this mine prior to any extraction of minerals. It also determined that the fair value of its obligation to prepare the land for an alternative use when all of the ore has been removed was \$40,000. During 2022, 2,500,000 units of ore were extracted and 2,200,000 of these units were sold.

Instructions

Compute the following.

- a. The total amount of depletion for 2022.
- b. The amount that is charged as an expense for 2022 for the cost of the minerals sold during 2022.

E11.24 (LO 5) (Revaluation Accounting) Croatia Company purchased land in 2022 for \$300,000. The land's fair value at the end of 2022 is \$320,000; at the end of 2023, \$280,000; and at the end of 2024, \$305,000.

Instructions

Prepare the journal entries to record the land using revaluation accounting for 2022–2024.

E11.25 (LO 5) (Revaluation Accounting) Pengo Ltd. owns land that it purchased at a cost of ¥400 million in 2020. The company chooses to use revaluation accounting to account for the land. The land's value fluctuates as follows (all amounts in thousands as of December 31): 2020, ¥450,000; 2021, ¥360,000; 2022, ¥385,000; 2023, ¥410,000; and 2024, ¥460,000.

Instructions

Complete the following table.

Value at December 31	Other Comprehensive Income	Accumulated Other Comprehensive Income	Recognized in Net Income
2020			
2021			
2022			
2023			
2024			

E11.26 (LO 5) (Revaluation Accounting) Use the information in E11.25.

Instructions

Prepare the journal entries to record the revaluation of the land in each year.

E11.27 (LO 5) (Revaluation Accounting) Falcetto Company acquired equipment on January 1, 2021, for €12,000. Falcetto elects to value this class of equipment using revaluation accounting. This equipment is being depreciated on a straight-line basis over its 6-year useful life. There is no residual value at the end of the 6-year period. The appraised value of the equipment approximates the carrying amount at December 31, 2021 and 2023. On December 31, 2022, the fair value of the equipment is determined to be €7,000.

Instructions

- Prepare the journal entries for 2021 related to the equipment.
- Prepare the journal entries for 2022 related to the equipment.
- Determine the amount of depreciation expense that Falcetto will record on the equipment in 2023.

E11.28 (LO 6) Groupwork (Ratio Analysis) A recent annual report of Eastman plc contains the following information.

(in millions)	Current Year-End	Prior Year-End
Total assets	£13,659	£14,320
Total liabilities	10,630	12,932
Net sales	10,301	10,568
Net income	676	(601)

Instructions

Compute the following ratios for Eastman for the current year. (Round to three decimal places.)

- a. Asset turnover.
- b. Return on assets.
- c. Profit margin on sales.
- d. How can the asset turnover be used to compute the return on assets?

***E11.29 (LO 5, 7) (Revaluation Accounting)** Su Ltd. acquired an excavator on January 1, 2020, for ¥10,000 (all amounts in thousands). This excavator represents the company's only piece of equipment, and Su chooses revaluation accounting. This excavator is being depreciated on a straight-line basis over its 10-year useful life. There is no residual value at the end of the 10-year period. The appraised value of the excavator approximates the carrying value at December 31, 2020 and 2022. On December 31, 2021, the fair value is determined to be ¥8,800; on December 31, 2023, the fair value is determined to be ¥5,000.

Instructions

- a. Show all journal entries for each year-end from 2020 through 2023.
- b. Su also owns some property and buildings for which revaluation accounting is not used. Briefly discuss why Su might not use revaluation accounting for these assets.

Problems

P11.1 (LO 1, 2) Groupwork (Depreciation for Partial Period—SL, SYD, and DDB) Alladin Company purchased Machine #201 on May 1, 2022. The following information relating to Machine #201 was gathered at the end of May.

Price	\$85,000
Credit terms	2/10, n/30
Freight-in costs	\$ 800
Preparation and installation costs	\$ 3,800
Labor costs during regular production operations	\$10,500

It was expected that the machine could be used for 10 years, after which the residual value would be zero. Alladin intends to use the machine for only 8 years, however, after which it expects to be able to sell it for \$1,500. The invoice for Machine #201 was paid May 5, 2022. Alladin uses the calendar year as the basis for the preparation of financial statements.

Instructions

- a. Compute the depreciation expense for the years indicated using the following methods. (Round to the nearest dollar.)
 1. Straight-line method for 2022.
 2. Sum-of-the-years'-digits method for 2023.
 3. Double-declining-balance method for 2022.

- b. Suppose Kate Crow, the president of Alladin, tells you that because the company is a new organization, she expects it will be several years before production and sales reach optimum levels. She asks you to recommend a depreciation method that will allocate less of the company's depreciation expense to the early years and more to later years of the assets' lives. What method would you recommend?

P11.2 (LO 1, 2) (Depreciation for Partial Periods—SL, Act., SYD, and DDB) The cost of equipment purchased by Charleston, SA, on June 1, 2022, is €89,000. It is estimated that the machine will have a €5,000 residual value at the end of its service life. Its service life is estimated at 7 years, its total working hours are estimated at 42,000, and its total production is estimated at 525,000 units. During 2022, the machine was operated 6,000 hours and produced 55,000 units. During 2023, the machine was operated 5,500 hours and produced 48,000 units.

Instructions

Compute depreciation expense on the machine for the year ending December 31, 2022, and the year ending December 31, 2023, using the following methods.

- Straight-line.
- Units-of-output.
- Working hours.
- Sum-of-the-years'-digits.
- Declining-balance (twice the straight-line rate).

P11.3 (LO 1, 2) (Depreciation—SYD, Act., SL, and DDB) The following data relate to the Plant Assets account of Eshkol, Ltd. at December 31, 2022.

	Plant Assets			
	A	B	C	D
Original cost	£46,000	£51,000	£80,000	£80,000
Year purchased	2017	2018	2019	2021
Useful life	10 years	15,000 hours	15 years	10 years
Residual value	£ 3,100	£ 3,000	£ 5,000	£ 5,000
Depreciation method	Sum-of-the-years'-digits	Activity	Straight-line	Double-declining-balance
Accum. Depr. through 2022*	£31,200	£35,200	£15,000	£16,000

*For Assets A, C and D, in the year an asset is purchased, Eshkol does not record any depreciation expense on the asset. In the year an asset is retired or traded in, Eshkol takes a full year's depreciation on the asset.

The following transactions occurred during 2023.

- a. On May 5, Asset A was sold for £13,000 cash. The company's bookkeeper recorded this retirement in the following manner in the cash receipts journal.

Cash	13,000	
Plant Assets (Asset A)		13,000

- b. On December 31, it was determined that Asset B had been used 2,100 hours during 2023.
- c. On December 31, before computing depreciation expense on Asset C, the management of Eshkol, Inc. decided the useful life remaining from January 1, 2023, was 10 years.
- d. On December 31, it was discovered that a plant asset purchased in 2022 had been expensed completely in that year. This asset cost £28,000 and has a useful life of 10 years and no residual value. Management has decided to use the double-declining-balance method for this asset, which can be referred to as "Asset E."

Instructions

Prepare the necessary correcting entries for the year 2023. Record the appropriate depreciation expense on the above-mentioned assets. (Ignore taxes.)

P11.4 (LO 1, 2) (Depreciation and Error Analysis) A depreciation schedule for semi-trucks owned by Ichiro Manufacturing was requested by your auditor soon after December 31, 2023, showing the additions, retirements, depreciation, and other data affecting the income of the company in the 4-year period 2020 to 2023, inclusive. The following data were ascertained (amounts in thousands).

Balance of Trucks account, Jan. 1, 2020	
Truck No. 1 purchased Jan. 1, 2017, cost	¥18,000
Truck No. 2 purchased July 1, 2017, cost	22,000
Truck No. 3 purchased Jan. 1, 2019, cost	30,000
Truck No. 4 purchased July 1, 2019, cost	24,000
Balance, Jan. 1, 2020	<u>¥94,000</u>

The Accumulated Depreciation—Trucks account previously adjusted to January 1, 2020, and entered in the ledger, had a balance on that date of ¥30,200 (depreciation on the four trucks from the respective dates of purchase, based on a 5-year life, no residual value). No charges had been made against the account before January 1, 2020.

Transactions between January 1, 2020, and December 31, 2023, which were recorded in the ledger, are as follows.

July 1, 2020	Truck No. 3 was traded for a larger one (No. 5), the agreed purchase price of which was ¥40,000. Ichiro paid the automobile dealer ¥22,000 cash on the transaction. The entry was a debit to Trucks and a credit to Cash, ¥22,000. The transaction has commercial substance.
Jan. 1,	Truck No. 1 was sold for ¥3,500 cash; entry debited Cash and credited Trucks, ¥3,500.

2021	
July 1, 2022	A new truck (No. 6) was acquired for ¥42,000 cash and was charged at that amount to the Trucks account. (Assume Truck No. 2 was not retired.)
July 1, 2022	Truck No. 4 was damaged in a wreck to such an extent that it was sold as junk for ¥700 cash. Ichiro received ¥2,500 from the insurance company. The entry made by the bookkeeper was a debit to Cash, ¥3,200, and credits to Miscellaneous Income ¥700 and Trucks ¥2,500.

Entries for depreciation (using the straight-line method) had been made at the close of each year as follows: 2020, ¥21,000; 2021, ¥22,500; 2022, ¥25,050; and 2023, ¥30,400.

Instructions

- For each of the 4 years, compute separately the increase or decrease in net income arising from the company's errors in determining or entering depreciation or in recording transactions affecting trucks, ignoring income tax considerations.
- Prepare one compound journal entry as of December 31, 2023, for adjustment of the Trucks account to reflect the correct balances as revealed by your schedule, assuming that the books have not been closed for 2023.

P11.5 (LO 1, 2, 5) Groupwork (Comprehensive Property, Plant, and Equipment Problem) Darby Sporting Goods Plc has seen increased demand for its products over the last several years. The last two Olympic Games greatly increased the popularity of basketball around the world. As a result, a European sports retailing consortium entered into an agreement with Darby's Roundball Division to purchase basketballs and other accessories on an increasing basis over the next 5 years.

To be able to meet the quantity commitments of this agreement, Darby had to obtain additional manufacturing capacity. A real estate firm located an available factory in close proximity to Darby's Roundball manufacturing facility, and Darby agreed to purchase the factory and used machinery from Quay Athletic Equipment Company on October 1, 2021. Renovations were necessary to convert the factory for Darby's manufacturing use.

The terms of the agreement required Darby to pay Quay £50,000 when renovations started on January 1, 2022, with the balance to be paid as renovations were completed. The overall purchase price for the factory and machinery was £400,000. The building renovations were contracted to Malone Construction at £100,000. The payments made, as renovations progressed during 2022, are shown below. The factory was placed in service on January 1, 2023.

	1/1	4/1	10/1	12/31
Quay	£50,000	£90,000	£110,000	£150,000
Malone		30,000	30,000	40,000

On January 1, 2022, Darby secured a £500,000 line-of-credit with a 12% interest rate to finance the purchase cost of the factory and machinery, and the renovation costs. Darby

drew down on the line-of-credit to meet the payment schedule shown above; this was Darby's only outstanding loan during 2022.

Bob Sprague, Darby's controller, will capitalize the maximum allowable borrowing costs for this project. Darby's policy regarding purchases of this nature is to use the appraisal value of the land for book purposes and to prorate the balance of the purchase price over the remaining items. The building had originally cost Quay £300,000 and had a net book value of £50,000, while the machinery originally cost £125,000 and had a net book value of £40,000 on the date of sale. The land was recorded on Quay's books at £40,000. An appraisal, conducted by independent appraisers at the time of acquisition, valued the land at £290,000, the building at £105,000, and the machinery at £45,000.

Angie Justice, chief engineer, estimated that the renovated plant would be used for 15 years, with an estimated residual value of £30,000. Justice estimated that the productive machinery would have a remaining useful life of 5 years and a residual value of £3,000. Darby's depreciation policy specifies the 200% declining-balance method for machinery and the 150% declining-balance method for the plant. One-half year's depreciation is taken in the year the plant is placed in service and one-half year is allowed when the property is disposed of or retired. Darby uses a 360-day year for calculating interest costs.

Instructions

- a. Determine the amounts to be recorded on the books of Darby Sporting Goods as of December 31, 2022, for each of the following properties acquired from Quay Athletic Equipment Company.
 1. Land.
 2. Building.
 3. Machinery.
- b. Calculate Darby Sporting Goods' 2023 depreciation expense, for book purposes, for each of the properties acquired from Quay Athletic Equipment Company.
- c. Discuss the arguments for and against the capitalization of borrowing costs.
- d. Given the enhancements to the building, Darby thinks it would make its financial position look better if it used revaluation accounting. Advise Darby management on whether the company can use revaluation accounting for this building. Should Darby management use revaluation accounting? Briefly discuss some of the reasons for and against use of revaluation accounting.

P11.6 (LO1, 2) Groupwork (Comprehensive Depreciation Computations)

Kohlbeck Corporation, a manufacturer of steel products, began operations on October 1, 2021. The accounting department of Kohlbeck has started the plant asset and depreciation schedule (presented after the following information). You have been asked to assist in completing this schedule. In addition to ascertaining that the data already on the schedule are correct, you have obtained the following information from the company's records and personnel.

1. Depreciation is computed from the first of the month of acquisition to the first of the month of disposition.
2. Land A and Building A were acquired from a predecessor company. Kohlbeck paid \$800,000 for the land and building together. At the time of acquisition, the land had an appraised value of \$90,000, and the building had an appraised value of \$810,000.
3. Land B was acquired on October 2, 2021, in exchange for 2,500 newly issued shares of Kohlbeck's ordinary shares. At the date of acquisition, the shares had a par value of \$5 per share and a fair value of \$30 per share. During October 2021, Kohlbeck paid \$16,000 to demolish an existing building on this land so it could construct a new building.
4. Construction of Building B on the newly acquired land began on October 1, 2022. By September 30, 2023, Kohlbeck had paid \$320,000 of the estimated total construction costs of \$450,000. It is estimated that the building will be completed and occupied by July 2024.
5. A grant for certain equipment was given to the company by the local community. An independent appraisal of the equipment when granted placed the fair value at \$40,000 and the residual value at \$3,000. The grant is recorded as deferred grant revenue.
6. Machinery A's total cost of \$182,900 includes installation expense of \$600 and normal repairs and maintenance of \$14,900. Residual value is estimated at \$6,000. Machinery A was sold on February 1, 2023.
7. On October 1, 2022, Machinery B was acquired with a down payment of \$5,740 and the remaining payments to be made in 11 annual installments of \$6,000 each beginning October 1, 2022. The prevailing interest rate was 8%. The following data were abstracted from present value tables (rounded).

Present value of \$1.00 at 8%		Present value of an ordinary annuity of \$1.00 at 8%	
10 years	.463	10 years	6.710
11 years	.429	11 years	7.139
15 years	.315	15 years	8.559

Kohlbeck Corporation							
Plant Asset and Depreciation Schedule							
For Fiscal Years Ended September 30, 2022, and September 30, 2023							
Assets	Acquisition Date	Cost	Residual Value	Depreciation Method	Estimated Life in Years	Depreciation Expense Year Ended September 30	
						2022	2023
Land A	October 1, 2021	\$ (1)	N/A	N/A	N/A	N/A	N/A
Building A	October 1,	(2)	\$40,000	Straight-line	(3)	\$13,600	(4)

	2021						
Land B	October 2, 2021	(5)	N/A	N/A	N/A	N/A	N/A
Building B	Under Construction	320,000 to date	—	Straight-line	30	—	(6)
Donated Equipment	October 2, 2021	(7)	3,000	150% declining-balance	10	(8)	(9)
Machinery A	October 2, 2021	(10)	6,000	Sum-of-the-years'-digits	8	(11)	(12)
Machinery B	October 1, 2022	(13)	—	Straight-line	20	—	(14)
N/A—Not applicable							

Instructions

For each numbered item on the schedule above, supply the correct amount. (Round each answer to the nearest dollar.)

P11.7 (LO 1, 2) (Depreciation for Partial Periods—SL, Act., SYD, and DDB) On January 1, 2020, a machine was purchased for \$90,000. The machine has an estimated residual value of \$6,000 and an estimated useful life of 5 years. The machine can operate for 100,000 hours before it needs to be replaced. The company closed its books on December 31 and operates the machine as follows: 2020, 20,000 hours; 2021, 25,000 hours; 2022, 15,000 hours; 2023, 30,000 hours; and 2024, 10,000 hours.

Instructions

- a. Compute the annual depreciation charges over the machine's life assuming a December 31 year-end for each of the following depreciation methods.
 1. Straight-line method.
 2. Activity method.
 3. Sum-of-the-years'-digits method.
 4. Double-declining-balance method.
- b. Assume a fiscal year-end of September 30. Compute the annual depreciation charges over the asset's life applying each of the following methods.
 1. Straight-line method.
 2. Sum-of-the-years'-digits method.
 3. Double-declining-balance method.

P11.8 (LO 1, 2) (Depreciation Methods) On January 1, 2021, Luis SA, a small machine-tool manufacturer, acquired for R\$1,260,000 a piece of new industrial equipment. The new equipment had a useful life of 5 years, and the residual value was estimated to be R\$60,000. Luis estimates that the new equipment can produce 12,000

machine tools in its first year and 50,000 units over its life. It estimates that production will decline by 1,000 units per year over the remaining useful life of the equipment.

The following depreciation methods may be used: (1) straight-line, (2) double-declining-balance, (3) sum-of-the-years'-digits, and (4) units-of-output.

Instructions

Which depreciation method would maximize net income for financial statement reporting for the 3-year period ending December 31, 2023? Prepare a schedule showing the amount of accumulated depreciation at December 31, 2023, under the method selected. (Ignore present value, income tax, and deferred income tax considerations.)

P11.9 (LO 3) (Impairment) Roland SE uses special strapping equipment in its packaging business. The equipment was purchased in January 2021 for €10,000,000 and had an estimated useful life of 8 years with no residual value. At December 31, 2022, new technology was introduced that would accelerate the obsolescence of Roland's equipment. Roland's controller estimates that the present value of expected future net cash flows on the equipment will be €5,300,000 and that the fair value less costs to sell the equipment will be €5,600,000. Roland intends to continue using the equipment, but it is estimated that the remaining useful life is 4 years. Roland uses straight-line depreciation.

Instructions

- Prepare the journal entry (if any) to record the impairment at December 31, 2022 (depreciation for 2022 has been recorded).
- Prepare any journal entries for the equipment at December 31, 2023. The recoverable amount of the equipment at December 31, 2023, is estimated to be €4,900,000.
- Repeat the requirements for (a) and (b), assuming that Roland intends to dispose of the equipment and that it has not been disposed of as of December 31, 2023.

P11.10 (LO 3) (Impairment) At the end of 2022, Sapporo Group tests a machine for impairment. The machine is carried at depreciated historical cost, and its carrying amount is ¥150,000. It has an estimated remaining useful life of 10 years. The machine's recoverable amount is determined on the basis of a value-in-use calculation, using a pretax discount rate of 15%. Management-approved budgets reflect estimated costs necessary to maintain the level of economic benefit expected to arise from the machine in its current condition. The following information related to future cash flows is available at the end of 2022 (amounts in thousands; round all calculations to the nearest ¥).

Year	Future Cash Flow	Year	Future Cash Flow
2023	¥22,165	2028	¥24,825
2024	21,450	2029	24,123
2025	20,550	2030	25,533
2026	24,725	2031	24,234
2027	25,325	2032	22,850

Instructions

Part I

- a. Compute the amount of the impairment loss at December 31, 2022.
- b. Prepare the journal entry to record the impairment loss, if any, at December 31, 2022.

Part II

In the years 2023–2025, no event occurs that requires the machine's recoverable amount to be re-estimated. At the end of 2026, costs of ¥25,000 are incurred to enhance the machine's performance. Revised estimated cash flows in management's most recent budget are as follows.

Year	Future Cash Flow	Year	Future Cash Flow
2027	¥30,321	2030	¥31,950
2028	32,750	2031	33,100
2029	31,721	2032	27,999

- c. Prepare the journal entry for an impairment or reversal of an impairment at December 31, 2026.

P11.11 (LO 4) (Mineral Resources) Phelps Oil Wildcatters plc has leased property on which oil has been discovered. Wells on this property produced 36,000 barrels of oil during the past year, which sold at an average sales price of £65 per barrel. Total oil resources of this property are estimated to be 500,000 barrels. The lease provided for an outright payment of £1,200,000 to the lessor (owner) before drilling could be commenced and an annual rental of £62,000. A premium of 4% of the sales price of every barrel of oil removed is to be paid annually to the lessor. In addition, Phelps (lessee) is to clean up all the waste and debris from drilling and to bear the costs of reconditioning the land for farming when the wells are abandoned. At the time of the lease, the estimated fair value of this clean-up and reconditioning is £50,000.

Instructions

- a. From the provisions of the lease agreement, compute the cost per barrel for the past year, exclusive of operating costs, to Phelps.
- b. Compute the impact on Phelps' current-year profit and loss of the operation of the leased property.
- c. Phelps is considering putting in a bid to lease an adjacent tract of land for development, based on some preliminary geological surveys and exploratory drilling. Advise Phelps on how to account for these exploration and evaluation costs.

P11.12 (LO 1, 2, 4) (Depletion and Depreciation—Mining) Khamsah Mining Company has purchased a tract of mineral land for \$900,000. It is estimated that this tract will yield 120,000 tons of ore with sufficient mineral content to make mining and processing profitable. It is further estimated that 6,000 tons of ore will be mined the first and last year and 12,000 tons every year in between. (Assume 11 years of mining operations.) The land will have a residual value of \$30,000.

The company builds necessary structures and sheds on the site at a cost of \$36,000. It is estimated that these structures can serve 15 years. But, because they must be dismantled if they are to be moved, they have no residual value. The company does not intend to use the buildings elsewhere. Mining machinery installed at the mine was purchased secondhand at a cost of \$60,000. This machinery cost the former owner \$150,000 and was 50% depreciated when purchased. Khamsah Mining estimates that about half of this machinery will still be useful when the present mineral resources have been exhausted but that dismantling and removal costs will just about offset its value at that time. The company does not intend to use the machinery elsewhere. The remaining machinery will last until about one-half the present estimated mineral ore has been removed and will then be worthless. Cost is to be allocated equally between these two classes of machinery.

Instructions

- As chief accountant for the company, prepare a schedule showing estimated depletion and depreciation costs for each year of the expected life of the mine.
- Also compute the depreciation and depletion for the first year assuming actual production of 5,000 tons. Nothing occurred during the year to cause the company engineers to change their estimates of either the mineral resources or the life of the structures and equipment.

***P11.13 (LO 5, 7) (Revaluations)** Wang Ltd. owns land (cost HK\$200,000) for which it uses revaluation accounting. It has the following information related to this asset, the only land asset that Wang owns.

Date	Fair Value
January 1, 2021	HK\$200,000
December 31, 2021	215,000
December 31, 2022	185,000
December 31, 2023	205,000

Instructions

- Prepare all entries related to the land for 2021.
- Determine the amounts to be reported by Wang at December 31, 2022 and 2023, as Land, Other Comprehensive Income, Impairment Loss, and Accumulated Other Comprehensive Income.
- Prepare the entry for any revaluation adjustments at December 31, 2022 and 2023.
- Prepare the entries for the sale of the property by Wang on January 15, 2024, for HK\$220,000.

***P11.14 (LO 5, 7) (Revaluations)** Parnevik Group uses revaluation accounting for a class of equipment it uses in its golf club refurbishing business. The equipment was purchased on January 2, 2022, for €500,000; it has a 10-year useful life with no residual value. Parnevik has the following information related to the equipment. (Assume that

estimated useful life and residual value do not change during the periods presented below.)

Date	Fair Value
January 2, 2022	€500,000
December 31, 2022	468,000
December 31, 2023	380,000
December 31, 2024	355,000

Instructions

- Prepare all entries related to the equipment for 2022.
- Determine the amounts to be reported by Parnevik at December 31, 2023 and 2024, as Equipment, Other Comprehensive Income, Depreciation Expense, Impairment Loss, and Accumulated Other Comprehensive Income.
- Prepare the entry for any revaluation adjustments at December 31, 2023 and 2024.
- Prepare the entries for the sale of the equipment by Parnevik on January 2, 2025, for €330,000.

Concepts for Analysis

(Unless instructed otherwise, round answers to nearest currency unit. Interest rates are per annum unless otherwise indicated.)

CA11.1 (LO 1) (Depreciation Basic Concepts) Hakodat Manufacturing Group was organized January 1, 2022. During 2022, it has used in its reports to management the straight-line method of depreciating its plant assets.

On November 8, you are having a conference with Hakodat’s officers to discuss the depreciation method to be used for income tax and shareholder reporting. Tao Chen, president of Hakodat, has suggested the use of a new method, which he feels is more suitable than the straight-line method for the needs of the company during the period of rapid expansion of production and capacity that he foresees. Following is an example in which the proposed method is applied to a fixed asset with an original cost of ¥248,000, an estimated useful life of 5 years, and a residual value of approximately ¥8,000 (amounts in thousands).

Year	Years of Life Used	Fraction Rate	Depreciation Expense	Accumulated Depreciation at End of Year	Book Value at End of Year
1	1	$\frac{1}{15}$	¥16,000	¥ 16,000	¥232,000
2	2	$\frac{2}{15}$	32,000	48,000	200,000
3	3	$\frac{3}{15}$	48,000	96,000	152,000
4	4	$\frac{4}{15}$	64,000	160,000	88,000
5	5	$\frac{5}{15}$	80,000	240,000	8,000

The president favors the new method because he has heard that:

1. It will increase the funds recovered during the years near the end of the assets' useful lives when maintenance and replacement disbursements are high.
2. It will result in increased write-offs in later years and thereby will reduce taxes.

Instructions

- a. What is the purpose of accounting for depreciation?
- b. Is the president's proposal within the scope of international financial reporting standards? In making your decision, discuss the circumstances under which use of the method would be reasonable, if any, and those under which it would not be reasonable, if any.
- c. The president wants your advice on the following issues.
 1. Do depreciation charges recover or create funds? Explain.
 2. Assume that the taxing authorities accept the proposed depreciation method in this case. If the proposed method were used for shareholder and tax reporting purposes, how would it affect the availability of cash flows generated by operations?

CA11.2 (LO 1, 2) Writing (Depreciation—Strike, Units-of-Production, Obsolescence) Presented below are three different and unrelated situations involving depreciation accounting. Answer the question(s) at the end of each situation.

Situation I: Recently, Nai Su Ltd. experienced a strike that affected a number of its operating plants. The controller of this company indicated that it was not appropriate to report depreciation expense during this period because the equipment did not depreciate and an improper matching of costs and revenues would result. She based her position on the following points.

1. It is inappropriate to charge the period with costs for which there are no related revenues arising from production.
2. The basic factor of depreciation in this instance is wear and tear, and because equipment was idle, no wear and tear occurred.

Instructions

Comment on the appropriateness of the controller's comments.

Situation II: Etheridge Company manufactures electrical appliances. Company engineers have designed a new type of kitchen blender which will perform more functions than any blender currently on the market. Demand for the new blender can be projected with reasonable probability. In order to make the blenders, Etheridge needs a specialized machine that is not available from outside sources. The company decides to make the machine in its own plant.

Instructions

- a. Discuss the effect of projected demand in units for the new blenders (which may be steady, decreasing, or increasing) on the determination of a depreciation method for the machine.
- b. What other matters should be considered in determining the depreciation method? Ignore income tax considerations.

Situation III: Haley Paper Company operates a 300-ton-per-day kraft pulp mill and four sawmills. The company is in the process of expanding its pulp mill facilities to a capacity of 1,000 tons per day, and plans to replace three of its older, less efficient sawmills with an expanded facility. One of the mills to be replaced did not operate for most of 2022 (current year), and there are no plans to reopen it before the new sawmill facility becomes operational.

In reviewing the depreciation rates and in discussing the residual values of the sawmills that were to be replaced, the company noted that if present depreciation rates were not adjusted, substantial amounts of plant costs on these three mills would not be depreciated by the time the new mill came online.

Instructions

What is the proper accounting for the four sawmills at the end of 2022?

CA11.3 (LO 1) Writing (Depreciation Concepts) As a cost accountant for San Francisco Cannery, you have been approached by Phil Perriman, canning room supervisor, about the 2022 costs charged to his department. In particular, he is concerned about the line item “depreciation.” Perriman is very proud of the excellent condition of his canning room equipment. He has always been vigilant about keeping all equipment serviced and well oiled. He is sure that the huge charge to depreciation is a mistake; it does not reflect the cost of minimal wear and tear that the machines have experienced over the last year. He believes that the charge should be considerably lower.

The machines being depreciated are six automatic canning machines. All were put into use on January 1, 2022. Each cost \$625,000, having a residual value of \$55,000 and a useful life of 12 years. San Francisco depreciates this and similar assets using double-declining-balance depreciation. Perriman has also pointed out that if you used straight-line depreciation the charge to his department would not be as great.

Instructions

Write a memo to Phil Perriman to clear up his misunderstanding of the term “depreciation.” Also, calculate year-1 depreciation on all machines using both methods. Explain the theoretical justification for double-declining-balance and why, in the long run, the aggregate charge to depreciation will be the same under both methods.

CA11.4 (LO 1) Ethics (Depreciation Choice) Jerry Prior, Beeler AG’s controller, is concerned that net income may be lower this year. He is afraid upper-level management might recommend cost reductions by laying off accounting staff, including him.

Prior knows that depreciation is a major expense for Beeler. The company currently uses the double-declining-balance method for both financial reporting and tax purposes, and he’s thinking of selling equipment that, given its age, is primarily used when there are

periodic spikes in demand. The equipment has a carrying amount of €2,000,000 and a fair value of €2,180,000. The gain on the sale would be reported in the income statement. He doesn't want to highlight this method of increasing income. He thinks, "Why don't I increase the estimated useful lives and the residual values? That will decrease depreciation expense and require less extensive disclosure, since the changes are accounted for prospectively. I may be able to save my job and those of my staff."

Instructions

Answer the following questions.

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues involved?
- c. What should Prior do?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. What descriptions are used by M&S in its statement of financial position to classify its property, plant, and equipment?
- b. What method or methods of depreciation does M&S use to depreciate its property, plant, and equipment?
- c. Over what estimated useful lives does M&S depreciate its property, plant, and equipment?
- d. What amounts for depreciation expense did M&S charge to its income statement in 2019 and 2018?
- e. What were the capital expenditures for property, plant, and equipment made by M&S in 2019 and 2018?

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a. What amount is reported in the statements of financial position as property, plant, and equipment (net) of adidas at year-end 2018 and of Puma at year-end 2018? What percentage of total assets is invested in property, plant, and equipment by each company?
- b. What depreciation methods are used by adidas and Puma for property, plant, and equipment? How much depreciation was reported by adidas and Puma in 2018 and 2017?
- c. Compute and compare the following ratios for adidas and Puma for 2018.
 1. Asset turnover.
 2. Profit margin on sales.
 3. Return on assets.
- d. What amount was spent in 2018 for capital expenditures by adidas and Puma? What amount of borrowing cost was capitalized in 2018?

Financial Statement Analysis Case

Carrefour Group

Carrefour Group (FRA) is one of the top retailers in Europe with €76 billion in sales. It has more than 360,000 employees worldwide, with operations in 30 countries. Carrefour provided the following information in a recent annual report related to its property and equipment.

Carrefour Group

(in millions)

Notes to the Financial Statements (in part)

(3) Tangible fixed assets

In accordance with IAS 16 — *Property, Plant and Equipment*, land, buildings and equipment are stated at cost less accumulated depreciation and any accumulated impairment losses. Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalised as part of the cost of the asset. Qualifying assets are defined in IAS 23 — *Borrowing Costs* as assets that necessarily take a substantial period of time to get ready for their intended use or sale, corresponding in the Group's case to investment properties, hypermarkets and supermarkets for which the construction period exceeds one year. Tangible fixed assets are depreciated on a straight-line basis according to the following average useful lives:

- Buildings 40 years

- Site improvements 10 years
- Car parks 6 to 10 years
- Equipment, fixtures, fittings and installations 4 to 8 years
- Other fixed assets 3 to 10 years

Depreciation of tangible fixed assets	Current Year	Prior Year	Change
		€1,536	€1,601
	Current Year		Prior Year
Land		€ 2,606	€ 2,576
Buildings		10,611	10,403
Equipment, fixtures, fittings and installations		16,060	15,842
Other fixed assets		430	431
Fixed assets in progress		567	658
Leased land, buildings, fixtures		1,697	1,711
Gross tangible fixed assets		31,971	31,621
Accumulated Depreciation		(18,614)	(17,741)
Impairment		(720)	(783)
Net tangible fixed assets		<u>€ 12,637</u>	<u>€ 13,097</u>
Cash Provided by Operations			
(euros in millions)	Current Year		Prior Year
Cash provided by operations		€ 2,108	€ 2,843
Capital expenditures		1,611	2,369
Cash provided by operations as a percent of capital expenditures		131%	120%

Instructions

- What method of depreciation does Carrefour use?
- Do depreciation and amortization expense cause cash flow from operations to increase? Explain.
- What does the schedule of cash flow measures indicate?

Accounting, Analysis, and Principles

Electroboy Enterprises operates several stores throughout northern Belgium and the southern part of the Netherlands. As part of an operational and financial reporting review in a response to a downturn in its markets, the company's management has decided to perform an impairment test on five stores (combined). The five stores' sales have declined

due to aging facilities and competition from a rival that opened new stores in the same markets. Management has developed the following information concerning the five stores as of the end of fiscal 2022.

Original cost	€36 million
Accumulated depreciation	€10 million
Estimated remaining useful life	4 years
Estimated expected future annual cash flows (not discounted)	€4.0 million per year
Appropriate discount rate	5%
Fair value less cost of disposal	€19 million

Accounting

- a. Determine the amount of impairment loss, if any, that Electroboy should report for fiscal 2022 and the carrying amount at which Electroboy should report the five stores on its fiscal year-end 2022 statement of financial position. Assume that the cash flows occur at the end of each year.
- b. Repeat part (a), but instead assume that (1) the estimated remaining useful life is 10 years, (2) the estimated annual cash flows are €2,720,000 per year, and (3) the appropriate discount rate is 6%.

Analysis

Assume that you are a financial analyst and you participate in a conference call with Electroboy management in early 2023 (before Electroboy closes the books on fiscal 2022). During the conference call, you learn that management is considering selling the five stores, but the sale will not likely be completed until the second quarter of fiscal 2023. Briefly discuss what implications this would have for Electroboy's 2022 financial statements. Assume the same facts as in part (b) above.

Principles

Electroboy management would like to know the accounting for the impaired asset in periods subsequent to the impairment. Suppose conditions improve in its markets. Can the assets be written back up? Briefly discuss the conceptual arguments for this accounting.

Research Case

Matt Holmes recently joined Klax AG as a staff accountant in the controller's office. Klax provides warehousing services for companies in several European cities.

The location in Koblenz, Germany, has not been performing well due to increased competition and the loss of several customers that have recently gone out of business. Matt's department manager suspects that the plant and equipment may be impaired and wonders whether those assets should be written down. Given the company's prior success, this issue has never arisen in the past, and Matt has been asked to conduct some research on this issue.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free IFRS access at this site). When you have accessed the documents, you can use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. What is the authoritative guidance for asset impairments? Briefly discuss the scope of the standard (i.e., explain the types of transactions to which the standard applies).
- b. Give several examples of events that would cause an asset to be tested for impairment. Does it appear that Klax should perform an impairment test? Explain.
- c. What is the best evidence of fair value? Describe alternate methods of estimating fair value.

Global Accounting Insights

LEARNING OBJECTIVE 8

Compare accounting procedures for property, plant, and equipment under IFRS and U.S. GAAP.

U.S. GAAP adheres to many of the same principles as IFRS in the accounting for property, plant, and equipment. Major differences relate to use of component depreciation, impairments, and revaluations.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to property, plant, and equipment.

Similarities

- The definition of property, plant, and equipment is essentially the same under U.S. GAAP and IFRS.
- Under both U.S. GAAP and IFRS, changes in depreciation method and changes in useful life are treated in the current and future periods. Prior periods are not affected.
- The accounting for plant asset disposals is the same under U.S. GAAP and IFRS.
- The accounting for the initial costs to acquire natural resources is similar under U.S. GAAP and IFRS.
- Under both U.S. GAAP and IFRS, interest costs incurred during construction must be capitalized. Recently, IFRS converged to U.S. GAAP.
- The accounting for exchanges of non-monetary assets is essentially the same in U.S. GAAP and IFRS. U.S. GAAP requires that gains on exchanges of non-monetary assets be recognized if the exchange has commercial substance. This is the same framework used in IFRS.
- U.S. GAAP and IFRS both view depreciation as allocation of cost over an asset's life. U.S. GAAP and IFRS permit the same depreciation methods (straight-line, diminishing-balance, units-of-production).

Differences

- Under U.S. GAAP, component depreciation is permitted but is rarely used. IFRS requires component depreciation.
- U.S. GAAP does not permit revaluations of property, plant, equipment, and mineral resources. Under IFRS, companies can use either the historical cost model or the revaluation model.
- In testing for impairments of long-lived assets, U.S. GAAP uses a different model than IFRS (details of the U.S. GAAP impairment test are presented in the About the Numbers discussion). Under U.S. GAAP, as long as future undiscounted cash flows exceed the carrying amount of the asset, no impairment is recorded. The IFRS

impairment test is stricter. However, unlike U.S. GAAP, IFRS permits reversals of impairment losses.

- Under U.S. GAAP, all losses on non-monetary asset exchanges are recognized immediately.

About the Numbers

As indicated, impairment testing under U.S. GAAP is a two-step process. [Illustration GAAP 11.1](#) summarizes impairment measurement under U.S. GAAP. The key distinctions relative to IFRS relate to the use of a cash flow recovery test to determine whether an impairment test should be performed. Also, U.S. GAAP does not permit reversal of impairment losses for assets held for use.

On the Horizon

With respect to revaluations, as part of the conceptual framework project, the Boards will examine the measurement bases used in accounting. It is too early to say whether a converged conceptual framework will recommend fair value measurement (and revaluation accounting) for property, plant, and equipment. However, this is likely to be one of the more contentious issues, given the long-standing use of historical cost as a measurement basis in U.S. GAAP.

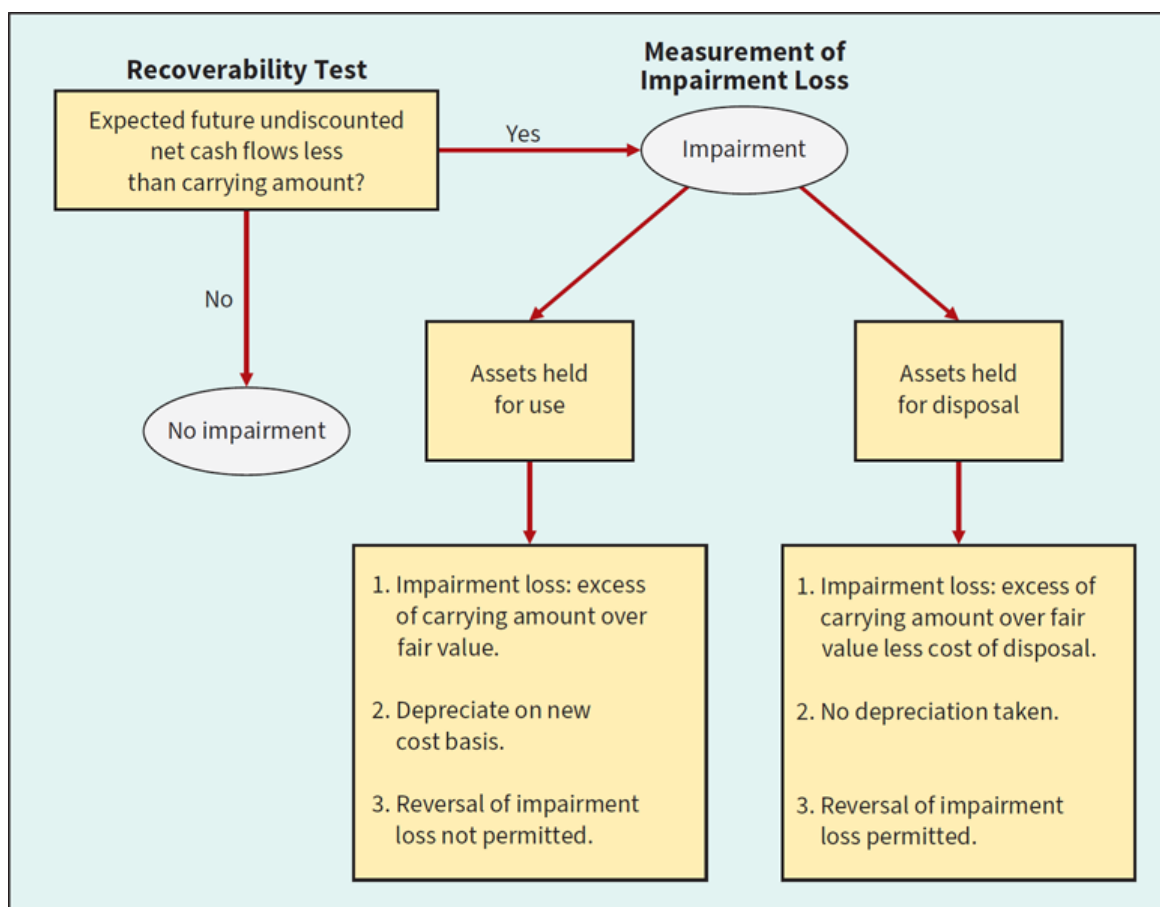

ILLUSTRATION GAAP 11.1 U.S. GAAP Impairment Measurement

GAAP Self-Test Questions

1. All of the following are key similarities between U.S. GAAP and IFRS with respect to accounting for property, plant, and equipment **except**:
 - a. the definition of property, plant, and equipment is essentially the same.
 - b. changes in depreciation method and changes in useful life are treated in the current and future periods.
 - c. both U.S. GAAP and IFRS allow revaluation accounting.
 - d. the accounting for plant asset disposals is the same under U.S. GAAP and IFRS.
2. All of the following are key differences between U.S. GAAP and IFRS with respect to accounting for property, plant and equipment **except**:
 - a. under U.S. GAAP, component depreciation is permitted but is rarely used.
 - b. U.S. GAAP does not permit revaluations of property, plant, and equipment, and mineral resources.
 - c. in testing for impairments of long-lived assets, U.S. GAAP compares value-in-use to the carrying value of the asset.
 - d. under U.S. GAAP, impairment testing is a two-step process.
3. Which of the following statements is **correct**?
 - a. Both IFRS and U.S. GAAP permit revaluation of property, plant, and equipment.
 - b. IFRS permits revaluation of property, plant, and equipment, but not U.S. GAAP.
 - c. Neither IFRS nor U.S. GAAP permit revaluation of property, plant, and equipment.
 - d. U.S. GAAP permits revaluation of property, plant, and equipment, but IFRS does not.
4. Hilo Company has land that cost \$350,000 but now has a fair value of \$500,000. Which of the following statements is **correct**?
 - a. Under IFRS, Hilo Company must continue to report the land at \$350,000 (if using revaluation accounting).
 - b. Under U.S. GAAP, Hilo Company would report a net income increase of \$150,000 due to an increase in the value of the land.
 - c. Under U.S. GAAP, Hilo Company would credit Unrealized Gain on Revaluation by \$150,000.
 - d. Under IFRS, Hilo Company would credit Unrealized Gain on Revaluation for \$150,000.
5. Under U.S. GAAP, an impairment of property, plant, and equipment:
 - a. may always be reversed if the fair value subsequently increases.

- b. is based on a two-step model, comparing value-in-use to the carrying value of the asset.
- c. may be reversed for assets held for sale.
- d. is measured based on total future undiscounted cash flows.

GAAP Concepts and Application

GAAP11.1 Briefly describe some of the similarities and differences between IFRS and U.S. GAAP with respect to the accounting for property, plant, and equipment.

GAAP11.2 At a recent executive committee meeting, the controller for Ricardo Company remarked, “With only a single key difference between IFRS and U.S. GAAP for property, plant, and equipment, it should be smooth sailing for the IASB and FASB to converge their standards in this area.” Prepare a response to the controller.

GAAP11.3 Moncrief Group, in accordance with IFRS, applies revaluation accounting to plant assets with a carrying amount of \$400,000, a useful life of 4 years, and no residual value. At the end of year 1, independent appraisers determine that the asset has a fair value of \$460,000. Discuss how an analysis of ratios such as return on assets and return on equity would be affected in comparing Moncrief to a U.S. GAAP company.

GAAP11.4 The real estate company **Liberty International** (now known as **Intu**) (GBR) followed IFRS. In one year, Liberty disclosed the following information on revaluations of its tangible fixed assets. The revaluation reserve measures the amount by which tangible fixed assets are recorded above historical cost and is reported in Liberty’s equity.

Liberty International

Completed Investment Properties

Completed investment properties are professionally valued on a market value basis by external valuers at the balance sheet date. Surpluses and deficits arising during the year are reflected in the revaluation reserve.

Liberty reported the following additional data. Amounts for **Kimco Realty** (USA) (which follows U.S. GAAP) in the same year are provided for comparison.

	Liberty (pounds sterling, in thousands)	Kimco (dollars, in millions)
Total revenues	£ 741	\$ 517
Average total assets	5,577	4,696
Net income	125	297

Instructions

- a. Compute the following ratios for Liberty and Kimco.
 1. Return on assets.
 2. Profit margin.

3. Asset turnover.

How do these companies compare on these performance measures?

- b. Liberty reported a revaluation surplus in Accumulated Other Comprehensive Income of £1,952. Assume that £1,550 of this amount arose from an increase in the net replacement value of investment properties during the year. Prepare the journal entry to record this increase.
- c. Under IFRS, are Liberty's assets and equity overstated? If so, why? When comparing Liberty to U.S. companies, like Kimco, what adjustments would you need to make in order to have valid comparisons of ratios such as those computed in (a) above?

Answers to GAAP Self-Test Questions

1. c 2. c 3. b 4. d 5. c

Notes

- 1 Residual value does not include possible future inflation effects. [2]
- 2 The airline industry also illustrates the type of problem involved in estimation. In the past, aircraft were assumed not to wear out—they just became obsolete. However, some jets have been in service as long as 20 years, and maintenance of these aircraft has become increasingly expensive. As a result, some airlines now replace aircraft not because of obsolescence but because of physical deterioration.
- 3 Companies use the straight-line method more than any other method of depreciation. In a survey of 200 international companies, straight-line depreciation was used 170 times, declining-balance 11 times, units-of-production (activity method) 18 times, and other (e.g., proportion of proven reserve) 8 times. In some cases, companies use two or more depreciation methods. See *IFRS Accounting Trends & Techniques*.
- 4 What happens if the estimated service life of the asset is, let us say, 51 years? How would we calculate the sum-of-the-years'-digits? Fortunately, mathematicians have developed the following formula that permits easy computation:

$$\frac{n(n+1)}{2} = \frac{51(51+1)}{2} = 1,326$$

- 5 A pure form of the declining-balance method (sometimes called the "fixed percentage of book value method") has also been suggested as a possibility. This approach uses a rate that depreciates the asset exactly to the residual value at the end of its expected useful life. The formula for determining the rate is as follows.

$$\text{Depreciation rate} = 1 - \sqrt[n]{\frac{\text{Residual value}}{\text{Acquisition cost}}}$$

The life in years is n . After computing the depreciation rate, a company applies it on the declining book value of the asset from period to period, which means that depreciation

expense will be successively lower. This method is not used extensively in practice, and it is generally not permitted for tax purposes.

- 6 Recently, **Intel** (USA) indicated that due to slower product cycles, it will also depreciate its machinery and equipment more slowly, resulting in an average useful life of five years instead of four. This change in estimate will mean that Intel will book \$1.5 billion less in depreciation expense, which will increase its profitability (in [Chapter 22](#), we provide a more complete discussion of changes in estimates). Is the change a positive for Intel? Only time will tell, as the change could signal problems for Intel (and others) in the global semiconductor industry due to reduced sales of its products in the future.
- 7 If a company can more readily determine value-in-use (or fair value less costs to sell) and it determines that no impairment is needed, it is not required to compute the other measure. [\[6\]](#)
- 8 Specifically, the pretax rate is determined taking into account market- and company-specific borrowing rates, adjusted for any risks the market might attribute to expected cash flows for the asset. [\[8\]](#)
- 9 The IASB has conducted a research project on the extractive industry. The primary focus is on the financial reporting issues associated with mineral and other natural resource reserves. The key question is whether and how to define, recognize, measure, and disclose reserves in the financial statements. At present, the Board is contemplating an agenda decision for a future standard. See the IFRS website for more information.
- 10 When a depreciable asset is revalued, companies use one of two approaches to record the revaluation. As an alternative to the one shown here, companies restate on a proportionate basis the cost and accumulated depreciation of the asset, such that the carrying amount of the asset after revaluation equals its revalued amount.
- 11 The entry for the transfer recognizes that any depreciation on the revalued part of the asset's carrying amount has been realized by being charged to retained earnings. By making this entry, it should be noted that the historical cost carrying amount (as if no revaluations have been recorded) can be determined by deducting the AOCI balance from the revalued carrying amount. In this case, the historical cost carrying amount after two years is €600,000 (€1,000,000 – €200,000 – €200,000), which is equal to the revalued carrying amount of €712,500 less AOCI of €112,500.
- 12 Another way to compute the loss on impairment of €30,000 is to determine the historical cost carrying amount of the equipment at December 31, 2023, which is €600,000 (€1,000,000 – €200,000 – €200,000), and subtract the fair value of the equipment (€570,000).

CHAPTER 12

Intangible Assets

LEARNING OBJECTIVES

After studying this chapter, you should be able to:

1. Discuss the characteristics, valuation, and amortization of intangible assets.
2. Describe the accounting for various types of intangible assets.
3. Explain the accounting issues for recording goodwill.
4. Identify impairment procedures and presentation requirements for intangible assets.
5. Describe the accounting and presentation for research and development and similar costs.

This chapter also includes numerous conceptual discussions that are integral to the topics presented here.

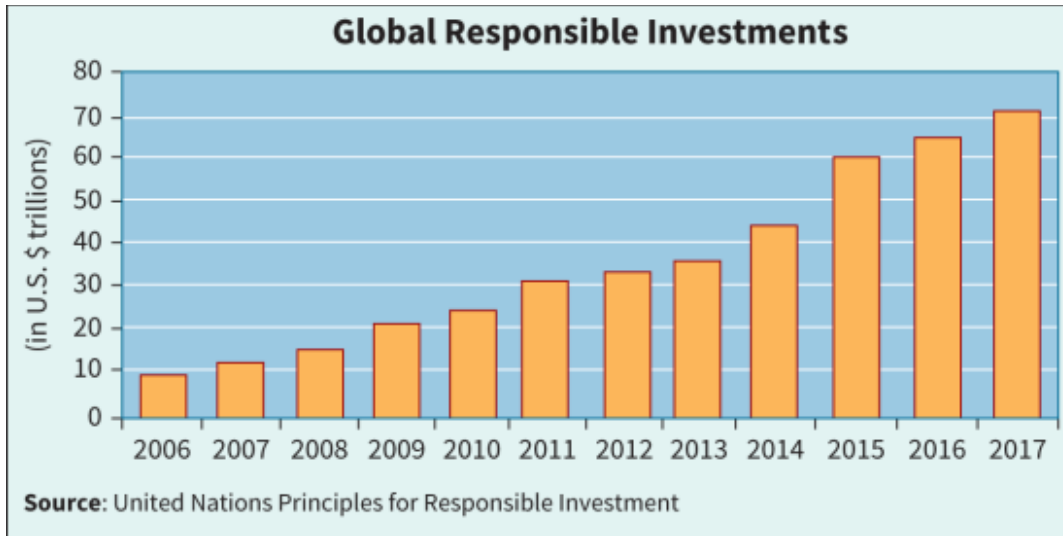

PREVIEW OF CHAPTER 12

As the following opening story indicates, sustainability strategies are taking on increased importance for companies like **SAP** (DEU) and **Alcatel Lucent Enterprise** (FRA). Reporting challenges for effective sustainability investments are similar to those for intangible assets. In this chapter, we explain the basic conceptual and reporting issues related to intangible assets. The content and organization of the chapter are as follows.

Is This Sustainable?

Companies are increasing their focus on sustainability issues. Companies like **Alcatel Lucent Enterprise** (FRA), **China Southern Power Grid Co.** (CHN), and **Clorox** (USA) are implementing strategic initiatives such as fuel-spill control, use of recycled materials, and water conservation in efforts to support long-term objectives related to responsible management of resource use. Why the growing importance of sustainability? One important reason is that market participants are increasingly looking to invest in companies that are pursuing sustainability strategies.

For example, as indicated in the adjacent graph, global sustainability investments have increased from below \$10 trillion in 2006 to over \$70 trillion in 2017.

In response, companies are now providing more useful “non-financial” information about the future cash flow consequences of sustainability strategies. Many companies are exploring ways to combine this non-financial information with mandated disclosures in what is called an integrated report. In such a report, a company discloses data on numerous metrics beyond conventional financial statements, whether the data are “integrated” or released in a separate format. Practitioners collectively refer to sustainability reporting as ESG, for the three major categories of data: environmental, social, and company governance.

While a growing number of companies are issuing sustainability reports, there is significant variation in the content and format. Only a handful, like those prepared by **Clorox** (USA), **SAP** (DEU), and **Polymer Group Inc.** (USA), integrate a sustainability report with the financial statements. Standards to ensure useful information on ESG issues are being developed by the **International Integrated Reporting Council** and the **Sustainability Accounting Standards Board**. And with the emergence of sustainability and integrated reporting standards, companies are voluntarily seeking assurance that their sustainability reports are meeting these standards. For example, over half of the world’s largest companies

recently reporting on sustainability also invested in external assurance for their reports. With standards and assurance, it is hoped that sustainability reports will gain the same credibility as the financial statements.

Review and Practice

Go to the [Review and Practice](#) section at the end of the chapter for a targeted summary review and practice problem with solution. Multiple-choice questions with annotated solutions, as well as additional exercises and practice problem with solutions, are also available online.

Intangible Asset Issues

LEARNING OBJECTIVE 1

Discuss the characteristics, valuation, and amortization of intangible assets.

Characteristics

Christian Dior's (FRA) most important asset is its brand image, not its store fixtures. **The Coca-Cola Company's** (USA) success comes from its secret formula for making Coca-Cola, not its plant facilities. The world economy is dominated by information and service providers. For these companies, their major assets are often intangible in nature.

What exactly are intangible assets? **Intangible assets** have three main characteristics. **[1]** (See the [Authoritative Literature References](#) section near the end of the chapter.)

1. **They are identifiable.** To be identifiable, an intangible asset must either be separable from the company (can be sold or transferred), or it arises from a contractual or legal right from which economic benefits will flow to the company.

2. **They lack physical existence.** Tangible assets such as property, plant, and equipment have physical form. Intangible assets, in contrast, derive their value from the rights and privileges granted to the company using them.
3. **They are not monetary assets.** Assets such as bank deposits, accounts receivable, and long-term investments in bonds and shares also lack physical substance. However, monetary assets derive their value from the right (claim) to receive cash or cash equivalents in the future. Monetary assets are not classified as intangibles.

In most cases, intangible assets provide benefits over a period of years. Therefore, companies normally classify them as non-current assets.

Valuation

Purchased Intangibles

Companies **record at cost** intangibles purchased from another party. Cost includes all acquisition costs plus expenditures to make the intangible asset ready for its intended use. Typical costs include purchase price, legal fees, and other incidental expenses.

Sometimes companies acquire intangibles in exchange for shares or other assets. In such cases, **the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident.** What if a company buys several intangibles, or a combination of intangibles and tangibles? In such a “basket purchase,” the company should allocate the cost on the basis of relative fair values. Essentially, the accounting treatment for purchased intangibles closely parallels that for purchased tangible assets.¹

Internally Created Intangibles

Businesses frequently incur costs on a variety of intangible resources, such as scientific or technological knowledge, market research,

intellectual property, and brand names. These costs are commonly referred to as research and development (R&D) costs. Intangible assets that might arise from these expenditures include patents, computer software, copyrights, and trademarks. For example, **Nokia** (FIN) incurred R&D costs to develop its communications equipment, resulting in patents related to its technology. In determining the accounting for these costs, Nokia must determine whether its R&D project is at a sufficiently advanced stage to be considered economically viable. To perform this assessment, Nokia evaluates costs incurred during the **research phase** and the **development phase**.

Illustration 12.1 indicates the two stages of research and development activities, along with the accounting treatment for costs incurred during these phases.

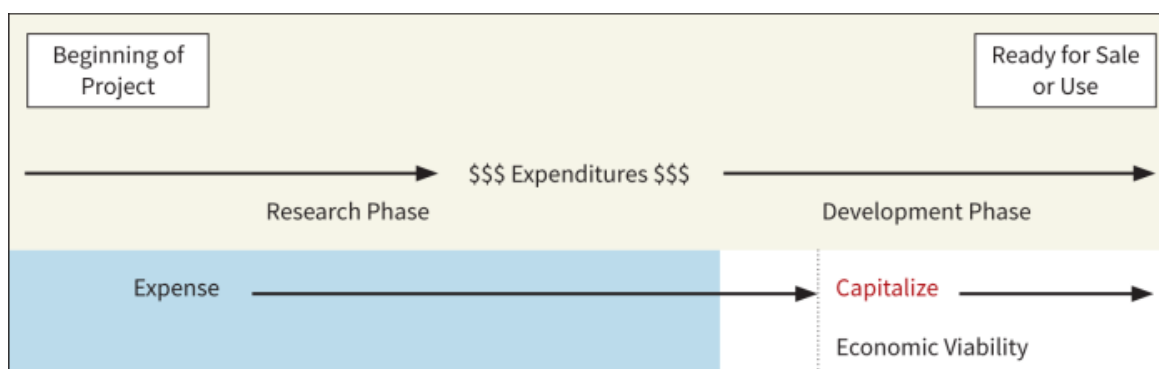

ILLUSTRATION 12.1 Research and Development Stages

As indicated, all costs incurred in the research phase are expensed as incurred. Once a project moves to the development phase, certain development costs are capitalized. Specifically, development costs are capitalized when certain criteria are met, indicating that an economically viable intangible asset will result from the R&D project. In essence, **economic viability** indicates that the project is far enough along in the process such that the economic benefits of the R&D project will flow to the company. Therefore, development costs incurred from that point forward meet the recognition criteria and should be recorded as an intangible asset (see **Underlying Concepts**).

Underlying Concepts

The controversy surrounding the accounting for R&D expenditures reflects a debate about whether such expenditures meet the definition of an asset. If so, then an “expense all research and some development costs” policy results in overstated expenses and understated assets.

In summary, **companies expense all research phase costs and some development phase costs. Certain development costs are capitalized once economic viability criteria are met.** IFRS identifies several specific criteria that must be met before development costs are capitalized (which we discuss in more detail later in the chapter).²

Amortization of Intangibles

The allocation of the cost of intangible assets in a systematic way is called **amortization**. Intangibles have either a **limited (finite) useful life** or an **indefinite useful life**. For example, a company like **Disney** (USA) has both types of intangibles. Disney **amortizes** its **limited-life** intangible assets (e.g., copyrights on its movies and licenses related to its branded products). It **does not amortize indefinite-life** intangible assets (e.g., the Disney trade name or its Internet domain name).

Limited-Life Intangibles

Companies amortize their limited-life intangibles by systematic charges to expense over their useful life. The useful life should reflect the periods over which these assets will contribute to cash flows. Disney, for example, considers these factors in determining useful lives:

1. The expected use of the asset by the company.
2. The effects of obsolescence, demand, competition, and other economic factors. Examples include the stability of the industry,

known technological advances, legislative action that results in an uncertain or changing regulatory environment, and expected changes in distribution channels.

3. Any provisions (legal, regulatory, or contractual) that enable renewal or extension of the asset's legal or contractual life without substantial cost. This factor assumes that there is evidence to support renewal or extension. Disney also must be able to accomplish renewal or extension without material modifications of the existing terms and conditions.
4. The level of maintenance expenditure required to obtain the expected future cash flows from the asset. For example, a material level of required maintenance in relation to the carrying amount of the asset may suggest a very limited useful life.
5. Any legal, regulatory, or contractual provisions that may limit the useful life.
6. The expected useful life of another asset or a group of assets to which the useful life of the intangible asset may relate (such as lease rights to a studio lot). [3]

The amount of amortization expense for a limited-life intangible asset should reflect the pattern in which the company consumes or uses up the asset, if the company can reliably determine that pattern. For example, assume that Second Wave Ltd. purchases a license to provide a specified quantity of a gene product called Mega. Second Wave should amortize the cost of the license following the pattern of use of Mega. If Second Wave's license calls for it to provide 30 percent of the total the first year, 20 percent the second year, and 10 percent per year until the license expires, it would amortize the license cost using that pattern. If it cannot determine the pattern of production or consumption, Second Wave should use the straight-line method of amortization. (*For homework problems, assume the use of the straight-line method unless stated otherwise.*) **When Second Wave amortizes this license, it should show the charges as expenses. It should credit either the appropriate asset accounts or separate accumulated amortization accounts.**

The amount of an intangible asset to be amortized should be its cost less residual value. The residual value is assumed to be zero, unless at the end of its useful life the intangible asset has value to another company. For example, if Hardy Co. purchases an intangible asset from U2D Co., U2D Co. should reduce the cost of its intangible asset by the residual value (when computing amortization). Similarly, U2D Co. should consider fair values, if reliably determinable, for the residual.

IFRS requires companies to assess the estimated residual values and useful lives of intangible assets at least annually. What happens if the life of a limited-life intangible asset changes? In that case, the remaining carrying amount should be amortized over the revised remaining useful life (see [Underlying Concepts](#)). Companies must also evaluate the limited-life intangibles annually to determine if there is an indication of impairment. If there is indication of impairment, an impairment test is performed.

Underlying Concepts

The terms “carrying amount,” “carrying value,” and “book value” are all used to refer to the cost less accumulated amortization of an intangible asset.

An impairment loss should be recognized for the amount that the carrying amount of the intangible is greater than the recoverable amount. Recall that the recoverable amount is the greater of the fair value less costs to sell or value-in-use. (We will cover impairment of intangibles in more detail later in the chapter.)

Indefinite-Life Intangibles

If no factors (legal, regulatory, contractual, competitive, or other) limit the useful life of an intangible asset, a company considers its useful life indefinite. An **indefinite life** means that there is no foreseeable limit on the period of time over which the intangible asset is expected to provide cash flows. A company **does not amortize** an intangible asset with an indefinite life. To illustrate, assume that

Double Clik Group acquired a trademark that it uses to distinguish a leading consumer product. It renews the trademark every 10 years. All evidence indicates that this trademark product will generate cash flows for an indefinite period of time. In this case, the trademark has an indefinite life; Double Clik does not record any amortization.

Companies also must test indefinite-life intangibles for **impairment** at least annually. The **impairment test** for indefinite-life intangibles is similar to the one for limited-life intangibles. That is, an impairment loss should be recognized for the amount that the carrying amount of the indefinite-life intangible asset is greater than the recoverable amount.³

Illustration 12.2 summarizes the accounting treatment for intangible assets.⁴

Type of Intangible	Manner Acquired		Amortization	Impairment Test
	Purchased	Internally Created		
Limited-life intangibles	Capitalize	Expense [*]	Over useful life	Compare recoverable amount to carrying value.
Indefinite-life intangibles	Capitalize	Expense [*]	Do not amortize	Compare recoverable amount to carrying value.
	*Except for certain limited costs that meet recognition criteria.			

ILLUSTRATION 12.2 Accounting Treatment for Intangibles

Types of Intangible Assets

LEARNING OBJECTIVE 2

Describe the accounting for various types of intangible assets.

There are many different types of intangibles, often classified into the following six major categories. [5]

1. Marketing-related intangible assets.
2. Customer-related intangible assets.
3. Artistic-related intangible assets.
4. Contract-related intangible assets.
5. Technology-related intangible assets.
6. Goodwill.

Marketing-Related Intangible Assets

Companies primarily use **marketing-related intangible assets** in the marketing or promotion of their products or services. Examples are trademarks or trade names, newspaper mastheads, Internet domain names, and non-competition agreements.

A **trademark** or **trade name** is a word, phrase, or symbol that distinguishes or identifies a particular company or product. Trade names like Mercedes-Benz, Pepsi-Cola, Honda, Cadbury Eggs, Wheaties, and Ikea create immediate product identification in our minds, thereby enhancing marketability. A recent expansion of Internet domain names will allow industries to use terms like .cars or even Web slang like .lol. This expansion has led to a new wave of domain-name activity. For a substantial fee, companies can register their own domain names; applications received include company names such as **Sony** (JPN) (which would have the name .sony) and for city-based domains such as .NYC and .Berlin.

Under common law, the right to use a trademark or trade name, whether registered or not, rests exclusively with the original user as long as the original user continues to use it. For example, in the United States, registration with the U.S. Patent and Trademark Office provides legal protection for an **indefinite number of renewals for periods of 10 years each.**⁵ Therefore, a company that uses an established trademark or trade name may properly consider it to have an indefinite life and does not amortize its cost.

If a company buys a trademark or trade name, it capitalizes the cost at the purchase price. If a company develops a trademark or trade name, it capitalizes costs related to securing it, such as attorney fees, registration fees, design costs, and consulting fees. However, it excludes research costs and development costs that do not meet recognition criteria. When the total cost of a trademark or trade name is insignificant, a company simply expenses it.

It is not uncommon for companies to incur legal fees and other costs to protect their valuable trade names and other intangible assets (e.g., copyrights and patents, discussed in the next two sections) (see [“Patent Battles”](#) in the “What Do the Numbers Mean?” box). In general, IFRS does not allow capitalization of these subsequent expenditures. The reason? The IASB indicates that subsequent expenditures likely only maintain the expected future economic benefits of the existing intangible asset, rather than enhancing its value or creating a new intangible asset. [6]

Customer-Related Intangible Assets

Customer-related intangible assets result from interactions with outside parties. Examples include customer lists, order or production backlogs, and both contractual and non-contractual customer relationships.

To illustrate, assume that Green Market AG acquires the customer list of a large newspaper for €6,000,000 on January 1, 2022. This customer database includes names, contact details, order history, and demographic information. Green Market expects to benefit from the information evenly over a three-year period. In this case, the customer

list is a limited-life intangible that Green Market should amortize on a straight-line basis.

Green Market records the purchase of the customer list and the amortization of the customer list at the end of each year as follows.

To record purchase of customer list (January 1, 2022)		
Customer List	6,000,000	
Cash		6,000,000
To record amortization expense (December 31, 2022, 2023, 2024)		
Amortization Expense (customer list) ($€6,000,000 \div 3$)	2,000,000	
Customer List (or Accumulated Customer List Amortization)		2,000,000

The preceding example assumed no residual value for the customer list. But what if Green Market determines that it can sell the list for €60,000 to another company at the end of three years? In that case, Green Market should subtract this residual value from the cost in order to determine the amortization expense for each year.

Amortization expense would be €1,980,000 per year, as shown in

[Illustration 12.3](#)

Cost	€6,000,000
Residual value	(60,000)
Amortization base	<u>€5,940,000</u>
Amortization expense per period: €1,980,000 ($€5,940,000 \div 3$)	

ILLUSTRATION 12.3 Calculation of Amortization Expense with Residual Value

Companies should assume a zero residual value unless the asset's useful life is less than the economic life and reliable evidence is available concerning the residual value. [7]

Artistic-Related Intangible Assets

Artistic-related intangible assets involve ownership rights to plays, literary works, musical works, pictures, photographs, and video

and audiovisual material. Copyrights protect these ownership rights.

A **copyright** is a government-granted right that all authors, painters, musicians, sculptors, and other artists have in their creations and expressions. A copyright is granted for the **life of the creator plus 70 years**.⁶ It gives the owner or heirs the exclusive right to reproduce and sell an artistic or published work. Copyrights are not renewable.

Copyrights can be valuable. In the late 1990s, **Disney** (USA) faced the loss of its copyright on Mickey Mouse, which could have affected sales of billions of dollars of Mickey-related goods and services (including theme parks). This copyright was so important that Disney and many other big entertainment companies fought all the way to the U.S. Supreme Court—and won an extension of copyright lives from 50 to 70 years.

As another example, **Really Useful Group** (USA) owns copyrights on the musicals of Andrew Lloyd Webber—*Cats*, *Phantom of the Opera*, *Jesus Christ Superstar*, and others. Really Useful Group has little in the way of tangible assets, yet analysts value the company at over \$300 million.

Companies capitalize the costs of acquiring a copyright. They amortize any capitalized costs over the useful life of the copyright if less than its legal life (life of the creator plus 70 years). For example, Really Useful Group should allocate the costs of its copyrights to the years in which it expects to receive the benefits. The difficulty of determining the number of years over which it will receive benefits typically encourages a company like Really Useful Group to write off these costs over a fairly short period of time. Companies must expense all research costs and any development costs not meeting recognition criteria that lead to a copyright as those costs are incurred.

Contract-Related Intangible Assets

Contract-related intangible assets represent the value of rights that arise from contractual arrangements. Examples are franchise and licensing agreements, construction permits, broadcast rights, and service or supply contracts.

A **franchise** is a contractual arrangement under which the franchisor grants the franchisee the right to sell certain products or services, to use certain trademarks or trade names, or to perform certain functions, usually within a designated geographical area. When you purchase a Prius from a **Toyota** (JPN) dealer, fill up your tank at the corner **Shell** (NLD) station, or eat lunch at a **McDonald's** (USA) restaurant, you are most likely dealing with franchises.

The franchisor, having developed a unique concept or product, protects its concept or product through a patent, copyright, or trademark or trade name. The franchisee acquires the right to exploit the franchisor's idea or product by signing a franchise agreement.

Another type of franchise arrangement, granted by a governmental body, permits a business to use public property in performing its services. Examples are the use of city streets for a bus line or taxi service; the use of public land for telephone, electric, or cable television lines; and the use of airwaves for radio or TV broadcasting. Such operating rights are referred to as **licenses** or **permits**.

Franchises and licenses may be for a definite period of time, for an indefinite period of time, or perpetual. The company securing the franchise or license carries an intangible asset account (entitled Franchises or Licenses) on its books, only when it can identify costs with the acquisition of the operating right. (Such costs might be legal fees or an advance lump-sum payment, for example.) **A company should amortize the cost of a franchise (or license) with a limited life as operating expense over the life of the franchise.** It should not amortize a franchise with an indefinite life nor a perpetual franchise; the company should instead carry such franchises at cost.

Annual payments made under a franchise agreement should be entered as operating expenses in the period in which they are incurred. These payments do not represent an asset since they do not relate to *future rights* to use the property.

Technology-Related Intangible Assets

Technology-related intangible assets relate to innovations or technological advances. Examples are patented technology and trade secrets granted by a governmental body.

In many countries, a **patent** gives the holder exclusive right to use, manufacture, and sell a product or process **for a period of 20 years** without interference or infringement by others.⁷ Companies such as **Merck** (USA) and **Canon** (JPN) were founded on patents and built on the exclusive rights thus granted.⁸ The two principal kinds of patents are **product patents**, which cover actual physical products, and **process patents**, which govern the process of making products.

If a company like **Samsung** (KOR) purchases a patent from an inventor, the purchase price represents its cost. Samsung can capitalize other costs incurred in connection with securing a patent, such as registration and attorneys' fees. However, it **must expense all research costs and any development costs incurred before achieving economic viability** related to the **development** of the product, process, or idea that it subsequently patents.

Companies should amortize the cost of a patent over its legal life or its useful life (the period in which benefits are received), **whichever is shorter**. If Samsung owns a patent from the date it is granted and expects the patent to be useful during its entire legal life, the company should amortize it over 20 years. If it appears that the patent will be useful for a shorter period of time, say, for five years, it should amortize its cost over five years.

Changing demand, new inventions superseding old ones, inadequacy, and other factors often limit the useful life of a patent to less than the legal life. For example, the useful life of pharmaceutical patents is frequently less than the legal life because of the testing and approval period that follows their issuance. A typical drug patent has several years knocked off its 20-year legal life. Why? Because, in the United States, a drugmaker spends one to four years on animal tests, four to six years on human tests, and two to three years for the U.S. Food and Drug Administration to review the tests. All this time occurs *after* issuing the patent but *before* the product goes on pharmacists' shelves.

What Do the Numbers Mean?

Patent Battles

The smartphone industry has been a patent battleground. For example, **Nokia** (FIN) filed patent lawsuits against **Apple** (USA), and Apple countersued, over such cell phone features as swiping gestures on touch screens and the “app store” for downloading software. Apple also targeted **HTC** (TWN) for infringing on Apple’s patented feature that allows screens to detect more than one finger touch at a time. This facilitates the popular zoom-in and zoom-out capability. HTC, in turn, sued Apple for infringing on patented technology that helps extend battery life.

With respect to popular apps used on smartphones, **BlackBerry** (CAN) sued **Facebook** (USA), alleging that the Facebook apps WhatsApp and Instagram co-opted BlackBerry’s intellectual property. This property includes the very features that users demand in these apps, explaining why BlackBerry would go to these legal lengths to protect its patents.

The activity-tracker product space is another patent battleground. Competition in that market heated up when **Under Armour** (USA) paid \$150 million to acquire **MapMyFitness** (USA), which had 20 million people registered to use its websites and mobile applications to map, record, and share their workouts. To protect the value of the patent related to its **miCoach** (USA) fitness tracking system, **adidas AG** (DEU) sued Under Armour to protect its 10 patents, underscoring the growing importance of gadgetry and personal technology for sportswear makers that traditionally focused on shoes and apparel.

Sources: J. Mintz, “Smart Phone Makers in Legal Fights over Patents,” *Wisconsin State Journal* (December 19, 2010), p. F4; S. Germano, “adidas Sues Under Armour Over Patents: Company Alleges Under Armour Infringes on 10 miCoach Patents,” *Wall Street Journal* (February 4, 2014); and D. George-Cosh, “BlackBerry Brings Patent Case Against Facebook, WhatsApp and Instagram,” *Wall Street Journal* (March 6, 2018).

Amortization expense should reflect the pattern, if reliably determined, in which a company uses up the patent.⁹ A company may credit amortization of patents directly to the Patents account or to an Accumulated Patent Amortization account. To illustrate, assume that Harcott Co. incurs \$180,000 in legal costs on January 1, 2022, to secure a patent. The patent's useful life is 10 years, amortized on a straight-line basis. Harcott records the legal fees and the amortization at the end of 2022 as follows.

To record legal fees related to patent (January 1, 2022)		
Patents	180,000	
Cash		180,000
To record amortization of patent (December 31, 2022)		
Patent Amortization Expense ($\$180,000 \div 10$)	18,000	
Patents (or Accumulated Patent Amortization)		18,000

We've indicated that a patent's useful life should not extend beyond its legal life of 20 years. However, companies often make small modifications or additions that lead to a new patent. For example, **AstraZeneca plc** (GBR) filed for additional patents on minor modifications to its heartburn drug, Prilosec. The effect may be to extend the life of the old patent. If the new patent provides essentially the same benefits, AstraZeneca can apply the unamortized costs of the old patent to the new patent.

Alternatively, if a patent becomes impaired because demand drops for the product, the asset should be written down or written off immediately to expense.

What Do the Numbers Mean?

Patents—Strategic Lifeblood

Are patents valuable assets, even though they are intangible? Let's take a look at **BASF** (DEU), a leading international chemical company. Here is the BASF strategy statement regarding innovation:

“Innovations based on effective and efficient research and development are an important growth engine for BASF.... This is how we ensure our long-term business success with chemistry-based solutions for almost all sectors of industry.”

And BASF acts on this strategy through expenditures on research and development, which many times lead to valuable patents. For example in a recent year, BASF spent €1,426 million on research and development (that's 30 percent of net income), and product innovation alone (from products on the market since 2013) generated €9 billion in sales. In that year alone, BASF filed 900 new patents worldwide.

Because patented technology is so important to BASF's success, it is not surprising that it provides expansive disclosure of patent-related information in its financial statements. Adjacent is an excerpt, from the note disclosure.

This development schedule for know-how intangible assets (sometimes referred to as a “roll-forward”) provides reconciliation of the changes in the intangible asset account. This information is important for understanding the magnitude of this important intangible asset and how it changed during the period. Note that BASF's total intangible assets decreased during the year and that there was a net decrease in its patent balance. This would be something to watch, given the importance of patented innovations in the BASF strategy.

Assets	2018	2017
Intangible assets	€16,554	€17,755

(000,000)	
11—INTANGIBLE ASSETS (in part)

Balance as of January 1, 2018	€1,879
Additions, net	2,761
Disposals/Transfers	(117)
Exchange differences, other	<u>52</u>
Balance as of December 31, 2018	4,575
Accumulated amortization	<u>(1,046)</u>
Net carrying value	<u>€3,529</u>

Goodwill

LEARNING OBJECTIVE 3

Explain the accounting issues for recording goodwill.

Although companies may capitalize certain costs incurred in developing specifically identifiable assets such as patents and copyrights, the amounts capitalized are generally insignificant. But companies do record material amounts of intangible assets when purchasing intangible assets, particularly in situations involving a business combination (the purchase of another business).

To illustrate, assume that Portofino Company decides to purchase Aquinas Company. In this situation, Portofino measures the assets acquired and the liabilities assumed at fair value. In measuring these assets and liabilities, Portofino must identify all the assets and liabilities of Aquinas. As a result, Portofino may recognize some assets

or liabilities not previously recognized by Aquinas. For example, Portofino may recognize intangible assets such as a brand name, patent, or customer list that were not recorded by Aquinas. In this case, Aquinas may not have recognized these assets because they were developed internally and charged to expense.¹⁰

In many business combinations, the purchasing company records goodwill. **Goodwill** is measured as the excess of the cost of the purchase over the fair value of the identifiable net assets (assets less liabilities) purchased. For example, if Portofino paid \$2,000,000 to purchase Aquinas's identifiable net assets (with a fair value of \$1,500,000), Portofino records goodwill of \$500,000. Goodwill is therefore measured as a residual rather than measured directly. That is why goodwill is sometimes referred to as a *plug*, a **gap filler**, or a **master valuation account**.

Conceptually, goodwill represents the future economic benefits arising from the other assets acquired in a business combination that are not individually identified and separately recognized. It is often called “the most intangible of the intangible assets” because it is identified only with the business as a whole. The only way to sell goodwill is to sell the business.

Recording Goodwill

Internally Created Goodwill

Goodwill generated internally should not be capitalized in the accounts. The reason? Measuring the components of goodwill is simply too complex, and associating any costs with future benefits is too difficult. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. To add to the mystery, goodwill may even exist in the absence of specific costs to develop it. Finally, because no objective transaction with outside parties takes place, a great deal of subjectivity—even misrepresentation—may occur (see [Underlying Concepts](#)).

Underlying Concepts

Capitalizing goodwill only when it is purchased in an arm's-length transaction, and not capitalizing any goodwill generated internally, is another example of faithful representation (and verifiability) winning out over relevance.

Purchased Goodwill

As indicated earlier, **goodwill is recorded only when an entire business is purchased.** To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price (cost) of the acquired business. The difference is considered goodwill. **Goodwill is the residual—the excess of cost over fair value of the identifiable net assets acquired.**

To illustrate, Feng, Inc. decides that it needs a parts division to supplement its existing tractor distributorship. The president of Feng is interested in buying Tractorling SA, a small concern in São Paulo, Brazil. [Illustration 12.4](#) presents Tractorling's statement of financial position.

Tractorling SA			
Statement of Financial Position			
As of December 31, 2022			
Assets		Equity and Liabilities	
Property, plant, and equipment, net	\$153,000	Share capital	\$100,000
Inventory	42,000	Retained earnings	100,000
Accounts receivable	35,000	Current liabilities	55,000
Cash	25,000		
Total assets	<u>\$255,000</u>	Total equity and liabilities	<u>\$255,000</u>

ILLUSTRATION 12.4 Tractorling Statement of Financial Position

After considerable negotiation, Tractorling decides to accept Feng's offer of \$400,000. What, then, is the value of the goodwill, if any?

The answer is not obvious. Tractorling's historical cost-based statement of financial position does not disclose the fair values of its identifiable assets. Suppose, though, that as the negotiations progress, Feng investigates Tractorling's underlying assets to determine their fair values. Such an investigation may be accomplished either through a purchase audit undertaken by Feng or by an independent appraisal from some other source. The investigation determines the valuations shown in [Illustration 12.5](#).

Fair Values	
Property, plant, and equipment, net	\$205,000
Patents	18,000
Inventory	122,000
Accounts receivable	35,000
Cash	25,000
Liabilities	<u>(55,000)</u>
Fair value of net assets	<u>\$350,000</u>

ILLUSTRATION 12.5 Fair Value of Tractorling's Net Assets

Normally, differences between fair value and book value are more common among non-current assets than among current assets. Cash obviously poses no problems as to value. Receivables normally are fairly close to current valuation although they may at times need certain adjustments due to inadequate bad debt provisions. Liabilities usually are stated at book value. However, if interest rates have changed since the company incurred the liabilities, a different valuation (such as present value based on expected cash flows) is appropriate. Careful analysis must be made to determine that no unrecorded liabilities are present.

The \$80,000 difference in Tractorling's inventories (\$122,000 – \$42,000) could result from a number of factors. The most likely is that the company uses the average-cost method. Recall that during

periods of inflation, average-cost will result in lower inventory valuations than FIFO.

In many cases, the values of non-current assets such as property, plant, and equipment and intangibles may have increased substantially over the years. This difference could be due to inaccurate estimates of useful lives, continual expensing of small expenditures (say, less than \$300), inaccurate estimates of residual values, and the discovery of some unrecorded assets. (For example, in Tractorling's case, analysis determines Patents have a fair value of \$18,000.) Or, fair values may have substantially increased.

Since the investigation now determines the fair value of net assets to be \$350,000, why would Feng pay \$400,000? Undoubtedly, Tractorling points to its established reputation, good credit rating, top management team, and well-trained employees, as well as synergies and cost savings in the combined entity. These factors make the value of the business greater than \$350,000. Feng places a premium on the future earning power of these attributes as well as on the basic asset structure of the company today.

Feng labels the difference between the purchase price of \$400,000 and the fair value of \$350,000 as goodwill.

Goodwill is viewed as one or a group of unidentifiable values (intangible assets), the cost of which “is measured by the difference between the cost of the group of assets or enterprise acquired and the sum of the assigned costs of individual tangible and identifiable intangible assets acquired less liabilities assumed.”¹¹ This procedure for valuation is called a **master valuation approach**. It assumes goodwill covers all the values that cannot be specifically identified with any identifiable tangible or intangible asset. [Illustration 12.6](#) shows this approach.

Assigned to purchase price of \$400,000	Property, plant, and equipment, net	\$205,000
	Patents	18,000
	Inventory	122,000
	Accounts receivable	35,000
	Cash	25,000
	Liabilities	(55,000)
	Fair value of net identifiable assets	350,000
	Purchase price	(400,000)
	Value assigned to goodwill	\$ 50,000

ILLUSTRATION 12.6 Determination of Goodwill—Master Valuation Approach

Feng records this transaction as follows.

Property, Plant, and Equipment	205,000	
Patents	18,000	
Inventory	122,000	
Accounts receivable	35,000	
Cash	25,000	
Goodwill	50,000	
Liabilities		55,000
Cash		400,000

Companies often identify goodwill on the statement of financial position as the **excess of cost over the fair value** of the net assets acquired.

Goodwill Write-Off

Companies that recognize goodwill in a business combination **consider it to have an indefinite life and therefore should not amortize it**. Although goodwill may decrease in value over time, predicting the actual life of goodwill and an appropriate pattern of amortization is extremely difficult. In addition, investors find the amortization charge of little use in evaluating financial performance.

Furthermore, the investment community wants to know the amount invested in goodwill, which often is the largest intangible asset on a

company's statement of financial position. Therefore, **companies adjust its carrying value only when goodwill is impaired**. This approach significantly impacts the income statements of some companies.

Some believe that goodwill's value eventually disappears. Therefore, they argue, companies should charge goodwill to expense over the periods affected, to better match expense with revenues. Others note that the accounting treatment for purchased goodwill and goodwill created internally should be consistent. They point out that companies immediately expense goodwill created internally and should follow the same treatment for purchased goodwill. Though these arguments may have some merit, non-amortization of goodwill combined with an adequate impairment test should provide the most useful financial information to the investment community. We discuss the accounting for goodwill impairments later in the chapter.

Bargain Purchase

In a few cases, the purchaser in a business combination pays *less than* the fair value of the identifiable net assets. Such a situation is referred to as a **bargain purchase**. A bargain purchase results from a market imperfection, that is, the seller would have been better off to sell the assets individually than in total. However, situations do occur (e.g., a forced liquidation or distressed sale due to the death of a company founder) in which the purchase price is less than the value of the net identifiable assets. **This excess amount is recorded as a gain by the purchaser.** [11]

The IASB notes that an economic gain is inherent in a bargain purchase. The purchaser is better off by the amount by which the fair value of what is acquired exceeds the amount paid. As an example, the recently proposed merger between **Deutsche Bank** (DEU) and **Commerzbank** (DEU) was asserted to depend on the ability of the merged bank to realize a "badwill" gain of over €16 billion.¹² Some expressed concern that some companies may attempt inappropriate gain recognition by making an intentional error in measurement of the assets or liabilities. As a result, the IASB requires companies to

disclose the nature of this gain transaction. Such disclosure will help users to better evaluate the quality of the earnings reported.

Impairment and Presentation of Intangible Assets

LEARNING OBJECTIVE 4

Identify impairment procedures and presentation requirements for intangible assets.

An intangible asset is **impaired** when a company is not able to recover the asset's carrying amount either through using it or by selling it. As discussed in [Chapter 11](#), to determine whether a long-lived asset (property, plant, and equipment or intangible assets) is impaired, a review is made of the asset's cash-generating ability through use or sale. If the carrying amount is higher than the recoverable amount, the difference is an impairment loss. If the recoverable amount is greater than the carrying amount, no impairment is recorded. [12] The specific procedures for recording impairments depend on the type of intangible asset—limited-life or indefinite-life (including goodwill).

Impairment of Limited-Life Intangibles

The rules that apply to **impairments of property, plant, and equipment also apply to limited-life intangibles**. At each statement of financial position date, a company should review limited-life intangibles for impairment. Information indicating that an impairment test should be performed might be internal (e.g., adverse changes in performance) or external (e.g., adverse changes in the business or regulatory environment, or technological or competitive developments). If there is an indication that an intangible asset is impaired, the company performs an impairment test: compare the carrying value of the intangible asset to the recoverable amount.

Recall that the **recoverable amount** is defined as the higher of fair value less costs to sell or value-in-use. Fair value less costs to sell means what the asset could be sold for after deducting costs of disposal. Value-in-use is the present value of cash flows expected from the future use and eventual sale of the asset at the end of its useful life. The **impairment loss** is the carrying amount of the asset less the recoverable amount of the impaired asset. As with other impairments, the loss is reported in profit or loss. Companies generally report the loss in the “Other income and expense” section. **Illustration 12.7** presents an impairment loss situation.

Impairment Loss on Patent

Facts: Lerch SE has a patent on how to extract oil from shale rock, with a carrying value of €5,000,000 at the end of 2021.

Unfortunately, several recent non-shale-oil discoveries adversely affected the demand for shale-oil technology, indicating that the patent is impaired. Lerch determines the recoverable amount for the patent, based on value-in-use (because there is no active market for the patent). Lerch estimates the patent's value-in-use at €2,000,000, based on the discounted expected net future cash flows at its market rate of interest.

Questions: (a) What is the amount of the impairment? (b) What is the journal entry to record the impairment?

Solution:

- a. The impairment loss is computed as follows (based on value-in-use).

Carrying value of patent	€5,000,000
Recoverable amount (based on value-in-use)	(2,000,000)
Loss on impairment	€3,000,000

- b. Lerch records this loss as follows.

Loss on Impairment	3,000,000	
Patents		3,000,000

After recognizing the impairment, the recoverable amount of €2,000,000 is the new carrying amount or book value of the patent. Lerch should amortize the patent's recoverable amount (new carrying amount) over its remaining useful life or legal life, whichever is shorter.

ILLUSTRATION 12.7 Computation of Loss on Impairment of Patent

Reversal of Impairment Loss

What happens if a review in a future year indicates that an intangible asset is no longer impaired because the recoverable amount of the asset is higher than the carrying amount? In that case, the impairment loss may be reversed. To illustrate, continuing the Lerch patent example, assume that the remaining life of the patent is five years with zero residual value. Recall the carrying value of the patent after impairment is €2,000,000 (€5,000,000 – €3,000,000). Thus, Lerch’s amortization is €400,000 (€2,000,000 ÷ 5) over the remaining five years of the patent’s life. The amortization expense and related carrying amount after the impairment are shown in **Illustration 12.8**.

Year	Amortization Expense	Carrying Amount	
2022	€400,000	€1,600,000	(€2,000,000 – €400,000)
2023	400,000	1,200,000	(€1,600,000 – €400,000)
2024	400,000	800,000	(€1,200,000 – €400,000)
2025	400,000	400,000	(€800,000 – €400,000)
2026	400,000	0	(€400,000 – €400,000)

ILLUSTRATION 12.8 Post-Impairment Carrying Value of Patent

Early in 2023, based on improving conditions in the market for shale-oil technology, Lerch remeasures the recoverable amount of the patent to be €1,750,000. In this case, Lerch reverses a portion of the recognized impairment loss with the following entry.

Patents (€1,750,000 – €1,600,000)	150,000	
-----------------------------------	---------	--

Recovery of Impairment Loss

150,000

The recovery of the impairment loss is reported in the “Other income and expense” section of the income statement. The carrying amount of the patent is now €1,750,000 (€1,600,000 + €150,000).¹³ Assuming the remaining life of the patent is four years, Lerch records €437,500 (€1,750,000 ÷ 4) of amortization expense in 2023.

Impairment of Indefinite-Life Intangibles Other Than Goodwill

Companies test indefinite-life intangibles (including goodwill) for impairment annually.¹⁴ The impairment test for indefinite-life assets other than goodwill is the same as that for limited-life intangibles. That is, compare the recoverable amount of the intangible asset with the asset’s carrying value. If the recoverable amount is less than the carrying amount, the company recognizes an impairment.

Illustration 12.9 presents an impairment situation for an indefinite-life intangible.

Impairment Loss on License

Facts: Arcon Radio purchased a broadcast license for €2,000,000. The license is renewable every 10 years if the company provides appropriate service and does not violate Government Communications Commission (GCC) rules. Arcon Radio has renewed the license with the GCC twice, at a minimal cost. Because it expects cash flows to last indefinitely, Arcon reports the license as an indefinite-life intangible asset. Recently, the GCC decided to auction these licenses to the highest bidder instead of renewing them. Based on recent auctions of similar licenses, Arcon Radio estimates the fair value less costs to sell (the recoverable amount) of its license to be €1,500,000.

Question: What is the impairment loss, if any, to be reported by Arcon?

Solution: Arcon reports an impairment loss of €500,000, computed as follows.

Carrying value of broadcast license	€2,000,000
Recoverable amount (based on fair value less costs to sell)	<u>(1,500,000)</u>
Loss on impairment	€ 500,000

ILLUSTRATION 12.9 Computation of Loss on Impairment of Broadcast License

Guidelines for reversal of impairments similar to those applied to limited-life intangible assets are applied to indefinite-life intangible assets other than goodwill.

Impairment of Goodwill

The timing of the impairment test for goodwill is the same as that for other indefinite-life intangibles. That is, companies must test goodwill at least annually. However, because goodwill generates cash flows only in combination with other assets, the impairment test is conducted based on the cash-generating unit to which the goodwill is assigned. Recall from our discussion in [Chapter 11](#) that companies identify a **cash-generating unit** based on the smallest identifiable group of assets that generate cash flows independently of the cash flows from other assets. Under IFRS, when a company records goodwill in a business combination, it must assign the goodwill to the cash-generating unit that is expected to benefit from the synergies and other benefits arising from the business combination.

To illustrate, assume that Kohlbuy AG has three divisions. It purchased one division, Pritt Products, four years ago for €2 million. Unfortunately, Pritt experienced operating losses over the last three quarters. Kohlbuy management is now reviewing the division (the cash-generating unit) for purposes of its annual impairment testing. [Illustration 12.10](#) lists the Pritt Division’s net assets, including the associated goodwill of €900,000 from the purchase.

Property, plant, and equipment net	€ 800,000
Goodwill	900,000
Inventory	700,000
Receivables	300,000
Cash	200,000
Accounts and notes payable	<u>(500,000)</u>
Net assets	<u>€2,400,000</u>

ILLUSTRATION 12.10 Net Assets of Pritt Division, Including Goodwill

Kohlbuy determines the recoverable amount for the Pritt Division to be €2,800,000, based on a value-in-use estimate.¹⁵ **Because the fair**

value of the division exceeds the carrying amount of the net assets, Kohlbuy does not recognize any impairment.

However, if the recoverable amount for the Pritt Division were less than the carrying amount of the net assets, then Kohlbuy must record an impairment. [Illustration 12.11](#) presents the goodwill impairment evaluation for Kohlbuy.

Evaluating Goodwill Impairment

Facts: The carrying value of Kohlbuy's Pritt Division is €2,400,000 (including Goodwill of €900,000). The recoverable amount of the Pritt Division is €1,900,000.

Questions: (a) What the impairment loss, if any, should be recorded? (b) What journal entry does Kohlbuy make to record the impairment loss, if any?

Solution:

- a. The amount of the impairment loss to be recorded is as follows.

Recoverable amount of Pritt Division	€ 1,900,000
Net identifiable assets	(2,400,000)
Loss on impairment	€ 500,000

- b. Kohlbuy makes the following entry to record the impairment.

Loss on Impairment	500,000	
Goodwill		500,000

Following this entry, the carrying value of the goodwill is €400,000.

ILLUSTRATION 12.11 Evaluation of Goodwill Impairment

If conditions change in subsequent periods, such that the recoverable amount of the Pritt Division's assets other than goodwill exceeds their carrying value, Kohlbuy may reverse an impairment loss on the Pritt Division assets other than goodwill. **Goodwill impairment loss reversals are not permitted.** [14]¹⁶

Presentation of Intangible Assets

The reporting of intangible assets is similar to the reporting of property, plant, and equipment. However, contra accounts may not be shown for intangibles on the statement of financial position.

As indicated, on the statement of financial position, companies should report as a separate item all intangible assets other than goodwill. If goodwill is present, companies should report it separately. The IASB concluded that since goodwill and other intangible assets differ significantly from other types of assets, such disclosure benefits users of the statement of financial position.

On the income statement, companies should present amortization expense and impairment losses and reversals for intangible assets other than goodwill separately in net income (usually in the operating section), as a separate line item.

The notes to the financial statements should include information about acquired intangible assets, including the amortization expense for each type of asset. The notes should include information about changes in the carrying amount of each type of intangible asset during the period.

Illustration 12.12 shows an excerpt of the intangible asset reporting for **Nestlé** (CHE). Note that Nestlé uses the label "Balance Sheet" for its statement of financial position.

 Nestlé (CHF in millions)

Balance Sheet	
At 31 December 2018	
Goodwill (note 9)	31,702
Intangible assets	18,634
1. Accounting policies (in part)	
Intangible assets	
<p>This heading includes intangible assets that are acquired either separately or in a business combination when they are identifiable and can be reliably measured. Intangible assets comprise indefinite-life intangible assets and finite-life intangible assets. Indefinite life intangible assets mainly comprise certain brands, trademarks, operating rights and intellectual property rights which can be renewed without significant cost and are supported by ongoing marketing activities. They are not amortized but tested for impairment annually or more frequently if an impairment indicator is triggered. The assessment of the classification of intangible assets as indefinite is reviewed annually.</p> <p>Finite life intangible assets are amortized over the shorter of their contractual or useful economic lives. They comprise mainly management information systems, patents and rights to carry on an activity (e.g. exclusive rights to sell products or to perform a supply activity). Finite life intangible assets are amortized on a straight-line basis assuming a zero residual value: management information systems over a period ranging from 3 to 8 years; other finite intangible assets over the estimated useful life or the related contractual period, generally 5 to 20 years or longer, depending on specific circumstances.</p>	
Impairment of goodwill and indefinite-life intangible assets	
<p>Goodwill and indefinite-life intangible assets are tested for impairment at least annually and upon the occurrence of an indication of impairment. The impairment tests are performed annually at the same time each year and at the cash generating unit (CGU) level. The Group defines its CGUs based on the way that it monitors and derives economic benefits from the acquired goodwill and intangibles. The impairment tests are performed by comparing the carrying value of the assets of these CGUs with their recoverable amount, based on their future projected cash flows discounted at an appropriate pre-tax rate of return.</p>

ILLUSTRATION 12.12 Nestlé's Intangible Asset Disclosures

Research and Development Costs

LEARNING OBJECTIVE 5

Describe the accounting and presentation for research and development and similar costs.

Research and development (R&D) costs are not in themselves intangible assets. However, we present the accounting for R&D costs here because R&D activities frequently result in the development of patents or copyrights (such as a new product, process, idea, formula, composition, or literary work) that may provide future value.

As indicated in the opening story, many companies spend considerable sums on research and development. **Illustration 12.13** shows the outlays for R&D made by selected companies in a recent year.

Company	Sales (in millions)	R&D/Sales
Volkswagen (DEU)	\$291.1	5.26 %
Samsung (KOR)	195.9	7.20
Intel (USA)	55.9	20.57
Microsoft (USA)	86.8	13.13
Roche (CHE)	51.9	20.81
Google (USA)	66.0	14.85
Amazon (USA)	89.0	10.45
Toyota (JPN)	249.0	3.69
Novartis (CHE)	52.4	17.37
Johnson & Johnson (USA)	74.3	11.44

ILLUSTRATION 12.13 R&D Outlays, as a Percentage of Sales

As discussed earlier, IFRS requires that all research costs be expensed as incurred. Development costs are generally expensed as incurred. However, once a project moves to the development phase, certain development costs are capitalized. Capitalization begins when the project is far enough along in the process such that the economic benefits of the R&D project will probably flow to the company (the project is economically viable).¹⁷ *For purposes of homework, assume that all R&D costs are expensed as incurred unless stated otherwise.*

What Do the Numbers Mean?

Global R&D Incentives

Research and development investments are the lifeblood of product and process developments that lead to future cash flows and growth. Countries around the world understand this and as a result provide significant incentives in the form of tax credits, “super deductions” (deductions greater than 100 percent), and company tax rate reductions, including “patent box” rates for companies that own and use patents registered in that country. The following table provides a summary for seven major economies.

Country	Statutory Tax Rate	R&D Incentives
China	25.0%	Offers a 150% super deduction and favorable tax rates for qualifying companies.
France	31.0%	Offers a variety of R&D incentives including refundable tax credits (30% of first €100 million of R&D expenditure), grants, special innovation tax credits, and a patent box (income from licensing/sale of patent taxed at reduced rate of 17%).
Ireland	12.5%	Offers a 25% incremental credit for all expenditure exceeding the “base amount” (total qualified expenditure incurred). A 25% volume-based credit is applied to all qualifying research expenses.
Japan	23.2%	Offers volume-based credits, as well as incremental credits for companies that have increased their research spending. The tax credit ranges from 6–10% of total R&D expenditure for large companies.
Singapore	17.0%	Offers super deductions under a complex

		multi-tiered system for R&D carried out both in Singapore and outside Singapore. Super deductions can be as high as 250%.
United Kingdom	19.0%	Offers a 130% super deduction or a taxable credit of 11% thereafter. Also offers a full deduction for capital costs incurred for R&D that may be claimed in the year the expenditure is incurred rather than depreciated.
United States	21.0%	Offers choice to report Alternative Simplified Credit (14% of excess of qualified research expenses) or Traditional Research Tax Credit (20% of amount of qualified research expenses exceeding a base amount).

As indicated, there are wide variations in both statutory tax rates and R&D incentives. However, tax credits, government incentives, and company tax rates may constitute only a fraction of the relevant factors a company considers when evaluating development centers. In addition, depending on the politics of tax provisions, there can be year-to-year uncertainty in company tax planning, thereby weakening the effectiveness of such incentives.

Sources: L. Cutler, D. Sayuk, and Camille Shoff, "Global R&D Incentives Compared," *Journal of Accountancy* (June 2013); and www2.deloitte.com/content/dam/Deloitte/us/Documents/Tax/us-tax-surveyof-global-investment-and-innovation-incentives.pdf.

Identifying R&D Activities

Illustration 12.14 shows the definitions for **research activities** and **development activities**. These definitions differentiate research and development costs from other similar costs. [16]

<p style="text-align: center;">Research Activities</p>  <p style="text-align: center;">Original and planned investigation undertaken with the prospect of gaining new scientific or technical knowledge and understanding.</p>	<p style="text-align: center;">Development Activities</p>  <p style="text-align: center;">Application of research findings or other knowledge to a plan or design for the production of new or substantially improved materials, devices, products, processes, systems, or services before the start of commercial production or use.</p>
<p style="text-align: center;">Examples</p> <p>Laboratory research aimed at discovery of new knowledge; searching for applications of new research findings.</p>	<p style="text-align: center;">Examples</p> <p>Conceptual formulation and design of possible product or process alternatives; construction of prototypes and operation of pilot plants.</p>

ILLUSTRATION 12.14 Research Activities versus Development Activities

R&D activities do not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other ongoing operations, even though these alterations may represent improvements. For example, routine ongoing efforts to refine, enrich, or improve the qualities of an existing product are not considered R&D activities.

Accounting for R&D Activities

The costs associated with R&D activities and the accounting treatments accorded them are as follows.

1. **Materials, equipment, and facilities.** Expense the entire costs, **unless the items have alternative future uses** (in other projects or otherwise). If there are alternative future uses, carry the items as inventory and allocate as consumed, or capitalize and depreciate as used.
2. **Personnel.** Expense as incurred salaries, wages, and other related costs of personnel engaged in R&D.

3. **Purchased intangibles.** Recognize and measure at fair value. After initial recognition, account for in accordance with their nature (as either limited-life or indefinite-life intangibles).¹⁸
4. **Contract services.** Expense the costs of services performed by others in connection with R&D as incurred.
5. **Indirect costs.** Include a reasonable allocation of indirect costs in R&D costs, except for general and administrative costs, which must be clearly related in order to be included in R&D.

Consistent with item 1 above, if a company owns a research facility that conducts R&D activities and that has alternative future uses (in other R&D projects or otherwise), it should capitalize the facility as an operational asset. The company accounts for depreciation and other costs related to such research facilities as R&D expenses.

To illustrate, assume that Next Century Incorporated develops, produces, and markets laser machines for medical, industrial, and defense uses. [Illustration 12.15](#) lists the types of expenditures related to its laser-machine activities, along with the recommended accounting treatment.

Next Century Incorporated

Type of Expenditure	Accounting Treatment	Rationale
1. Construction of long-range research facility for use in current and future projects (three-story, 400,000-square-foot building).	Capitalize and depreciate as R&D expense.	Has alternative future use.
2. Acquisition of R&D equipment for use on current project only.	Expense immediately as R&D.	Research cost.
3. Acquisition of machinery for use on current and future R&D projects.	Capitalize and depreciate as R&D expense.	Has alternative future use.
4. Purchase of materials for use on current and future R&D projects.	Record as Inventory and allocate to R&D projects; expense as consumed.	Has alternative future use.
5. Salaries of research staff designing new laser bone scanner.	Expense immediately as R&D.	Research cost.
6. Research costs incurred under contract with New Horizon, Inc., and billable monthly.	Record as a receivable.	Not R&D cost (reimbursable expense).

Next Century Incorporated

<p>7. Material, labor, and overhead costs of prototype laser scanner (economic viability not achieved).</p>	<p>Expense immediately as R&D.</p>	<p>Does not meet recognition criteria.</p>
<p>8. Costs of testing prototype and design modifications (economic viability not achieved).</p>	<p>Expense immediately as R&D.</p>	<p>Does not meet recognition criteria.</p>
<p>9. Legal fees to obtain patent on new laser scanner.</p>	<p>Capitalize as patent and amortize to overhead as part of cost of goods manufactured.</p>	<p>Direct cost of patent.</p>
<p>10. Executive salaries.</p>	<p>Expense as operating expense.</p>	<p>Not R&D cost (general and administrative expense).</p>
<p>11. Cost of marketing research to promote new laser scanner.</p>	<p>Expense as operating expense.</p>	<p>Not R&D cost (selling expense).</p>
<p>12. Engineering costs incurred to advance the laser scanner to full production stage (economic viability achieved).</p>	<p>Capitalize as R&D.</p>	<p>Meets recognition criteria.</p>

Next Century Incorporated		
13. Costs of successfully defending patent on laser scanner.	Expense as legal fees.	Such expenditures only maintain expected benefits.
14. Commissions to sales staff marketing new laser scanner.	Expense as operating expense.	Not R&D cost (selling expense).

ILLUSTRATION 12.15 Sample R&D Expenditures and Their Accounting Treatment

Evolving Issue

Recognition of R&D and Internally Generated Intangibles

The requirement that companies expense immediately all research and most development costs (as well as start-up costs) incurred internally is a practical solution. It ensures consistency in practice and uniformity among companies. But the practice of immediately writing off expenditures made in the expectation of benefiting future periods is conceptually incorrect.

Proponents of immediate expensing contend that from an income statement standpoint, long-run application of this standard frequently makes little difference. They argue that because of the ongoing nature of most companies' R&D activities, the amount of R&D cost charged to expense each accounting period is about the same, whether there is immediate expensing or capitalization and subsequent amortization.

Others criticize this practice. They believe that the statement of financial position should report an intangible asset related to expenditures that have future benefit. To preclude capitalization of most R&D expenditures removes from the statement of financial position what may be a company's most valuable asset.

Indeed, research findings indicate that capitalizing R&D costs may be helpful to investors. For example, one study showed a significant relationship between R&D outlays and subsequent benefits in the form of increased productivity, earnings, and shareholder value for R&D-intensive companies. Another study found that there was a significant decline in earnings usefulness for companies that were forced to switch from capitalizing to expensing R&D costs, and that the decline appears to persist over time.

The current accounting for R&D and other internally generated intangible assets represents one of the many trade-offs made among relevance, faithful representation, and cost-benefit

considerations. The FASB and IASB have completed some limited-scope projects on the accounting for intangible assets, and the Boards have contemplated a joint project on the accounting for identifiable intangible assets (i.e., excluding goodwill). Such a project would address concerns that the current accounting requirements lead to inconsistent treatments for some types of intangible assets depending on how they arise. At present, that project is on hold. The IASB has an active project on goodwill and impairment (see www.ifrs.org/projects/work-plan/goodwill-and-impairment).

Sources for research studies: Baruch Lev and Theodore Sougiannis, “The Capitalization, Amortization, and Value-Relevance of R&D,” *Journal of Accounting and Economics* (February 1996); and Martha L. Loudder and Bruce K. Behn, “Alternative Income Determination Rules and Earnings Usefulness: The Case of R&D Costs,” *Contemporary Accounting Research* (Fall 1995). See also the recent critique of the accounting for intangible assets in Baruch Lev and Feng Gu, *The End of Accounting* (Hoboken, NJ: John Wiley & Sons, 2016).

Costs Similar to R&D Costs

Many costs have characteristics similar to research and development costs.¹⁹ Examples are:

1. Start-up costs for a new operation.
2. Initial operating losses.
3. Advertising costs.

For the most part, these costs are expensed as incurred, similar to the accounting for research costs. We briefly explain these costs in the following sections.

Start-Up Costs

Start-up costs are incurred for one-time activities to start a new operation. Examples include opening a new plant, introducing a new product or service, or conducting business in a new territory. Start-up costs include **organizational costs**, such as legal and governmental fees incurred to organize a new business entity.

The accounting for start-up costs is straightforward: **Expense start-up costs as incurred.** The profession recognizes that companies incur start-up costs with the expectation of future revenues or increased efficiencies. However, determining the amount and timing of future benefits is so difficult that a conservative approach—expensing these costs as incurred—is required. [19]

To illustrate examples of start-up costs, assume that U.S.-based Hilo Beverage Company decides to construct a new plant in Brazil. This represents Hilo's first entry into the Brazilian market. Hilo plans to introduce the company's major U.S. brands into Brazil on a locally produced basis. The following costs might be involved:

1. Travel-related costs; costs related to employee salaries; and costs related to feasibility studies, accounting, tax, and government affairs.
2. Training of local employees related to product, maintenance, computer systems, finance, and operations.
3. Recruiting, organizing, and training related to establishing a distribution network.

Hilo Beverage should expense all these start-up costs as incurred.

Start-up activities commonly occur at the same time as activities involving the acquisition of assets. For example, as it is incurring start-up costs for the new plant, Hilo probably is also buying or building property, plant, equipment, and inventory. Hilo should not immediately expense the costs of these tangible assets. Instead, it should report them on the statement of financial position using appropriate IFRS reporting guidelines.

Initial Operating Losses

Some contend that companies should be allowed to capitalize initial operating losses incurred in the start-up of a business. They argue that such operating losses are an unavoidable cost of starting a business.

For example, assume that Hilo lost money in its first year of operations and wishes to capitalize this loss. Hilo's CEO argues that as

the company becomes profitable, it will offset these losses in future periods. What do *you* think? We believe that this approach is unsound, since losses have no future service potential and therefore cannot be considered an asset.

IFRS requires that operating losses during the early years **should not be capitalized**. In short, **the accounting and reporting standards should be no different for an enterprise trying to establish a new business than they are for other enterprises**.

[20]²⁰

Advertising Costs

Over the years, **PepsiCo** (USA) has hired various pop stars, such as Justin Timberlake and Beyoncé, to advertise its products. How should it report such advertising costs related to its star spokespeople?

PepsiCo could expense the costs in various ways:

1. When the pop stars have completed their singing assignments.
2. The first time the advertising runs.
3. Over the estimated useful life of the advertising.
4. In an appropriate fashion to each of the three periods identified above.
5. Over the period revenues are expected to result.

PepsiCo must expense these advertising costs as incurred.

The IASB acknowledges that advertising and promotional activities may enhance or create customer relationships, which in turn generate revenues. However, those expenditures are no different than other internally generated intangible assets (e.g., brands, mastheads, and customer lists), which primarily contribute to the development of the business as a whole. Therefore, they do not meet the separately identifiable criterion and should be expensed as incurred. **[21]**

What Do the Numbers Mean?

Branded

For many companies, developing a strong brand image is as important as developing the products they sell. Now more than ever, companies see the power of a strong brand, enhanced by significant and effective advertising investments.

As the following chart indicates, the value of brand investments is substantial. **Apple** (USA) heads the list with an estimated brand value of about \$184.2 billion. Companies from around the globe are represented in the top 20 brands.

Valuable Global Brands (in billions)		
1.	Apple (USA)	\$184.2
2.	Google (USA)	141.7
3.	Microsoft (USA)	80.0
4.	Coca-Cola (USA)	69.7
5.	Amazon (USA)	64.8
6.	Samsung (KOR)	56.2
7.	Toyota (JPN)	50.3
8.	Facebook (USA)	48.2
9.	Mercedes-Benz (DEU)	47.8
10.	IBM (USA)	46.0
Source: Interbrand Corp.		

Companies may include the value of a brand in the financial statements under goodwill. But, generally you will not find the estimated values of brands recorded in companies' statements of financial position. The reason? The subjectivity that goes into estimating a brand's value. In some cases, analysts base an estimate of brand value on opinion polls or on some multiple of advertising spending. For example, in estimating the brand values

shown in the table, **Interbrand Corp.** (USA) estimates the percentage of the overall future revenues the brand will generate and then discounts the net cash flows to arrive at a present value. Some analysts believe that information on brand values is relevant. Others voice valid concerns about the reliability of brand value estimates due to subjectivity in the estimates for revenues, costs, and the risk component of the discount rate.

Source: Interbrand Corp., *Best Global Brands Report* (2017).

Presentation of Research and Development Costs

Companies should disclose in the financial statements (generally in the notes) the total R&D costs charged to expense each period for which they present an income statement. **GlaxoSmithKline** (GBR), a global research pharmaceutical company, reported research and development in its recent income statement, with related accounting policy discussion in the notes as shown in [Illustration 12.16](#).

GlaxoSmithKline
(in millions)

	31 December 2018
Turnover	£30,821
Cost of Sales	(10,241)
Gross Profit	20,580
Selling, General, and Administrative	(9,915)
Research and Development	(3,893)
Royalty Income	299
Other Operating Income	(1,588)
Operating Profit	<u>£ 5,483</u>

Note 2 (in part) Research and development

Research and development expenditure is charged to the income statement in the period in which it is incurred. Development expenditure is capitalised when the criteria for recognising an asset are met, usually when a regulatory filing has been made in a major market and approval is considered highly probable. Property, plant and equipment used for research and development is capitalised and depreciated in accordance with the Group's policy.

Learning Objectives Review

1 Discuss the characteristics, valuation, and amortization of intangible assets.

Intangible assets have three main characteristics: (1) they are identifiable, (2) they lack physical existence, and (3) they are not monetary assets. In most cases, intangible assets provide services over a period of years and so are normally classified as non-current assets.

Intangibles are recorded at cost. Cost includes all acquisition costs and expenditures needed to make the intangible asset ready for its intended use. If intangibles are acquired in exchange for shares or other assets, the cost of the intangible is the fair value of the consideration given or the fair value of the intangible received, whichever is more clearly evident. When a company makes a “basket purchase” of several intangibles or a combination of intangibles and tangibles, it should allocate the cost on the basis of relative fair values.

Intangibles have either a limited useful life or an indefinite useful life. Companies amortize limited-life intangibles. They do not amortize indefinite-life intangibles. Limited-life intangibles should be amortized by systematic charges to expense over their useful lives. The useful lives should reflect the period over which these assets will contribute to cash flows. The amount to report for amortization expense should reflect the pattern in which a company consumes or uses up the asset, if it can reliably determine that pattern. Otherwise, use a straight-line approach.

2 Describe the accounting for various types of intangible assets.

Major types of intangibles are (1) *marketing-related intangibles*, used in the marketing or promotion of products or services; (2) *customer-related intangibles*, resulting from interactions with outside parties; (3) *artistic-related intangibles*, giving ownership rights to such items as plays and literary works; (4) *contract-related intangibles*, representing the value of rights that arise from contractual arrangements; (5) *technology-related intangibles*, relating to

innovations or technological advances; and (6) *goodwill*, arising from business combinations.

3 Explain the accounting issues for recording goodwill.

Unlike receivables, inventories, and patents that a company can sell or exchange individually in the marketplace, goodwill can be identified only with the company as a whole. **Goodwill is a “going concern” valuation and is recorded only when an entire business is purchased.** A company should not capitalize goodwill generated internally. The future benefits of goodwill may have no relationship to the costs incurred in the development of that goodwill. Goodwill may exist even in the absence of specific costs to develop it.

To record goodwill, a company compares the fair value of the net tangible and identifiable intangible assets with the purchase price of the acquired business. The difference is considered goodwill. Goodwill is the residual. Goodwill is often identified on the statement of financial position as the excess of cost over the fair value of the net assets acquired.

4 Identify impairment procedures and presentation requirements for intangible assets.

An intangible asset is impaired when a company is not able to recover the asset's carrying amount either through using it or by selling it. Limited-life intangibles are reviewed annually to determine if there are impairment indicators; if so, the impairment test is performed. Indefinite-life intangibles, including goodwill, must be tested for impairment every year. An impairment loss is recorded in net income if the recoverable amount (the greater of fair value less costs to sell and value-in-use) of an intangible asset is less than the carrying value. Impairment losses on intangible assets (other than goodwill) may be reversed but only up to the carrying amount that would have been recorded in the absence of the impairment.

With respect to presentation, on the statement of financial position, companies should report all intangible assets other than goodwill as a separate item. Contra accounts are not normally shown. If goodwill is present, it too should be reported as a separate item. On the income statement, companies should report amortization expense and impairment losses in operating income. The notes to the financial statements have additional detailed information.

5 Describe the accounting and presentation for research and development and similar costs.

R&D costs are not in themselves intangible assets, but R&D activities frequently result in the development of something a company patents or copyrights. The difficulties in accounting for R&D expenditures are (1) identifying the costs associated with particular activities, projects, or achievements; and (2) determining the magnitude of the future benefits and length of time over which a company may realize such benefits. Because of these latter uncertainties, companies are required to expense all research costs when incurred. Certain costs incurred during the development phase of an R&D project are capitalized when an R&D project achieves economic viability.

[Illustration 12.15](#) shows the costs associated with R&D activities and the accounting treatment accorded them. Many costs have characteristics similar to R&D costs. Examples are start-up costs, initial operating losses, and advertising costs. For the most part, these costs are expensed as incurred, similar to the accounting for all research and many development costs. Financial statements must disclose the total R&D costs charged to expense each period for which an income statement is presented.

Enhanced Review and Practice

Practice Problem

Sky ASA, organized in 2022, provided you with the following information.

1. Purchased a license for €20,000 on July 1, 2022. The license gives Sky exclusive rights to sell its services in the provincial region and will expire on July 1, 2030.
2. Purchased a patent on January 2, 2023, for €40,000. It is estimated to have a 5-year life.
3. Costs incurred to develop an exclusive Internet connection process as of June 1, 2023, were €45,000. The process has an indefinite life.
4. On April 1, 2023, Sky purchased a small circuit board manufacturer for €350,000. Goodwill recorded in the transaction was €90,000.
5. On July 1, 2023, legal fees of €11,400 were incurred for application and filing of a new patent, which will expire at the same time as the patent purchased on January 2, 2023.
6. Research and development costs incurred as of September 1, 2023, were €75,000. None of the related projects involved had achieved economic viability.

Instructions

- a. Prepare the journal entries to record all the entries related to the patent during 2023.
- b. At December 31, 2023, an impairment test is performed on the license purchased in 2022. It is estimated that the net cash flows to be received from the license will be €13,000, and its recoverable amount is €7,000. Compute the amount of impairment, if any, to be recorded on December 31, 2023.
- c. What is the amount to be reported for intangible assets on the statement of financial position at December 31, 2022? At December 31, 2023?

Solution

a.

January 2, 2023		
Patents	40,000	
Cash		40,000
July 1, 2023		
Patents	11,400	
Cash		11,400
December 31, 2023		
Patent Amortization Expense	9,267	
Patents		9,267

Computation of Patent Amortization Expense:

$€40,000 \times 12/60 =$	€8,000
$€11,400 \times 6/54 =$	<u>1,267</u>
Total	<u>€9,267</u>

b. Computation of impairment loss:

Cost	€20,000
Less: Accumulated amortization [$€20,000 \times (18 \div 96)$]	<u>3,750</u>
Book value	<u>€16,250</u>

Book value of €16,250 is greater than the recoverable amount. Therefore, the license is impaired. The impairment loss is computed as follows.

Book value	€16,250
Recoverable amount	<u>7,000</u>
Loss on impairment	<u>€ 9,250</u>

c. Intangible assets as of December 31, 2022:

Licenses		€18,750*
*Cost	€ 20,000	
Less: Accumulated amortization [$€20,000 \times (6 \div 96)$]	1,250	
Total	<u>€ 18,750</u>	

Intangible assets as of December 31, 2023:

Licenses	€ 7,000
Patents ($€40,000 + €11,400 - €9,267$)	42,133
Goodwill	90,000
Total	<u>€139,133</u>

All the costs to develop the Internet connection process and the research and development costs are expensed as incurred.

Questions

1. What are the three main characteristics of intangible assets?
2. If intangibles are acquired for shares, how is the cost of the intangible determined?
3. Intangibles have either a limited useful life or an indefinite useful life. How should these two different types of intangibles be amortized?
4. Why does IFRS make a distinction between internally created intangibles and purchased intangibles?
5. In 2022, Ghostbusters SA spent €420,000 for “goodwill” visits by sales personnel to key customers. The purpose of these visits was to build a solid, friendly relationship for the future and to gain insight

into the problems and needs of the companies served. How should this expenditure be reported?

6. What are factors to be considered in estimating the useful life of an intangible asset?

7. What should be the pattern of amortization for a limited-life intangible?

8. Novartis (CHE) acquired a trademark that is helpful in distinguishing one of its new products. The trademark is renewable every 10 years at minimal cost. All evidence indicates that this trademarked product will generate cash flows for an indefinite period of time. How should this trademark be amortized?

9. McNabb Company spent \$190,000 developing a new process prior to achieving economic viability, \$45,000 in legal fees to obtain a patent, and \$91,000 to market the process that was patented, all in the year 2022. How should these costs be accounted for in 2022?

10. Izzy Ltd. purchased a patent for £350,000 which has an estimated useful life of 10 years. Its pattern of use or consumption cannot be reliably determined. Prepare the entry to record the amortization of the patent in its first year of use.

11. Explain the difference between artistic-related intangible assets and contract-related intangible assets.

12. What is goodwill? What is a bargain purchase?

13. Under what circumstances is it appropriate to record goodwill in the accounts? How should goodwill, properly recorded on the books, be written off in order to conform with IFRS?

14. In examining financial statements, financial analysts often write off goodwill immediately. Comment on this procedure.

15. Braxton Inc. is considering the write-off of a limited-life intangible because of its lack of profitability. Explain to the management of Braxton how to determine whether a write-off is permitted.

16. Last year, Zeno Company recorded an impairment on an intangible asset. Recent appraisals indicate that the asset has

increased in value. Should Zeno record this recovery in value?

17. Explain how losses on impaired intangible assets should be reported in income.

18. Shi Ltd. determines that its goodwill is impaired. It finds that its recoverable amount is HK\$3,600,000 and its recorded goodwill is HK\$4,000,000. The fair value of its identifiable assets is HK\$14,500,000. What is the amount of goodwill impaired?

19. What is the nature of research and development costs? Can development costs be capitalized? Explain.

20. Research and development activities may include (a) personnel costs, (b) materials and equipment costs, and (c) indirect costs. What is the recommended accounting treatment for these three types of R&D costs?

21. Which of the following activities should be expensed currently as R&D costs?

- a. Testing in search for or evaluation of product or process alternatives.
- b. Engineering follow-through in an early phase of commercial production.
- c. Legal work in connection with patent applications or litigation, and the sale or licensing of patents.

22. Indicate the proper accounting for the following items.

- a. Organization costs.
- b. Advertising costs.
- c. Operating losses.

23. In 2021, Jackie Chan Ltd. developed a new product that will be marketed in 2023. In connection with the development of this product, the following costs were incurred in 2022: research and development costs ¥40,000,000, materials and supplies consumed ¥6,000,000, and compensation paid to research consultants

¥12,500,000. (¥23,000,000 of the development phase costs were incurred after the product became economically viable.) It is anticipated that these costs will be recovered in 2025. What is the amount of research and development costs that Chan should record in 2022 as a charge to expense?

24. Recently, a group of university students decided to form a company for the purposes of selling a process to recycle the waste product from manufacturing cheese. Some of the initial costs involved were legal fees and office expenses incurred in starting the business, governmental fees, and stamp taxes. One student wants to charge these costs against revenue in the current period. Another wishes to defer these costs and amortize them in the future. Which student is correct?

25. An intangible asset with an estimated useful life of 30 years was acquired on January 1, 2012, for \$540,000. On January 1, 2022, a review was made of intangible assets and their expected service lives, and it was determined that this asset had an estimated useful life of 30 more years from the date of the review. What is the amount of amortization for this intangible in 2022?

Brief Exercises

BE12.1 (LO 2) Celine Dion Corporation purchases a patent from Salmon Company on January 1, 2022, for \$54,000. The patent has a remaining legal life of 16 years. Celine Dion feels the patent will be useful for 10 years. Prepare Celine Dion's journal entries to record the purchase of the patent and 2022 amortization.

BE12.2 (LO 2) Use the information provided in BE12.1. Assume that at January 1, 2024, the carrying amount of the patent on Celine Dion's books is \$43,200. In January, Celine Dion spends \$24,000 successfully defending a patent suit. Celine Dion still feels the patent will be useful until the end of 2031. Prepare the journal entries to record the \$24,000 expenditure and 2024 amortization.

BE12.3 (LO 2) Larry Lyon SA spent €68,000 in attorney fees while developing the trade name of its new product, the Mean Bean

Machine. Prepare the journal entries to record the €68,000 expenditure and the first year's amortization, using an 8-year life.

BE12.4 (LO 2) Gershwin plc obtained a franchise from Sonic Hedgehog Inc. for a cash payment of £120,000 on April 1, 2022. The franchise grants Gershwin the right to sell certain products and services for a period of 8 years. Prepare Gershwin's April 1 journal entry and December 31 adjusting entry.

BE12.5 (LO 3) On September 1, 2022, Winans Ltd. acquired Aumont Enterprises for a cash payment of £700,000. At the time of purchase, Aumont's statement of financial position showed assets of £620,000, liabilities of £200,000, and equity of £420,000. The fair value of Aumont's assets is estimated to be £800,000. Compute the amount of goodwill acquired by Winans.

BE12.6 (LO 4) Kenoly Corporation owns a patent that has a carrying amount of \$300,000. Kenoly expects future net cash flows from this patent to total \$210,000 over its remaining life of 10 years. The recoverable amount of the patent is \$110,000. Prepare Kenoly's journal entry, if necessary, to record the loss on impairment.

BE12.7 (LO 4) Use the information in BE12.6. Assume that at the end of the year following the impairment (after recording amortization expense), the estimated recoverable amount for the patent is \$130,000. Prepare Kenoly's journal entry, if needed.

BE12.8 (LO 4) Waters Ltd. purchased Jang Group 3 years ago and at that time recorded goodwill of HK\$400,000. The Jang Division's net assets, including the goodwill, have a carrying amount of HK\$800,000. The fair value of the division is estimated to be HK\$1,000,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE12.9 (LO 4) Use the information provided in BE12.8. Assume that the recoverable amount of the division is estimated to be HK\$750,000. Prepare Waters' journal entry, if necessary, to record impairment of the goodwill.

BE12.10 (LO 5) Sujo Ltd. commenced operations in early 2022. The company incurred HK\$60,000,000 of costs such as fees to

underwriters, legal fees, governmental fees, and promotional expenditures during its formation. Prepare journal entries to record the HK\$60,000,000 expenditure and 2022 amortization, if any.

BE12.11 (LO 5) Treasure Land plc incurred the following costs in 2022.

Cost of laboratory research aimed at discovery of new knowledge	£120,000
Cost of testing in search for product alternatives	100,000
Cost of engineering activity required to advance the design of a product to the manufacturing stage	210,000
Prototype testing subsequent to meeting economic viability	75,000
	<u>£505,000</u>

Prepare the necessary 2022 journal entry or entries for Treasure Land.

BE12.12 (LO 5) Indicate whether the following items are capitalized or expensed in the current year.

- a. Purchase cost of a patent from a competitor.
- b. Research costs.
- c. Development costs (after achieving economic viability).
- d. Organizational costs.
- e. Costs incurred internally to create goodwill.

BE12.13 (LO 4) Nieland Industries had one patent recorded on its books as of January 1, 2022. This patent had a book value of \$288,000 and a remaining useful life of 8 years. During 2022, Nieland incurred research costs of \$96,000 and brought a patent infringement suit against a competitor. On December 1, 2022, Nieland received the good news that its patent was valid and that its competitor could not use the process Nieland had patented. The company incurred \$85,000 to defend this patent. At what amount should the patent(s) be reported

on the December 31, 2022, statement of financial position, assuming monthly amortization of patents?

BE12.14 (LO 4) Sinise Industries acquired two copyrights during 2022. One copyright related to a textbook that was developed internally at a cost of €9,900. This textbook is estimated to have a useful life of 3 years from September 1, 2022, the date it was published. The second copyright (a history research textbook) was purchased from University Press on December 1, 2022, for €24,000. This textbook has an indefinite useful life. How should these two copyrights be reported on Sinise's statement of financial position as of December 31, 2022?

Exercises

E12.1 (LO 1, 2) (Classification Issues—Intangibles) The following is a list of items that could be included in the intangible assets section of the statement of financial position.

1. Investment in an affiliate company.
2. Timberland.
3. Cost of engineering activity required to advance the design of a product to the manufacturing stage.
4. Lease prepayment (6 months' rent paid in advance).
5. Cost of equipment obtained.
6. Cost of searching for applications of new research findings.
7. Costs incurred in the formation of a company.
8. Operating losses incurred in the start-up of a business.
9. Training costs incurred in start-up of new operation.
10. Purchase cost of a franchise.
11. Goodwill generated internally.
12. Cost of testing in search for product alternatives.
13. Goodwill acquired in the purchase of a business.

14. Cost of developing a patent (before achieving economic viability).
15. Cost of purchasing a patent from an inventor.
16. Legal costs incurred in securing a patent.
17. Unrecovered costs of a successful legal suit to protect the patent.
18. Cost of conceptual formulation of possible product alternatives.
19. Cost of purchasing a copyright.
20. Development costs incurred after achieving economic viability.
21. Long-term receivables.
22. Cost of developing a trademark.
23. Cost of purchasing a trademark.

Instructions

- a. Indicate which items on the list above would generally be reported as intangible assets in the statement of financial position.
- b. Indicate how, if at all, the items not reportable as intangible assets would be reported in the financial statements.

E12.2 (LO 1, 2) (Classification Issues—Intangibles) The following is selected account information related to Matt Perry Inc. as of December 21, 2022. All these accounts have debit balances.

Cable television franchises	Film contract rights
Music copyrights	Customer lists
Research and development costs	Prepaid expenses
Goodwill	Covenants not to compete
Cash	Brand names
Accounts receivable	Notes receivable
Property, plant, and equipment	Investments in associated companies

Internet domain name	Organization costs
Land	

Instructions

Identify which items should be classified as intangible assets. For those items not classified as intangible assets, indicate where they would be reported in the financial statements.

E12.3 (LO 1, 2) (Classification Issues—Intangibles) Langrova SpA has the following amounts reported in its general ledger at December 31, 2022.

Organization costs	€24,000
Trademarks	20,000
Bonds payable	35,000
Deposits with advertising agency for ads to promote goodwill of company	10,000
Excess of cost over fair value of net identifiable assets of acquired company	75,000
Cost of equipment acquired for research and development projects; the equipment has an alternative future use	90,000
Costs of developing a secret formula for a product that is expected to be marketed for at least 20 years (all research phase)	70,000

Instructions

- On the basis of the information above, compute the total amount to be reported by Langrova for intangible assets on its statement of financial position at December 31, 2022. As noted, the equipment has alternative future use.
- If an item is not to be included in intangible assets, explain its proper treatment for reporting purposes.

E12.4 (LO 2, 5) (Intangible Amortization) Presented below is selected information for Palmiero Company.

1. Palmiero purchased a patent from Vania Co. for \$1,500,000 on January 1, 2020. The patent is being amortized over its remaining legal life of 10 years, expiring on January 1, 2030. During 2022, Palmiero determined that the economic benefits of the patent would not last longer than 6 years from the date of acquisition. What amount should be reported in the statement of financial position for the patent, net of accumulated amortization, at December 31, 2022?
2. Palmiero bought a franchise from Dougherty Co. on January 1, 2021, for \$350,000. The carrying amount of the franchise on Dougherty's books on January 1, 2021, was \$500,000. The franchise agreement had an estimated useful life of 30 years. Because Palmiero must enter a competitive bidding at the end of 2030, it is unlikely that the franchise will be retained beyond 2030. What amount should be amortized for the year ended December 31, 2022?
3. On January 1, 2020, Palmiero incurred organization costs of \$275,000. What amount of organization expense should be reported in 2022?
4. Palmiero purchased the license for distribution of a popular consumer product on January 1, 2022, for \$150,000. It is expected that this product will generate cash flows for an indefinite period of time. The license has an initial term of 5 years but by paying a nominal fee, Palmiero can renew the license indefinitely for successive 5-year terms. What amount should be amortized for the year ended December 31, 2022?

Instructions

Answer the questions asked about each of the factual situations.

E12.5 (LO 2, 5) (Correct Intangible Assets Account) As the recently appointed auditor for Ng Ltd., you have been asked to

examine selected accounts before the 6-month financial statements of June 30, 2022, are prepared. The controller for Ng mentions that only one account is kept for intangible assets.

Intangible Assets				
		Debit	Credit	Balance
Jan. 4	Research and development costs (prior to achieving economic viability)	HK\$940,000		HK\$ 940,000
Jan. 5	Legal costs to obtain patent	75,000		1,015,000
Jan. 31	Payment of 7 months rent on property leased by Ng	91,000		1,106,000
Feb. 11	Share premium on ordinary shares		HK\$250,000	856,000
Mar. 31	Unamortized bond discount on bonds due March 31, 2042	84,000		940,000
Apr. 30	Promotional expenses related to start-up of business	207,000		1,147,000
June 30	Operating losses for first 6 months	141,000		1,288,000

Instructions

Prepare the entry or entries necessary to correct this account. Assume that the patent has a useful life of 12 years.

E12.6 (LO 2, 5) (Recording and Amortization of Intangibles)

Powerglide plc, organized in 2021, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2022.

1/2/22	Purchased patent (8-year life)	£ 380,000
4/1/22	Goodwill (indefinite life)	360,000
7/1/22	Purchased franchise with 10-year life; expiration date 7/1/32	450,000
8/1/22	Payment of copyright (5-year life)	156,000
9/1/22	Development costs to increase the value of the patent (£55,000 incurred after economic viability achieved)	215,000
		<u>£1,561,000</u>

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2022, recording any necessary amortization and reflecting all balances accurately as of that date. (Use straight-line amortization.)

E12.7 (LO 2, 4) (Accounting for Trade Name) In early January 2021, Reymont Corporation applied for a trade name, incurring legal costs of \$18,000. In January 2022, Reymont incurred \$7,800 of legal fees in a successful defense of its trade name.

Instructions

- Compute 2021 amortization, 12/31/21 book value, 2022 amortization, and 12/31/22 book value if the company amortizes the trade name over 10 years.
- Compute the 2022 amortization and the 12/31/22 book value, assuming that at the beginning of 2022, Reymont determines that the trade name will provide no future benefits beyond December 31, 2025.

- c. Ignoring the response for part (b), compute the 2023 amortization and the 12/31/23 book value, assuming that at the beginning of 2023, based on new market research, Reymont determines that the recoverable amount of the trade name is \$12,000.

E12.8 (LO 5) (Accounting for Organization Costs) Fontenot SA was organized in 2021 and began operations at the beginning of 2022. The company is involved in interior design consulting services. The following costs were incurred in 2022, prior to the start of operations.

Attorney's fees in connection with organization of the company	€17,000
Purchase of drafting and design equipment	10,000
Costs of meetings to discuss organizational activities	7,000
Government filing fees for company start-up	1,000
	<u>€35,000</u>

Instructions

- Compute the total amount of organization costs incurred by Fontenot.
- Prepare the journal entry to record organization costs for 2022.

E12.9 (LO 2, 5) (Accounting for Patents, Franchises, and R&D) Devon Harris Company has provided information on intangible assets as follows.

A patent was purchased from Bradtke Company for \$2,500,000 on January 1, 2021. Harris estimated the remaining useful life of the patent to be 10 years. The patent was carried in Bradtke's accounting records at a net book value of \$2,000,000 when Bradtke sold it to Harris.

During 2022, a franchise was purchased from Greene Company for \$580,000. In addition, 5% of revenue from the franchise must be paid to Greene. Revenue from the franchise for 2022 was \$2,500,000.

Harris estimates the useful life of the franchise to be 10 years and takes a full year's amortization in the year of purchase.

Harris incurred research and development costs in 2022 as follows.

Materials and equipment	\$142,000
Personnel	189,000
Indirect costs	102,000
	<u>\$433,000</u>

Harris estimates that these costs will be recouped by December 31, 2025, but due to uncertainty in the market, its process has not achieved economic viability. The materials and equipment purchased have no alternative uses.

On January 1, 2022, because of recent events in the field, Harris estimates that the remaining life of the patent purchased on January 1, 2021, is only 5 years from January 1, 2022.

Instructions

- a. Prepare a schedule showing the intangibles section of Harris's statement of financial position at December 31, 2022. Show supporting computations in good form.
- b. Prepare a schedule showing the income statement effect for the year ended December 31, 2022, as a result of the facts above. Show supporting computations in good form.

E12.10 (LO 2) (Accounting for Patents) During 2021, Matsumura Ltd. spent ¥170,000 in research costs. As a result, a new product called the New Age Piano was patented. The patent was obtained on October 1, 2021, and had a legal life of 20 years and a useful life of 10 years. Legal costs of ¥24,000 related to the patent were incurred as of October 1, 2021. (Amounts are in thousands.)

Instructions

- a. Prepare all journal entries required in 2021 and 2022 as a result of the transactions above.

- b. On June 1, 2023, Matsumura spent ¥12,400 in legal fees, which resulted in a new patent. The estimate of useful life is 12 years from June 1, 2023. Prepare all journal entries required in 2023 and 2024.
- c. In 2025, Matsumura determined that a competitor's product would make the New Age Piano obsolete and the patent worthless by December 31, 2026. Prepare all journal entries required in 2025 and 2026.

E12.11 (LO 2) (Accounting for Patents) Yoon Industries has the following patents on its December 31, 2021, statement of financial position (amounts in thousands).

Patent Item	Initial Cost	Date Acquired	Useful Life at Date Acquired
Patent A	₩40,800	3/1/18	17 years
Patent B	₩15,000	7/1/19	10 years
Patent C	₩14,400	9/1/20	4 years

The following events occurred during the year ended December 31, 2022.

1. Research and development costs of ₩245,700 were incurred during the year. All of these costs (except for ₩28,000 incurred on May 1, 2022, for Patent C) were incurred prior to projects achieving economic viability.
2. Patent D was purchased on July 1 for ₩28,500. This patent has a useful life of 9 1/2 years.
3. As a result of reduced demands for certain products protected by Patent B, a possible impairment of Patent B's value may have occurred at December 31, 2022. A market-based fair value is not available. The controller for Yoon estimates the expected future cash flows from Patent B will be as follows.

Year	Expected Future Cash Flows
2023	₩2,000

2024	2,000
2025	2,000

The proper discount rate to be used for these cash flows is 8%.
(Assume that the cash flows occur at the end of the year.)

Instructions

- Compute the total carrying amount of Yoon's patents on its December 31, 2021, statement of financial position.
- Compute the total carrying amount of Yoon's patents on its December 31, 2022, statement of financial position.

E12.12 (LO 3) (Accounting for Goodwill) Fred Graf, owner of Graf Interiors, is negotiating for the purchase of Terrell Galleries. The following statement of financial position of Terrell is given in an abbreviated form.

Terrell Galleries Statement of Financial Position As of December 31, 2022				
Assets		Equity and Liabilities		
Buildings (net)	\$200,000	Share capital—ordinary	\$200,000	
Equipment (net)	175,000	Retained earnings	<u>25,000</u>	\$225,000
Copyrights (net)	30,000	Accounts payable	50,000	
Land	70,000	Long-term notes payable	<u>300,000</u>	
Cash	<u>100,000</u>	Total liabilities		<u>350,000</u>
Total assets	<u><u>\$575,000</u></u>	Total equity and liabilities		<u><u>\$575,000</u></u>

Graf and Terrell agree that:

1. Land is undervalued by \$50,000.
2. Equipment is overvalued by \$5,000.

Terrell agrees to sell the gallery to Graf for \$380,000.

Instructions

Prepare the entry to record the purchase of Terrell Galleries on Graf's books.

E12.13 (LO 3) (Accounting for Goodwill) On July 1, 2022, Brandon SE purchased Mills Company by paying €250,000 cash and issuing a €150,000 note payable. At July 1, 2022, the statement of financial position of Mills Company was as follows.

Buildings (net)	€ 75,000	Equity	€235,000
Equipment (net)	70,000	Accounts payable	<u>200,000</u>
Trademarks	10,000		<u>€435,000</u>
Land	40,000		
Inventory	100,000		
Accounts receivable	90,000		
Cash	<u>50,000</u>		
	<u>€435,000</u>		

The recorded amounts all approximate current values except for land (fair value of €80,000), inventory (fair value of €125,000), and trademarks (fair value of €15,000).

Instructions

- a. Prepare the July 1 entry for Brandon to record the purchase.
- b. Prepare the December 31 entry for Brandon to record amortization of intangibles. The trademarks have an estimated useful life of 4 years with a residual value of €3,000.

E12.14 (LO 4) (Copyright Impairment) The following information is related to a copyright owned by Botticelli Company at

December 31, 2022.

Cost	\$8,600,000
Carrying amount	4,300,000
Recoverable amount	3,400,000

Assume that Botticelli Company will continue to use this copyright in the future. As of December 31, 2022, the copyright is estimated to have a remaining useful life of 10 years.

Instructions

- Prepare the journal entry (if any) to record the impairment of the asset at December 31, 2022. The company does not use accumulated amortization accounts.
- Prepare the journal entry to record amortization expense for 2023 related to the copyright.
- The fair value of the copyright at December 31, 2023, is \$3,500,000. Prepare the journal entry (if any) necessary to record the increase in fair value.

E12.15 (LO 3, 4) (Goodwill Impairment) The following is net asset information related to the Ting Division of Santana Ltd.

Ting Division Net Assets As of December 31, 2022 (in millions)	
Property, plant, and equipment (net)	HK\$2,600
Goodwill	200
Accounts receivable	200
Cash	60
Less: Notes payable	<u>(2,700)</u>
Net assets	<u>HK\$ 360</u>

The purpose of the Ting Division (cash-generating unit) is to develop a nuclear-powered aircraft. If successful, traveling delays associated with refueling could be substantially reduced. Many other benefits would also occur. To date, management has not had much success and is deciding whether a write-down at this time is appropriate. Management estimated its future net cash flows from the project to be HK\$400 million. Management has also received an offer to purchase the division for HK\$335 million (fair value less costs to sell). All identifiable assets' and liabilities' book and fair value amounts are the same.

Instructions

- a. Prepare the journal entry (if any) to record the impairment at December 31, 2022.
- b. At December 31, 2023, it is estimated that the division's recoverable amount increased to HK\$345 million. Prepare the journal entry (if any) to record this increase in fair value.

E12.16 (LO 5) (Accounting for R&D Costs) Margaret Avery Company from time to time embarks on a research program when a special project seems to offer possibilities. In 2021, the company expends €325,000 on a research project, but by the end of 2021 it is impossible to determine whether any benefit will be derived from it.

Instructions

- a. What account should be charged for the €325,000, and how should it be shown in the financial statements?
- b. The project is completed in 2022, and a successful patent is obtained. The development costs to complete the project are €110,000 (€36,000 of these costs were incurred after achieving economic viability). Additional administrative and legal expenses incurred in obtaining patent number 472-1001-84 in 2022 total €24,000. The patent has an expected useful life of 5 years. Record these costs in journal entry form. Also, record patent amortization (full year) in 2022.

- c. Additional engineering and consulting costs incurred in 2023 required to advance the design of a product to the manufacturing stage total €60,000. These costs enhance the design of the product considerably, but it is highly uncertain if there will be a market for the new version of the product (it has not achieved economic viability). Discuss the proper accounting treatment for this cost.

E12.17 (LO 5) (Accounting for R&D Costs) Martinez Company incurred the following costs during 2022 in connection with its research and development activities.

Cost of equipment acquired that will have alternative uses in future R&D projects over the next 5 years (uses straight-line depreciation)	\$330,000
Materials consumed in R&D projects	59,000
Consulting fees paid to outsiders for R&D projects	100,000
Personnel costs of persons involved in R&D projects	128,000
Indirect costs reasonably allocable to R&D projects	50,000
Materials purchased for future R&D projects	34,000

Instructions

Compute the amount to be reported as research and development expense by Martinez on its income statement for 2022. Assume equipment is purchased at the beginning of the year and economic viability has not been achieved.

Problems

P12.1 (LO 2) Groupwork (Correct Intangible Assets Account)

Reichenbach Co., organized in 2021, has set up a single account for all intangible assets. The following summary discloses the debit entries that have been recorded during 2021 and 2022.

Intangible Assets		
7/1/21	8-year franchise; expiration date 6/30/29	€ 48,000

Intangible Assets		
10/1/21	Advance payment on laboratory space (2-year lease)	24,000
12/31/21	Net loss for 2021 including governmental business fee, €1,000, and related legal fees of organizing, €5,000 (all fees incurred in 2021)	16,000
1/2/22	Patent purchased (10-year life)	84,000
3/1/22	Cost of developing a secret formula (indefinite life)	75,000
4/1/22	Goodwill purchased (indefinite life)	278,400
6/1/22	Legal fee for successful defense of patent purchased above	12,650
9/1/22	Research and development costs (development costs of €45,000 incurred related to 1/2/22 patent, which has achieved economic viability)	160,000

Instructions

Prepare the necessary entries to clear the Intangible Assets account and to set up separate accounts for distinct types of intangibles. Make the entries as of December 31, 2022, recording any necessary amortization and reflecting all balances accurately as of that date. (Ignore income tax effects.)

P12.2 (LO 2) (Accounting for Patents) Choo Laboratories holds a valuable patent (No. 758-6002-1A) on a precipitator that prevents certain types of air pollution. Choo does not manufacture or sell the products and processes it develops. Instead, it conducts research and develops products and processes which it patents, and then assigns the patents to manufacturers on a royalty basis. Occasionally, it sells a patent. The history of Choo's patent number 758-6002-1A is as follows.

Date	Activity	Cost
2013– 2014	Research conducted to develop precipitator	HK\$384,000

Jan. 2015	Design and construction of a prototype	87,600
Mar. 2015	Testing of models	42,000
Jan. 2016	Fees paid engineers and lawyers to prepare patent application; patent granted June 30, 2016	59,500
Nov. 2017	Engineering activity necessary to advance the design of the precipitator to the manufacturing stage	81,500
Dec. 2018	Legal fees paid to successfully defend precipitator patent	42,000
Apr. 2019	Development costs aimed at modifying the design of the patented precipitator	49,000
July 2021	Legal fees paid in unsuccessful patent infringement suit against a competitor	34,000

Based on execution of a royalty contract in March 2019, the patent is deemed to be economically viable. Choo assumed a useful life of 17 years when it received the initial precipitator patent. On January 1, 2021, it revised its useful life estimate downward to 5 remaining years. Amortization is computed for a full year if the cost is incurred prior to July 1, and no amortization is computed for the year if the cost is incurred after June 30. The company's year ends December 31.

Instructions

Compute the carrying value of patent No. 758-6002-1A on each of the following dates:

- a. December 31, 2016.
- b. December 31, 2020.
- c. December 31, 2023.

P12.3 (LO 2) (Accounting for Franchise, Patents, and Trademark) Information concerning Sandro SA's intangible assets is as follows.

1. On January 1, 2022, Sandro signed an agreement to operate as a franchisee of Hsian Copy Service for an initial franchise fee of R\$75,000. Of this amount, R\$15,000 was paid when the agreement was signed, and the balance is payable in annual payments of R\$15,000 each, beginning January 1, 2023. The agreement provides that the down payment is not refundable and no future services are required of the franchisor. The present value at January 1, 2022, of the four annual payments discounted at 14% (the implicit rate for a loan of this type) is R\$43,700. The agreement also provides that 5% of the revenue from the franchise must be paid to the franchisor annually. Sandro's revenue from the franchise for 2022 was R\$900,000. Sandro estimates the useful life of the franchise to be 10 years. (*Hint: You may want to refer to [Chapter 18](#) to determine the proper accounting treatment for the franchise fee and payments.*)
2. Sandro incurred R\$65,000 of experimental and development costs in its laboratory to develop a patent that was granted on January 2, 2022. Legal fees and other costs associated with registration of the patent totaled R\$17,600. Sandro estimates that the useful life of the patent will be 8 years. The patent has yet to achieve economic viability.
3. A trademark was purchased from Shanghai Company for R\$36,000 on July 1, 2019. Expenditures for successful litigation in defense of the trademark totaling R\$10,200 were paid on July 1, 2022. Sandro estimates that the useful life of the trademark will be 20 years from the date of acquisition.

Instructions

- a. Prepare a schedule showing the intangible assets section of Sandro's statement of financial position at December 31, 2022. Show supporting computations in good form.
- b. Prepare a schedule showing all expenses resulting from the transactions that would appear on Sandro's income statement for the year ended December 31, 2022. Show supporting computations in good form.

P12.4 (LO 5) Groupwork (Accounting for R&D Costs) During 2020, Robin Wright Tool Company purchased a building site for its proposed research and development laboratory at a cost of \$60,000. Construction of the building was started in 2020. The building was completed on December 31, 2021, at a cost of \$320,000 and was placed in service on January 2, 2022. The estimated useful life of the building for depreciation purposes was 20 years. The straight-line method of depreciation was to be employed, and there was no estimated residual value.

Management estimates that about 50% of the projects of the research and development group will result in long-term benefits (i.e., at least 10 years) to the company. The remaining projects either benefit the current period or are abandoned before completion. A summary of the number of projects and the direct costs incurred in conjunction with the research and development activities for 2022 appears below.

	Number of Projects	Salaries and Employee Benefits	Other Expenses (Excluding Building Depreciation Charges)
Completed projects with long-term benefits (costs shown are development costs incurred after achieving economic viability)	15	\$ 90,000	\$50,000
Abandoned projects or projects that benefit the current period	10	65,000	15,000
Projects in process—results indeterminate	5	40,000	12,000
Total	30	\$195,000	\$77,000

Upon recommendation of the research and development group, Robin Wright Tool Company acquired a patent for manufacturing rights at a cost of \$88,000. The patent was acquired on April 1, 2021, and has an economic life of 10 years.

Instructions

Under IFRS, how would the items above relating to research and development activities be reported on the following financial statements?

- a. The company's income statement for 2022.
- b. The company's statement of financial position as of December 31, 2022.

Be sure to give account titles and amounts, and briefly justify your presentation.

P12.5 (LO 3, 4) (Goodwill, Impairment) On July 31, 2022, Mexico Company paid \$3,000,000 to acquire all of the ordinary shares of Conchita Incorporated, which became a division (cash-generating unit) of Mexico. Conchita reported the following statement of financial position at the time of the acquisition.

Non-current assets	\$2,700,000	Equity	\$2,400,000
Current assets	800,000	Non-current liabilities	500,000
Total assets	<u>\$3,500,000</u>	Current liabilities	600,000
		Total equity and liabilities	<u>\$3,500,000</u>

It was determined at the date of the purchase that the fair value of the identifiable net assets of Conchita was \$2,750,000. Over the next 6 months of operations, the newly purchased division experienced operating losses. In addition, it now appears that it will generate substantial losses for the foreseeable future. At December 31, 2022, Conchita reports the following statement of financial position information.

Current assets	\$ 450,000
Non-current assets (including goodwill recognized in purchase)	2,400,000

Current liabilities	(700,000)
Non-current liabilities	(500,000)
Net assets	<u>\$1,650,000</u>

It is determined that the recoverable amount of the Conchita Division is \$1,850,000.

Instructions

- Compute the amount of goodwill recognized, if any, on July 31, 2022.
- Determine the impairment loss, if any, to be recorded on December 31, 2022.
- Assume that the recoverable amount of the Conchita Division is \$1,600,000 instead of \$1,850,000. Determine the impairment loss, if any, to be recorded on December 31, 2022.
- Prepare the journal entry to record the impairment loss, if any, and indicate where the loss would be reported in the income statement.

P12.6 (LO 2, 3, 4) (Comprehensive Intangible Assets) Montana Matt's Golf Ltd. was formed on July 1, 2021, when Matt Magilke purchased the Old Master Golf Company. Old Master provides video golf instruction at kiosks in shopping malls. Magilke plans to integrate the instructional business into his golf equipment and accessory stores. Magilke paid £770,000 cash for Old Master. At the time, Old Master's statement of financial position reported assets of £650,000 and liabilities of £200,000 (thus equity was £450,000). The fair value of Old Master's assets is estimated to be £800,000. Included in the assets is the Old Master trade name with a fair value of £10,000 and a copyright on some instructional books with a fair value of £24,000. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 40 years.

Instructions

- a. Prepare the intangible assets section of Montana Matt's at December 31, 2021. How much amortization expense is included in Montana Matt's income for the year ended December 31, 2021? Show all supporting computations.
- b. Prepare the journal entry to record amortization expense for 2022. Prepare the intangible assets section of Montana Matt's at December 31, 2022. (No impairments are required to be recorded in 2022.)
- c. At the end of 2023, Magilke is evaluating the results of the instructional business. Due to fierce competition from online and television, the Old Master cash-generating unit has been losing money. Its book value is now £500,000. The recoverable amount of the Old Master reporting unit is £420,000. Magilke has collected the following information related to the company's other intangible assets.

Intangible Asset	Value-in-Use
Trade names	£ 3,000
Copyrights	25,000

Prepare the journal entries required, if any, to record impairments on Montana Matt's intangible assets. (Assume that any amortization for 2023 has been recorded.) Show supporting computations.

Concepts for Analysis

CA12.1 (LO1, 5) Writing (Development Costs) Dogwood Electronics has been working to develop a patented technology for backing up computer hard drives. Dogwood had the following activities related to this project.

March 1	Dogwood incurred €10,000 in legal and processing fees to file and record a patent for the technology.
April 5	Laboratory and materials fees to identify a working system, €23,000.
May 15	Prototype development and testing, €34,000.

June 1	Dogwood meets the economic viability threshold upon receiving a firm contract for the product.
June 30	Final development of product based on earlier tests, €45,000.

Instructions

- a. Prepare a schedule indicating Dogwood’s R&D costs to be expensed and Dogwood’s R&D costs to be capitalized.
- b. Briefly discuss how the accounting for these costs will impact the information presented in Dogwood’s income statement and statement of financial position. Discuss the effects in current and future periods.
- c. Identify the criteria for determining “economic viability.”

CA12.2 (LO 1, 2, 5) (Accounting for Pre-Opening Costs) After securing lease commitments from several major stores, Auer Shopping Center, Inc. was organized and built a shopping center in a growing suburb.

The shopping center would have opened on schedule on January 1, 2022, if it had not been struck by a severe tornado in December. Instead, it opened for business on October 1, 2022. All of the additional construction costs that were incurred as a result of the tornado were covered by insurance.

In July 2021, in anticipation of the scheduled January opening, a permanent staff had been hired to promote the shopping center, obtain tenants for the uncommitted space, and manage the property.

A summary of some of the costs incurred in 2021 and the first 9 months of 2022 follows.

	2021	January 1, 2022 through September 30, 2022
Interest on mortgage bonds	\$720,000	\$540,000

Cost of obtaining tenants	300,000	360,000
Promotional advertising	540,000	557,000

The promotional advertising campaign was designed to familiarize shoppers with the center. Had it been known in time that the center would not open until October 2022, the 2021 expenditure for promotional advertising would not have been made. The advertising had to be repeated in 2022.

All of the tenants who had leased space in the shopping center at the time of the tornado accepted the October occupancy date on condition that the monthly rental charges for the first 9 months of 2022 be canceled.

Instructions

Explain how each of the costs for 2021 and the first 9 months of 2022 should be treated in the accounts of the shopping center. Give the reasons for each treatment.

CA12.3 (LO 1, 2) Writing (Accounting for Patents) On June 30, 2022, your client, Ferry plc, was granted two patents covering plastic cartons that it had been producing and marketing profitably for the past 3 years. One patent covers the manufacturing process, and the other covers the related products.

Ferry's executives tell you that these patents represent the most significant breakthrough in the industry in the past 30 years. The products have been marketed under the registered trademarks Evertight, Duratainer, and Sealrite. Licenses under the patents have already been granted by your client to other manufacturers around the world and are producing substantial royalties.

On July 1, Ferry commenced patent infringement actions against several companies whose names you recognize as those of substantial and prominent competitors. Ferry's management is optimistic that these suits will result in a permanent injunction against the manufacture and sale of the infringing products as well as collection of damages for loss of profits caused by the alleged infringement.

The financial vice president has suggested that the patents be recorded at value-in-use, based on the discounted value of expected net royalty receipts.

Instructions

- a. What is the meaning of “discounted value of expected net receipts”? Explain.
- b. How would such a value be calculated for net royalty receipts?
- c. What basis of valuation for Ferry’s patents would be used under IFRS? Give supporting reasons for this basis.
- d. Assuming no practical problems of implementation and ignoring IFRS, what is the preferable basis of valuation for patents? Explain.
- e. What would be the preferable theoretical basis of amortization? Explain.
- f. What recognition, if any, should be made of the infringement litigation in the financial statements for the year ending September 30, 2022? Discuss.

CA12.4 (LO 5) Writing (Accounting for Research and Development Costs) Cuevas Co. is in the process of developing a revolutionary new product. A new division of the company was formed to develop, manufacture, and market this new product. As of year-end (December 31, 2022), the new product has not been manufactured for resale (economic viability has not been achieved). However, a prototype unit was built and is in operation.

Throughout 2022, the new division incurred certain costs. These costs include design and engineering studies, prototype manufacturing costs, administrative expenses (including salaries of administrative personnel), and market research costs. In addition, approximately €900,000 in equipment (with an estimated useful life of 10 years) was purchased for use in developing and manufacturing the new product. Approximately €315,000 of this equipment was built specifically for the design development of the new product. The

remaining €585,000 of equipment was used to manufacture the pre-production prototype and will be used to manufacture the new product once it is in commercial production.

Instructions

- a. How are “research” and “development” defined in IFRS?
- b. Briefly indicate the practical and conceptual reasons for the conclusion reached by the IASB on accounting and reporting practices for research and development costs.
- c. In accordance with IFRS, how should the various costs of Cuevas described above be recorded on the financial statements for the year ended December 31, 2022?
- d. Discuss the importance of economic viability as it relates to research and development cost accounting.

CA12.5 (LO 5) Ethics (Accounting for Research and Development Costs) Czeslaw Corporation’s research and development department has an idea for a project it believes will culminate in a new product that would be very profitable for the company. Because the project will be very expensive, the department requests approval from the company’s controller, Jeff Reid.

Reid recognizes that company profits have been down lately and is hesitant to approve a project that will incur significant expenses that cannot be capitalized due to IFRS requirements. He knows that if Czeslaw Corporation hires an outside firm to do the work and obtain a patent for the process, Czeslaw can then purchase the patent from the outside firm and record the expenditure as an asset. Reid knows that the company’s own R&D department is first-rate, and he is confident they can do the work well.

Instructions

Answer the following questions.

- a. Who are the stakeholders in this situation?
- b. What are the ethical issues involved?

c. What should Reid do?

Using Your Judgment

Financial Reporting Problem

Marks and Spencer plc (M&S)

The financial statements of **M&S** (GBR) are presented in [Appendix A](#). The company's complete annual report, including the notes to the financial statements, is available online.

Instructions

Refer to M&S's financial statements and the accompanying notes to answer the following questions.

- a. Does M&S report any intangible assets and goodwill in its financial statements and accompanying notes? Briefly explain.
- b. How much selling and administrative expenses does M&S report in 2018 and 2019? Briefly discuss the significance of these expenses to M&S's operating results.

Comparative Analysis Case

adidas and Puma

The financial statements of **adidas** (DEU) and **Puma** (DEU) are presented in [Appendices B](#) and [C](#), respectively. The complete annual reports, including the notes to the financial statements, are available online.

Instructions

Use the companies' financial information to answer the following questions.

- a.
 1. What amounts for intangible assets were reported by adidas and Puma in their respective statements of financial

position?

2. What percentage of total assets is each of these reported amounts?
 3. What was the change in the amount of intangibles from 2017 to 2018 for adidas and Puma?
- b.
1. On what basis and over what periods of time did adidas and Puma amortize their intangible assets?
 2. What were the amounts of accumulated amortization reported by adidas and Puma at the end of 2018 and 2017? Did either company record impairments on intangible assets? Explain.
 3. What was the composition of the identifiable and unidentifiable intangible assets reported by adidas and Puma at the end of 2018?

Financial Statement Analysis Cases

Case 1: Merck and Johnson & Johnson

Merck & Co., Inc. (USA) and **Johnson & Johnson** (USA) are two leading producers of healthcare products. Each has considerable assets and each expends considerable funds each year toward the development of new products. The development of a new healthcare product is often very expensive and risky. New products frequently must undergo considerable testing before approval for distribution to the public. For example, it took Johnson & Johnson 4 years and \$200 million to develop its 1-DAY ACUVUE contact lenses. The following are some basic data compiled from the financial statements of these two companies.

(all dollars in millions)	Johnson & Johnson	Merck
Total assets	\$53,317	\$42,573
Total revenue	47,348	22,939

Net income	8,509	5,813
Research and development expense	5,203	4,010
Intangible assets	11,842	2,765

Instructions

- What kinds of intangible assets might a healthcare products company have? Does the composition of these intangibles matter to investors—that is, would investors perceive Merck differently if all of its intangibles were goodwill, rather than if all of its intangibles were patents?
- Suppose the president of Merck has come to you for advice. He has noted that by eliminating all research and development expenditures, the company could have reported \$4 billion more in net income. He is frustrated because much of the research never results in a product, or the products take years to develop. He says shareholders are eager for higher returns, so he is considering eliminating research and development expenditures for at least a couple of years. What would you advise?
- The notes to Merck’s financial statements state that Merck has goodwill of \$1.1 billion. Where does recorded goodwill come from? Is it necessarily a good thing to have a lot of goodwill on a company’s books?

Case 2: Analysis of Goodwill

As a new intern for the local branch office of a national brokerage firm, you are excited to get an assignment that allows you to use your accounting expertise. Your supervisor provides you with the spreadsheet below, which contains data for the most recent quarter for three companies that the firm has been recommending to its clients as “buys.” All of the companies’ returns on assets have outperformed their industry cohorts in the past, but given recent challenges in their markets, there is concern that the companies may experience operating challenges and lower earnings. (All numbers in millions, except return on assets.)

	A	B	C	D	E
1	Company	Market Value of Company	Book Value (Net Assets)	Carrying Value of Goodwill	Return on Assets
2	Sprint Nextel	\$36,361	\$51,271	\$30,718	3.5%
3	Washington Mutual	11,742	23,941	9,062	2.4%
4	E* Trade Financial	1,639	4,104	2,035	5.6%
5					

Instructions

- The market value for each of these companies is lower than the corresponding book value. What implications does this have for each company's future prospects?
- To date, none of these companies has recorded goodwill impairments. Your supervisor suspects that the companies will need to record impairments in the near future, but he is unsure about the goodwill impairment rules. Is it likely that these companies will recognize impairments? Explain.
- Using the above data, estimate the amount of goodwill impairment for each company and prepare the journal entry to record the impairment. For each company, you may assume that the book value less the carrying value of the goodwill approximates the fair value of the company's net assets.
- Discuss the effects of your entries in part (c) on your evaluation of these companies based on the return on assets ratio.

Accounting, Analysis, and Principles

On January 2, 2022, Raconteur AG reported the following intangible assets: (1) a copyright with a carrying value of €15,000, and (2) a trade name with a carrying value of €8,500. The trade name has a remaining life of 5 years and can be renewed at nominal cost indefinitely. The copyright has a remaining life of 10 years.

At December 31, 2022, Raconteur assessed the intangible assets for possible impairment and developed the following information.

	Estimated Undiscounted Expected Future Cash Flows	Estimated Recoverable Amount
Copyright	€20,000	€16,000
Trade name	10,000	5,000

Accounting

Prepare any journal entries required for Raconteur's intangible assets at December 31, 2022.

Analysis

Many securities analysts indicate a preference for less-volatile operating income measures. Such measures make it easier to predict future income and cash flows using reported income measures. How does the accounting for impairments of intangible assets affect the volatility of operating income?

Principles

Many accounting issues involve a trade-off between the primary characteristics of relevance and faithful representation of information. How does the accounting for intangible asset impairments reflect this trade-off?

Research Case

King Company is contemplating the purchase of a smaller company, which is a distributor of King's products. Top management of King is convinced that the acquisition will result in significant synergies in its selling and distribution functions. The financial management group (of which you are a part) has been asked to analyze the effects of the acquisition on the combined company's financial statements. This is

the first acquisition for King, and some of the senior staff insist that based on their recollection of goodwill accounting, any goodwill recorded on the acquisition will result in a “drag” on future earnings for goodwill amortization. Other younger members on the staff argue that goodwill accounting has changed. Your supervisor asks you to research this issue.

Instructions

Access the IFRS authoritative literature at the IFRS website (you may register for free eIFRS access at this site). When you have accessed the documents, use the search tool in your Internet browser to respond to the following questions. (Provide paragraph citations.)

- a. Identify the accounting literature that addresses goodwill and other intangible assets.
- b. Define goodwill.
- c. Is goodwill subject to amortization? Explain.
- d. When goodwill is recognized by an affiliated company, should it be tested for impairment at the consolidated level or at the affiliate level? Discuss.

Global Accounting Insights

LEARNING OBJECTIVE 6

Compare the accounting for intangible assets under IFRS and U.S. GAAP.

There are some significant differences between IFRS and U.S. GAAP in the accounting for both intangible assets and impairments. U.S. GAAP related to intangible assets is presented in FASB literature addressing goodwill and other intangible assets and business combinations. The accounting for research and development, start-up costs, and advertising costs is prescribed in separate parts of the FASB literature.

Relevant Facts

Following are the key similarities and differences between U.S. GAAP and IFRS related to intangible assets.

Similarities

- Like IFRS, under U.S. GAAP intangible assets (1) lack physical substance and (2) are not financial instruments. In addition, under IFRS an intangible asset is identifiable. To be identifiable, an intangible asset must either be separable from the company (can be sold or transferred) or it arises from a contractual or legal right from which economic benefits will flow to the company. Fair value is used as the measurement basis for intangible assets under U.S. GAAP if it is more clearly evident.
- With the issuance of a converged statement on business combinations (*IFRS 3* and *SFAS No. 141—Revised*), U.S. GAAP and IFRS are very similar for intangibles acquired in a business combination. That is, companies recognize an intangible asset separately from goodwill if the intangible represents contractual or legal rights or is capable of being separated or divided and sold, transferred, licensed, rented, or exchanged. In addition, under both IFRS and U.S. GAAP, companies recognize acquired in-process research and development (IPR&D) as a separate intangible asset if it meets the definition of an intangible asset and its fair value can be measured reliably.
- As in IFRS, U.S. GAAP assesses goodwill for impairment at least annually, based on the fair value of the reporting unit.
- As in IFRS, under U.S. GAAP the costs associated with research and development are segregated into the two components. Costs in the research phase are always expensed under both U.S. GAAP and IFRS.

Differences

- U.S. GAAP does not permit the revaluation basis of accounting. While under IFRS revaluations are not permitted for goodwill,

revaluation of other indefinite-life intangible assets are rare because revaluations are not allowed unless there is an active market for the intangible asset.

- U.S. GAAP requires expensing of all costs associated with internally generated intangibles. IFRS permits some capitalization of internally generated intangible assets (e.g., brand value) if it is probable there will be a future benefit and the amount can be reliably measured.
- Under IFRS, legal costs incurred to protect rights under a patent, copyright, or trademark are expensed as incurred. Under U.S. GAAP, a company may capitalize these costs if it is successful in the legal proceedings.
- Under U.S. GAAP, impairment loss is measured as the excess of the carrying amount over the asset's fair value. IFRS requires an impairment test at each reporting date for long-lived assets and intangibles, and records an impairment if the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the asset's fair value less costs to sell and its value-in-use. **Value-in-use** is the future cash flows to be derived from the particular asset, discounted to present value.
- U.S. GAAP gives companies the option to perform a qualitative assessment to determine whether it is more likely than not (i.e., a likelihood of more than 50 percent) that an indefinite-life intangible asset (including goodwill) is impaired. If the qualitative assessment indicates that the fair value of the reporting unit is more likely than not to be greater than the carrying value (i.e., the asset is not impaired), the company need not continue with the fair value test.
- Under U.S. GAAP, impairment losses cannot be reversed for assets to be held and used; the impairment loss results in a new cost basis for the asset. IFRS and U.S. GAAP are similar in the accounting for impairments of assets held for disposal. IFRS allows reversal of impairment losses when there has been a change in economic conditions or in the expected use of limited-life intangibles and indefinite-life intangibles other than goodwill.

- Under U.S. GAAP, all development costs are expensed as incurred. Under IFRS, costs in the development phase of a research and development project are capitalized once technological feasibility (referred to as **economic viability**) is achieved.

About the Numbers

To illustrate the effect of differences in the accounting for brands, consider the following disclosure by **GlaxoSmithKline** (GBR) in a recent annual report. Note that GlaxoSmithKline would report lower income by £1.3 billion if it accounted for its brands under U.S. GAAP.

Notes to the Financial Statements	
Intangible assets (in part):	
The following table sets out the IFRS to U.S. GAAP adjustments required to the IFRS income statement for amortization of brands:	
Income Statement	
	(£ million)
Amortisation charge under IFRS	(139)
Amortisation charge under U.S. GAAP	1,454
IFRS to U.S. GAAP adjustment	<u>1,315</u>

On the Horizon

The FASB and IASB are pursuing different paths in their review of the accounting for intangible assets. The FASB recently issued an Invitation to Comment, in which there is the potential to (1) include the amortization of goodwill either as an option or as a requirement; (2) possibly change the impairment testing done for goodwill; (3) include, in the amount of goodwill, recognized customer-related intangibles; (4) include non-compete agreements, which are currently separately recognized; and (5) include additional disclosures related to goodwill.

The IASB is preparing to issue a discussion paper also related to goodwill. The IASB has expressed preliminary views that the

amortization of goodwill will not be permitted; some relief to the mandatory qualitative impairment test should be provided, but the test itself will not be changed. In addition, separate recognition of identifiable intangible assets should not be included in goodwill, and better disclosures should be required. The net result of the work of the two Boards is likely to create more differences between the two sets of standards.

GAAP Self-Test Questions

1. All of the following are key similarities between U.S. GAAP and IFRS with respect to accounting for intangible assets **except**:
 - a. for accounting purposes, costs associated with research and development activities are segregated into the two components.
 - b. the accounting for intangibles acquired in a business combination.
 - c. recovery of impairments on intangibles other than goodwill.
 - d. the accounting for impairments of assets held for disposal.
2. Research and development costs are:
 - a. expensed under U.S. GAAP.
 - b. expensed under IFRS.
 - c. expensed under both U.S. GAAP and IFRS.
 - d. None of the answer choices is correct.
3. Which of the following statements is **correct**?
 - a. Both IFRS and U.S. GAAP permit revaluation of property, plant, and equipment and intangible assets (except for goodwill).
 - b. U.S. GAAP permits capitalization of development costs.
 - c. IFRS requires capitalization of research and development costs once economic viability is met.

d. IFRS requires capitalization of development costs once economic viability is met.

4. A loss on impairment of an intangible asset under U.S. GAAP is the asset's:

- a. carrying amount less the expected future net cash flows.
- b. carrying amount less its recoverable amount.
- c. recoverable amount less the expected future net cash flows.
- d. carrying value less its fair value.

5. Recovery of impairment is recognized under U.S. GAAP for all the following **except**:

- a. patent held for use.
- b. trademark.
- c. goodwill.
- d. None of the answer choices is correct; impairment reversals are not allowed under U.S. GAAP.

GAAP Concepts and Application

GAAP12.1 Briefly describe some of the similarities and differences between U.S. GAAP and IFRS with respect to the accounting for intangible assets.

GAAP12.2 Sophia SpA, a cellular phone company based in Italy, prepares its financial statements in accordance with IFRS. In 2022, it reported average assets of €12,500 and net income €1,125. Included in net income is amortization expense of €120. Under U.S. GAAP, Sophia's amortization expense would have been €325. Briefly discuss how analysis of Sophia's 2022 return on assets (and comparisons to a company using U.S. GAAP) would be affected by differences in intangible asset amortization between IFRS and U.S. GAAP.

GAAP12.3 Briefly discuss the convergence efforts that are underway in the area of intangible assets.

GAAP12.4 Presented below are recent data and accounting policy notes for the goodwill of two international drug companies. **Bayer** (DEU) prepares its statements in accordance with International Financial Reporting Standards (IFRS). **Merck** (USA) prepares its financial statements in accordance with U.S. GAAP.

Related Information	Bayer (€ millions)	Merck (\$ millions)
Research and development expense	2,107	4,010
Amortization expense	0	0
Net income	1,361	4,459
Accumulated goodwill amortization	0	0
Shareholders' equity	15,532	44,676

Both U.S. GAAP and IFRS do not allow amortization of goodwill.

Instructions

- a. Compute the return on equity for each of these companies, and use this analysis to briefly discuss the relative profitability of the two companies.
- b. IFRS requires that development costs must be capitalized if technical and commercial feasibility (economic viability) of the resulting product has been established. Assume that Bayer recorded €1 million of development costs in the year reported above. Discuss briefly how this accounting affects your ability to compare the financial results of Bayer and Merck.

Answers to GAAP Self-Test Questions

1. c 2. a 3. d 4. d 5. d

Notes

- 1 The accounting in this section relates to the acquisition of a single asset or group of assets. The accounting for intangible assets acquired in a **business combination** (transaction in which the purchaser obtains control of one or more businesses) is discussed later in this chapter.
- 2 IFRS also prohibits recognition of intangible assets such as internally generated brands, mastheads, and customer lists. These expenditures are similar to other costs to develop the business as whole; therefore, they do not meet the identifiable criterion. [2]
- 3 For limited-life intangibles, the impairment test is performed only if there is indication of impairment. However, the impairment test for indefinite-life intangibles must be conducted annually. This more stringent test is required because indefinite-life intangibles are not amortized, and the recognized amounts may be subject to significant judgment.
- 4 Similar to long-lived tangible assets, companies may revalue certain types of intangible assets subsequent to acquisition. The revaluation model can only be used for intangible assets that trade in active markets (e.g., taxi licenses or similar contracts). [4] This constraint, as well as the cost to perform the annual revaluation process, explains the limited use of the revaluation option for intangible assets. See I. von Keitz and KPMG IFRG Limited, *The Application of IFRS: Choices in Practice* (December 2006), p. 11.
- 5 The legal life of trade names or trademarks may vary across countries. However, over 70 countries, including members of the European Union (EU), Australia, and the United States, are party to the Madrid Protocol, which recognizes the trade names and trademarks registered in other member countries (see www.ipa.gov.uk/).
- 6 As with trademarks and trade names, the legal life of a copyright may vary across countries. However, the United Kingdom, the countries of the European Union, and the United States all have the same copyright length.

- 7** While patent lives may vary across countries, the term of protection under most modern patent laws is 20 years from the filing date of the application. Over 140 countries are party to the Patent Cooperation Treaty (PCT), which was ratified in 1970 and most recently amended in 2001. The PCT makes it possible to seek patent protection for an invention simultaneously in each of a large number of countries by filing an “international” patent application (see www.wipo.int/patentscope/en/patents/).
- 8** Consider the opposite result: Sir Alexander Fleming, who discovered penicillin, decided not to use a patent to protect his discovery. He hoped that companies would produce it more quickly to help save sufferers. Companies, however, refused to develop it because they did not have the patent shield and, therefore, were afraid to make the investment.
- 9** Companies may compute amortization using the activity method in a manner similar to that described for depreciation on property, plant, and equipment.
- 10** IFRS provides detailed guidance regarding the recognition of identifiable intangible assets in a business combination. With this guidance, the IASB expected that companies would recognize more identifiable intangible assets, and less goodwill, in the financial statements as a result of business combinations. **[8]** Under IFRS, because goodwill does not meet the identifiability criterion, it is not an intangible asset. **[9]** Nonetheless we present the accounting for goodwill here because goodwill commonly arises in combination with other intangible assets.
- 11** The IASB expressed concern about measuring goodwill as a residual but noted that there is no real measurement alternative since goodwill is not separable from the company as a whole. **[10]**
- 12** P. Kowsmann and P. Davies, “Deutsche Bank-Commerzbank Deal Might Rest on Mountain of ‘Badwill’,” *Wall Street Journal* (April 14, 2019).

- 13** As with impairments of property, plant, and equipment, the amount of the recovery of the loss is limited to the carrying value amount that would result if the impairment had not occurred. **[13]**
- 14** Note that the impairment test is performed every year (not only when there is an impairment indicator). This more stringent impairment model for indefinite-life intangibles (and goodwill) is used because these assets are not amortized and the recognized amounts may be subject to significant judgment.
- 15** Because there is rarely a market for cash-generating units, estimation of the recoverable amount for goodwill impairments is usually based on value-in-use estimates.
- 16** In the Kohlbuy case, the entire impairment loss is allocated to goodwill. If the impairment loss exceeds the carrying value of the goodwill, Kohlbuy allocates the impairment loss to the goodwill and other assets as follows: (1) reduce the goodwill to zero and (2) allocate any remaining impairment loss to the other assets on the basis of their relative carrying amounts. In this case, Kohlbuy follows the impairment guidelines for long-lived assets, as discussed in [Chapter 11](#). If these assets are evaluated for impairment on an individual basis, impairment losses may have been recorded on these assets as part of that process. Alternatively, the Kohlbuy example could represent a situation in which the other assets are evaluated at the cash-generating-unit level. These procedures are complex and beyond the scope of this textbook.
- 17** All of the following criteria must be met to begin capitalizing development costs into the carrying value of the related intangible: (1) the project achieves technical feasibility of completing the intangible asset so that it will be available for use or sale; (2) the company intends, and has the ability, to complete the intangible asset and use or sell it; (3) the intangible asset will generate probable future economic benefits (there is a market for the asset or the output of the asset); (4) the company has adequate technical, financial, and other resources to complete the development of the intangible asset; and (5) the company can measure reliably the

development costs associated with the intangible asset to be developed. [15]

18 If R&D-related intangibles (often referred to as *in-process R&D*) are acquired in a business combination, they are also recognized and measured at fair value. After initial recognition, these intangible assets are accounted for in accordance with their nature (as either limited-life or indefinite-life intangibles). [17]

19 With the growth in online selling activities, internally developed websites represent a significant source of internally generated intangible assets. IFRS has specific criteria for determining whether the development costs associated with websites meet capitalization thresholds. In essence, these criteria assess whether the website is economically viable in generating sales for the company. [18]

20 A company is considered to be in the developing stages when it is directing its efforts toward establishing a new business and either the company has not started the principal operations or it has earned no significant revenue.
